4700. Yes, but you see the increase in the receipts is only Rx. 36,000?—On looking at the figures again I find the increase is even less than that. I omitted from the figure already given for 1895–96 the Port Blair receipts and some local receipts which must be included if comparison with the 1893–94 figure is to be made. Including these amounts, the total figure for 1895–96 of jail receipts in India would be Rx. 297,596. I may add, however, in explanation of the increased charge that the establishment of central jails is, of course, an improvement of administration; they are much better organised than the district jails.

4701. And do you know that there was any prevalent idea that the prisons were not so well organised as they should be, and that there ought to be greater outlay in putting them on a good footing?—There has been in the past, I think, a good deal of argument raised about that, and I should say that a great deal has been done of late to improve the jail administration.

4702. Then, again, with regard to the police, there is a very big increase there, you see, more than 50 per cent.?—A large portion of that is due to Upper Burmah. The charge for police in Upper Burmah in 1893–4 was Rx. 648,190.

4703. And there was no such charge, of course, in 1875–76?—No, and then generally I may say that it has been necessary to re-organise the police force and to improve the position of the police.

4704. Has their pay been raised?—Yes, in almost every province.

4705. What led to that? were they discontented with their existing pay?—It was not so much that they were discontented, as that we did not get sufficiently reliable men for the pay.

4706. It was not so much the necessity of raising wages as of getting a better class of men?—Yes, more trustworthy men.

Mr. S. Jacob, C.S.I.

5 March 1896.

Law and Justice.

4707. (*Sir Andrew Scoble.*) Is it not the fact that the rate of wages generally has risen, and, therefore, you have been obliged to raise the rate of wages of the police?—I believe it is in part due to that.

4708–9. (*Chairman.*) On that point I put rather a similar question to you with regard to the clerical and menial establishments; and, I think, without expressing an opinion about whether the rates had generally risen, your evidence was, that the Government had not thought it necessary to raise the pay for 20 years, in any sensible degree, of clerks and other attendants of the courts?—No. I do not think that the pay of clerical establishments has generally risen; but I think that the pay of menials has risen in India. I may add that even now the pay of constables is extraordinarily low; in some parts of India it is almost less than an ordinary day labourer can earn.

4710. (*Sir Andrew Scoble.*) That is because of the expectation of pension, is it not?—Pension, of course, is a consideration.

(*Mr. Caine.*) Surely, Mr. Jacob is right in his original statment, that the pay of the police has been very greatly raised of recent years with the object of getting more efficient men into the force. I think that is very largely the reason of the increase. But I think there has been an increase in the wages of menials; certainly there has been an increase in the wages of domestic servants in India.

(*Chairman.*) You think there has?

(*Mr. Caine.*) Oh, yes.

4711. (*Chairman.*) My doubt is based on this: I was reading the other day a paper on the fall of the rupee and on its effect in India; and at considerable length the writer gave what, he said, were the rates of wages throughout India, taken from a Government publication. It gave the rate of day labourers, of grooms, of blacksmiths, and so forth, with the result, that they had not risen since 1870. It struck me very much, because I thought, with Sir Andrew Scoble, that wages had slightly risen; but, of course, if the writer of this article has correctly quoted the statistics which the Government put forth, we are not likely to get better statistics than they collect.

4712. (*Mr. Naoroji.*) It may be that there is an increase of wages in towns where there is congestion?

(*Chairman.*) It purported to go outside towns.

(*Mr. Naoroji.*) But if we took wages all round in India, it would not be proved that they have risen.

4713. (*Sir Donald Stewart.*) There is an enormous difference?—The pay of constables in Bengal in 1895–96 is only six rupees a month.

4714. (*Mr. Buchanan.*) How would that compare with 1875–76?—They do not give the pay by grades in the accounts of that year.

4715. What do the village police get?—They get about four rupees in Bengal. The rate of pay is not given in the old estimates; they merely give the total number of constables and the total pay without separation of the grades.

4716. (*Chairman.*) When you have deducted Upper Burma, it brings down the charge to 3,271,000 Rx. against 2,473,000 Rx. in 1875–6. That still represents a very large increase and that you think is caused by this increase of pay?—There are other causes. Some charges have been brought on the accounts which did not come on the accounts in 1875–76. For instance, police clothing charges; they used to be taken net on to the accounts before; the police subscribed a certain amount for their clothing and only the net charge to Government was brought to account. Now the clothing receipts are credited and the whole charge is debited.

4717. That would not account for a very great deal, of the increase, because I see the receipts have only risen from 234,000 Rx. to 417,000 Rx.?—Yes; but still to that extent it would.

4718. Yes?—Then police includes other charges besides what are called police generally in Europe. For instance, the cattle pounds, they are entirely a police charge.

4719. (*Sir Andrew Scoble.*) And the charge for police would include railway police, to the cost of which the railway companies contribute?—Yes, they pay a share of that.

4720. (*Chairman.*) That would come within the receipts?—No; the railway companies' contribution is taken by deduction from the charge; but the railway police are additional police as a rule. They would account for some part of the increase too.

4721. You do not know at all what the extra pay that has been given would amount to?—No; I could not say without taking it out from the actual orders; I do not think the accounts would show.

4722. I do not know that there is anything else that occurs to me to ask you upon those points; my attention has only been directed to the figures between 1875–76 and the present time: but you may have something to say that would elucidate the point of increase?—I could get out the exact figures of the force in 1875–76 and in 1893–94 if that were wished.

4723. Is it a work of difficulty?—No, I do not think so. Of course they would only show the total strength of the force without distribution into grades.

4724. Perhaps you would put that in?—Yes, I could put that in.*

4725. (*Mr. Buchanan.*) You have also got thirty more millions of people to look after?—Yes.

4726. (*Chairman.*) Is there anything else you would like to remark upon this?—No, I have no further remark to make, I think.

4727. (*Sir William Wedderburn.*) As regards getting a more trustworthy class of men for the police it would also tend in that direction if every grade had better chances of rising into the higher grades?—Yes, it would.

4728. But the higher grades are mostly recruited from Europeans, are they not?—Only the grade of district superintendent.

4729. Probationers; I think there is a class of young men brought out from England?—Yes; some of the assistant superintendentships are reserved for Europeans.

4730. It would no doubt be a great encouragement to good men of the good class to join the lower grades of the police if they had a reasonable chance of promotion into those higher grades?—I do not think it would affect the men in the constable grade; I do not suppose that they could generally have any hope of rising to the post of district superintendent of police, even if that were open, to, say, the inspectors and chief constables.

4731. (*Mr. Naoriji.*) I think the question was put to you to give the figures of the amounts paid to Europeans and natives in the different departments. Now, as you go on with the evidence on these different departments, will you be pleased also to give us these figures at the time, as to what amount is given to Europeans, and what amount is paid to natives?—I cannot give the amounts absolutely as they are not shown in the accounts; I could only take an arbitrary proportion for certain of the heads.

4732. We are not able to compare properly then what proportion of the disbursements goes to Europeans and what to natives?—There was a statement presented to Parliament.

4733. But it does not go into the departments?—No, it does not go into the departments.

4734. It is only generally?—Yes.

4735. I thought at this special inquiry you would give us these figures; when you come next time in giving evidence on the different departments; there we would be able to judge more accurately how large is the proportion of the Europeans, how much Europeans get in proportion to what the natives get. It would be very desirable if you could manage to give as those figures?—I will see; if anything can be done, I will do it.*

4736. In regard to the higher positions or posts in the police, is it not the case that an examination is transferred to this country in order to recruit the police department, by means of which the natives are therefore put to a very great disadvantage, just as in the other services also where the examinations take place here?—The grade of district superintendent of police is open to natives, and there are native district superintendents, but there is an examination held in London for a certain proportion of the appointments.

4737. Then with regard to that portion the natives are at a disadvantage that they must come here, even

* *See* Appendices 14 and 17.

for these lower appointments?—I do not think they are at any disadvantage in that respect, because a certain proportion of the posts was reserved for Europeans, even when the appointments were made in India.

4738. But I do not know that the natives are raised to the higher position of inspectors. In Bombay I know of only one or two who are in the higher posts?—The inspectors in Bengal and in the North-West Provinces are almostly natives.

4739. I am thinking of the posts which are occupied entirely by Europeans in the Bombay cities?—In the Presidency towns of course there are more Europeans, but that is for special reasons.

4740. For special reasons natives are excluded?—In the Presidency towns a certain proportion of Europeans is required because they have to deal, to a great extent, with an European population.

4741. (*Mr. Caine.*) I should just like to ask you whether it is not the case that a good deal of the increase of expenditure on jails is due to improved sanitation, cells, and better rations for the men?—Yes, there has been some extra expenditure on that account. I am afraid that the accounts do not enable me to say exactly how much is due to that.

4742. You do not happen to have by you the jail death-rate in the two years compared; do not trouble if you have not got it, I can easily look it up for myself. If you can find it, perhaps you will put it in. I think it is quite pertinent to the inquiry to see whether the expenditure has had the desired result?—I have got it for 1877.

(*Chairman.*) In the report on the moral and material progress and condition of India the following passage occurs:—"The examination of the age statistics collected at the Census, collated with the returns of death in a few localities where the registration is notoriously more correct than amongst the villages of the interior of the country, shows that the above presumption is, so far as the data are at hand, correct. The jail mortality, which was 42 per mille amongst the convicts in 1881, is now 30, whereas, according to the Census calculation as above, the general rate is about what the jail rate was 10 years ago. The table under consideration shows indeed a higher rate in Assam, but the returns of the last few years from that province indicate a peculiarly unhealthy series of seasons, with the accompaniment of a specially fatal disease of a local character, and sundry outbreaks of cholera."

Mr. S. Jacob, C.S.I.
5 March 1896.
Law and Justice.

4743. (*Sir Andrew Scoble.*) In speaking about the increased charge for jails, have you taken into account the expenditure that has been made upon building an improved class of jails during the period to which you have been referring, or is it only the annual expense?—No, this is only the annual expense.

4744. Can you say at all what amount of money has been spent in the interval between 1875–76 and 1893–94 in the establishment of central jails and building new jails of a superior character?—I could get out the figures.

4745. I believe the classification of prisoners is now carried out more thoroughly and the more recent European system introduced?—I could get out the figures from the accounts; I have not taken it out.

4746. But the expenditure has been very considerable, has it not?—I believe it has, yes.

4747. In regard to the employment of natives in the police, you were asked by Mr. Naoroji about the Bombay establishment. I believe you were for some time stationed in Bombay?—Only in the city of Bombay.

4748. Do you happen to know whether or not the most important of the police departments in Bombay has been for many years entrusted to natives?—I believe that is the case.

4749. There are several Parsees; I am not sure whether there are any Mohammedan or Hindoo superintendents there?—I really cannot say that from my own knowledge.

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

At the India Office.

TENTH DAY.

Wednesday, March 11th, 1896.

PRESENT:

THE LORD WELBY, G.C.B., (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Major-General Sir EDWIN H. H. COLLEN, K.C.I.E., Military Secretary to the Government of India, and Mr. STEPHEN JACOB, C.S.I., Comptroller and Auditor-General to the Government of India, re-called and further examined.

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr S. Jacob, C.S.I.
11 March 1896.
Military.

4750. (*Chairman.*) Sir Edwin Collen, you have been so good as to give me some notes on the subject of the increase under the different grants, the substance of which I shall ask you to put into evidence presently; but in the first instance, I want to ask some general questions on the subject of Sir Henry Waterfield's return of 10th August 1895, comparing it with some other returns, and also I want to get together some averages of figures on which we may agree. I think perhaps it would be more convenient if I were to address those questions, which turn on Sir Henry Waterfield's paper, to Mr. Jacob. On some of those questions, I think, you would desire to express an opinion, and upon those you will perhaps give a reply.

Mr. Jacob, we have before us a paper put in by Sir Henry Waterfield, accounting for increase of expenditure. The title of this paper purports to deal with the years 1884–85 to 1894–5, but Sir Henry afterwards amplified the tables, and carried them back to 1875–6. You have that paper before you?

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

(*Mr. Jacob.*) Yes.

4751-2. As I understand it, the principle on which that paper is drawn is this, that the expenditure is shown net; that is to say, the extra receipts which the Military Department has collected in the course of the year, are deducted from the gross expenditure, so that the result is the net charge to the taxpayer?—Yes, that is so.

4753. There are two papers on military expenditure which are generally in the hands of people who are studying this question, namely, the Statistical Abstract for British India, and Sir Donald Macfarlane's Return, which gives the military expenditure of the Government of India for each year from 1875 to 1892-93. As a matter of convenience, and for the better understanding of Sir Henry Waterfield's paper, I would ask how Sir Henry Waterfield's paper differs from those two papers? I think that the totals of military expenditure as given in the Statistical Abstract are gross, and also the figures in Sir Donald Macfarlane's return, are they not?—Yes, I believe that is the case.

4754. And, therefore, in order to arrive at Sir Henry Waterfield's figures, we should have to deduct the receipts from the figures as given in the Statistical Abstract and in Sir Donald Macfarlane's Return, which are practically, with one or two slight modifications, the same?—Yes.

4755-6. But then, Sir Henry Waterfield goes rather further, and when he deals with the military expenditure, he includes in his total, as I think quite correctly, extraordinary expenditure—special operations?—Yes. I have not examined in detail Sir Donald Macfarlane's return.

4757. I am coming to that directly; but I am now calling your attention to the fact that Sir Henry Waterfield includes in his paper and in his totals the item of special operations?—I think that is always included in the Army; in the Parliamentary return it is included, and in Sir Henry Waterfield's tables as it is also in our accounts.

4758. In the Statistical Abstract it appears not to be included at page 190?—It does not appear to be included.

4759-61. I think I can make that clear to you. If you will look at Sir Donald Macfarlane's return of military expenditure, you will see that the totals in the first part of that return agree with those in the Statistical Abstract, except that Sir Donald Macfarlane's return gives, I think, a small item called "Unadjusted Expenditure." And if you deduct that from the totals as given in the Statistical Abstract, you will find that they agree?—The unadjusted expenditure is given in the Statistical Abstract, too.

4762. At all events they practically agree. If you will look at Sir Donald Macfarlane's return, you will see that the special operations come below?—Yes, they do.

4763-4 And as the totals in the first part of the account agree, it is pretty clear that the Statistical Abstract does not include those special operations?—But in Sir Donald Macfarlane's return the "exceptional payments" which are given below, are stated to be "exceptional payments included in the above."

4765. Perhaps you will say where they do differ, so that we may know, if we refer to these different returns, how to reconcile them?—My figures here, the gross Army figures, which work out to Sir Henry Waterfield's net figures agree exactly with the gross figures in the Statistical Abstract.

4767. And do they include the special operations?—Yes.

4768-9. Then, in reality, Sir Henry Waterfield's figures ought only to differ from the Statistical Abstract and from Sir Donald Macfarlane's return, by the deduction of the extra receipts?—Yes, I should suppose so. If the Commission would like it, I can easily compare them, and give in a statement showing where there is any difference, if there should be any.

4770. Thank you. Therefore, practically, in dealing with Sir Henry Waterfield's figures, we know that we are dealing, subject to that correction, with the same figures as are in these other returns?—Yes; but it will be understood that Sir Henry Waterfield's totals exclude exchange entirely.

4771. That is a point I was going to ask you about afterwards. By exchange, you mean that allowance which is given in India as compensation for the cost of remitting home, is it not?—Sir Henry Waterfield's tables include under "exchange" the exchange on the sterling payments in England, the extra exchange payments to the British soldier, and the exchange compensation allowance.

4772. But I think Sir Henry Waterfield includes exchange when he comes to the payments in England, does he not?—He has a separate table showing the payments due to exchange.

4773. The only point to which your remarks would apply is the allowance on account of exchange paid in India; you would count the charge on exchange for payments in England with the English payments, would you not?—No; it is always shown in a separate column in the accounts.

4774. But you would bring it in at the same time as the English payments? Yes.

4775. Because it is on the payments made in England?—Yes.

4776. Whereas any compensation allowance paid actually in India to the forces there, I suppose you would reckon as Indian expenditure?—Yes, it is included in our accounts of Indian expenditure.

4777. Quite so. Sir Henry Waterfield omits the latter, and therefore, when we come to it, we should have to take that fact into consideration?—Yes.

4778. I wish, in the first place, to ascertain the charge of the Indian Army to the taxpayer, therefore, following the line in the table attached to Sir Henry Waterfield's paper which runs from 1875-76 to 1895-96. I take the net Indian Revenue, that is the revenue derived from taxes, and the net army expenditure, that is, the expenditure deducting receipts which the Military Department realises and which are not in the nature of taxes. Do you agree that that method of calculation shows the charge of the Army to the taxpayer?—As regards Sir Henry Waterfield's Table IV., it must be noted that those figures relate only to Indian expenditure and that they do not include either the sterling expenditure on the Army in England or the exchange on that sterling expenditure and further they do not include the other charges due to exchange which are paid in India, namely, the exchange on British soldiers' pay and the charge for exchange compensation allowance; all these charges would, however, have to be included to show the net charge of the army to the taxpayer of India.

4779. I ought to explain my intention first; I am endeavouring to separate for the moment the expenditure in India from the expenditure in England and to analyse each branch as we go, with a view to bringing the two together at the end?—Yes.

4780. By that means we should be able to test whether expenditure in India—actually in India—has increased and what the causes of the increase are, without mixing it up with a different set of questions, which arise when we deal with the expenditure in England?—Yes. Then the only charges excluded are those exchange charges, as far as the charges in India are concerned.

4781. I take Sir Henry Waterfield's figures as they stand and I begin with the year 1881-82, the year after the termination of the Afghan War, because the cost of a great war of course disturbs and vitiates a comparison intended only to apply to the normal charge of this great branch of the public expenditure, I find that the total net revenue of India from 1881-82 to 1895-96 (including therefore the Budget estimate for 1895-96) amounted for 15 years to Rx. 711,055,528, or an average of Rx. 47,403,702, and that the net military expenditure in India amounted to Rx. 218,113,631, or an average of Rx. 14,540,909, showing that the net military expenditure in India amounted on the average of the 15 years to a charge of almost 30·6 on the net revenue. You have seen these figures I think; do you agree with them?—The figures in the question are practically correct, but the per-centage is nearer 30·7 than 30·6. They show the per-centage for the whole net charge of the army on the taxpayer in India as far as the charges in India are concerned and excluding exchange, but they include estimates for the last two years, not actuals.

4782. Yes, but at the same time the revised estimates are so close on the result, are they not, that you may take them as probably fairly representing the result?

—No, I should not say so; there is very often a considerable difference between the revised estimates and the actuals.

4783. Even when you have got 10 months actuals?—Yes.

4784. Does expenditure generally fall below the estimate or does it exceed it?—It generally falls considerably below.

4785. Therefore if we include the estimates of these two years we are stating the case rather against the Army than for it?—Yes.

4786. If, to test the question further, I take particular years—for instance, 1881–82, 1884–85, before the increase of the Army, that is to say, and 1893–94, the last year of the completed accounts, and the Budget estimate of 1895–96, I get the following results. In 1881–82, the revenue was Rx. 45,426,606; the Army charge Rx. 14,374,006; giving the per-centage of 31·6. In 1884–5, which I think was the lowest year of Army expenditure that there has been for a very long time, the revenue was Rx. 41,521,367; the Army charge Rx. 12,011,202 showing a per-centage of 29 on the revenue. In 1893–94 the revenue was Rx. 50,328,023; the Army charge Rx. 15,338,951, giving a per-centage of 30·5. In 1895–96, which is only Budget estimate, the revenue was Rx. 53,948,500; the Army charge 15,656,700; showing a per-centage on revenue of 29. Have you been able to confirm these figures?—Yes, those figures are correct; they exclude all charges for exchange.

4787. We understand throughout that that is the case, and that exchange will have to be added afterwards?—Yes.

4788. The four years 1881–82 to 1884–85 were apparently quiet years. There were no special military works and only small expeditions I think, and Burmah had not then been acquired; am I right in thinking that during those four years there were special expeditions worthy of note?—In 1881–82 there was a charge of 1,277,156 Rx. for the balance of the expenditure in connexion with the Afghan operations.

4789. Must we then still make deductions for paying off the balance of the Afghan expenditure in years subsequent to 1880–81?—Yes, and in 1882-83 there was an expenditure on special operations of 1,109,308 Rx., which was chiefly for Egypt.

4790. But that was repaid, was it not? A portion of it was repaid?—(*Sir Edwin Collen.*) 500,000*l.* of it I think.

4791. The payment you received back again on account of the Egyptian expedition was more than 500,000*l.*, was it not?—Well, I do not know that my memory is correct, but I thought it was that amount.

4792. Were there any more in those four years?—(*Mr. Jacob.*) There were some petty operations, I think Sir Edwin Collen could probably indicate what they were. They cost 44,166 Rx. in 1883-84, and 159,000 Rx. in 1884–85.

4793. When you say that the Egyptian expenditure in 1882–83 was 1,109,000 Rx., if 500,000*l.* was received back from England, would that amount not be deducted by Sir Henry Waterfield from the gross charge?—No, he has not deducted the repayments by England.

4794. Therefore, to state it completely, the net charge to the taxpayer in India would only be that sum of 1,109,000 Rx., minus 500,000*l.*, would it not?—Yes, that would be so.

4795–6. Subject to amendment in consequence of what you have just said, the average revenue of those four years was 43,239,000 Rx., the average military expenditure 12,922,000 Rx., giving a per-centage of 29·9, a figure slightly lower than the per-centage of the Budget of 1895–96. If we deduct these further sums which refer to the Afghan War, and all sums received back from England on account of Egypt, the per-centage would be lower because, the average expenditure against the taxpayer would be less?—Yes. I may state also that there were several changes in the revenue in the course of those years.

4797–800. I am coming to that; of course, that is a most important point?—Yes.

4801. The general figures which I have taken from Sir Henry Waterfield's tables include expenditure on the increase of the army, special defence works, and the cost of Upper Burmah. They are, therefore, comprehensive?—Yes.

4802. If, therefore, the Government had said in 1881–82 to the Military Department we wil give you for all military charges 30 per cent. of the Indian Revenue, or rather less than the figure of 1881–82, that per-centage would have sufficed to meet all the heavy extra charges since incurred?—Yes, that is so.

4803. Can you put in a table such as is given in the English Statistical Abstract of the amounts of taxation imposed and reduced in each year from 1881–82 to 1895–96?—I could not put in such a table to-day, though I could have one prepared in a few days, if the Commission would like to have such a table before it. I can, however, give approximately the amounts by which the taxation has been increased or reduced between 1881–82 and 1895–96, though in dealing with 1895–96 it must always be remembered that we are dealing only with an estimate, which may or may not be realised. I may say also that the amounts cannot be taken out from the accounts, and they are only the best estimate which I can make at short notice of the changes due to alteration in taxation. The main changes between 1881–82 and 1895–96 have been the following. Salt; the following changes have been made. In Bengal the duty has been reduced from Rs. 2.14 to Rs. 2.8 a maund. In Burmah the duty has been raised from annas 3 to Re. 1, and these two changes together give a net decrease of Rx. 200,000.

4804. As between 1881–82 and now?—As between 1881–82 and now. Of course there have been other changes in the interval, but I am only taking those two fixed points.

4805. Would it apply to 1893–94, as well as to 1895–96?—Yes, it would apply to 1893–94.

4806–7. Is your estimate based on the actual facts or only the Budget estimate? When you say Rx. 200,000, does it allow for increase of consumption?—The way I framed the estimate is this. The duty in Bengal was reduced from Rs. 2·14 to Rs. 2 in 1882, and that reduction caused a diminution of the revenue from Rx. 2,572,000 in 1881–82 to Rx. 1,900,000 in 1882–83, and Rx. 1,905,000 in 1883–84. That reduction we may say caused an actual reduction of revenue of Rx. 670,000. In 1888 the duty was again raised to Rs. 2·8 a maund, and this raised the revenue as follows:—In 1884–85 Rx. 2,086,000; in 1885–86, Rx. 1,988,000; in 1886–87, Rx. 2,086,000; in 1887–88, Rx. 1,982–000; making a total for four years of Rx. 8,142,000; so that it was rather fluctuating then, but the average was Rx. 2,035,000. The increase in the rate of duty raised it in 1888–89 to Rx. 2,404,000 and in 1889–90 to Rx. 2,387,000, which gives an average for those two years of Rx. 2,395,000, so that we may say that that caused an increase of Rx. 360,000. And the difference between this figure and the reduction of Rx. 670,000 previously mentioned gives a net reduction of Rx. 310,000.

4808. Could you give us what the actual figures were in 1893–94 for salt?—Yes, I was giving you only the figures for Bengal, because that was the only place, apart from Burma, in which there had been a change, but the total salt revenue in 1893–94 was Rx. 8,229,000 in India.

4809–10. In Bengal?—Rx. 2,374,000 in 1893-94.

4811. And what was it in India in the beginning, in 1881–82?—Rx. 7,375,620 for the whole of India.

4812. And for the whole of India for 1893–94?—Rx. 8,229,000.

4813. Then you would attribute a large part of that increase to increase of consumption?—Yes.

4814. Not to the effect of taxation?—A very large part of it is due to increase of consumption.

4815. You put the decrease at Rx. 200,000?—Yes.

4816. Therefore you attribute something like Rx. 1,200,000 to increase of consumption?—Yes.

4817. But at all events we take your figure that you estimate the decrease of taxation over those 14 years at Rx. 200,000?—Yes, I have taken the decrease of Rx. 310,000, that I have just explained on account of the reduction in Bengal, and I have taken about Rx. 100,000 on account of the increase in the rate of duty in Burmah from 3 annas to Re. 1.

4818. I forget whether you mentioned just now what the rate in Bengal was before the reduction?—Rs. 2·14.

4819. And afterwards?—It was first reduced to Rs. 2 and then raised to Rs. 2·8, so that between 1881-82 and 1895–96, it is a reduction from 2·14 to 2·8.

Major Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

4820. That is net?—Yes.

4821. Then will you pass on to the Income tax?—The Income tax was substituted for a Licence tax and increased the revenue by about Rx. 850,000. The last year of the licence tax was 1885–86, when the revenue was Rx. 503,034; the first year of the income tax was 1886–87, when the revenue was Rx. 1,354,735, which gives Rx. 851,000 as the increase.

4822. That is for the whole of India?—Yes.

4823. And the method you take for estimating the effect of increase or diminution of taxation, is to test it by the result of that one year; in subsequent years you consider that variations are due to the operation of natural causes?—I have tested it by the result of one or two years; if there has been a very great rise in the second year, I have assumed that part of that is due to the increased taxation. But I find there was no such rise here. The income tax was extended to Burmah in 1888–89, and that brought in about Rx. 50,000 more, so that the whole increase due to the income tax may be taken at about Rx. 900,000, apart, of course, from further increases since. Then Customs duties. The various changes made may be taken as increasing the revenue net by Rx. 2,160,000, including the excise duty on cotton which has been taken under this head.

4824. Are those all the increases of which you are aware?—There have been other slight variations, but these are the main changes, and they give a net increased revenue of Rx. 2,860,000. I should take Rx. 3,000,000 as the outside increase. Of this, in 1893–94, the increase would be only Rx. 794,000, or say in round numbers, Rx. 800,000. This does not include increase in land revenue due to resettlements, nor any increase for the changes in excise duty, as to which the Commission has been already supplied with such information as could be obtained from India.

4825. That is to say, summing up your evidence, if if you take 1893–94 you would estimate from the best means at your disposal the effect of changes of taxation at Rx. 800,000, and for 1895–96 at Rx. 3,000,000?—Yes. Then I suppose that Upper Burma net revenue should also be excluded.

4826. Do you know what that is?—Yes. The net revenue from Upper Burma in 1893–94 was Rx. 803,000, and in 1895–96 Rx. 838,000.

4827–8. As I have said, these figures include a very large amount of new expenditure now incurred which was not incurred in the year 1881–82 or in the four years to 1885, of which I have given an average; and I wish to ascertain the progress of military expenditure, apart from those items of new expenditure. By that means we should be able to judge whether the charges which existed in those early years of our period of comparison have a tendency to increase. Can you tell us, therefore, the charge in each year since 1881–82 of expeditions which are represented, I take it, by Sir Henry Waterfield's column, page 10, headed "Special Operations"?—This table gives the actual figures from which Sir Henry Waterfield's table is worked out; in the column of "special operations" the actual charges in each year are given.*

4829. The new effective charges are as follows in the year 1893–94—the last ascertained—viz., special operations, Rx. 219,000; Upper Burma, Rx. 458,000; and additions to the army, Rx. 1,617,000, making a total of Rx. 2,294,000, I think, to which I suppose you would add the "special defence works" charge, which, I see, Sir Henry Waterfield puts outside, of Rx. 161,000, making Rx. 2,455,000?—Yes.

4830. On the other hand, did those works of special defence have any effect in reducing the charge for military works?—None whatever, I believe. (*Sir Edwin Collen.*) No, I think not.

4831. You have given us the revenue of Upper Burma at Rx. 838,000, I think—over 800,000—and the army charge for Upper Burma for this particular year, 1893–94, is Rx. 458,000?—(*Mr. Jacob.*) Yes.

4832. Of course, that would exclude civil expenditure?—Yes.

4833. Would the result of that be that the revenue of Upper Burma covers the expenditure, or is there a deficit?—I do not think the revenue of Upper Burma covers all the expenditure, including the whole of the military charges; but the revenue of the whole of Burma taken together would cover the whole of the expenditure in the province. I may say that it is rather difficult to separate, in some cases, the revenue of Upper Burma from that of Lower Burma. For instance, all Customs revenue is credited to Lower Burma, because it is collected there.

4834. In that figure of Rx. 838,000 that you have given us, is any allowance made for the customs duty levied in Lower Burma which really belongs to Upper Burma?—No. The actual increase in the customs revenue owing to the annexation of Upper Burma is very slight, because we used to levy duty upon articles going to Upper Burma before; but still if you attempt to make any distribution of the revenue between the two provinces, it would be necessary, I suppose, to credit a certain portion to Upper Burma.

4835. Quite so. But in reality you are not levying very much more than you were before?—No.

4836. As I said, the total of these modifications in the years 1893–4 and 1895–6 amounts to Rx. 2,455,000 which, deducted from the net military expenditure of that year of Rx. 15,338,000, leaves a balance of Rx. 12,883,000, representing what I may call the old charges, the charges that were in existence before those additions were made to the expenditure?—It represents the same kind of charges; of course there have been various improvements in matters of detail affecting the health and the comfort of the soldiers.

4837–8. Oh, of course; that we shall come to when we ask Sir Edwin Collen to go through the votes with us?—Yes.

(*Sir Edwin Collen.*) These are, of course, if I may say so, similar charges, but then under the various heads there are a great many additions in consequence of the improved position of the soldier, improvement of equipment and so on.

(*Mr. Jacob.*) There is one more general modification that ought to be made, I think, under military works; an addition was made to the military works grant of about 15 lacs a year on account of the annexation of Upper Burma—that is Rx. 150,000.

4839. Then that ought to be deducted also?—That ought also to be deducted, yes. That, upon the principle adopted, brings the net military expenditure for 1893–94 down to Rx. 12,733,000.

4840. And that balance of Rx. 12,733,000 would fairly compare with the charge in any year you like to take previous to 1885–86, say 1876–77?—Yes, subject to those general remarks as to increased charges.

4841. And of course subject also to the fact that there were special operations in some of those years. But if we take, for instance, 1875–76, in which the charge for special operations is small, we have got Rx. 12,108,000 as the military expenditure?—Yes.

4842. Therefore, the old existing charge would be represented in that year by Rx. 12,108,000, and in 1893–4, being the last year of completed accounts, by Rx. 12,733,000?—Yes.

4843. And therefore for the whole period the increase to be accounted for would not exceed about Rx. 600,000?—Yes, that is so.

4844. That is the point to which I wanted particularly to direct your attention—first of all, if possible, to put the army expenditure in the last year of completed accounts on the same basis as it was at the commencement of the period which Sir Henry Waterfield has given us, so that we may be able to see the extent of the increase and how it has arisen, leaving on one side those items of expenditure which have been added as matters of policy?—Yes.

4845. I see a great distinction between those two classes of expenditure for this reason: additions which are made as a consequence of a change or a development of policy are really outside the powers of the administrator to check; he is obliged to obey, but his powers of being economical are confined to the services which are constant; and, if we find that there has been a large increase upon those services, it is possible there might be extravagance; if, on the contrary, we find the increase on the old services very small, I think in justice to the administrator you ought to say that the army has been economically administered?—Yes; apart from the special charges and from exchange, the increase in India has been a little over Rx. 600,000 in 20 years.

* *See* Q. 12,181.

4846. Can you tell what the military force was in 1875–76 and what it is now, making an allowance for the increase of the army in 1886–87; the increase in the army was 10,000 Europeans and 20,000 Natives, was it not?—(*Sir Edwin Collen.*) Yes, in round numbers. The strength of the army now is 70,562 British troops, warrant officers, non-commissioned officers, rank and file, and 141,257 natives, non-commissioned officers and rank and file, according to the estimates of 1895–96.*

4847. And do you know at all what it was in 1875–76?—I am afraid I could not answer accurately off-hand, because of course the difference is not merely the addition to the strength of the army in 1885–86, but there have been fluctuations. In round numbers it was 60,000 British troops and about 120,000 Natives—that is to say, those were the numbers borne on the estimates.

4848. I see that British troops in 1875–76 were 61,562, and in 1892–93, 72,648?—Yes.

4849. I gather from the papers which you gave me, there was a reduction made about 1881–82?—There was a slight reduction made about 1881–82 after the report of the Army Commission of 1879; but this was in cadres, the establishment in sabres and bayonets remained practically unchanged; it is a question whether the officers are included in the figures just given; I did not include the officers.

4850. My figures include officers and men?—Apparently.

4851. I think you spoke of these troops as borne on the estimates?—There are certain troops like the Hyderabad contingent which are not borne on the military stimates.

4852–3. Are they paid from Indian revenue?—They are paid from the revenues of the Berars, not from the military estimates. I merely wished to show that the total in the army is larger than is shown in the Indian estimates.

4854. They are not paid from Indian revenues?—No.

4855. So that they do not affect the comparison we are speaking of?—No.

(*Mr. Jacob.*) The increased charge on account of that addition of strength is given in that table as Rx. 1,617,338.

4856. Now following the figures that you have given us with regard to taxation, and applying them to the year 1893–94, Sir Henry Waterfield gives the revenue at Rx. 50,338,000, and you have told us that you estimate the effect in that year of increased taxation at Rx. 800,000?—Yes, and of the addition of the Upper Burma revenue at about Rx. 800,000; that would be an increase of about Rx. 1,600,000 in all.

4857. That would give a revenue on the same basis as in the earlier years of Sir Henry Waterfield's table of Rx. 48,700,000?—Rx. 48,738,000.

4858. Against which, if we carry the estimate back and put it on the same footing as it was in those earlier years, we get a charge of Rx. 12,733,000, do we not?—Yes.

4859. And comparing the same figures of revenue and army expenditure for 1875–76 we have a revenue of Rx. 40,005,000, and an army expenditure of Rx. 12,108,000. I think it is pretty clear to us, is it not, that the Rx. 12,108,000 is a considerably higher per-centage on Rx. 40,000,000, than Rx. 12,738,000 on Rx. 48,700,000?—Yes, it certainly is higher.

4860. Perhaps you would not mind putting in the per-centage?—Yes. The per-centage for 1875–76 was 30·3, against a per-centage of 26·1 for 1893–94.

4861. In fact, the per-centage of the old-established charges has fallen?—Yes.

4862. Sir Henry Waterfield has in his table stated the revenue and expenditure net, that is to say he deducts receipts which are not taxation. Could you give us a table for those years of the gross army expenditure and the receipts which Sir Henry Waterfield deducts from the gross expenditure, leaving the net expenditure as given in Sir Henry's tables?—Yes, this is the table.

4863. Do you happen to know how he divides those receipts among the grants? I suppose he does not attempt that; he deducts them *en bloc*, does he not?—No, they are divided against the grants in the accounts.

4864. Therefore, in these divisions which he makes, such as "special operations" and "special defence works," and so forth, the receipts attributable to those headings would be put against them?—Yes.

4865. Passing on now to the other heads of expenditure, besides what Sir Henry Waterfield calls the "other charges," you have non-effective charges and military works. Can you give us a table of the amount of those in each year?—Yes, my table gives the non-effective charges too, the second part of the table.

4866–8. It does not give the military works, does it?—No; I have given you the net amount, but I have not given you the gross amounts yet, I can add them to the table.

4869. Are there any heavy receipts on account of military works?—No, they are not very heavy. For 1893–94 the receipts from military works amounted to Rx. 46,000. They do not vary very much from that except in one or two years when there were exceptional receipts.

4870. I think, Mr. Jacob, that completes, for the moment, the general questions which I wished to ask on the result of Sir Henry Waterfield's tables, always reserving the question of the modifications to be made on account of exchange allowances in India?—Yes.

4871. I will now ask Sir Edwin Collen if he will take the totals of the estimates on the lines of the memorandum which he has given me?—(*Sir Edwin Collen.*) Beginning at what year?

4872. I propose to follow the lines that you have laid down here. You begin with a short comparison with the army charges in India in 1875–76 and 1883–84, following that up by comparing the army charges in India in 1884–85, and 1893–94; that is to say, you divide the 20 years into two periods of 10 years each, enabling the Commission thereby to note what have been the remarkable changes in the different heads of expenditure during that time?—Yes.

4873. The Indian Army Estimates I think are divided into 20 votes?—Into 20 grants.

4874. Of which the two biggest grants are Commissariat establishments, supplies and services, and Regimental Pay and Allowances?—Yes.

4875. Those between them made up in 1875–76 between Rx. 8,000,000 and 9,000,000 out of a total of Rx. 12,000,000?—Yes, out of a total of Rx. 11,725,000.

4876. Therefore those two grants really comprehend the largest part of the expenditure?—Yes.

4877. I will now, if you please, take you through the grants and ask you for any remarks that occur to you upon them. Grant I. is Army and Garrison Staff?—Yes.

4878. In 1875–76 that amounted in round figures to Rx. 505,000?—Yes.

4879. In 1883–84 it amounted to Rx. 517,000, showing an increase of Rx. 12,600. Are there any points in that grant which you would notice. The increase is not a very large one?—It is not very large. It is chiefly due to the higher tour and contingent expenses during that period.

4880. What do you call the higher tour?—The higher tour charges, I should have said, of the Commander-in-Chief; he made longer inspections, and therefore the charge was increased. And there was also the creation of an Intelligence Department and an increased number of musketry inspectors, and other minor items.

4881–2. Well, I suppose the creation of the Intelligence Department would go a long way to account for that sum?—Yes, it would. Of course there are many items. These are only the chief ones, but the total in the year includes other additional military expenditure.

4883. Then I suppose the increased number of musketry inspectors you look upon as a necessary consequence of having to teach troops the use of new arms?—Yes, for the increased efficiency of the army. Then, of course, there were sundry items of decrease; those I could give if the Commission wanted.

4884. I do not think that it will be necessary to go into that detail; you place before us two items which go far to account for such an increase as Rx. 13,000?—Yes. Might I say that under each of those grants we have decreased charges in many cases by economies, and we have made increases on account of the improved efficiency of the army, the better equipment of the army,

* *See* Appendix 15.

Major-Gen. Sir E. H. H. Colten, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military

the improvement of the position of the soldier, and so forth, so that we may say that we have provided a good deal of the increase by abolition of appointments and decreases of expenditure in other ways.

4885. Grant 2. Administrative staff. In 1875–76 Rx. 182,000; in 1883–84 Rx. 185,000; increase Rx. 3,000?—This was really due chiefly to a very small increase of the Military Accounts Department in 1876.

4886. I am going to reserve to the last the two great grants, because they are those upon which, no doubt, you will have most to say; and I will now run through the others. Grant 5. Remount and Veterinary Establishments. 1875–76, Rx. 162,000; 1883–84, Rx. 129,000; decrease, Rx. 33,000?—I must explain in regard to that decrease that during the period under reference horse-breeding charges were transferred to the Civil account.

4887–8. Can you tell us what sort of a charge that would have been?—In 1888–84 it was about Rx. 20,000.

4889. Therefore that does not account for the whole of the decrease?—No. Then another transfer was the cost of the Hissar cattle farm; that was transferred to Grant 4, Commissariat; but even taking those facts into account, there was a reduction chiefly owing to the gradual abolition of the old Stud Department, and the reduction in the number of appointments.

4890. On the whole that vote shows a real decrease after allowing for those changes due to transfers?—Yes, I think so.

4891. Then we come to Clothing establishment, supplies and services. 1875–76, Rx. 115,000; in 1883–84, Rx. 123,000; increase Rx. 8,000 odd?—That was chiefly due to increased purchase of local supplies in India.

4892–3. Does that represent the whole of the clothing charge in India in those two years?—Yes.

4894–5. But is there any large item of clothing supplied from England, that would come under another head?—Yes; a large amount comes out from home for the British troops. The materials are worked up in India.

4896. But would the grant cover the whole charge for the uniforms of the native troops?—Yes, it did in those days.

4897. When you say "increased purchase of local supplies," do you mean that previously you got more from England, and that you took in the latter years to buying more on the spot?—Yes, I think that is the explanation.

4898. Then we come to Grant 7, Barrack Establishment—supplies and services. 1875–76, Rx. 216,000; 1883–84, Rx. 185,060; decrease, Rx. 31,000 odd?—Here, again, it is not an actual decrease, because the charges for establishments and barrack furniture were transferred to the Public Works Department, in the Bombay Presidency, in 1881. But apart from this, there were reductions in the period under examination in punkha-pulling establishments, tattie-watering establishments, and other barrack charges.

4899. Do you know at all what the amount of the charge of barrack furniture transferred to the Public Works Department would amount to; that was only in Bombay, I think?—That was only in Bombay, yes. I am afraid I have not got it at this moment, but I have no doubt I could obtain it from India.

4900. Would it represent the total of that decrease?—I should think it would contribute very considerably to the decrease, but I cannot give an absolutely accurate answer.

4901. Grant 8. Administration of martial law. Rx. 32,000 in 1875-76; Rx. 28,000 in 1883–84; decrease Rx. 3,600. To what is that decrease due?—It is due to the abolition of appointments; the staff of the Judge Advocate General's Department was reduced by several appointments in that time.

4902. We now come to a grant in which the increase was very large, namely, Medical establishment—supplies and services. In 1875–76 it was Rx. 466,000; in 1883–84, Rx. 519,000; increase, Rx. 93,000?—There, again, it is exceedingly difficulty to say exactly how the increase is accounted for, because there have been so many important changes in the mode of accounting for the expenditure; it is very difficult to make any comparison. There have been several transfers from this grant to other grants; there was, for example, a transfer to this grant of the pay of British Medical Officers from grants 1 and 3. On the other hand, there was a reduction of medical officers in 1881–82 from 360 to 300. Then there was a transfer of the pay of the Army Hospital Native Corps from Grants 1 and 3, and there was a transfer of the charges on account of the Subordinate Medical Department. But a *bonâ fide* increase is that in 1876 all the officers of the Army Medical Department were promoted to surgeons-major after 12 years' service; that caused an increase of Rx. 22,000; and previously, in 1873, the proportion of higher to lower ranks of the British Army Medical Department in India was re-adjusted; this gave an increase of Rx. 48,000.

4903. That is a *bonâ fide* increase?—Yes. In 1880 the dual administrative staff was abolished, there was a reduction of 14 officers; and there has been a more extended use of local supplies in the Medical Department, which accounts for some of the increase. I may say that the details are given in the reviews of military expenditure which I have.

4904–5. Which are given from year to year?—They are compiled generally for certain periods by the Accountant-General.

4906. Do you mean a decennial review?—I do not think there is any period fixed.

4907. But taking this amount of Rx. 93,000 have you any idea what the amount transferred to this grant from other grants would represent?—I could give you this, but it would take some time.

4908. It is rather important if we are examining the increases to know how much of an increase is due to transfer from elsewhere, because the balance only is a *bonâ fide* increase?—Yes. The net expenditure—this is the period 1872–73 to 1883–84—after deducting the receipts, in Grant 9 was Rx. 363,000; the expenditure of 1883–84 after deducting the transfer of Rx. 230,000 was Rx. 360,000.

4909. And what was the former grant?—The former year was Rx. 363,000; that was for 1872–73. Rx. 363,000 against the expenditure of 1883–84 which, after deducting the transfer of Rx. 230,000 was Rx. 360,000.

4910. Then you may say they are practically the same?—Yes, they are. Then the receipts in 1883–84 must be deducted; that, of course, is a question of the receipts, and we are dealing with gross figures in Sir Donald Macfarlane's return.

4911. But putting it in round figures, the transfers would have accounted almost for the increase?—I think so, because there have been considerable reductions in the number of appointments and the number of medical officers.

4912. Coming now to Grant 10, which is a very large grant—ordnance establishments, stores, and camp equipage. In 1875–76 that amounted to Rx. 570,000, and in 1883–84 to Rx. 519,000, showing a decrease over that period of Rx. 51,000. Have you any remarks to make upon that?—It happened that there was a decrease—I suppose less stores were purchased and manufactured in that year 1883–84. But, taking for instance 1882–83, the amount was Rx. 610,000 and, I think, it may be said if one looks at the succeeding years, that the tendency in the Ordnance Department is towards increase, for two main reasons. Because we buy more local supplies in India and we manufacture more, and secondly the equipments of the troops of all kinds cost more than they did in the earlier years. So that I would not say that there had been a real decrease, because it happened in that year there were fewer stores bought, but I should say it was not very much—taking an average of years—over the earlier years. Really the increased expenditure is due to increase in pay of establishments and equipments. And then we made great reductions in 1875 and subsequent years consequent on the recommendations of a special Ordnance Commission, and there have been in the last 20 or 30 years a large number of ordnance establishments abolished and reduced. Then again, in 1879 we went over the whole of the question of reserves; we found that certain reserves were redundant, they were not required, and after the Commander-in-Chief had been consulted these were reduced. So that there have been large reductions in the Ordnance Department, although there has been a progressive increase in expenditure due, as I think, to those causes which I have specified.

4913. In confirmation of what you say about that year not being a very good sample year, if you add the

expenditure of 1882–83 and 1883–84 together, and divide it by two, you get Rx. 565,000 against Rx. 570,000 in 1875–76, and that looks very much as if the expenditure in 1882–83 had been abnormally large, and the expenditure of 1883–84 abnormally small, does it not?—Yes. Taking 1875–76 or 1878–79, that year it was Rx. 913,000, then it fell again in 1879–80 to Rx. 773,000.

4914. (*Sir Ralph Knox.*) This includes both Home and Indian expenditure?—Indian expenditure only.

4915. (*Chairman.*) We are dealing solely and entirely with Indian expenditure now. All you told us before, Sir Edwin, was that of late there has been a considerable addition I think, had there not, to the local supplies in India. For instance, ammunition and so forth?—Yes, a large development.

4916. But had that come into operation before 1884?—Partly; it had been going on for many years.

4917. Then, on the whole, with regard to this vote should we take it as your view that vigorous reductions on one side over the period now under review practically neutralised increases on the other side, and that you may say that at that time the expenditure was pretty stationary?—I think I may say that the reductions have gone a long way to counterbalance the increase.

4918. Of course we are confining ourselves now only to the years up to 1883–84?—Yes.

4919. At all events there was no increase at that time on the ordinary expenditure, that need call for any particular remark?—No. I should like to emphasise the remark that there might have been a real extra expenditure in some directions, as there was a real reduction by the reduction of the large number of depôts about India.

4920. That is what I gathered from what you said before?—It followed on the policy which the Government accepted in 1875–76 consequent on the report of the Ordnance Commission of 1874–75. It followed on the acceptance of that policy to concentrate rather than disperse ordnance establishments, and that has been carried out to a very great extent.

4921–3. (*Sir Ralph Knox.*) But during these years, 1875–6 to 1883–4, was there not a very large reduction in home expenditure for ordnance stores?—I am not quite sure; very probably, I think.

4924–5. I find here in Table XVII. expenditure on military stores, ordnance and miscellaneous in England; for 1875–76 it starts with an expenditure of 470,000*l.*, which was increased the next year by 28,000*l.*, and the next by 45,000*l.*; then there was a decrease of 291,000*l.*, next, a decrease of 4,600*l.*, next, 47,000*l.*, next, 24,000*l.*, and so on?—Yes, there was a considerable decrease—that is to say, after 1877–78. Of course, it may be replied that there may have been an excessive stock obtained previously.

4926. Was there anything in 1875–76 in the nature of re-armament or anything of that kind—in small arms?—There is no doubt during that period there were large additions caused by the equipment of British troops with the Martini-Henry rifle; the native troops were also armed with Sniders and the issue of R.M.L. guns to the artillery took place. These re-armaments took place from 1874–5 to 1877–8.

4927. (*Chairman.*) The next is Grant 11. Ecclesiastical. In 1875–76 that amounted to Rx. 22,000; in 1883–84, Rx. 28,000; increase Rx. 6,000?—That is chiefly due, I think, to an increase in the scale of pay to Roman Catholic priests.

4928. Grant 12. Education. In 1875–76 it was Rx. 43,000; in 1883–84, Rx. 40,000, showing a decrease of Rx. 3,000?—As far as I can make out that was mainly due to the increased economy in the military asylums which are placed under this head; the affairs of the military asylums were investigated by a committee, and I think the general result was economy, which I think accounts for the very small decrease.

4929. Then Grant 13. Sea Transport Charges. 1875–76, Rx. 68,000; 1883–84, Rx. 62,000; decrease, Rx. 6,000. May I ask what charges does this cover? merely coast transport?—Generally Indian port-to-port transport; but also certain charges connected—in those days certainly—with the overland troop service, that were paid for in Bombay, passages of officers in private vessels, passages home.

4930. By charges connected with the overland troop service do you mean coming home or going out?—Coming home. They consisted of charges for bedding, washing, and so on I think.

4931. The general burden of transport is borne in England, is it not?—Yes, it is.

4932. Grant 14. Miscellaneous services. In 1875–76, Rx. 280,000; in 1883–84, Rx. 286,000; showing an increase of Rx. 6,000. What do those miscellaneous charges cover?—All charges which cannot appropriately be classified under the other heads. It is not a grant that really admits of much comparison, because it varies very much from year to year. For instance, the accounts of a small expedition brought to a total may be put under the Grant 14; but I can, of course, give the Commission the details of the charges. They are very numerous.

4933. Do you happen to have an account by you from which you can read us in any one year what are the services covered by the vote?—Yes. The services are the examinations of military officers in native languages, donations to Officers' Widows Fund of British troops; grant in aidof the United Service Institution, grant in aid of the Soldiers' Total Abstinence Association, grant in aid of the Rifle Association, house rent for military telegraph officers, munshi allowance to officers and men on acquisition of native languages, certain charitable allowances.

4934. Those you are mentioning now would be constant charges, would they not?—Yes, they would.

4935. What would the constant charges amount to in round figures, do you think?—It would be difficult to say as camps of exercise and instruction would be entered, and those varied a good deal till late years, when a fixed sum has been given. Then we come to the different expeditions, certain arrear charges, and military charges on account of the Gilgit agency.

4936. Then do all extra charges connected with expeditions fall on this vote?—Well, the small expeditions are generally accounted for separately, and then placed as a total under this particular grant.

4937. I see in one of the papers before us there is an account of the expenditure forward from 1884–85, and I am struck by the difference. For instance, in 1885–86 there is an expenditure of Rx. 3,302,000?—Under grant 14?

4938. (*Mr. Buchanan.*) In 1885–86?—That, no doubt, was Quetta; that was over two crores, I think.

4939. (*Chairman.*) Grant 15 is Volunteer Corps, which in 1875–76 was Rx. 15,000; in 1883–84, was Rx. 60,000; increase, Rx. 45,000?—That is really due to the development of the volunteer movement—the increase in numbers.

4940. Who are these volunteers?—They are Europeans and Eurasians. There are nearly 30,000 of them now, I think, 28,000 to 30,000.

4941. Then we come to rewards for military services, Grant 16. 1875–76, Rx. 10,000; 1883–84, nearly Rx. 9,000; decrease, Rx. 1,400. What are these?—The Indian expenditure includes good service pensions, Victoria cross annuities, annuities and gratuities for meritorious services, and, for the native army, the allowances for the Order of British India and the Order of Merit.

4942. It strikes one as remarkable that there should be so large a decrease for this service?—It happened, I think, in this way. There was an increase in the Order on the 1st January 1877, but there was a subsequent transfer to Grant 18, when the native officers were pensioned, because the allowance was included in native officers' pensions.

4943. At all events, that is a very small affair?—Very small.

4944. Grant 17. Military Pensions to Europeans. In 1875 we may call it in round figures Rx. 100,000; in 1884 Rx. 105,000; the increase being pretty nearly Rx. 6,000. What was that due to?—That was due to an increase in the number of retired officers living in India, and probably to the capitalisation of pensions, which was brought in in 1881; they were allowed to capitalise one-third of their pensions before leaving India, and that, of course, was paid in rupees.

4945. Then would that represent the pensions of European officers and soldiers who happened to remain in India?—Yes, that would represent the actual payments in India, including the commutation of certain portions of the pensions which are in sterling.

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

4946. These figures, of course, are the gross figures; you have not deducted from them the receipts?—No.

4947. Then we come to Grant 18. Military Pensions to Natives. 1876-76, Rx. 512,000; 1883-84, Rx. 647,000; increase, Rx. 135,000. Are those pensions to the Native forces?—Yes, invalid and wound pensions of warrant and non-commissioned officers, and what are called family pensions of the Native army; that is to say, the pension that is given in the shape of a sort of compassionate allowance to the heir of a native soldier who dies on foreign service.

4948. Are the soldiers in the Native army entitled to pension as a rule?—Yes, under certain rules.

4949. I suppose after a certain amount of service?—Yes.

4950. Are the native soldiers in India engaged for long service?—Well, it may be really called a long service army. After 15 years a man gets his pension, if invalided, even enlisted before 30th November 1886, but the ordinary pension now is after 21 years, and can be claimed without invaliding. There is also a supsrior rate of pension for men of unblemished character after 32 years' service.

4951. Then, in fact, you encourage a service of 21 years?—Yes, but I might explain that non-commissioned officers and soldiers are entitled to discharge in time of peace, after three years' service under certain restrictions, and we allow them to pass to the reserve, as far as the limit of the reserve permits, after five years' service and not more than 12 years' service with the colours.

4952. In which case they receive a retaining fee, I suppose?—Yes, a retaining fee of three rupees.

4953. Not a pension?—No, but men in the reserve get pensioned after 25 years' colour and reserve service

4954. Would you expect to see a continuous increase in this grant, because, if the Native army has, as a condition of service, a pension attached to it, apart from increasing the force, you would expect eventually to arrive at a more or less normal figure?—Yes, provided that the figures are not disturbed by wars and expeditions, because those would naturally tend to an increase in the pension list.

4955. Quite so, and India is always at war?—This grant, of course, does tend to increase up to certain limits.

4956. This is a very large increase; there has been no great increase in the army during this period, and here you have an increase from 500,000 to 647,000, or 135,000, which is a very large per-centage on the 500,000?—Well, that was due to the retirement of men who had enlisted, during 1857, at a greater age than is allowed in normal times, to improvement in pensions in 1878, and it was due also to the Afghan war.

4957. (*Sir Ralph Knox.*) Is there any reserve pay?—Yes; I have explained it, I think.

4958-60. Is there any charge for the reserve in this year, 1883-4?—No, because the reserve was not established till 1885-86, and it has made slow progress. I may mention also that the pensions are derived from a much larger army than now exists.

4961. (*Chairman.*) You might class Grant 19—Widows' Pensions and Compassionate Allowances—with the former one, might you not; it is not a very big grant, Rx. 18,000 in 1875-76, and Rx. 20,000 in 1883-84, increase Rx. 2,000. I suppose that would be due to the Afghan War, would it not?—Well, the increase is very small.

4962. Then we come to Grant 20—Departmental Pensions—which was Rx. 23,000, and rose to Rx. 40,000, showing an increase of Rx. 17,000. What is that grant for?—The grant includes pensions and gratuities given under civil rules to uncovenanted servants in military employment, departmental officers; and in this period, no doubt, there was a good deal of re-organisation of offices and enlargement, as they had all been cut down very low in the year succeeding the Mutiny. I think that accounts for the increase of the pension charge.

4963. A large portion of these pensions would be to natives, would they not?—Yes.

4964. That takes us through all the Grants except the two largest, and I will now go back to Grant 3, Regimental Pay and Allowances. In 1875-76 that amounted to Rx. 6,500,000, and in 1883-84 it was Rx. 6,141,000?—The decrease was Rx. 358,650.

4965. Therefore we have got a decrease on regimental pay and allowances of the large amount of Rx. 358,000 upon an expenditure in 1875-76 of Rx. 6,500,000. Have you any remarks to offer upon that Grant?—There was a very large decrease in the charge consequent on the recommendations of the special Army Organisation Commission of 1879. The Commission proposed to reduce 30 native infantry regiments and 10 cavalry regiments, while the Government of India recommended the reduction of 18 infantry and 4 cavalry regiments. Both in the recommendations of the Commissions and in the proposals of the Government of India, it was not intended to reduce the whole strength of the army, but to keep the number of men at about the same figure. The Commission of 1879 was instituted with a view to seeing how expenditure could be reduced as well as to see how improvement could be effected in the organisation of the army, and I think that the large savings are chiefly due to these reductions.

4966. That is to say, the Government did adopt a number of recommendations made by that Commission with a view to economy?—Yes.

4967-8. Have you got the report of that Commission at hand here?—I have not got it at the present moment; I have an abstract of the different recommendations that were proposed.

4969-70. It has been laid before Parliament, has it not?—Yes.

4971. (*Sir Ralph Knox.*) I understand there was no reduction in the total force, in the total numbers?—No.

4972. It was a re-organisation?—A re-organisation, yes.

4973. (*Chairman.*) Still one is struck by the fact that the comparison of the tenth year should show so considerable a reduction as Rx. 358,000?—Of course, here again one is met by the fact that there were transfers, there was a transfer to Grant 9 of the pay of medical officers; I think it was in 1882-83; and then there was a very large reduction of artillery in 1881-82 from 86 batteries to 77 batteries.

4974. That meant an absolute reduction of men, did it not?—Yes, and there was a large reduction of the number of officers in India, who were left unemployed after the Mutiny.

4975. That is a reduction of non-effective charge in fact?—No, they were not non-effective; they were kept on the active list, but they were redundant officers for whom places could not be found.

4976. And they have gradually disappeared?—Yes, they have gradually disappeared from the effective list.

4977. But there was no great change during that time in your scales of pay and allowances evidently?—There were various changes affecting the Native army in the way of increase, that is to say, improvement in position.

4978. Still they could not have been heavy financially in view of this result?—I might say that in 1877-78 the cost of certain concessions to the native army was about Rx. 120,000.

4979-80. The transfers, I think we gathered, compared with the total cost of this service, were not very much; I think the figure you gave in regard to the transfer in the medical grant was a considerable one upon the amount of that grant, but it would not be very large as affecting the total of this grant, would it?—The total amount transferred from the grant, for medical officers was say Rx. 190,000. Then there were about Rx. 57,000 for hospital servants and subordinate medical establishment, who were also transferred. Then, again, only a portion of this charge I may say, appeared in Grant 9 owing to the reduction of medical officers which I mentioned.

4982. Yes, quite so. But you see that gives you Rx. 247,000 transferred, leaving out of a decrease of Rx. 358,000 about Rx. 100,000 still to the good. If the increase in 1878, which was only one instance, was Rx. 120,000, there must have been very considerable counter-balancing reductions if you were improving the condition of the soldier in the meantime?—Yes, there were. The reduction of the Native army in 1882, re-organisation of Artillery district staff, and other items of decrease accounted for a good deal of savings.

4982. (*Sir Donald Stewart.*) Was there not a large reduction due to the fact that the number of batteries of artillery was reduced?—I think I mentioned that.

4983. And you got rid of the number of officers belonging to the regiments reduced?—I mentioned that there was a reduction in 1882 of artillery from 86 batteries to 77; and then there was some reduction in officers, but I think not any very great reduction. Of course when the army was reduced, each regiment that remained got another officer; however, there was a considerable reduction too.

4984. There was a reduction of all charges due to regimental organisation?—Yes, quite so.

4985. You got rid of all the bands and messes, and a certain number of officers and other charges, medical, and so forth?—Yes, that is so.

4986. These were all reduced largely?—They were reduced largely, but at the same time one officer was added to each of the remaining regiments. I may mention that there were many measures of expenditure increasing the cost of the British Army.

4987. (*Chairman.*) When the army was increased in 1886 was the artillery increased back to its old force?—I think it was increased by 11 batteries; giving a larger number of batteries than we had before 1882 by 2, or 88 against 86.

4988. Now we pass to Grant 4. Commissariat establishments, supplies and services. That on the contrary shows a considerable increase. In 1875–76 it was Rx. 1,941,000; in 1883–84 it was Rx. 2,221,000, showing an increase of Rx. 280,000?—The increase is really due to increased consumption of locally brewed malt liquor, to provisions for Native soldiers at Quetta, to compensation for dearness of food to Bengal cavalry which was granted in 1877; to increase in the pay of the lower ranks of the Commissariat, and to the reorganisation of the transport after the Afghan war. Those are the main heads; of course there are many details.

4989. What do you mean by increasing the consumption of locally brewed malt liquor; was that formerly all imported?—It was formerly imported.

4990. Would that account for a considerable part of this increase?—Yes, I think so—a very large part.

4991. I see you say that the increase was also due to compensation for dearness of food to Bengal cavalry in 1877; was that a serious increase?—Yes; I do not know the exact amount, but it was considerable. The method of calculating the compensation for the dearness of forage was also changed in 1875 to the advantage of the soldier.

4992. I notice in a paper among those you were kind enough to give me, correspondence in India which pointed to the fact that there had been a very considerable increase in food prices which had to be taken into consideration?—Yes.

4993. That question comes probably more conveniently later?—I will venture to enter upon that when we come to the later period.

4994. Quite so. Then may I take it that we may attribute a very large amount of this considerable increase to increased cost of food?—And to the fact that the privilege was extended to the Bengal cavalry, who had not enjoyed it before; I think that the compensation charges did not rise to a very extraordinary extent. It varies very much with certain years; if you have a bad year as to prices, the cost rises. Now I notice in 1875–76, compensation under the head of "compensation to natives for dearness of "provisions" was about Rx. 19,420. In 1883–84, it was Rx. 42,000, so that it had risen; still, there was no very extraordinary rise considering the changes I have specified.

4995–7. With regard to these two most important grants (3 and 4), and I would add the Ordnance grant, which appears to me to be a very important grant, you could give us the causes of increase or decrease a little more in detail, and hand it in to us as a table for this period, 1875–6 to 1883–4. Probably we should see whether continuation is necessary when we deal with the second period of 10 years?—I can do so, certainly.*

4998. That I think finishes nearly all that is to be said about the detail of increase for the period from 1875–76 to 1883–84. I do not know whether you wish to add anything before we pass on the next decennial period?—No, I do not think so.

4999. We now come to the next decennial period from 1884–85 to 1893–94, and I think we had better follow your memorandum and take the grants throughout in the same way. Therefore I will begin with Grant 1—Army and Garrison staff. 1884–85, Rx. 485,000; 1893–94, Rx. 527,000; increase Rx. 42,000. That is an increase during this 10 years considerably larger than in the previous 10 years?—There was a reduction under the head of Commander-in-Chief due to a less charge for the tours, and there was a reduction in the Adjutant-General's Department, but that was chiefly due to the abolition of the appointment of Deputy Adjutant-General of Royal Artillery: and there was an increase by the appointment of an Inspector-General of Cavalry in 1887, and, of course, under the head of musketry there has been a considerable increase due to the necessity of providing higher musketry instruction in the army. Then, again, under the head of Quartermaster-General's Department, there was a reduction consequent on the re-organisation of the staff in 1889–90, the two separate departments of the Adjutant-General's and the Quartermaster General's being amalgamated. I may mention that there was a committee on commands and staff of which the Quartermaster-General was president, and the Deputy Adjutant-General and I were members. We recommended considerable reductions in the staff, and although in consequence of the extension of army commands to Upper Burma and on the frontier, and so on, there was not an absolute decrease of expenditure, yet we were able to meet those extensions from a sum which was not very much greater, I think, than the previous expenditure on the smaller area.

5000. Then I observe that one of the largest increases was in district commands and staff, very nearly Rx. 20,000?—That, of course, is largely due to the additional requirements of Upper Burma: but as I point out the increase has been much less than it otherwise would have been if we had not made considerable reductions.

5001. Now would that increase caused by Upper Burma appear under that head of Sir Henry Waterfield's paper which gives the charges of Upper Burma; I suppose not?—I should be rather diffident in answering that question. A part of it might so appear.

5002. Then there is another large increase in what is called "station conservancy," which rose from Rx. 5,000 to Rx. 20,000?—That is due to increased sanitary requirements. I think it has been transferred, since this period began, to the medical grant, but I may say that a great deal of expenditure in India is due to the increased attention paid to sanitary matters, and to the conviction that these matters are essential, and also to the fact that the Army Sanitary Commission at home presses the Secretary of State and the Secretary of State presses the Government of India, to make improvements in the sanitary condition of contonments especially; in years gone by the Government were content with a very modest style of buildings for native troops; but the State has had of late years to spend a great deal of money on improving the huts, or barracks, and also in improving generally the sanitary arrangements of stations, in water supply and drainage, &c. Those improvements are, I venture to think, most legitimate objects of expenditure, but a great deal of money is required.

5003. Then we may sum up this grant by saying that the largest increases have been first of all in the district commands and staff due to Upper Burma, that is Rx. 18,000; then Rx. 15,000 on sanitary requirements of station conservancy. On the other hand, you have had a very considerable decrease by the re-organisation of the Quartermaster-General's Department?—And the staff, yes. Of course, the increase provided for the establishment of an Intelligence Department in India—the re-organisation of it rather in 1892–3 because the Intelligence Department was created in 1876.

5004. It was then made more expensive?—It was made more expensive, and a branch started for Burma, and a mobilization branch at army headquarters.

5005. Then shall we find under other grants that there is an increase of expense due to the occupation of Burma, but not included in the special account for Burma?—Not to any great extent. I think it may occur in some cases, but I am not certain. I should like to be sure before I gave a decided answer whether, in compiling the extra expenditure on account of Upper Burma they take into account the extra staff; as far as I know they do.

* *See* Appendix 18.

Major.-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacobs, C.S.I.

11 March 1896.

Military.

5006. Taking staff and commands, I see that there is a very large increase in the item "garrison and station staff"; what is the meaning of that?—We had a certain number of district stations at which there were brigade majors, that would come under brigades; and a certain number of these officers were made station-staff officers of the first class. They are local staff officers. And there were certain brigade commands abolished, and colonels on the staff were appointed. So I think it means merely that one class of expenditure was diminished and the other class was increased, but not in the same proportion.

5007. Are those like depôt appointments?—The station staff officer is a local and not a district staff officer.

5008. Then we next come to Grant 2—Administrative staff. In 1884-85 it was Rx. 186,000; in 1893-94 it was Rx. 200,000; increase Rx. 14,000. That is against an increase in the previous 10 years of Rx. 3,000?—This is accounted for by the creation of an additional circle of accounts. There used to be only three—Bengal, Madras, and Bombay, but Bengal was split up into Punjab and Bengal, so that we have four instead of three.

5009. We come here again to a separate establishment in Burma?—Yes, but of course the Burma charges are spread all over the Budget.

5010. You probably would not know how far Sir Henry Waterfield has been able to extract them from the grants, and whether therefore the items under the head of Burma have been so extracted?—Yes, I should think most probably that they have been eliminated. He has got them under his column "Burma" because of course, although the charges are spread over the grants, they are collected as an account; they are made into a separate account for statistical purposes, or to give information as to the decrease of military expenditure caused by Upper Burma which goes on year by year.

5011. Then I think we will do as we did in the first case, Sir Edwin, and reserve the two big votes of Pay and Commissariat to the end, and go on to Grant 5, Remount and Veterinary Establishments. A large increase is here, because it has risen from Rx. 158,000 to Rx. 297,000; increase, Rx. 138,000. That is against in the previous 10 years a decrease of Rx. 33,000?—Here again there was a transfer from one grant to the other. In 1887-88 the pay of veterinary surgeons in charge of station hospitals was transferred to this grant from Grant 3; that comes to Rx. 21,787.

5012. Then we come to a large increase in your stud?—After the old Stud Department was abolished, the system was gradually inaugurated which now prevails and depôts have been successively created, and the Army Remount Department started and developed.

5013. In the previous 10 years you account for the decrease by the gradual abolition of the Stud Department; may I take it that in the subsequent years the military authorities came to the conclusion that they had over-reduced and took a larger training establishment for horses?—I think it was due to the abolition of the Stud Department. The new arrangement was founded on certain principles and governed by a certain policy, whose object was the substitution of a different system, which really depends upon the horse breeding operations carried out throughout the country as an industry. We do not breed horses now as we did in the days of the old Stud Department, but we depend on the breeding which we encourage in the country, and to encourage the breeding of suitable horses, rearing depôts have been established; young stock are purchased at good prices, and the increase here is caused by the gradual evolution of the Horse-breeding department—the Army Remount department—from what was the old Stud Department, and since 1890 the charges for horse-breeding has been transferred to civil .

5014. Bringing it down simply to a matter of pounds, shillings, and pence, the abolition of the old department made a saving of Rx. 33,000, and the machinery replacing it cost something like Rx. 138,000; I am taking the main figures which show that the new arrangement is about Rx. 100,000 more costly than the old?—But I think we must take into account the increase of the army in that case and many other items; I should not like to answer that question in the affirmative offhand. There has also been, it must be remembered, an increase in the price of Ordnance mules, and in later years in the price at which Australian remounts are purchased.

5015. I said simply looking at it as a matter of pounds, shillings, and pence, it has that look on the face of it, has it not?—Yes, but a comparision is most difficult, because the period of 1875-6 was the period of reduction, the gradual abolition of the Stud Department practically beginning from 1873-74, and the second period has been that of increase. The way in which horse-breeding charges have been transferred increases the difficulty of comparison.

5016. Now I observe in this case, that you give as a reason "the feed of cattle and remounts, larger "numbers being now kept at depôts, also reserve of "ordnance mules, and siege train bullocks," and you give as a reason for increase "rise in prices, namely, "barley and gram." Has that rise been so marked that you have found it a serious item in the accounts?—Yes, I think so, but I do not know that the rise has been very extraordinary; at the same time it undoubtedly accounts for some part of the expenditure.

5017. In these 10 years the Clothing establishment, Grant VI., shows an increase of Rx. 100,000 on Rx. 139,000?—Yes.

5018. That is a very large increase, attributed to the augmentation of the army, the change in the clothing system of British troops, and increase of establishments. What is that change in the arrangements of the British troops?—Up to the 31st March 1893, the most important features in the system of clothing the British troops in force in India were, first, that all clothing supplied by the State after it had lasted the period fixed for its duration became the property of the soldier; secondly, compensation in lieu of clothing was generally admissible; and thirdly, the regimental necessaries were sold to the soldier at rates fixed annually, which represented the averages of the invoice rates of the previous year, calculated at the rate of exchange of 2*s.* the rupee plus 5 per cent. for charges. From the 1st of April 1893, this system was changed, and the more important features of the system now introduced—which, I may say, it is now proposed to change again—are, first, that the State provides all clothing actually required by the soldier, time-expired clothing, except white and khaki, remaining the property of the State; secondly, compensation is not allowed except in special cases; and, thirdly, regimental necessaries are sold to the soldier at rates fixed annually, which represent the averages of the invoice rates of the previous year, calculated at the official rate of exchange of the year during which they are in force, so that from the 1st April 1893 a system was introduced which led to larger expenditure.

5019. Do I gather from a remark that you made that the system is likely to be changed again—that that change has not answered the expectation?—I think it is to be changed because the system at home has been changed; we have to follow that.

5020. It is a very large charge that is involved; in that case you see it comes to very nearly 80 per cent. on the expenditure?—I must not be understood to say that that increase is due to the change of system alone; of course that is only a portion of it.

5021. There is the augmentation of the army, of course?—There is that, and more. For instance, local supplies are obtained; boots, for instance, for the British army in India are now obtained entirely locally instead of being imported from England.

5022. And that is since 1883-84?—The great development has occurred since 1883-84.

5023. I ask this because that is one of the reasons you gave for an increase in the previous 10 years?—Yes, it began before, but it received a much greater development in the later years. Then there has been an increase in the establishment following on the augmentation of the army—an increase of the clothing factories.

5024. I see you mention that the Clothing factory at Bombay was abolished; was that one of several factories?—One of three that we had. As a measure of economy the one at Madras was maintained to supply both Madras and Bombay, and the one at Calcutta was retained.

5025. (*Sir Ralph Knox.*) How much would the transfer of the charge for boots from home to this charge account for?—It appears from the Financial Review of

the Army Clothing Department that the sum was, in round figures, Rx. 63,000.

5026. (*Chairman.*) It is a large increase. Would you give us, if you can conveniently do so, a table showing, as far as may be, how these different causes have operated to make that increase?—Yes. I will endeavour to do so.*

5027. Next we come to Grant 7, barrack establishment supplies and services. That shows an increase of Rx. 40,000 on an expenditure in 1884–85 of Rx. 190,000?—This increase is due to the augmentation of the army, the occupation of Upper Burma, and more barrack establishments, such as those for punkha-pulling and tattie watering, and to a better system of lighting of barracks at an increased cost. Then there has been an increase, for instance, at Quetta and other places in expenditure on firewood, and conservancy establishments have been increased very considerably.

5028. Do you include sanitary establishments under the head "conservancy"?—Yes, I think in this period they were under two separate headings, but they have been brought together now.

5029. I see you speak of the fixed grant, 3½ lakhs, being allotted for punkha-pulling establishments as a step taken to reduce expenditure; how is that?—I think it probably will prove an economy.

5030. But is not the grant allowed to be exceeded under any circumstances?—No, the grant is given to the Commander-in-Chief, and under his orders it is distributed in the best possible way.

5031. Grant 8, Administration of martial law; that shows a very considerable increase. It has risen from Rx. 28,000 to Rx. 40,000., increase Rx. 12,000?—On that head I may say that reductions were made in 1888–89 with a view to economy, and salaries were reduced; and as we could not get any officers to join, we had to raise them again.

5032. The decrease in the previous 10 years, which I think you attribute to the abolition of appointments, was Rx. 3,642, followed in the next 10 years by an increase of Rx. 12,400. Does not that look as if the abolition of the appointments in the first period was hardly an economy?—No, I think that the abolition of the appointments in the previous 10 years was not connected with this increase. Certain appointments were abolished, and for some time the department stood at a particular figure. Then we thought that, as a knowledge of military law increased among officers, we might safely reduce a certain number of the Judge Advocate-General's Department. These were reduced, and the salaries were reduced, and we found we could not get recruits for the Department, and we had to augment them.

5033. Of course the increase is very large on the expenditure as it stood at the beginning of the period?—Yes.

5034. (*Sir Ralph Knox.*) Would this charge be affected by the increase in the army at all?—Yes, especially by the increase in the British Army.

5035. (*Chairman.*) We must bear in mind that the increase in the army accounts for a great deal?—Yes.

5036. Putting it roughly, if the increase in those grants was exactly parallel to the increase in the Army, it would not represent more than 10 per cent., would it?—I am afraid I can hardly answer that question.

5037. The increase of force was 10 per cent. in the European Army—in the Native Army was it a great deal more?—It was 16 per cent., roughly.

5038–9. I mean, allowing that the increase in the Army causes an increase of charge, one must keep in mind what relation the two increases bear to one another. If the increase of the Army was 10 or 15 per cent., it would not cover an increase in expenditure of 20 to 30?—No. Then, if I may venture to say so, there are a great many other causes which led to an increase of expenditure.

5040. Medical establishments in 1884–85 Rx. 550,000 show an increase in 1893–94 of Rx. 172,000. There again there is a large increase, and, as compared with the previous 10 years, the increase in this branch is very heavy indeed. In 1875–76 the total sum granted was Rx. 406,000, which had risen in 20 years to Rx. 722,000?—Yes.

5041. That increase is getting on, you see, for 100 per cent.?—The increase is greatly due to the various reorganisations. The reorganisation of subordinate and medical department in 1884–85, pay and allowances, corresponding ranks in the Army Medical Department being given to the officers of the Indian Medical Service who happened to hold no specific appointments. Then there was an increase of the Medical Staff in 1886–87 and in 1887–88, consequent on the increase of the Army, and the apothecary branch of the subordinate medical department was increased in 1888–89; revision of hospital assistant branch in 1892–93, longer training for native medical pupils at colleges. Then I think in this branch, as in every other, there is a natural tendency to increase, although a great deal has been done by obtaining more local supplies in India in the way of drugs, and also by Surgeons-General cutting down the lists of medicines and implements, and so on, required. Then on the other hand there is longer training given to our native medical pupils at the colleges; and then there is better nursing, the institution of the Indian nursing service, the formation of a native army hospital corps, and so forth.

5042. And is that a service you expect to see continue to rise?—No; I should hope myself that it would remain fairly stationary, because I think that the medical service is well provided for; the hospitals are well provided.

5043. (*Sir Ralph Knox.*) Were there any increases of pay during this period?—There was an increase, which I pointed out, in giving Indian medical officers the pay that Army medical officers would get; that is, where the Indian medical officers had not a specific appointment, when they were called unemployed, increase arose from giving them medical pay instead of unemployed pay: but I do not remember any other special increases of pay.

5044. (*Chairman.*) Were these officers in the Indian Medical Service?—Yes, it is a distinct service for India, recruited much in the way that the Army Medical Department is recruited, and divided into civil and military. A certain number are employed on civil duties, and a certain number on military duties.

5045. Is it a local branch apart from the Army Medical Department which belongs to the whole army?—It is entirely an Indian service.

5046. (*Sir Ralph Knox.*) Those performing civil duties are not borne on this estimate?—No; they are not.

5047. (*Chairman.*) Then the Ordnance Department, Grant 10, that was in 1884–85, Rx. 496,000 and it rose in 1893–94 to Rx. 830,000, showing an increase of Rx. 333,000. In the previous period of 10 years you remember, there had been a decrease of Rx. 50,000, but you explained that the decrease was probably only apparent, and that the expenditure had been stationary during that time. Therefore while the first period of ten years was stationary, the second period was marked by this very great increase?—I would rather say that the increase was not very great in the first period; I think it can hardly be said to be stationary.

5048–9. If you remember, you pointed out that in the first period while the expenditure for 1883–84 showed a decrease of Rx. 50,000 as compared with the previous year, it shows an increase upon 1875–76. I put the two last years together and arrived from that at an average very nearly the same as the expenditure in 1875–6. I thought that perhaps from that we might have taken the expenditure to be tolerably stationary; it did not show any very great increase?—Comparing the average of those two years with 1875–6 it was pretty nearly stationary, but between 1875–6 and those two years it was very much higher.

5050–1. From what you say as regards a comparison between 1875–76 and the period ending with 1883–84, the average of 1882–3 and 1883–4 did not afford the basis of a fair comparison?—Yes.

6052. Do you happen to know what the expenditure in the intervening years was?—Yes, I think I have the figures.

5053. I want to see whether the comparison of 1882–83 and 1883–84 happens to be an unfair one?—You will find the gross amount given, (I do not think the receipts vary very much) in that return of Sir Donald Macfarlane under Ordnance Establishments. 1875–76, Rx. 570,558; 1876–77, Rx. 519,230; 1877–78, Rx. 529,153; 1878–79, Rx. 646,268; 1879–80, Rx. 555,878; 1880–81, Rx. 578,558; 1881–82, Rx. 576,936.

5054. There you see it runs very fairly even starting with your 570, 558, 519, 529, 646, 555, 578, 576, 610, 519, 496?—Yes, it does.

* *See* Appendix 18.

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

5055. Therefore, I think we may say that the expenditure during those ten years was fairly stationary, may we not?—Yes, I think that may be said.

5056. But now we come to this very large increase, and I think you were just going to give us the reasons of it?—I can only in brief say that the reasons were the development of manufactures, the great changes in war material that took place, the increase of the army, larger reserves of military stores being maintained, the increased cost of equipments, which is a very large item, a larger amount of camp equipage and repairs, due in a great measure to more frequent camps of exercise and additional establishments required for the Ordnance Department, and more practice ammunition.

5057. I think in your previous evidence you explained to us some very great changes that had taken place in the ordnance estimate owing to getting more stores locally and less from England?—I think that was Colonel Wace.

5058. Yes, I beg your pardon it was Colonel Wace, who explained that to us. He laid great stress upon that fact that the general tendency of Indian policy was to get more stores on the spot?—Yes, that is so.

5059. Quite apart from any question of re-armament, or more expensive material, we must look forward to that policy being established, and to there being an increase in the ordnance grant?—Yes.

5060. Of course, to a certain extent that ought to be followed by a decrease at home?—Also you must take into account, if you take the two tables, the much greater cost of the various items of military equipment.

5061. Colonel Wace gave us some rather striking instances of what the increase of cost was?—Yes.

5062. (*Mr. Buchanan.*) Is the cost of equipment likely to continue to increase? I see in the returns for the past 10 years more than any other, it has continuously and rapidly increased. Here are the figures for 1888-89 (after, I suppose, the increase due to the increase of the army had come into operation) Rx. 576,000, next year Rx. 631,000, next year Rx. 798,000, and next year Rx. 830,000?—I think the natural tendency of the expenditure under Grant 10 is to increase, even if the army remained absolutely at the same figure, because everything becomes more expensive, even although we manufacture as much as possible in India; proposals for improvement are constantly put forward and great changes are made. In my own view, we should try and rather lag behind in some respects than go forward; that is to say, we should not always immediately follow up changes which are made at home.

5063. (*Mr. Courtney.*) That natural tendency to increase, of which you speak, appears not to have manifested itself for about 12 years?—I think that the progress in improvement of war material has been more marked in this recent period; altogether things have become more expensive, and there has been a large re-armament.

5064. (*Sir Ralph Knox.*) The changes are more constant also, are they not?—They are.

5065. (*Mr. Caine.*) Does not war material become more rapidly obsolete?—Yes, a renewal depends very much on the particular arm, or weapon, or implement, I think, used. I should think it may be said that the more delicate and the more highly manufactured a thing is, the quicker it is likely to require renewal.

5066. (*Chairman.*) In the paper which you have given us, which compares 1884-85 with 1893-94 in detail, the items, I think, are rather instructive. For instance, you give information on that point of local supplies having increased; I see the local supplies in 1884-85 were Rx. 57,000, in 1893-94 Rx. 166,000. There, at once, you get one third of the increase?—Yes.

5067. Then the local supplies of stores for arsenals and depôts were Rx. 84,000 and rose to Rx. 142,000?—Yes.

5068. There again that is very nearly Rx. 60,000 you see?—Yes.

5069. Manufacturing establishments also rise by Rx. 60,000, arsenals and depôts by Rx. 40,000. The increase is very large all the way down the line?—Yes. I should like to add that in the previous years which were spoken of just now, we did make very large reductions in arsenals and depôts. That I pointed out at the time. Now we can hardly do much in this way. Of course there are reductions which could be made, small reductions, but I mean the great reductions took place in that period, and therefore we could not secure economy in this latter period because it was not possible to make any further reductions.

5070. But one naturally asks with regard to reductions in arsenals, depôts, and manufacturing establishments, is it possible that large reforms went too far in the former periods and you had to go back again?—No, I do not think so. The increase of the establishments in this period means an increase of manufactures in India compared with the previous 10 years. There were a certain number of arsenals, depôts, and magazines scattered over India, and we reduced a certain number of them altogether, concentrating the work in larger centres; but in the present 10 years there has been increased activity of manufacture, owing to various causes, and of course increased establishments had to be provided.

5071. Now I see here a curious point. In the year 1884-85 the gross charge of the Ordnance establishments was Rx. 594,000, in 1893-94 Rx. 861,000: but the stores supplied to other departments were in 1884-85 Rx. 98,000, and in the last year only Rx. 31,000, showing a very much larger amount required by the Military Department itself, because I suppose stores supplied to other departments are supplied to departments which are not military departments, are they?—Supplied to civil departments, yes; it might be to the Public Works Department, for instance.

5072. Do you ever find a difficulty in employing all your establishment, if the demands of other departments for ordnance stores fall off?—No.

5073. Of course variations in the demands upon you must have a sensible effect upon your economical administration?—Yes; we always try to get as much work as possible for the factories.

5074. Grant 12, Ecclesiastical, we need not say anything about; it is the same. Grant 13, Education; that has risen from Rx. 41,000 to Rx. 48,000; increase, Rx. 7,000?—That is really not a material increase; it is a transfer from grant 1 of the cost of the establishment of the Director of Military Education in India. As a general rule, I think we may say that charges have decreased, because we have decreased the garrison instruction staff which we had.

5075. The next grant is Sea Transport, which shows very nearly the same, or only a small increase, Rx. 56,000 to Rx. 60,000. Have you any remark to make upon that?—I think a very small increase which is due to the increase in some passage rates, and there have been more movements between Burma and India.

5076. Then Grant 14, Miscellaneous Services; you have already described to us how very miscellaneous they are. In this case they show a very considerable decrease, but I think you have warned us against trusting to the result of a comparison of two single years?—Yes, I think it is impossible to compare the grants.

5077. Certain services I see you say have been transferred from this grant to other grants?—For instance, submarine mining has been transferred to grant 3.

5078. Well, then, Grant 15, Volunteer Corps, that again shows a very great advance?—That is really what may be called an automatic increase, because up to a certain limit, the numbers increase annually and so does the expenditure.

5079. In fact that has risen from Rx. 14,000 in 1875-76 to Rx. 177,000 in 1893-94?—Yes.

5080. And is that a rising service too?—Up to a certain limit; the limit is the limit of the European and Eurasian population in India. I do not think it can go on increasing very much, but still it may increase to a certain extent.

6081. Now we come to Non-effective Services; the first is the small one of rewards for military services. There is a considerable increase there against the decrease in the former ten years. In 1875-76 the expenditure was Rx. 10,000; in 1893-94, Rx. 11,000, but that difference is so small that I need not take up your time with it. Then come military pensions to Europeans. That shows an increase at a considerably higher rate than the previous ten years. I see you attribute part of this to a fall in exchange?—Because some of those pensions are paid in sterling.

5082. And therefore they receive a higher rate. Military pensions to natives. (*Sir Ralph Knox.*) I should just like to ask with regard to this; who are the principal recipients of the pensions? It includes, I see, retired commissioned officers?—Yes, a certain number of officers who elect to reside in India.

5083. British officers?—Indian officers.

5084. (*Chairman.*) Those are European officers who retire and who have chosen to make their residence there?—Yes.

5085. It is a largish sum. I should have thought fewer men would have stayed out. Military pensions to natives; that has risen from Rx. 664,000 to Rx. 725,000, showing an increase of Rx. 61,000; the previous period showing an increase of Rx. 135,000; therefore you have got, you may say, in round figures an increase of about Rx. 200,000 in 20 years. Is not that rather a large increase?—It is due to increase in the army, and to the results of expeditions.

5086. But the increase in the army would hardly have come into effect. You would not have got many new pensioners from the men you had in the army in 1886?—Well, we might have had some who were invalided, but the reconstitution of regiments accounts for a part of the increase. Take, for instance, the Madras regiments; seven of them were reconstituted, and some of the Bengal and Bombay regiments also, and the old material was pensioned off. That adds to the pension charges.

5087. But still I think it is a point worth noticing, that you find in 1875–76 the charge was Rx. 512,000, and now it is Rx. 725,000. It is an increase of Rx. 213,000 on Rx. 512,000; it is very big?—Of course expeditions naturally must increase the pension list considerably and the changes in army organizations; the Afghan and other campaigns have contributed to the increase.

5088. It is there one sees the result of constant expeditions?—Yes.

5089. I do not think there is much to say about the widows' pensions, but departmental pensions have increased Rx. 17,000 in the 10 years to 1883-84; and they have increased another Rx. 16,000 in these 10 years; in fact the rise there is from Rx. 23,000 to Rx. 60,000 in 20 years. These are civil pensions?—They are pensions under civil rules to military employés—natives in all the offices.

5090. But is not that a very heavy rise, Rx. 23,000 to Rx. 60,000 in 20 years; it is getting on for 200 per cent.?—Yes, it is very large. I can only account for it by the larger numbers of clerks required in the offices of the army and its governments, and to the increase of enlisted departmental followers.

5091. One ought to expect a more or less constant non-effective charge upon civil departments, unless they have been largely increased?—Well, I think that they were reduced very greatly after the Mutiny, and that they have been increased very considerably in the period following that year.

5092. And so long ago that the pension charge has already came into force?—I think so.

5093. Then there are the two great grants which we reserved, namely, Regimental pay and allowances, and Commissariat. The Regimental pay and allowances of the European army in 1884–85 were Rx. 2,884,799, and that increased by Rx. 1,068,645 in the 10 years. Taking the Native and European armies together, the expenditure which was in 1875–76 Rx. 6,500,000, had fallen in 1883–84 to 6,141,000, but had risen in the next 10 years to Rx. 7,889,000?—Yes.

5094. Taking the last ten years, how would you account for the increase?—No doubt the main reasons for the increase are the augmentation of the army and the fall in exchange, the fall in exchange being from 1*s.* 8*d.* in 1884–85 to 1*s.* 2¾*d.* in 1893–94.

5095. That led to an increase in the number of the rupees paid to the European soldiers?—Yes, and there is the further amount of the exchange compensation allowance paid to officers. That also is a large charge appearing first in 1893-94, I think. The increase of the British and native armies was very considerable.

5096. And are those causes quite sufficient to account for this increase? For instance, you say with regard to the Native army that the increase is due to the augmentation of the Native army consequent on the decision of 1885, and one or two other reasons; but, as far as the Native army goes, that was an increase of 10,000 men on 140,000, was it not?—An increase of 20,000 on 120,000.

5097. Therefore upon that basis one would not expect such a large increase as Rx. 650,000 on the 10 years?—Yes, but there are many other items, such as the acceleration of promotion in the Staff Corps, and there was the increase of pay to the native cavalry; that accounted for between Rx. 80,000 and Rx. 90,000, nearer Rx. 90,000. A considerable increase is due to the various measures which have been undertaken in respect of the armaments of coast defences, more gunnery instructors and inspectors, artificers, armaments, pay, &c. I mean in respect to grant 3 generally. Then there was the establishment of reserves. That, of course, is an automatic increase up to a certain limit. The establishment of reserves of the native army increases every year up to a limit of 23,000 men.

5098. Does not that save anything in the non-effective charges?—No; I do not think so, because men pass to the reserves after a much shorter period of service than that for which they are pensioned. The reconstitution of regiments, that is, getting better material and forming regiments out of that material, all involves considerable charges. That is an expense which swells the increase under the head Native Army.

5099. I see the European cavalry has risen over Rx. 100,000?—Yes; there was an increase of a squadron for each of the nine regiments of British cavalry.

5100. Would it be possible, do you think, Mr. Jacob, taking Sir Henry Waterfield's calculation, and these papers put before us, to get the figures which constitute the cost of the increase of the army in 1885–86 made out? The total is stated at Rx. 1,617,000?—(*Mr. Jacob.*) Yes; I am not quite sure of the details.

5101. Would it be possible to get them, do you think?—I think so.

5102. I think it would be rather interesting to see how far the increase of the army accounts for this increase of military expenditure, leaving the remainder of the increase to be accounted for in other quarters?—I will endeavour to get the details, but I am not at all sure that it will be possible to distribute the amount over each grant head.*

5103. Do you know from what source Sir Henry Waterfield got his figures?—I think he must have got them from one of the Financial Statements. I have got a statement from the financial statement of 1888–89, which gives the extra cost as Rx. 603,000, on account of British troops, of Rx. 521,300 on account of native troops, but that does not include the whole charge evidently. That may have been possibly the charge only for certain heads.

5104. Rx. 1,617,000 altogether is a considerable increase upon the estimate of the pay and allowances; would there be any additional increase under other heads?—Oh, yes, there would be a number of other heads; Commissariat and other heads would be included.

5105. All throughout, in fact?—Yes.

5106-7. Is there any other point in regard to the pay and allowances to which you would like to call attention, Sir Edwin?—(*Sir Edwin Collen.*) I should like to lay emphasis on the fact of the great loss by exchange under this grant; I find, for instance, that in 1884-85 under this grant 3, the loss was Rx. 184,300, and in 1893–94 it was Rx. 831,800.

5108. That is the extra sum that has to be paid to the British soldier on service in India on account of the fall of the rupee? Yes.

5109. That is quite separate, Mr. Jacob, from the figures in Sir Henry Waterfield's table? I take it Sir Henry Waterfield has omitted from his statement the charge on account of the army in India of exchange, has he not?—(*Mr. Jacob.*) The charge for exchange is excluded from Sir Henry Waterfield's table IV.

5110. But the charge to which Sir Edwin Collen is calling attention is included here?—No, not in table IV.

5111. Does Sir Henry Waterfield reckon under the separate head of exchange the extra amount which has to be paid, on account of the fall of exchange, to the British soldier in India?—Yes, it is shown in column 5 of his table XIX.

5112. Now passing on to the Commissariat establishment, in that case there was an increase from Rx. 2,200,000 to Rx. 3,490,000, the increase being

* It was found that the calculation of the cost of the increase of the Army strength was a mere estimate; and that it was impossible to give a distribution of the increase by grants.

Major-Gen. Sir E. H. H. Collen, K.C.I., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

1,200,000 during the last ten years. It rose from Rx. 1,941,000, in 1875–6, therefore the increase in the 20 years has been from Rx. 1,941,000 to Rx. 3,400,000 —a very large increase?—(*Sir Edwin Collen.*) A large portion of that increase is due to the increase of the Army, which affects the other grants, but there has been a large augmentation of transport. For a great many years there was practically very little transport kept up in India, and we were dependent on what we could hire as occasion arose, but after the experience of the Afghan war it was decided to maintain a considerable transport establishment, and that has been increased within recent years. Then there has been an increase under the head of provisions for Europeans. That is due to the increased strength of British troops, and an increase in the prices of food supplies. Under the head of provisions for natives the increase is due to the increase of numbers to whom free rations have been given. Take, for instance, Burma; free rations are given to the native troops in Burma, and the number of those troops in Burma has been largely increased. There too the increase in prices must account for a certain amount of increase of expenditure. The compensation to native troops for dearness of provisions has also increased very largely. That is a matter which we have investigated in the Military Department with the help of the Finance Department and the Revenue and Agriculture Department, but I cannot say that we have yet arrived at any definite conclusion as to how much increase is due to a rise in price, as compared with any increase due to an increase in strength. We know what the increase of strength has been; it has been about 16 per cent. of the native troops; but the increase in charges has been very large indeed, and it is a matter upon which it is rather difficult to arrive at any definite conclusion, because of the difficulties in finding out exactly the prices in a series of years when the stations have changed a good deal. Some of the increase is due to the increased cost of certain frontier stations. On the other hand, at many of those stations we give a money allowance in lieu of rations, so that really what we have to determine, which has not been determined at present, is, whether there has been a general rise in prices to account for the increase, which is not accounted for by the increase of strength and by the changes of conditions. And very much the same can be said for the compensation for dearness of forage for native cavalry.

5113-4. In your comparison of grant 4 in 1884–5 and 1893–4 at page 5, we find provisions for natives, compensation to natives for dearness of provisions, compensation to native cavalry for dearness of forage. Now that, I suppose, covers the ground of the increased cost of provisions as far as the Native Army is concerned? Yes.

5115, 6. Taking those three items together, I find in 1884–85 that they made about Rx. 147,000, while in 1893–94 those same items came to about Rx. 539,000. Now, I suppose, as far as rations go, that you may expect the cost of them to mount in proportion as the army is increased, that is to say, if you add 10,000 to 100,000 you would expect to find, as far as rations go, there would be 10,000 more rations consumed?—We do not give rations to the native army except in this way; we give them rations in certain stations as in Burma, and a money allowance at certain frontier stations, and generally we give them compensation for dearness of provisions. When the price of rations exceeds 3 rupees 8 annas a month they get the excess.

5117. You would consider that where there is an increase of the army, apart from any other circumstances, there would be an increase of the provisions consumed, or an increase in the allowance for provisions, which would represent a like percentage to that by which the army was increased?—Yes.

5118. And I think you said you reckoned it at about 16 per cent.?—Yes.

5119. Taking those figures of Rx. 147,000, an increase of 16 per cent. would not bring it up to very much over, say, Rx. 170,000; whereas the actual increase is Rx. 539,000?—Yes.

5120. Are there any other circumstances except the dearness of provisions that could account for such an enormous increase as that?—Well, there is the circumstance of additional stations, dearer stations, being occupied on the frontier, and the additional number of troops in Burma who get free rations. Of course when we first had troops in Burma the cost of the rations in that country was very much less that it is now. But it is not easy to explain the great rise in compensation, even taking those facts into consideration. I may mention that it is a matter which has engaged the attention of the Government of India for some time. They have been investigating it through the agency of committees, and so on. (*Mr. Jacob.*) Perhaps I may be allowed to say that the increase in the compensation is not measured by the proportionate increase in prices. The compensation is given for the cost of provisions above a certain amount; 3 rupees 8 annas I think it is. (*Sir Edwin Collen.*) Yes, 3 rupees 8 annas. (*Mr. Jacob.*) Suppose in any given year the provisions cost 3 rupees 9 annas, we give them each 1 anna. Suppose a few years afterwards it has risen to 4 rupees, we should give them each 8 annas. That is to say, that while the increase in the price would be only in the proportion of 8 annas to 3 rupees 8 annas, that is to say, an increase of one-seventh, the compensation would be eight times as much as it was.

5121. That is really an increase to their pay?—Yes, if the cost of the provisions rises above a certain amount we give them the difference between that amount and the cost calculated upon a normal ration.

5122. Would you explain a little bit more how that operates. I think you said just now the cost of the ration was?—3 rupees 8 annas is the standard figure which we take.

5123. (*Sir Andrew Scoble.*) 3 rupees 8 annas per month?—Yes. (*Sir Edwin Collen.*) 3 rupees 8 annas a month, which is the standard on certain staple articles of food.

5124. (*Chairman.*) Who settles when the price goes up sufficiently to justify an addition being made to the payment of the native?—(*Mr. Jacob.*) The civil authorities supply price lists and on these the calculation is made of what this normal ration costs and if it comes to anything exceeding 3 rupees 8 annas the difference is paid to the soldier.

5125-7. That is what I did not quite follow. As I understood you, you said if the price goes on rising it is not the precise difference that is paid to them between the current price and this assumed price of 3 rupees 8 annas, but something in addition to that?—No; what I meant to say was this, that the compensation is measured by the difference between 3 rupees 8 annas and the actual price. Supposing the price in any given year was 3 rupees 9 annas the soldier would receive only 1 anna compensation in the month. Supposing a few years afterwards it was 4 rupees he would receive 8 annas compensation in the month, that is to say he would receive eight times as much compensation.

5127. (*Mr. Courtney.*) How does the normal 3 rupees 8 annas appear in the accounts?—It does not appear in the accounts at all.

5128. It must be charged somewhere, that ration?—Not directly. The native soldier is supposed to be in a position to spend that much out of his monthly pay, which, of course, is charged as such in our accounts. Provided he does not have to spend on this account more than 3 rupees 8 annas, we do not consider him entitled to any compensation, but if the prices of these ordinary articles of food are such that the monthly cost of this normal ration exceeds 3 rupees 8 annas, we give him the difference.

5129. You ought to compare this addition with the ordinary pay, plus the addition?—No: if you take the head of compensation to native troops for dearness of provisions, an addition of one anna to the cost of the monthly ration, if it was previously 3 rupees 9 annas, would double the amount of the compensation.

5130. Yes, but you ought to compare the 3 rupees 9 annas with the 3 rupees 8 annas, or the 4 rupees with the 3 rupees 8 annas?—To arrive at the actual increase in price, that is correct; but the increase in compensation is much more than proportionate to the increase in price.

5131. (*Chairman.*) That is what I want to come to. Suppose the price went up to 4 rupees, the standard being 3 rupees 8 annas, the difference between them is 8 annas?—Yes.

5132. He would receive that; and that 8 annas, added on to the standard sum of 3 rupees 8 annas, would only just provide him with what he was intended to provide himself with?—Yes, but I am explaining the increase in the amount of compensation. If the amount of compensation is represented by X when

the compensation is 1 anna a month, it will be represented by 8X when the monthly rate of compensation is 8 annas.

5133. Is there any means of ascertaining in these cases what in any given year the additional sum paid to the native troops was?—These are the additional sums.

5134. But I mean in detail, whether it was a rupee, 8 annas, or 4 annas?—You could only strike an average because of course it varies at each station. (*Sir Edwin Collen.*) It varies at each station.

5135. To a certain extent at each station?—(*Mr. Jacob.*) Absolutely at each station.

5136. Could you strike an average?—(*Sir Edwin Collen.*) Of course there are returns of the compensation paid at each station, and I think I have got the rate of compensation at each station, but then the stations do not always remain the same for a series of years. That would rather throw out any average. I should like, if I might be permitted, to explain the question about the compensation in the following way. When we investigated the matter in the Military Department we found that the per-centage of increase of charges for compensation in 1893–94, compared with the increase of strength,—16 per cent.—was 89 per cent. But then, as Mr. Jacob remarked, before Government pays anything towards the food of the native soldier, the man himself has to pay the market price, 3 rupees 8 annas, for his ration, that is to say, he is supposed to supply himself with the necessaries of life, and therefore the true per-centage of a rise in price would only be arrived at by comparing the sums paid by the soldier plus the compensation, and according to the calculations made on this basis we found that the per-centages were: total increase in charges for compensation, 31·9, and that the increase due to the increase in strength was accurately 15·74; the increase, therefore, due to other causes was 15·87, the total making up 31·6, which was the increase in the charges. Therefore what we have to find out, and, as I said, we have not yet determined it, is whether this 15·87—or call it, in round numbers, 16 per cent.—whether that is accounted for by rise of price in addition to the change in the occupation of certain stations which, of course, would make it more.

5137. You might go from a cheap station to a dear station?—Yes, we might establish a station where the food was dear.

5138. But is it not possible to find out?—The investigation is going on now, but I have received no definite information to show the results. It is a subject which I may say has occupied my attention for many years, and it has always been rather a stumbling-block; but what we have to do now, and what we have not yet arrived at, is to find out whether that 16 per cent. is accounted for by a rise in prices and this change of stations.

5139. Would you feel satisfied that the officers, upon whose report the extra sum is paid to the native soldiers, are able to form a competent opinion upon the current prices; and that that which is intended merely to be a compensation for increase in prices does not become in certain cases a bounty?—That is a matter on which there is a great variety of opinion. The calculations on which the sepoy gets any compensation are based upon the prices current, which are prepared by the civil officers of districts. How that exactly is prepared, and whether it represents accurately the prices, I am hardly able to say.

5140. But the officer ought to fix his prices on the very best information he can get; and the compensation is intended solely and entirely to compensate the soldier for an increase in the prices of rations?—Yes, it is really intended to equalise his pay.

5141. (*Sir Andrew Scoble.*) Prices are fixed according to what are ascertained to be the current rates in the bazaar during the period?—Yes, they are; of course the officer commanding a regiment is hardly able to get behind that. Therein lies the difficulty. It has been proposed that there should be station committees to investigate prices, but it is a very difficult question.

5142. (*Mr. Courtney.*) How are the prices given in the Statistical Abstract for India of all the chief commodities at the different great markets ascertained?—I think those are wholesale prices, perhaps they would not be quite the same as the prices at which the sepoy could buy. Mr. Jacob might be able to tell. (*Mr. Jacob.*) They are supplied by the district officers—the civil officers, and they are wholesale prices.

5143. You never attempted to make out index numbers of prices of such commodities?—Oh yes, index numbers have been made out; Mr. O'Conor has written on that subject at great length.

5144. (*Mr. Buchanan.*) Since 1887–88, after the army was increased, has the amount paid in compensation varied much from year to year?—(*Sir Edwin Collen.*) It has varied on account of one year being a dear year, and the next year perhaps being a cheap year.

5145. Because I see here the totals for each year under this Grant 4 are given; there was a tremendous increase when the army was increased under this grant, but since that time, unlike many of the other grants, it has not continually increased: it has gone up one year and down another?—Yes.

5146. The question I wanted to ask was whether that has mainly been due to the fluctuation in this particular charge?—I think so, in places. You are speaking of this particular charge, are you not?

5147. Yes?—This particular charge compensation for dearness of provisions.

5148. Which is only one item, of course, in grant four?—Yes.

5149. Have the variations in this compensation charge been the main cause of the variations which we read of here in the total sums under grant 4?—No, I should not think so; of course it is one of the factors.

5150. Not a substantial one?—Well, it is a substantial one, but it is not the chief one; I should think the chief one is the augmentation of the army.

5151. (*Chairman.*) Then would it be your opinion, as far as your information enables you to form an opinion, that a considerable part of this increase is due to rise in prices. First of all, we have deducted 16 per cent. for the increase of the army, and we are left with 16 per cent. which you feel a difficulty in apportioning?—I should think that a considerable proportion of that 16 per cent. was due to rise in prices.

5152. In one of the papers which you gave me, reference is made to a circular which you addressed to the Commissaries General and the Controllers of Military Accounts in the different commands; were answers received to that communication?—No, they have not yet been received.

5153. What was the object of that circular?—My object was to be able to furnish more complete details to the Commission than I could otherwise do. I got the Government to let me issue that letter to see if I could get the Department to follow the figures throughout a series of years.

5154. Do you think you will get that information in time or not?—Not while I am in England, I am afraid.

5155. I do not think you had quite gone through all the heads to which you would call attention on that grant; for instance, I see you call attention to the increase in staff and establishments?—Yes. Well, that of course is due to the larger army, and also to the larger number of stations occupied, in more extended areas; but a considerable addition is due to the organization of the Transport Department, which really did not exist in the previous series of years, or at all events it had only been started in the previous 10 years. Then another increase was alluded to in the previous 10 years, the increase due to the purchase of malt liquor. That has developed; although of late years we have allowed regiments to make their own arrangements, and the charges are decreasing somewhat. Then under sea and inland water charges, which comes under Grant 4, Commissariat, there has been a considerable increase due to the larger number of troops in India and to their movements; and to native army reserves having received free passage by river. A good deal of the increase is due to the annexation of Upper Burma—more movements. In the same way railway charges have increased. That is due to the increased movement of troops, and a certain concession has been made to the Native Army in the way of passages to native soldiers proceeding on furlough. The establishment of the native army reserve, and the cost of their passages when they come to be trained, more troops in the hills this policy has been developed to a large extent (and has cost more in in the way of railway charges).

Major-Gen Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

5156. (*Sir Ralph Knox.*) What is the number of the army reserve now, do you know?—It is about 13,000 to 14,000.

5157. Do they come up regularly for training?—Yes.

5158. Every year?—Every year for a month.

5159. From some distance?—Occasionally long distances; it depends where they are recruited from. Then there have been considerable charges under this grant for grass cultivation. In old days the grass cutters for the mounted service could go out and cut grass anywhere by the side of the road, and they would trespass into the fields of cultivators. We found this sort of thing could not go on, and we placed an extra charge on the army estimates so as to avoid what was an injustice to the cultivators. We established grass farms, and in some cases we had to feed the troops of the mounted British service by contract. That is a very considerable item of expenditure, although ultimately I think it will tend to economy as compared with the price which we have to pay if we purchase the forage by contract. Then in the way of the feed of horses and mules, and so on, the numbers increased have been very considerable, and we have many more stations occupied; for example, mules were posted at 85 stations in 1892-93 against 36 in 1884-85, and some of the new stations are in rather expensive localities. Again, taking the feed of animals in the transport—that increase is due to the difference in numbers and to the distribution, to the cost of supplies, and, as I have said, to the larger number of stations at which they are now located. I think those are the main items of increase of expenditure, but of course there are a large number of details.

5160. This army reserve has to be fed, of course, for a month every year?—No, they are not fed in the way of getting rations; if they train at dear stations they get the compensation for dearness of food.

5161. (*Chairman.*) We were talking about provisions for natives, but there is also the item of provisions for Europeans, which in these ten years has risen from 484,000 Rx. to 731,000 Rx. I think you have told us what you would consider the per-centage of increase of the European army?—It was about one-sixth.

5162. Well, you add one-sixth to that 484,000 Rx. and you get to something like Rx. 560,000 or Rx. 570,000, while the extra charge is 731,000?—Yes.

5163. But you have a difficulty, you tell us, in determining how far the increase is due to rise in prices, because in some cases troops have been sent to expensive stations, and so forth. Would that apply to European troops as well as to natives?—I think it would. For instance, the occupation of Upper Burma has notoriously caused a considerable rise under this head, because meat and everything is so very much more expensive there.

5164. The cost of the increase there does not look so striking as it does in the case of native troops, because there the three charges,—provisions for natives, compensation to natives for dearness of provisions, and compensation to native cavalry for dearness of forage—which amounted in 1884-85 to Rx. 147,000, amounted in 1893-94 to 539,000 Rx. The increase is enormous, and of the whole series of charges which come before us, and which we have gone through to-day, that is the most striking?—Yes.

5165. And at the present moment you are not in a position to form an opinion as to how that enormous difference is to be divided between the different sources representing it?—No; excepting in a general way; I could not possibly give an exact detail showing how the difference has arisen.

5166. I think you said you had at hand and would be able to give us possibly, shortly, an abstract of the report of the 1879 Commission. Is there any table of recommendations or summary?—I think it would be hardly possible for me to read it; it is a long paper; I might hand it in, perhaps.*

5167. Perhaps you would?—Yes; then there is a statement,† of course, showing the savings proposed, which really amounted to about 1,000,000 Rx., but I must say at once that the Government of India did not accept all their proposals, so that only a portion of the saving was carried out; still it was very considerable.

5168. Was there any table drawn up afterwards showing how far the recommendations were carried out, and what the effect had been?—I have here a table showing the principal proposals of the Army Organisation Commission which have been carried out and——

5169. What is the result? Can you give it?—I could not give it in figures.

5170. Then perhaps you would hand it in, and we can look at it?—Yes: the number of regiments in India, infantry and cavalry, for the native Indian Army, was to be decreased; that was carried out by a General Order of 1882, but not carried out exactly as the Commission recommended it. But the whole tendency, of course, was to economy, considerable reductions were made and improvements in organisation.

5171. Would you put that in?—Yes (*document put in*).‡

5172. I think we have now gone through the two periods to which your paper referred. Is there any other point to which you would like to call our attention in concluding this part of the examination?—I should like to say that even if we were to take the same number of men in the army and not increase it in any way, yet the expenditure on the army must undoubtedly increase, because there are benefits to be given to the soldiers, as time goes on and improvement in equipments, in fact, every condition of modern military administration becomes more expensive. There are only two or three ways in which we could reduce to any great extent the expenditure of the army in India. It would be by reducing pay, reducing the numbers, and reducing the stores, and when one considers those three heads one enters at once upon questions of policy. I think that the margin of reduction, the margin of economy in the present expenditure of the army is not very large.§ I have handed in a paper showing the economies which have been effected by the Military Department over a series of years, which I trust may be attached to the Report of the Commission. I do not think I have any other particular point to submit to the Commission.

5173. You look then for a gradual increase under various heads; may I ask, within your experience, have you had to increase the pay of the native soldier in India in order to get the class of men you want?—Yes. That did not come into the second period, 1883-84 to 1893-94, under review; but we had to increase the pay of the native soldiers from 7 to 9 rupees *per mensem*.

5174. Was it because you were no longer getting the class of men that you had been previously getting?—We were no longer getting them; the wages had risen of the classes from which the men were drawn.

5175. What date was that?—That was last year.

5176. You only increased it last year?—Yes, so it does not come into this period.

5177. That, rather, is an argument opposed to one which I have seen advanced of late, namely, that wages have not materially increased in India?—I have read the reports of the recruiting officers, and, before the increase was sanctioned, they most distinctly said that the best classes would not come forward; they could get more from railway and other works, and that, generally speaking, it was absolutely necessary to raise the pay in order to get the class of men we used to get formerly.

5178. (*Sir James Peile.*) What was the pay before you raised it?—Seven rupees.

5179. And when was that fixed?—That was fixed, I think, in 1780.

5180. (*Chairman.*) Seven rupees a month?—Seven rupees.

5181. Had the pay never been altered?—No; but I may say that various benefits have been given which amounted to an increase. Take this very question which you have been dealing with, compensation for dearness of food, they have been given that, good conduct pay, increased hutting allowance, and so on.

5182. (*Sir Donald Stewart.*) Kit allowance given to recruits?—Yes, kit allowance.

5183. (*Chairman.*) But, still, so far as it went, you were satisfied, from the reports of your officers, that it was necessary to raise the pay in order to get the class of men you had been getting before?—Yes.

5184. (*Mr. Courtney.*) Is that in consequence, would you say, of the development of new occupations, or was it because things had got dearer generally?—I should

* *See* Appendix 20.

† *See* Appendix 21.

‡ *See* Appendix 20.

§ *See* Appendix 21.

think from both causes; from the development of new occupations—for instance, new railways, and the development of railways, and also because there had been a rise of wages.

5185. Has the pay of an ordinary coolie increased?—According to my experience it has.

5186. Generally?—Generally.

5187. Referring to several stations?—Yes, I think so.

5187*a*. (*Mr. Buchanan.*) In comparing, as we have done, an earlier year and a later year, I suppose one ought in fairness to look at the progress of expenditure in the interval?—Do I understand rightly, the progress of improvements and efficiency as measured by the expenditure?

5188-9. No. We have got here in the Statistical Abstract one of the papers circulated to the Commission the other day, and in the continuous figures for all the years between 1884-85 and 1892-93. I suppose one would more fairly judge of what increase there has been in expenditure by looking at the continuous figures and then contrasting 1884-85 and 1893-94?—Yes; I should think you would get a general view in that way; of course, you would have to eliminate any special causes of expenditure in certain years.

5190. Yes; on that point I have been following your evidence. What seems to me remarkable is, that in one of the big grants, namely, grant 4, for Commissariat establishments, supplies and services, it made an enormous jump when the army was increased, but it alone apparently has not continuously increased since then. Here are the figures:—It went up between 1885-86-87 from Rx. 2,180,000 at once to Rx. 3,130,000, and then the next year it has gone up to Rx. 3,800,000; then it went down as Rx. 3,000,000 in 1890-91, and is now Rx. 3,400,000?—Yes. I think that must be due to the fact that prices, although they may have risen, have not risen extraordinarily, or that other economies have been effected.

5191. What are the large items, besides the price of provisions, contained in that vote?—Well, it begins with establishments, and then you see all the subheads-supplies, under which you have provisions for Europeans, provisions for natives, compensation, purchase of reserve stock, malt liquor; the sub-head of services, including feed of cattle, hire of transport, sea and inland water charges, railway charges, and so on; freight charges of stores from England, khedda charges, that is to say, elephant catching charges, cattle farms, and then comes the transport sub-head, including depôt and regimental transport, purchase of animals, feed of animals, and so on.

5192. But since the increase of the army, the total has kept pretty fairly constant?—Yes.

5193. This is taken from the report of the 8th of March 1893, by the Accountant-General of the Military Department, reviewing the increase in military expenditure. Are these reviews of the progress of military expenditure called for by the Government of India and presented to them at fixed periods?—Not at fixed periods, but at certain periods the Accountant-General submits such a review, and it is laid before the Government of India and discussed by them.

5194. It is, generally speaking, a regular practice of the Government of India to call upon its officers for such reviews?—Yes, we have had them for many years past.

5195. And the general effect of that practice, I suppose, has been, on the whole, to keep down, at least to restrain, the increase of military expenditure?—Well, it brings the matter clearly before the Government and before the officials who have to deal with these questions, and it gives them a basis very often from which to analyse the expenditure further; for instance, in 1892 I took the review that the Accountant-General, Colonel Pritchard, prepared, and I worked through that for my own information, and for the information of Government, to see exactly what had increased or decreased under the several grants.

5196. It would be your duty as Military Secretary, when a report of this sort is presented, to see whether in the report, there were any suggestions made, or called attention to any items of increase over which the Government of India might exercise some control?—Yes, and to suggest in what way economies might be effected, or at least in what directions an investigation might be made with a view to economy.

5197. (*Sir William Wedderburn.*) In Sir Donald Macfarlane's return, No. 7 of the principal causes of increased expenditure are minor field operations, which have been a cause of over a quarter of a million. Do you consider that the expenditure upon those operations has usually been conducted with economy?—Yes, I do. It must vary, of course, in war or in any military operations with the general officer in command. Supposing that the supplies and transport and all the expensive items for military preparation are the same in each case, yet it must vary with the general officer and his staff, army and departmental, as to the way it which the expenditure is dealt with.

5198. But from your experience of these expeditions, would you say that they had been wasteful in the way they had been carried out, or upon the whole fairly economically done?—I should say upon the whole fairly economically.

5199. You have not any suggestions to make in order to reduce the expense of such operations?—No. I think that the tendency is, as we gain experience, which is of course very expensive experience, to reduce any possibility of waste in expeditions of this kind. For instance, I will take the war preparations which were made in 1885. I have no doubt there was some waste there, but since we have worked out everything connected with the mobilisation of the army more closely there is a natural desire to do as much as possible with a certain amount of money, and I think the details have all been much more carefully investigated than they were in previous years.

5200-2. The particulars of these smaller expeditions are given in the next page, page 4, and from these it appears that for the first nine years over which this statement extends there was a total expenditure only of 2,642*l*., or about 300*l*. a year only; and in the next nine years there seems to have been an average of a quarter of a million each year for minor operations?—I am afraid I do not quite follow the figures.

5203-4. About the middle of the page, under "smaller "expeditions and field operations" is given the amount for each year, and for the first nine years the only item is 2,643*l*.?—Yes.

5205. For the last nine years there are large sums, I think averaging over a quarter of a million each year. I suppose that very large increase is in no way under the control of the Military Department?—No. I might point out that these minor expeditions cannot go on when a great war is proceeding. You will find that in the first nine years at least four of those years are occupied by expenditure in Afghanistan, or on account of Afghanistan. I mean that it is natural that any minor expeditions should not go on concurrently with a big war. I think that is one explanation.

5206. My question rather pointed to the view that for this enormous increase from, say, 250*l*. a year to 250,000*l*. a year, your Department is clearly not responsible, because that depended upon the policy adopted by the Government; all you could do was to make it as effective and as little wasteful as possible?—Exactly.

5207-8. And you have really no special suggestions to make to make that less expensive if those wars are to take place?—No.

5209. The only real economy would be not to have those wars?—That is it.

5210. (*Sir Andrew Scoble.*) Sir Edwin, I believe the object of the Indian Government is to make the Indian army as efficient a weapon as possible?—Yes.

5211. And in your opinion all these successive additions of expenditure to which you have referred have been incurred with that object?—Yes.

5212. The increase of the pay both of the cavalry and of the infantry was put off as long as possible, was it not?—It was, certainly.

5213. And at last accepted as really unavoidable?—Yes.

5214. The expenditure on mobilisation has been incurred with a view to the efficiency of the army as a fighting weapon, has it not?—Yes, it has; it has been deemed to be absolutely necessary that a certain portion of the army should be ready to move.

5215. And in regard to the last campaign, the campaign in Chitral, for instance, do you consider that the mobilisation arrangements that were previously made, have tended to economy or to extravagance as far

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

as that campaign was concerned?—I should say undoubtedly towards economy.

5216. Very much in the matter of transport, I believe?—In the matter of transport, but also under every head of charge.

5217. Now with regard to the question of the compensation for dearness of provisions, that is not a constant charge at particular stations, is it?—No; it must vary according to the cheapness or dearness of the articles of food at these stations.

5218. I presume that in one year compensation may be paid at a station, whereas for many years before and afterwards it would not have to be paid?—Quite so.

5219. And the variation in the expenditure which these demands for compensation produces is, I believe, a source of considerable trouble to the Military Department?—Yes.

5220. And the Government of India has made not one but many efforts to get rid of this system by including the compensation in the pay of the army, has it not?—No, I should hardly say that, Sir Andrew. These proposals have been made, but the Government of India have hardly made them.

5221. I will not say proposals, but endeavours have been made?—Well, it has been discussed.

5222. But found impossible; that is what I wanted to come to?—But found impossible.

5223. Now in regard to Ordnance I think you said that within the last 10 or 15 years the armament of the army has very much altered, as regards artillery, infantry, and cavalry?—Yes, there has been a considerable change and a change in the direction of extra expenditure.

5224. I was going to ask whether every one of these changes has led to increased expenditure?—Yes, I should say every one.

5225. And in your opinion has that expenditure been unavoidable, having regard to the conditions under which the Indian army would have to act in case of war?—It has generally been unavoidable.

5226. You have, I think, been for ten years the Secretary to the Military Department of the Government of India?—Yes, for over nine years, I think.

5227. From your experience have you found that during that period the desire not only of your own department, but of the Government of India, has been to introduce such economy into the administration of the Indian army, as was consistent with its efficiency as a fighting machine?—Yes, certainly.

5228. (*Sir Ralph Knox.*) You said that recently it has been found necessary to make some addition to the pay of the Native Army?—Yes.

5229–30. Has much variation taken place in recent years in the pay of the British officers of the Native Army?—No.

5231. How does the pay of the British officers of the Indian army compare with the pay of the British officers of the British army in India?—I should be sorry to make, or attempt to make, a very close comparison on the spur of the moment, but, generally speaking, the pay of the British officer of the Native Army is more than the pay of the corresponding rank of the British Army.

5232–3. I meant, in the first instance, to compare the pay of the British officer of the British regiment in India?—Well, in various ranks it is somewhat more; but then you must recollect that the British officer of the Native Army takes India as a career; he has to remain in India.

5234. And he receives somewhat higher pay?—Yes, he receives it in the shape of what may be called staff pay, because appointments in native regiments were looked upon as staff appointments. That idea has fallen into abeyance, but it is still called staff pay. A subaltern, for instance, gets 225 rupees per mensem plus 100 or 150 rupees, according as he is in infantry or cavalry.

5235. That is to say, the appointments of officers to native regiments would be much fewer than they are in a British regiment. Regarded as a staff appointment, he gets, comparatively, a higher rate of pay?—He gets a higher rate of pay.

5236. Do those rates of pay correspond at all with the staff rates of pay given to the British officer?—No.

5237. Well, now with regard to the question of the comparison of the pay of the British officer in India with what he has at home, or on a foreign station; have you ever made any comparison?—Yes; I have tables here.

5238. It includes the regimental ranks, and the staff positions as well?—Yes, I have brought them with me.

5239. If you have made a table showing the comparison, perhaps you would be good enough to hand it in?—Yes, I think this is what you require. (*Table put in*).*

5240. The rates of pay of the British officer in India remain unchanged; they have remained unchanged for a considerable time, have they not?—Yes, in the same way that the rates of pay of the British officer in the Native Army have remained unchanged. May I just mention that he now gets exchange compensation allowance.

5241. Is the increased rate of pay that is given to the British officer in India based upon any idea that it is to meet the increased cost of living in India?—No; I think originally it was given on other considerations; it was not a question of the cost of living in the country.

5242. It is the practice in the British army to give to British regiments, and British officers, when they serve in stations such as Hong Kong, the Straits Settlements, Ceylon, and so on, special extra allowances, and those allowances are more or less based upon what is regarded as the extra cost of living in those stations. I asked whether the Indian pay was based upon anything analogous?—I do not think it was so based. It was not, you see, made up in that way; it was made up under various heads by translating the British pay that he got into Indian money, and then adding batta and such items as tentage and gratuity; the aggregate is the present rate of pay.

5243. All these extra allowances being incidental to the nature of the service in India?—Yes, but that very item, batta, was intended to meet certain expenses—to meet expenses of living.

4244. That is very old?—Yes; very old.

5245. Do these conditions remain now in the present conditions of living in India?—I think the expenses have increased.

5246. Expenses of the same kind?—Well, the officer is not so much in camp as he used to be in old days, therefore the wear and tear of tents is not so great. When tentage was first given, and batta was first given, the army more or less were always on service, and were always under canvas. They are not so much now, but then the officer has other expenses, expenses in cantonments in lieu of those.

5247. (*Sir Donald Stewart.*) Were there not certain half batta stations and certain full batta stations?—Yes.

5248. The half batta stations were situated within 150 miles of the Presidency towns?—Within a certain distance of the Presidency towns.

5249–50. And it was supposed that every thing was cheaper in those districts near the Presidency towns than they were in the interior? That was the origin of the full and half batta. Does your experience bear that out?—I thought it was also because the troops were supposed to be more on field service; brigades, at stations like Monghyr, Bankipur, and Allahabad were looked upon as occupying settled country within the radius of the Presidency towns. In 1765 Clive issued orders that at the Presidency towns, or in its immediate neighbourhood, the troops in garrison should receive no batta; in cantonments half-batta; and in the field full batta. Dinapur, Barrackpore, and Berhampore were reduced from full to half-batta in 1828 by Lord William Bentinck.

5251. (*Sir Ralph Knox.*) You have answered several questions as regards the expenditure upon stores; do you find that expenditure to be increasing constantly?—Yes.

5252. Are the issues of ammunition to the troops the same as they were some years ago or different?—No, they have increased.

5253. That is to say the men have more practice with their rifle than they had formerly?—Yes.

5254. And the artillery with their guns, have they not?—Yes.

* *See* Appendices 22 and 23.

5255. And the ammunition itself has increased in cost?—Very much.

5256. Both the small arms ammunition and the gun ammunition?—Yes.

5257. Therefore there are two causes of increase there, the cost of the ammunition itself, and the increased issue of ammunition?—Yes. I think the increased cost of the ammunition is a bigger factor than the increased quantity of ammunition allowed.

5258–9. Has the rate of pension of the British officers been more or less maintained, or has there been a tendency to increase the rates of pension?—The rates of pension were revised in 1881 and increased, but they have not increased since then.

5260. The system generally is retirement at 55 years of age, is it not; that is practically the period of retirement?—Well, that is the period of superannuation in civil departments; a man is presumed to retire after 32 years' service. An officer who entered the Staff Corps after 1881 is liable to compulsory retirement after continuous non-employment for five years as a Lieut.-Colonel, and if Colonel, then at 55, or after five years' non-employment.

5261. But is there any compulsory retirement at that age?—No, not for those who entered before 1881; an officer at that age has to give up tenure of regimental command; he may not absolutely retire.

5262. That practically would mean about 50 years of age, or soon after?—Well, I think 52 generally, but the rules include many conditions.

5263. But there are positions which can be held by officers older than that?—Yes; the retirement rules are complicated, there are so many classes of officers.

5264. And do the Staff Corps officers attain such positions only after completing regimental service, or are they selected before?—No; they might obtain certain appointments before they had completed regimental service.

5265. But there is some compulsory age for retirement, I suppose, in the rank of Colonels, is there not?—Yes.

5226. What is that?—A Colonel who entered the Staff Corps after the 12th September 1866 is placed on the unemployed supernumerary list at the age of 57. If after 1881 he is liable to be retired at 55.

5267–8. The same as for the British army?—Yes.

5269. Is the annual charge for pensions for officers retiring a growing charge?—I think it has increased.

5270. Those pensions are almost all payable in England, are they not?—They are almost all payable in England.

5271. I see the charge is not more than Rx. 100,000 in India. Have you any idea what the additional cost has been for all services arising from the establishment of the reserve?—I could give it you; but I cannot remember it at the present moment.

5272–3. How long is it since there was an increase in the pay of the establishment of medical officers, do you remember?—I think it was 1876–77.

5274. The rates of pay of the medical service in India are not the same as of those serving at home; they are better in fact?—Yes.

5275. And, in consequence of their being better, you found yourself able to decline to grant some improvements that were given to the service at home a short time back?—Yes, that is so.

5276–7. And that is a great grievance on the part of the medical officers serving in India, is it not?. I want to illustrate the fact that you are under very considerable pressure upon these points, but that you resist it?—Under pressure, yes; I should not have said it was a very great grievance, but no doubt it is a grievance.

5278. That is from your point of view?—Yes.

5279. Do you obtain all the clothing for the British regiments from home, do you know?—All the cloth clothing. There are, however, certain articles which are made in India, such as hospital clothing.

5280. But you alluded to some intention to change the present system; would that be in the direction of providing clothing which could be obtained to a greater extent in India?—No, I do not think so.

5281. Is it the Khaki you obtain in India?—Khaki and white drill are obtained in India, but large quantities have been obtained from England.

5282. That is all obtained for the British troops in India?—Yes.

5283. That has reduced your demand, I suppose, for cloth clothing very considerably, has it not, from home?—They have always worn Khaki or white drill; but it will do so.

5284. But it is intended, is it not, to make some considerable modification in the issue of cloth clothing in India, is it not?—I think it follows on the arrangements which you have made at home.

5285. But if that is the case your demand for cloth clothing at home would be reduced, and there would be a larger demand upon the material made in India?—I think there may be some reduction; we shall have serge instead of cloth.

5286. Would that be obtainable in India?—Very good serge is obtainable in India but it does not follow that it always comes up to the standard.

5287. (*Sir Donald Stewart.*) No red serge?—No, no red serge, but cavalry and artillery blue serge might be obtained.

5288. (*Mr. Mowbray.*) Is the pay of the ordinary British soldier calculated on its sterling value?—Yes.

5289. I mean does it vary from year to year, or is it calculated on a basis once for all?—It varies from year to year, that is to say, the sterling value of the rupee varies.

5290. (*Sir James Peile.*) He gets the rupee equivalent of the sterling value?—Yes.

5291. (*Mr. Mowbray.*) In fact, during the last few years the ordinary British soldier in India has been constantly receiving an increasing number of rupees?—He has.

5292. And would you say that the price which he has had to pay for his provisions and the cost of living to him has been at all equivalent in its rise, if there has been a rise, to the increased number of rupees which he has been receiving in pay?—No, I should not.

5293. In fact the British soldier has been profiting by the fall in exchange, although it has been a loss to some others?—He has profited by the fall in exchange.

5294. It does not come into the period which we have been dealing with, but could you tell me whether the abolition of the Bombay and the Madras commands has actually led to a reduction of expenditure, to an economy?—When the proposals were first formulated by the Army Commission of 1879 there were many reductions which came into the scope of their recommendations. There was a considerable saving proposed, but many of those savings have been made use of since 1879 and prior to the abolition of what was called the Presidency army system, therefore they did not remain as a set off. These savings did not remain as a set off against what must be the increased cost in the way of administration and staff and consequently there has been an increase of expenditure under the head of re-organisation.

5295. Then so far as it is a financial question, the actual result has not been a reduction but an increase?—It has been a small increase: at the same time we hope that the greater ability to control military expenditure which will be possessed by the Government of India, will far more than cover that small increase.

5296. (*Mr. Courtney.*) You said just now, in answer to an inquiry, that a good deal of the recent expenditure in relation to the army was for the purpose of keeping it up to date?—Yes.

5297. With that object in view would it be important to consider what enemy the army was likely to fight?—Yes.

5298. The standard would depend upon the enemy it expected to encounter?—Yes.

5299. Now considering the military experience of India in the last 10 years, has the policy of keeping the army up to date paid? has it been necessary in Chitral and elsewhere?—I think it has been necessary.

5300. In relation to such wars the army has not been over equipped?—No; I would take the experience of the late Chitral campaign. I have no doubt that it conduced very much to the quick termination of that campaign that the British troops were armed with magazine rifles—the Lee-Metford rifles.

5301. Yes, but is the amount of reduction of time equivalent to the cost of preparation?—That I am unable to say.

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

5302. If the wars of India were confined to frontier wars with native tribes, would it be desirable to keep up the Indian army to the standard of European efficiency?—If it is intended that the Indian army, British and native, should merely be a police for the country, I have no doubt that many of the improvements that have been effected might be dispensed with. You might, for instance, have continued to use Brown Bess instead of having successive improvements in muskets and rifles.

5303. And what you call policing the country involves the maintenance of the frontier?—Yes.

5304. The prosecution of frontier wars as they occur? Yes, but we could not in any case rest content with obsolete arms, if the frontier tribes got hold of arms of precision. Then one must remember, looking at the matter from another point of view, that with a very small army compared to the enormous population, and that small army spread over an enormous area, you require, apart from the prospect or possibility of meeting any European foes, that the army should be armed and equipped in the best possible way.

5305. You require a great deal of transport mobilisation, but do you require arms of precision?—I should say so.

5306. And frequent changes?—The less frequently that you can change the arm of course the better for the finances. It is rather difficult to say whether frequent changes are necessary.

5307. From the point of view of the Indian Government, ought the British troops which are kept in India to be regarded as anything more than what you call the police force?—Yes, I think they must be so regarded, if it is considered that we should ever have to move in any direction out of India, whether beyond the sea or across the frontier.

5308. But the Indian troops cannot be moved out of India without special steps being taken?—I am speaking of eastwards not westwards.

5309. Any expense on the British army in India, which is incurred for the purpose of making the British army efficient, or keeping it in the higher state of efficiency necessary against an European enemy, ought to be reduced, as far as the Indian Finance Department is concerned, to the standard of Indian efficiency?—That is a very moot question. Do you ask my opinion?

5310. Yes?—No, I could not go as far as that. I think that the argument to a certain extent is reasonable, because I do not think that India ought to pay for every change in organization; I do not think that India ought to pay for great changes of organization, for example, which may be adopted for the British army as a whole; but I do not see how India could resist paying for certain changes, we will say an increase of pay or improvement in arms; I should say that India must be prepared to pay a portion of those charges.

5311. A portion?—A portion, yes.

5312. You lay stress upon that?—Yes, I should not say that India ought to have to pay the whole for changes in organization.

5313. Supposing you had got an Emperor of India, who was friendly to the monarch of the United Kingdom, but not politically dependent, and was willing to receive and pass through a certain portion of the forces of the United Kingdom; and it was pressed upon that Emperor that certain things should be done for the equipment of his army, and he replied: "I am quite "willing to do whatever is necessary for my purpose "here; if you want to go beyond that you must pay "the difference." Would that be a reasonable attitude?—Well, I should not be inclined to answer in the affirmative absolutely.

5314. Nor in the negative?—No, nor in the negative.

5315. (*Sir Andrew Scoble.*) I should like to ask one question upon that. I suppose, General Collen, you look upon the British army in India, as part of the Imperial army of Great Britain—of the Empire?—Yes.

5316. And not as a mercenary force which India simply hires for the purpose of defending herself against attack?—No.

5317. Therefore you consider it part of the duty of India to bear her fair share in any changes that might be necessary to keep the British army in India up to the standard of the British army at home?—Yes, in a way. I think the matter is really a question of compromise.

5318. I say a fair share?—A fair share.

5319. I do not say an aliquot part—a fair share?—Yes.

5320. (*Mr. Courtney.*) I admit that.

(*Chairman.*) A question was asked you, Sir Edwin, about the pay of the British soldier in India. The ground of the arrangement is, is it not, that his bargain with the State is in sterling; therefore, wherever he goes throughout the world he is entitled equitably to have the equivalent in sterling. That is the ground on which his pay in rupees varies, is it not?—Yes.

5321. One other question; I am not sure whether I asked you before. In the Military Works budget I see that the charges have remained on the whole rather constant, with a tendency to decrease rather than to increase apparently. Some diminution took place when the special department of Military Works was instituted. I should like to know whether there are any points to which you think our attention should be directed in the scheme or management of the military works?—No. I may say that the amount given is a fixed one, so far as the main bulk of the grant goes, that is to say, we are supposed to get this crore, 1,000,000 Rx; then to that, is added usually a certain sum for military works in Upper Burma and we also get a small extra addition to help us towards water supply for cantonments throughout India; but we cannot make it do; at least there are hundreds and hundreds of demands which are made upon the crore which we cannot possibly fulfil, and I am afraid that a large expenditure is likely to occur within the next few years in the way of barracks. Barracks have been built now 30 years or more, and no doubt a good many of them require renewal.

5322. Then practically the idea that underlies the formation of that Works budget is a fixed sum which you have to apportion as you please, but with which you have to meet all your demands?—Yes.

5323. (*Sir Ralph Knox.*) When the Indian Government makes a demand for additional British troops, as in 1885, their demand was an effective demand for a certain portion of the British army up to the standard of British army efficiency, was it not?—Up to the standard of efficiency that was then obtaining, I suppose, in India.

5324. But what they wanted was a part of the British army?—Yes, but chiefly in the way of original drafts.

5325. The British army meaning an army trained thoroughly and as efficient as it is at home?—Yes.

5326. But, in fact, they wanted an army more efficient than it is at home, did they not?—Why?

5327. Was not their idea to have an army much more competent to take the field than an army such as we have at home, which was not competent to take the field at a moment's notice?—I am not prepared to say the army at home is not ready to take the field.

5328. But is it not admitted that the British army in India is kept at a condition of efficiency superior to that which is maintained in the home army?—My personal opinion is that we are able, with our particular organisation and arrangements, to equip and mobilise troops perhaps quicker than you can at home.

5329. But if it be the case that you want a force out in India which is not as efficient as the British army, your demands should be not for more British soldiers, but for something else?—I do not want a less efficient army.

5330. Well, I thought just now that you were admitting that you could do with an army which was much less efficient than the army is in England?—No; on a certain supposition only that the army had merely to act as police of the country; that might be true.

5331. But the demand of the Indian Government really is to have an efficient military European force?—Yes.

5332. That is what they wish and that is what they demand?—Yes.

5333. And that is what they call upon the Home Government to supply?—You supply the material; we supply the efficiency.

(*Sir James Peile.*) At the cost of India

5334. (*Chairman.*) Can you really draw such a distinction as has been mentioned of what an army is wanted for? India has got a powerful neighbour. Has not the Indian native more interest than anybody to be preserved from an invading army, and, therefore, does not whatever is necessary to save him from such a danger as that concern him, just as much as it concerns us here to prevent an invading army coming upon us?—Certainly, if you presuppose an invading army, it is to his great interest that he should be preserved from being invaded.

5335. And therefore if you have got a power such as Russia close by you, do you not want, in the interests of India itself, as perfect an army as you can have, to secure the Indian inhabitants from invasion?—Yes.

(*Mr. Naoroji.*) That necessitates my putting a question too, but I will reserve it till to-morrow.

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

11 March 1896.

Military.

The witnesses withdrew.

Adjourned till to-morrow at 11 a.m.

At the India Office.

Eleventh Day.

Thursday, March 12th, 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Major-General Sir EDWIN H. H. COLLEN, K.C.I.E., Military Secretary to the Government of India, and Mr. STEPHEN JACOB, C.S.I., Comptroller and Auditor-General to the Government of India, re-called and further examined

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

12 March 1896.

Military.

5336–7. (*Chairman.*) Sir Edwin, before we leave the subject on which we were speaking some time yesterday afternoon, I should like to place before you a point that has occurred to me with regard to the question of the allowance for provisions to native troops. I am not putting the question with a view to elicit an answer from you at once; you have already told us that the subject is under your consideration, and that you are waiting for certain information upon it which will probably elucidate the matter clearly, and enable you to come to some conclusion as to the meaning of the figures. In this paper comparing the details of the estimates of 1884–85 with 1893–94, which you were so good as to give me, under the head of Commissariat establishments, you will remember, the item of supplies is divided into three headings, namely, provisions for Europeans, provisions for natives, and compensation to natives for dearness of provisions. Two of those items, provisions to natives and compensation to natives for dearness of provisions, in 1884–85 amounted to Rx. 137,000, in 1893–94 they amounted to Rx. 507,000. I think we learnt from Mr. Jacob that the increase of the native forces is taken at about 16 per cent.?—(*Sir Edwin Collen.*) 16 per cent.

5338. If we increase those allowances of provisions for natives, and compensation to natives for dearness of provisions by 16 per cent., which, I think, is a fair way of estimating what would have been the charge in 1884–5, the basis of the existing strength of the native army, I reckon that it would be instead of Rx. 137,000, Rx. 158,000, in round figures, and we have to compare that with the charge in 1893–94 of Rx. 507,000. Now the observer who has no intimate knowledge of the subject, would naturally turn and say, "Well, what "kind of evidence have we in prices that at all sup- "ports that large increase?"—(*Mr. Jacob.*) That is the kind of inquiry which the Government of India has been, and still is, engaged in making.

5339–44. I see the Statistical Abstract gives, in the case of rice, a rise in price in something like the proportion of 13 to 9½, or about 37 per cent.; whereas the rise in allowances is about 220 per cent.?—The rise in the allowances is not really so great as that. The amount of Rx. 137,000 shown in 1884–5 under the head of commissariat charges does not represent the total charge in that year on account of these allowances, because in Madras and Bombay the compensation was in 1884–5 classified under the head "miscellaneous." Including the amounts so classified, the total charge for compensation in 1884–5 is reported by the Accountant General, Military Department, to have been Rx. 144,992; and to this must be added the cost of provisions for native troops, amounting to Rx. 103,569, so that the total figure for that year becomes Rx. 248,561, or say in round numbers Rx. 249,000 instead of Rx. 137,000. Adding 16 per cent. to this figure for the reason mentioned by your Lordship, the figures for comparison would be 290 and 507, which give an increase in the allowances themselves of only 75 per cent. instead of 220 per cent. But further the increase in the allowances taken by themselves cannot be fairly compared with the increase in prices. As explained yesterday, the compensation is granted on the assumption that the men pay Rs. 3·8 per month a head for, or towards their rations, out of their own pay. This amount (Rx. 4·2 per annum) calculated on the total strength of the men drawing compensation, must be added to the figures of both years, before any conclusion can be formed as to the general increase in prices which is indicated. The men who are rationed by Government must be excluded from this calculation, as the whole cost of their provisions is charged to Government, and is shown under the head of "cost of "provisions for Native Troops." I have not at hand the exact number of men so provisioned, but, if we take them at 25,000 men in 1884–5, and 45,000 men in 1893–4, as outside figures, we shall have a balance of about 100,000 men left. The amount to be added to each of the figures, above would, therefore, as a minimum, be Rx. 420,000, and the figures for comparison would be 710 (290 + 420 and 927 (507 + 420) which would give an increase of only 30 per cent. I do not think that such a general comparison is of much value, for various reasons, chiefly because (1) compensation is given in all circles to followers, and in the Madras circle to pensioners as well as to fighting men; and (2) because the rise in prices at individual stations at which troops are stationed may be greater or less than the general increase in prices throughout India;

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

15 March 1896.

Military.

but these figures will perhaps suffice to show that there is no such startling discrepancy between the increase in the compensation, and the increase in prices as might at first sight appear.

5345. (*Mr. Naoroji.*) I read an extract from a speech by Lord Kimberley made by him at the Mansion House, in 1893. He says, "There is one point upon "which I imagine, whatever may be our party politics "in this country, we are all united; that we are "resolutely determined to maintain our supremacy "over our Indian Empire. That I conceive is a matter "about which we have only one opinion, and let me "tell you that that supremacy rests upon three distinct "bases. One of those bases, and a very important "one, is the loyalty and good-will of the native princes "and population over whom we rule. Next, and not "less important, is the maintenance of our European "Civil Service, upon which rests the foundation of our "administration in India. . . . . Last, not because it "is the least, but because I wish to give it the greatest "prominence, we rest also upon the magnificent "European force which we maintain in that country, "and the splendid army of native auxiliaries by which "that force is supported. . . . . Let us firmly and "calmly maintain our position in that country; let us "be thoroughly armed as to our frontier defences, and "then I believe we may trust to the old vigour "of the people of this country, come what may, "to support our supremacy in that great empire." Lord Kimberley thus points out that the splendid European Army—I will not speak about the other services—is to maintain the supremacy of the British rule in India; it is mainly for that purpose that we have any British army. Then the Government of India in a letter of the 25th March 1890, given in one of the papers placed here, says: "Millions of money have been spent "on increasing the army in India, on armaments and "on fortifications to provide for the security of India, "not against domestic enemies, or to prevent the in-"vasions of the warlike peoples of adjoining countries, "but to maintain the supremacy of British power in "the East." And, similarly again, on another occasion in another part of that Memorandum, there is also put down: "India is incurring great expenditure in the "increase of the army and in armaments and defences "for the maintenance of British supremacy in the "East," and makes it still more emphatic here—"it "would be much nearer the truth to affirm that the Im-"perial Government keeps in India, and quarters upon "the revenues of that country as large a portion of its "army as it thinks can possibly be required to maintain "its own dominion there; that it habitually treats that "portion of the army as a reserve force available for "Imperial purposes; that it has uniformly detached "European regiments from the garrison of India to "take part in Imperial wars." Now I will not read any more extracts on this point, but that the British army is essential from the British point of view to maintain the supremacy of Britain over India. Is it right that the Indian revenues of the Indian people should be made to pay the whole of the expenditure of that army, or at least of the services themselves and the *personnel*, though the chief object and the chief necessity of the British Army in India is the maintenance of the British rule itself, and therefore it is to the purpose and interests of Britain that there is any British army in India?—(*Sir Edwin Collen.*) I should certainly reply in the sense of the quotations which you have made from the despatches of the Government of India.

5346. Then the next question will be that if it is essentially for the maintenance of the British supremacy that a British army is there, and if the British Exchequer should therefore in proportion to their own interest and purpose take a share in the expense of that army, is it not right and proper also that this share, whatever it may be, should be according to the capacity of the two countries? I can read a quotation from the Government of India. The Government of India says in another part:—"The Go-"vernment of India has however continually objected "to any rateable division as imposing an undue charge "on the revenue of India; they maintain that as a "question of partnership, India as a poor country "should not be put on a level with rich England." Is that a right principle and do you agree with it?—In my opinion it is so.

5347. Then leaving this question of the whole British Army there, the *personnel*—that Britain is chiefly interested in the maintenance of a British army in India—I will just put a question or two with regard to the frontier wars. We see from one of the returns laid here (Commons, No. 91 of 1895) that during the past years there are nearly 129 millions of rupees spent from April 1882 to March 1891 beyond the West and North-West frontiers of India after the expenditure on the Afghan War of 21 millions sterling. Now, in all this expenditure, I want to know whether the 129 millions includes the ordinary pay of the soldiers also or not? The items are these: there is construction of railways, construction of roads, and bridges, military works (including fortifications and cantonments), special defence works, expeditions and explorations, expenditure in the military department which is Rx. 2,544,000; does this include the ordinary pay of the soldier when he is not on any expedition?—No, it does not include it.

5348. It does not include it, so that will make the amount so much larger if that is included in it?—If you were to take the portion of the army beyond the frontier.

5349. I am talking of that portion only which is touching on the frontier?—Yes.

5350. Therefore according to this return there has been an expenditure of Rx. 12,857,000 from the year 1882 to 1891. Now these frontier wars, according to the repeated declarations of the Cabinets—of the Governments here—both Conservative and Liberal, were all Imperial wars. I had better read an extract or two so that the thing may be more clear?—Might I venture to ask to which wars or expeditions you refer?

5351. All the frontier wars, I am talking about—on the north-west frontier?—You mean the expeditions against the Waziris, for example?

5352. All the small expeditions, the Afghan war and all those, all the frontier wars. Now Lord Beaconsfield in the House of Lords said "That the real question at "issue was whether England should possess the gates "of her own great Empire in India . . . . We re-"solved that the time has come when this country "should acquire the complete command and possession "of the gates of the Indian Empire. Let me at least "believe that the Peers of England are still determined "to uphold not only the Empire but the honour of this "country." Then Mr. Fawcett raised the question with regard to the Afghan war, that, being an Imperial war, a portion must be paid by this country?—Yes.

5353. And during that discussion Mr. Fawcett read an extract from Lord Lytton's speech, in which Lord Lytton said:—"I came to India, and just before leaving "England for India I had frequent interviews with "Lord Salisbury, the then Indian Secretary, and I "came out specially instructed to treat the Indian "frontier question as an indivisible part of a great "Imperial question mainly depending for its solution "upon the general policy of Her Majesty's Govern-"ment." This was the declaration made by Lord Lytton in the name of Lord Salisbury; and then Mr. Fawcett insisted upon regarding it as an Imperial war, and on that occasion Mr. Gladstone emphatically endorsed the opinion put forth by Mr. Fawcett, and said that it was a really Imperial question, and I may be able to read a great many extracts, but I do not think it would be necessary, because all these wars beyond the frontier are specially for the purpose of taking necessary precautions, as it is alleged, against any Russian invasion, and it matters both as to the European position as well as to the Imperial character of the British Empire. I therefore ask you whether it is right that the British Government should not pay a portion of the expenditure incurred in all these frontier wars?—If I may venture to say so, I should draw rather a sharp distinction between expeditions which might be called of a local character or interest, and any large campaigns which were engaged upon in following out a certain Imperial policy. For instance, I should say that a campaign on the North-East frontier against the Akas or the Abors, or some of the wild tribes between India and Burma, or some of the tribes on the North-West frontier, who possibly raided on some of our subjects, and came down, and crossed the frontier or approached the frontier and gave us a good deal of trouble, those I maintain are justifiably paid by the Indian revenues. With regard to the larger wars, if they are engaged upon by reason of following out a policy which has for its object the maintenance of our power not only in India but in the East generally, then I think that we may fairly claim that England shall pay a reasonable part of these expenses. That, in the instance you have

quoted, of the Afghan war, was done to some extent, because a contribution of five millions was made.

5354. With regard to these tribes, if they are contiguous to the border, and harass our people, it may be that in defence and in preventing them from doing so, you may have these small wars, but then if you specially go, as it were, to secure the gate of the Indian Empire, and take every possible step in order to gain that object, all that will come under the Imperial policy and for the European position of Britain?—That is my view, certainly.

5355. Then I will go further with regard to the wars outside of India, with which India has nothing whatever to do, such as in Egypt, Africa, or Abyssinia, or any of those places, if the Government of England uses the Indian Army, is it not right and just that they should pay for the whole expenditure of that army instead of putting on India even the ordinary pay of the soldiers that are used in this way?—As you are aware, an argument has been used in these cases that you cannot dissociate the object of the expeditions from India. Take Egypt; it was said that it was the high road to India, and, therefore, India was interested. But I think in the case of Abyssinia and Egypt, and in other instances which might be quoted, the whole of the charges should have been borne by the Imperial Exchequer.

5356. Then now comes the question of the capacity of the two countries. Supposing the principle were as admitted—as it has been repeatedly admitted, and I could read several other extracts from the letter of the Government of India—supposing it is admitted, taking them as partners, in so far as the British army in India exists entirely for the supremacy, but India benefits indirectly to a certain extent, by preventing Russia from coming in— making every allowance for that—supposing the partnership to be admitted, what would be a fair apportionment between the two countries with regard to the expenditure of the British Army in India, and on such Imperial wars as took place in which India is interested, such as the North-West frontier wars; I can give you some figures here?—I am afraid I could hardly answer such a question as that.

5357. Lord Cromer compared the capacity of the two countries as follows:—England's wealth being on an average 33*l.* per head, India's production is 27 rupees per head, which at present exchange would be about 33*s.*, so that is just about one-twentieth part, and Sir Henry Fowler in a speech has pointed out, also, that the taxation paid by India is nearly one-twentieth per head of all the taxation as paid in England per head. Consequently, do you not think that that would be a fair ratio of the capacity of the two countries in making any division as two partners, one benefiting largely, and at the same time being the wealthiest, the other benefitting not so much, but at the same time its capacity being so very little—a very small partner indeed compared with all the benefits that England derives from India—do you think that that would be a fair division?—I am afraid I could hardly accept any arithmetical division in such a sense.

5358. No, the Government of India refuse to take any arithmetical division, and the Government of India insists on having it according to the capacity of the two countries.

5359. (*Sir William Wedderburn.*) Might I ask one question; it is with reference to the boundaries of India. I think you drew a distinction just now between the local wars and those upon the boundaries which are fairly debitable to India, and frontier wars with a wider object. Can you tell me if the Government of India have a distinct decision and understanding as to where the north-west frontier line is? Can you tell me whether there is any authorised map upon which the Government of India depends in these matters?—I think so.

5360. Can you refer me to it?—I cannot remember which map it is.

5361. When any military operations take place beyond that frontier the consent of both Houses of Parliament is necessary in order that the cost may be charged to Indian revenues. In deciding that point I understand you would consider it a good test whether or not they came under those two categories that I refer to—whether it was a purely local disturbance so to say, or whether it was a step taken in an Imperial policy?—Yes, I think so.

5362. That would be a good criterion for judging?—I should say so.

5363. (*Mr. Ryder.*) May I ask a question with reference to the first question of Mr. Naoroji—whether you are satisfied that it is quite fair to distinguish between the cost of the maintenance of the British rule in India and the cost of the *de facto* Government of India? Is it not fair to say that the *de facto* Government of India is British: but that that does not affect the duty of India as a very large and powerful community to pay for the cost of its own government?—I should say that it was certainly the duty of the Government of India to provide for the maintenance of order in the country, and for repelling attacks of border tribes in such a way as might be necessary in the local interests of India. Whether it is right for the Government of India to pay the whole charge in matters which affect the Empire generally is, I think, another question.

5364. Yes; I had rather intended to avoid that question of the apportionment of charge. No doubt everybody will be agreed that where India cannot afford to bear the whole of the charge England should come to its assistance. Really my point was that *primâ facie* it is the duty of India to pay for its own government; the fact that that Government is British does not affect the duty of India to pay?—I certainly think it is the duty of India to pay for its own government, qualifying that with reference to the remark I just made; that is to say, the fulfilment of the duties of India in connexion with India itself, as it were—not going beyond India.

5365. But then would you go so far (as I think Mr. Naoroji did) as to draw such a distinction between Imperial interests and Indian interests as to hold that the one was exclusive of the other, and that, if once you granted that an interest was Imperial, then it ceased to be Indian and became chargeable on the British taxpayer instead of upon the Indian?—Not altogether.

5366. Surely it is of Imperial interest that every part of the Empire should be prosperous and should be defended against its enemies?—Yes.

5367. You really cannot separate the two; Indian interests are Imperial, and must continue to be so as long as India is part of the British Empire; and therefore it is not enough to say that a particular interest is Imperial in order to prove that the charge should not fall upon the Indian taxpayer?—I think we might take the example of the Afghan war. That was what may be called an Imperial war, and there was a grant in aid given by the Imperial Exchequer to that.

5368. That grant-in-aid might be justified by the fact that India was over-burdened by the charge of the Afghan war?—But I think in the case of the Afghan war it was allowed by Mr. Gladstone that it was an Imperial war to a great extent, or rather he said that he would not assert anything to the contrary.

5369. It undoubtedly was an Imperial war, but so also an Indian war may be Imperial in its magnitude and yet be still Indian?—Yes.

5370. (*Mr. Naoroji.*) Now, to provide for the Government of India is it necessary at all that there should be British troops, European troops?—Yes, certainly.

5371. That is to say, for maintaining the British supremacy. If that question were not considered there would be no necessity for British troops, and Indian troops would supply every want?—There would be no India at all if British supremacy were not maintained.

5372. Yes; then it is the British supremacy that necessitates this employment of European troops?—I should rather say that the British troops—European troops—are required for the maintenance of order in India.

5373. Very well. The maintenance of order is also as necessary for the existence of the British rule as any other purpose, because then, without that order and law, and if this was not gained, there would be no existence for British rule, which would be very much jeopardised in every way. British people are deeply interested in everything that is done in India. Then, again, India being regarded as a part of the Imperial partnership, does India get the slightest share of glory or gain out of what is called the Imperial concern. For instance——

(*Chairman.*) But, Mr. Naoroji, may I appeal to you for a moment. Do you not think that when we come

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

12 March 1896.

Military.

to the question as to whether a British force ought to be kept up in India, we are getting beyond our limit?

(*Mr. Naoroji.*) No, because that involves the very question of the whole expenditure. It is not merely the question of the amount of the expenditure that is troubling India, it is in the way in which the expenditure is carried out and used that the whole difficulty arises. Unless we thoroughly understand the character of the whole expenditure we shall never be able to judge properly.

(*Chairman.*) I think we have got a step beyond your first questions.

(*Mr. Naoroji.*) Shall I wait till the question arises upon the apportionment?

(*Chairman.*) Well, I think it will be more appropriate there.

(*Mr. Naoroji.*) I took the policy for granted.

(*Chairman.*) But when we get to the question as to whether British troops should be kept in India at all, I think it would be rather the opinion of the Commission that we are stepping beyond our instructions.

(*Sir James Peile.*) I think it gets on to policy.

(*Mr. Buchanan.*) Should we discuss this question that Mr. Ryder raised, with regard to the amount that should be put upon the Indian Exchequer and the amount that should be borne by the British Exchequer with regard to expeditions outside the limits of India, now or when we came to the question of apportionment?

(*Chairman.*) I think it would be better when we come to the question of apportionment.

(*Mr. Ryder.*) I am afraid that belonged to a later part of the inquiry; I had not wished to raise the question at all.

(*Chairman.*) It was a matter for Mr. Ryder to ask, because Mr. Naoroji put the question how far India was concerned in this matter rather broadly.

(*Mr. Buchanan.*) I thought it was a very important matter to go into: but the question is, now or later?

(*Chairman.*) At present we are looking only into the actual increase of the army charges.

(*Mr. Naoroji.*) Mr. Ryder has raised a far broader question than mine, consequently I was going to say something about it, but now as it is postponed to the other occasion I shall not interfere any more.

5374. (*Sir Ralph Knox.*) I should be glad if Sir Edwin Collen could give us some description of the system under which the native army is raised and trained and recruited, and the expenses that are contingent upon this raising and training of recruits of the Native Army in India. What is the system of enlistment, and who enlists them; where are they enlisted; what staff is used for the purpose; where are they trained as recruits, and so forth?—They are enlisted by district recruiting officers established at certain centres of recruiting areas from which we expect to get the best material, and these recruits are medically examined and are then passed to their regimental centres, if their battalion happens to be there. I may say that the battalions are linked in twos or threes, and that one battalion is usually at a regimental centre. These recruits are passed to the battalion which is at the centre, or to the battalion away from the centre, and they are then drilled in the usual way and passed into the ranks after a certain time, not exceeding 8 months.

5374*a*. Can you state what the number of these recruiting districts is?—The previous system was that regiments sent out recruiting parties, sometimes under an officer, sometimes not; but within the last few years the system of district recruiting under special officers has been established. It has been first established in the Punjab and Bengal, and it is only now coming into operation in Bombay. In Madras at the present time they follow the old system of regimental recruiting, or did so until quite recently.

5375. Could you tell us the number of these recruiting districts?—Yes. There are four for the Punjab, Amritsur, Rawal Pindi, Dharmsala, Peshawar; Gorakhpore, Lucknow, and Delhi for Bengal. I do not think the head-quarters of recruiting officers have yet been settled for Bombay or Madras.

5376. They have a staff attached to them?—One officer and an assistant, as a rule.

5377. And no non-commissioned officers or men?—They have non-commissioned officers from regiments.

5378. Would there not be some native officers working under them?—Yes, there are native officers.

5379. But you do not mean to say that the European officer goes into this district and tackles the men and asks them whether they will join the army?—What happens is this: he visits as much as possible of the district; he tours about and the recruits come in to his centre. He gets to know a large number of the village head men and the natives of influence and position.

5380. By what method does it become known that he is present there, and is ready to receive recruits?—A notice is circulated; but I have no doubt it is very well known at once that he is there.

5381. But some machinery is necessary to make it known, is it not?—Of course all the civil officers are warned, and they warn all their subordinates in turn.

5382. Then the civil officers are used in some way to assist the recruiting for the native army?—Yes, in this way, that they convey the information; but, as I say, it very soon becomes known where a district recruiting officer is, and, certainly since the increase of pay has been given, I think the recruits come forward readily enough.

5383. They know that from time to time an officer will appear at some recognised place, to whom they can make application to join the army during a certain period?—Yes.

5384. You say the regiments are grouped in numbers—twos and threes and so forth; does that apply to the cavalry as well as to the infantry?—No.

5385-6. Can you say about how many of these local centres there are in which one battalion is more or less constantly placed?—There are 15 in the Punjab, 10 in Bengal, 9 in Madras.

5387. And this battalion, which is more or less a stationary battalion, practically performs the duty of a training depôt, amongst other duties, for the regiments that may be stationed on service elsewhere?—It does not follow that it is always stationed at the centre; it moves about.

5388. But if it migrates, does not one of the other battalions come and take its place?—Yes, except under special circumstances.

5389. They interchange amongst themselves?—Yes.

5390. And you endeavour to have one of the battalions of the regiment stationed at the centre to receive these recruits?—Yes, that is no doubt what was originally intended; but recruits generally go to the battalion for which they enlist, unless it happens to be on foreign service.

5391. And they do pass from that localised battalion to the other battalion?—Yes, in the case I have mentioned.

5392. Do you know how long they are kept in the localised battalion before they are passed to the other?—No, I cannot say; it varies. In some cases they join direct.

5393. But I understood you that the practice was, though there is no invariable rule, that men who are enlisted go to this depôt or battalion; although they may join the other battalion, the general organisation is, that men collected in a certain district, for a certain regiment, would go to this localised regimental centre?—I did not perhaps explain clearly that as a rule recruits go direct to the regiment for which they enlist; in some cases they may be sent to the centres first.

5394. You cannot say how long they are generally kept before they are sent to the outlying battalions?—No; I do not remember the exact period.

5395. But they are kept some time?—Yes, in particular cases.

5396. And the idea is that they should be more or less trained, so as to be able to take their place in the ranks of the battalion that they join?—Yes, that was the original intention of the plan; but in most cases they go direct.

5397. That gives a sketch, I suppose, of the infantry system. Could you explain the cavalry system, inasmuch as the regiments do not appear to be combined in twos and threes like the infantry?—The cavalry is recruited in much the same way, but recruits go direct to the station of the regiment for which they enlist.

5398. Do the regiments move long distances from station to station in the district?—The endeavour is to

arrange the relief so that the movements may not be very long; but at the same time they are often necessarily so.

5399. The result is that a regiment of Bengal cavalry recruits throughout the whole of Bengal wherever it may happen to be stationed?—It depends very much on the composition of the regiment. If the regiment is composed partly of Pathans, and partly of Sikhs, they recruit from different districts.

5400. Well then, they adopt particular districts according to the idiosyncracies of the regiments?—According to what they are composed of.

5401. Is there no organisation for obtaining recruits from these particular districts to send them to these particular regiments?—It would be done now to some extent through the district recruiting officer; in former days they would send out recruiting parties, and they do so now.

5402. (*Sir Donald Stewart.*) I thought cavalry always made their own arrangements?—I think of late years the recruiting officer has helped them in a certain way, but I do not think there is a general regulation to that effect.

5403. How would it be possible for that recruiting officer to arrange about men who had to pay for their assamis?—They would come forward and be medically inspected; I mean, if likely young men came forward the recruiting officer would find out about them, and I suppose he would be in communication with the officers commanding the regiments. But as a general rule they go straight to regimental head-quarters with the money they have to pay.

5404. (*Sir Ralph Knox.*) I do not quite understand that payment, would you describe it?—It is Rs. 200 and above, it may reach 400 Rs. With this the recruit pays for his horse, pony, tent, uniform, &c. His carbine is supplied free. The Madras Cavalry (three regiments) are in what is called the "regular" system. They get everything from the State.

(*Sir Donald Stewart.*) He gets a horse and certain equipment.

(*Sir Ralph Knox.*) He has to put down this money before he enlists, and then he gets a pay in return for that, which recoups him for that expenditure?

5405. (*Sir Donald Stewart.*) The Government give him so much for the maintenance of his horse and so much for his own maintenance. If the expenditure on his horse is greater than the Government allowance he gets compensation for it?—Yes. He gets compensation for dearness of provisions and forage.

5406. 13 Rs. 8 annas is allowed for the maintenance of the horse, I think?—Yes. Whenever the monthly cost of the horses' daily food, or a certain scale, exceeds 13 Rs. 8 annas, he gets compensation.

5407–8. (*Sir Ralph Knox.*) I should gather from what you say that there is a sort of combined system, that is to say, that a Cavalry regiment throws out its recruiters whether British, native, or non-commissioned officers, and that they are assisted by the district recruiting officer who may be situated in the place from which they are in the habit of drawing their recruits. They work together to this extent, that if a district recruiter is about, he directs the preliminary arrangements for the regimental recruiting officer as far as he can?—I think in some cases he does.

5409. On the other hand, besides, there is a regimental agency, which comes from the regiments to these districts which they adopt particularly, and obtains their recruits there?—Generally speaking, that is so; men come to the head-quarters of the regiment, and they wait there very often until there is a vacancy.

5410. But would they not have to move very long distances to do that?—Sometimes.

5411. (*Sir Donald Stewart.*) They come to their relatives in the regiment?—Yes.

5412. Their relations are in the lines, and they come and stay in the lines until there is a vacancy?—Yes, they do that.

5413. That is a very common practice?—Yes.

5414. (*Sir Ralph Knox.*) I thought you stated that it was necessary to make not long since an increase in the pay of the native soldier in order to induce him to join?—That is so.

5415. Then that does not seem to be supported by the fact that these men rushed always to the colours to the extent that you wanted them?—In the case of the cavalry, the commanding officers complained that they could not get men of the same stamp, they would not come forward; and therefore after a very long discussion and every endeavour to postpone the increase of pay and to adopt other expedients, it was found necessary to raise that pay; and the commanding officers then reported that they had no difficulty in getting them.

5416. Then the system in India appears to be a somewhat easy one from the fact that men are all anxious to rush into the army to the full extent of the numbers that you want?—Certainly, since the pay has been raised; not before that in recent years at all events.

5417. That of course facilitates the recruiting very considerably?—It does.

5418. But it does not do away with the necessity for training the men when you catch them as recruits?—No.

5419. They have to be trained, and it is generally recognised, I suppose, that they are under training for some time before they are fit to take their position in the ranks?—Yes.

5420 (*Sir Donald Stewart.*) The outside limit is a year for the infantry, and of course longer for the cavalry?—Yes, 8 months for infantry, I think.

5421. (*Sir Ralph Knox.*) These are the only two arms that are recruited in India?—There are the native mountain batteries and sappers.

5422. What number of mountain batteries?—There are eight.

5423. And engineers?—There are three corps of Sappers and Miners.

5424–5. What are the numbers of the mountain artillery. Eight batteries of about 150 men each?—106 native officers, non-commissioned officers and gunners, and 149 of the driver establishment in each battery.

5427. (*Mr. Mowbray.*) Was the cavalry pay raised at the same time as the infantry?—No, in 1891–92.

5428. What is the present pay of the native cavalry?—It is 31 rupees per mensem.

5429. And the infantry?—It has been raised by Rs. 2, to Rs. 9 per mensem.

(*Chairman.*) I think now we can turn to the military charges in England, which are separated in Sir Henry Waterfield's tables from the charges incurred in India. Of course they are all part of the same expenditure, and, as Sir William Wedderburn has pointed out in his memorandum, the military charges in England and the military charges in India, when we come finally to consider what the increase of military expenditure has been, must be taken together. At present we are taking them separately in order to watch and test the progress of expenditure in both divisions.

(*Sir Ralph Knox.*) But they are shown together in this return of Sir Donald Macfarlane's.

5430. (*Chairman.*) Yes, they are shown together there, but I am dealing now with Sir Henry Waterfield's tables which give the net expenditure. I think probably, Mr. Jacob, I had better address the questions to you, had I not, on Sir Henry Waterfield's tables?—(*Mr. Jacob.*) Yes, I think so. (*Sir Edwin Collen.*) I am not very familiar with them; they have only lately come before me.

5431. Then perhaps you will turn to Table X. Table X. shows an increase of net expenditure in England from Rx. 12,501,000 in 1875–6 to Rx. 15,681,000 in 1895–6, and that is exclusive of the charge involved in exchange?—(*Mr. Jacob.*) Yes, that is the total charge in England; that is not the charge for the army only.

5432. Yes; I am taking the total first of all: Sir Henry has separated the army charge in Table X. and I shall next call attention to the columns in the Table X., which refer to the army?—Yes.

5433. That increase on the whole therefore is a little over Rx. 3,000,000?—Yes.

5434. Taking the budget for this year—and there is no very great difference between the final accounts of 1893–94, and the Budget of this year—a difference of about 100,000?—Yes, that is all.

5435. Going through the latter we find that the army expenditure is included in columns 7, 8, 9, and 10, is it not?—Yes.

5436. The "army effective," of course, gives the army expenditure under that head complete?—It does

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob. C.S.I.

12 March 1896.

Military.

not include all that is generally included under "army effective"; the furlough pay is generally included under that head, but it is here shown separately under the head of "Furlough."

5437. But that head of "Furlough" (column 8) includes a certain amount of civil pay, does it not?—That is so.

5438. The detail of them is given in table XV?—Column 5 of that table shows the army charge.

5439. It shows that that charge has been almost stationary—Rs. 318,000 and Rs. 327,000?—Yes.

5440. And further, column 9 of Table X. gives the non-effective, of which only a portion again is military?—Yes, that is so.

5441. The last column is stores; column 10 includes civil stores as well as military stores?—Yes.

5442. Taking now the net army effective charges, the amount in 1875–76, was 623,000*l.*; in 1884–85 it was 864,000*l.*; in the Budget of 1895–96 1,037,000*l.*, which is only a very small amount above the final account of 1893–94. Can you give us any description of the causes which have lead to that increase?—The increase is almost entirely in the payments to the War Office. The payments to the War Office in 1875–76 were 320,000*l.*, and in 1895–96, 750,000*l.*; that is an increase of 430,000*l.*, which is almost equivalent to the total increase under these heads.

5443. A large part of that, I presume, arises from the increase of the army in India, does it not?—A portion of it is no doubt due to that, but a portion is also due to an increase in the actual amount per head levied.

5444. Can you give us the ground on which that increase was made?—I can give the information from a memorandum prepared by Sir Henry Waterfield. There were various committees and discussions as to the amount to be charged to India on account of the British army from 1869 to 1872, and eventually in 1875 a committee, which I think is generally called Mr. Bouverie's committee, reported and named certain amounts at which each soldier was to be rated according to his branch of the service. The amount payable on an average strength (from 1870–71 to 1875–76) of 61,309 was raised by Mr. Bouverie's committee to 5*l.* 16*s.* 7*d.* per man of all arms (as compared with 4*l.* 12*s.* 6*d.*, the amount which was previously paid).

5445. But Mr. Bouverie's committee sat in 1875, did it not?—It reported in 1875–76.

5446. Therefore the sum of 5*l.* 16*s.* 7*d.* would, I presume, apply to the sum paid in 1875–76?—It may have been paid partly in arrears.

5447. There was a considerable increase immediately afterwards. In 1876–77 there is an addition of 80,000*l.*, in 1877–78, 100,000*l.* in 1878–79, 61,000*l.*, and in 1879–80, 52,000*l.*, and then for some time it remained stationary or declined?—Yes, the Government of India did not at once accept the proposals of Mr. Bouverie's committee; they required further information on many points, but the Secretary of State agreed to adjust the claims from 1873–74 to 1876–77 accordingly. The accounts in dispute, however, from 1870–71 onwards, were not closed, as the India Office refused to accept at the rate named for recruits, soldiers of several years' standing; and, in view of the charges of which the India Office had assumed the direct payment, averaging 3*l.* 19*s.* 3*d.* on the establishment in India, a capitation rate of 6*l.* for those still paid by the War Office was proposed. The Committee on Public Accounts having in 1877 commented very strongly on the delay in settling the payments, a Treasury Minute was recorded on the 2nd of July 1878, under which the Chancellor of the Exchequer agreed to remit the outstanding sums (estimated at from 100,000*l.* to 150,000*l.*) which might be claimed from India, up to March 31st, 1879. A Commission over which Lord Northbrook presided, was then appointed to consider the capitation rate for the future, which the India Office had offered to take at 6*l.* 10*s.* on the establishment in India.

5448. Therefore, probably we may take it that the sum of 320,000*l.* brought to account in 1875–76 represents the old capitation charge?—Yes, that was so.

5449. Which you say was 4*l.* 12*s.* 6*d.*?—Yes.

5450. I understand, that, with some modifications, Mr. Bouverie's recommendation was accepted?—It was accepted to a certain extent; but then another committee was appointed under Lord Northbrook, which examined the accounts for each year and fixed the amount payable.

5451. And what generally was the amount at which the committee arrived?—For the four years, the rates were as follows: 1886–87, 7*l.* 1*s.* per head; 1887–88, 7*l.* 6*s.*; 1888–89, 7*l.* 9*s.*; 1889–90, 7*l.* 4*s.*; and the small difference in the amounts led both the India Office and the War Office to concur that the data had now been obtained for fixing a capitation rate, regard being had to the larger number of drafts sent to India in 1890–91 and 1891–92; and in the final report of Lord Northbrook's Commission, on the 22nd March 1892, they recommended that the claims for those two years should be settled by the payment of a capitation rate of 7*l.* 10*s.*, which is still in force.

5452. That is 7*l.* 10*s.*?—Yes, that was the rate finally settled.

5453–4. Would you say that that 7*l.* 10*s.* fixed in the year 1890–91 compares with 4*l.* 12*s.* 6*d.*, the rate that you think was in force in 1875–76?—Yes, I believe that is the case.

5455–6. And, therefore, applying it to the same force, you would expect to find a very large increase; it is an increase of between 60 and 70 per cent., is it not?—Yes.

5457. Well, that would at once carry up the charge on the same basis as 1875–76, to over 500,000*l.*, would it not?—Yes, the mere increase in the rate would do that, apart from any increase in numbers.

5458. Well, should we be correct in supposing that the increase from 320,000*l.* to 750,000*l.* is divided between this increase of rate and increase of numbers?—There is also another branch of the payments, that on account of deferred pay. I believe that was not paid at all in 1875–76, the system was introduced after that.

5459. (*Sir Ralph Knox.*) In 1876–77?—Yes; there was no payment on that account at all in 1875–76.

5460. (*Chairman.*) And what was the payment on that account in 1895–96?—183,000*l.*, and it has been larger in some of the previous years. In 1894–95 it was 230,000*l.*

5461. Allowing for that charge a very small sum indeed would be left to represent increased force?—Yes.

5462. If you started with 320,000*l.*; if you then take 190,000*l.* for deferred pay, and something not very far off the same sum for the difference between the 4*l.* 12*s.* 6*d.* and 7*l.* 10*s.* rates, it carries you up, does it not, to close upon 700,000*l.*; and would leave very little, less than 50,000*l.*, to represent other causes of increase?—Yes, that would be quite right.

5463. Therefore you would put it down that the result of these committees of inquiry has been that they have led to a very considerable increase in the capitation rate per man since 1875–76?—Yes.

5464. That the introduction of deferred pay has again added very largely to the charge against India with perhaps a comparatively small margin of increase caused by increase of force?—Yes, that is so.

5465. Then the next head of effective service is transport. That appears to have been a very stationary item; but can you tell us what the charges are which are met under that head in England?—The system has varied considerably, and the charges have also varied very considerably from year to year. The amounts in 1875–76 and 1895–96 correspond very closely, but it has risen to 335,000*l.* in 1883–84, and has fallen so low as 195,000*l.* in 1889–90.

5466. What determines the charge for the transport? A large number of transports are kept by the Admiralty for the Indian service, are they not?—They used to be so kept.

5467. That has only been altered within the last few years?—Yes, within the last few years.

5468. Then would you not have expected to find the maintenance of those ships, more or less, a constant charge?—I believe that in some cases private vessels had to be engaged in addition to the ordinary transport ships. (*Sir Edwin Collen.*) Yes.

5469. And the charge for hiring is the margin which rises and falls according to the needs of the Indian Government?—(*Mr. Jacob.*) Yes.

5470. You do not happen to know what the actual charge was in 1884–85?—Yes, the actual charge in 1884–85 was 305,000*l.*, that is the net charge.

5471-2. At present is the transport conducted entirely on the principle of hiring vessels?—(*Sir Edwin Collen.*) That is a branch of expenditure entirely between the India Office and the Admiralty. The "Malabar," I think, is running.

5473. (*Sir Donald Stewart.*) She is now going on her last voyage?—Yes.

5474. (*Chairman.*) At all events that probably is an item, which, apart from some great demand from India for an increased number of troops, is one that would remain more or less constant; we need not expect a great increase upon it?—(*Mr. Jacob.*) I should think not.

5475. Then there comes a rather comprehensive heading, "Other charges," apparently 37,000*l.* in 1875-76, and 31,000*l.* in 1895-96, and therefore not a very important item. But in the interval there are several years in which these charges vary very greatly indeed, owing, I see from a note attached, to the payments made by the British Government on account of the Afghan war. Are there any other disturbing causes than that?—These payments do not increase the charge; they lessen the net charge.

5476. But increase the payment, do they not, in the way they are brought to account in the years 1881-82 and 1882-83?—No; in the year 1880-81 the actual net payment, if we take only the charges ordinarily charged under that head, was 41,000*l.*, but there was a credit under that head, of 2,695,000*l.*.

5477. Quite so, and of course that was to the good?—Yes.

5478. But if you look at next year?—Yes; that means that the credit was lessened. The charge in that year was 47,000*l.*, and the credit was 2,305,000*l.*, the credit in the two years making up 5,000,000*l.*

5479. However, except those payments, there is nothing calling for special comment?—There is nothing at all.

5480. I see that during a series of years ending 1877-78, instead of there being an actual charge against this head, it was in credit—you see taking the figures which are put in italics, which means there is more received than paid?—Those figures merely indicate the difference between the actuals of successive years—there is no credit in any year under that head, no absolute credit—the table shows merely the difference between each year and the preceding year. I can give you the details of the charges in 1875-76 and 1893-94. I have not taken them out for every year. Perhaps I might give the corresponding amounts in 1875-76 and 1893-94: advanced to regiments in 1875-76, 13,107*l.*; 4,352*l.* in 1893-94; pay during the voyage was only 5,131*l.* in 1875-76, against 5,858*l.* in 1893-94. Then there was a contribution to the School of Music of 472*l.* in 1875-76; purchase of stallions, 12,943*l.*, neither of which recur at present; I think the latter charge is taken to another head now. Then there is the outfit allowance of Indian cadets, which cost 1,050*l.* in 1875-76. The pay of officers appointed in succession to subalterns was 188*l.* in 1875-76 against which may be taken in 1893-94 pay and allowances of second lieutenants 1,030*l.* and outfit allowance on promotion to commissioned rank 550*l.*; pay of surgeons, 2,436*l.* in 1875-76, and the corresponding payment now is 4,344*l.* Then officers acquiring scientific knowledge in 1875-76, 877*l.*, and in 1893-94, 2,792*l.*; purchase of land at Port Said, 121*l.* in 1875-76; and military officers on special duty, 842*l.* in 1875-76, and 5,261*l.* in 1893-94. There are also one or two charges in 1893-94 which did not occur in 1875-76. These include a payment for outfit allowances, &c. of lady nurses of 1,123*l.* in 1893-94; the guard of honour brought over to the Imperial Institute, 2,145*l.*; and officers studying Russian, 1,915*l.* There are a few other payments in each year but this enumeration, I think, completes all the payments which need be specified in detail.

5481. What is that first item, advance to troops; what does that mean?—(*Sir Edwin Collen.*) Advance to troops on passage. (*Mr. Jacob.*) These payments used formerly to be made by the War Office, and the recovery from India was included in the old capitation rate of 10*l.* The direct payment was undertaken by the India Office in 1869. When a corps is about to embark for India the paymaster is allowed, in accordance with the Royal Warrant, to draw on the India Office for an advance of 35 days' pay to the officers, and 25 days' pay for the non-commissioned officers and men, and his account is adjusted on his arrival in India.

5482. And that does not fall within the capitation rate?—No, it is outside the present capitation rate.

5483. The capitation rate does not begin to take effect until the men land in India; is that it?—It is calculated on the forces in India. (*Sir Edwin Collen.*) On the actual numbers. (*Mr. Jacob.*) In India.

5484. And, therefore, while the troops are being conveyed, the Indian Government make a separate payment to them?—(*Sir Edwin Collen.*) They pay the expenses of the troops from the day they leave England until they arrive, and of course while in India.

5485. (*Mr. Buchanan.*) They pay 7*l.* 10*s.* per head on the number of troops from the day they leave England, or from the day they arrive in India?—They make an annual payment according to the numbers actually in India.

5486. (*Sir Ralph Knox.*) The arrangement is that India pays directly all those men who go out as a portion of a battalion or regiment, but the pay of the men who go out as detachments, or drafts, is paid by the Home Government and is covered by the 7*l.* 10*s.*

5487. (*Chairman.*) Then we come to furlough pay, of which the details are given on page 15. The military charge was in 1875-76, 318,000*l.*, and in the budget of 1895-96, 327,000*l.*, therefore showing hardly any increase. What are the conditions under which that furlough grant is made? Would you not rather have expected to find with a large increase of force, that there would be an increase of furlough pay?—(*Mr. Jacob.*) Latterly there have been several alterations in the furlough rules, but the rules now in force were introduced in 1886, and under them the general rate of furlough pay of officers has been reduced. I think I am correct in saying that it has been generally reduced. The rates vary under the existing rules from 200*l.* a year to 700*l.* a year. Under the old rules the minimum was 250*l.*, and the maximum 1,000*l.*, so that I should say that generally there has been a reduction.

5488-9. Therefore, there has been an economy in the scale of furlough pay, which has counterbalanced any increase of furlough pay from increase of troops in India?—Yes; as regards the allowance payable, the scale has been reduced. I believe the rules are, if anything, slightly more liberal as to the amount of leave. (*Sir Edwin Collen.*) They are more liberal.

5490. That is to say, that under the new rules a man might get ten months' leave, while under the old rules he would only have had nine months, but during the ten months he would be receiving a smaller sum than he would have received during the nine months under the old rules?—(*Mr. Jacob.*) The rules are on an entirely different principle as to the amount of leave admissible?—(*Sir Edwin Collen.*) Might I say in addition to what Mr. Jacob has said, under the old rules, which were known as the 1868 rules, although the minimum was, I think, 200*l.* or 250*l.*, yet the intermediate sum a man could draw was based on his Indian pay; in a very high appointment he could draw 1,000*l.* a year undoubtedly; but the intermediate rates were based on a rupee calculation, and they were paid at the official exchange of the year, so that as the rupee fell the furlough allowance fell, and that was what caused the Government to settle the furlough allowances on a sterling basis under the 1886 rules.

5491. The next heading is table XVI., Non-effective charges in England, which is sub-divided under columns 5 and 6, into the military non-effective charges, British and Indian. Would you tell us what the distinction is between the Indian non-effective charges and the British?—(*Mr. Jacob.*) The British payment is a payment made to the War Office.

5492-3. That is under the arrangement between the India Office and the War Office?—Yes. The Indian payment is the payment of the actual pensions of Indian officers.

5494. "British" is that share of pensions of the Imperial troops which belongs to service in India?—Yes.

5495. The Indian pensions are the pensions to those officers who serve in the native army?—Yes.

5496-7. Now, of course, in dealing with the British item there is a very considerable qualification to be made. In 1875-76 the payment was 350,000*l.*, but in the Budget of 1895-96 it is 476,600*l.*, an increase, no doubt, but there was a complete change in the method of making these payments in the year 1885-86, was there not?—Yes.

5498. Can you describe to us what that change was?—From 1870 the arrangement in force was that the

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

12 March 1896.

Military.

capital value of each pension should be actuarially calculated; and that India should pay down the proportion of such capital value, which was due for service rendered to the Indian Government. Under this system India paid during the 14 years from 1870–71 to 1883–84 at the rate of 10*l.* 1*s.* 4*d.* per man; but the amount varied greatly, from 6*l.* 7*s.* 8*d.* for the first six years, 1870–76, to 13*l.* 8*s.* 6*d.* for the seven years 1876–83; these latter charges were exceptionally heavy in consequence of the large number of men who, having enlisted during the Crimean War and Indian Mutiny, were then completing their 21 years' service, and of the changes in the British army by which the payments for pensions to officers were greatly increased. Owing to the rapid increase, the quarterly advances proved insufficient, and arrears of 2,016,824*l.* were, on the 31st March 1883 owing to the British Government. In February 1884 a special payment of 1,000,000*l.* was made which accounts for the specially large payment shown in the accounts of 1883–84. With effect from the 1st April 1884 the Treasury decided to discontinue the system of receiving the capitalised value of the pensions due by India; and it was agreed that in each case of pension it should be actuarially calculated what was the chance of the man being alive during each year, and India should pay accordingly. This alteration of system effected an immediate reduction of the charge, so great, indeed, that the provision made in the Estimates for 1884–85 on the old system was sufficient to clear off the whole of the arrears; and, as India had thus discharged her liability for all pensions granted before 1884–85, the payments since that date have been very moderate, though they have necessarily continued to increase. They have risen from 36,289*l.* in 1884–85, to 430,674*l.* in 1894–95, the average for the 11 years being 247,754*l.*

5499. Therefore, the difference of system was this, that up to 1885 India by means of a capital payment got rid of its liability once for all in respect of every soldier, part of whose pension she had to pay?—Yes.

5500. But after 1885, upon proper calculation, the only charge India bears is the actual charge for the pensions of the men, falling due within the year?—Yes.

5501–2. There is not a calculation made for each man, is there? but that broad principle is aimed at?—I believe a calculation is made for each man.

5503. Do they watch whether he is alive or not?—No; I mean it is an actuarial calculation for each man.

5504. They do not follow the man?—No.

5505. But they say there is A. B. here, according to our actuarial calculations he ought to be alive?—Yes.

5506. And another year he ought to be dead, according to our calculation?—Yes, that is the way in which it is done.

5507. Therefore they do not follow the man, but they pay in regard to each man according to an actuarial calculation whether he ought to be alive or not?—Yes.

5508–9. And that of course has led for several years to a very much decreased charge: but at the same time the charge has now risen in the Budget of 1895–96 to 477,000*l.* being more than the capital payment of 1875–76 which was 350,000*l.*?—I think that the payment in 1875–76 was not a payment in full.

5510. Oh no, because, as you have just mentioned, over several years there were arrears?—Yes, there were very large arrears, over 2,000,000*l.* of arrears had accumulated.

5511. The interest of which money India kept in her pocket?—I cannot say.

5512–15. The calculation was made on the idea that the sum was paid down at the moment the soldier retired. As India did not pay up a large part of her charge for five or six years later, she certainly got the benefit of the money in the meantime. Well, then under the head "Pensions in India" the charge has risen from 1,100,000*l.* to 1,846,000*l.* Can you give us any reason for that?—The increase is very largely due to the increased successions to the colonels' allowances; also to an increase in the actual pension list generally. The pension list was not nearly at its maximum in 1875–76.

5516. Because at present we should hardly look for an increase of the non-effective charge on account of the addition made to the strength of the army in 1886?—No, it would be very slight, I suppose, on that account.

5517. You have not got any figures which show how that increase of 1,846,000*l.* is built up, to what extent it is due to colonels' allowances?—(*Sir Edwin Collen.*) Might I explain, my Lord, that after the Indian Mutiny there were a very large number of officers who were thrown out of employ; and, I think, the gradual increase of charges was due, in great measure, in the earlier years of the series certainly, to those officers being gradually pensioned off and retired.

5518. But would not the charge of officers put *en disponibilité* so long ago as the Indian Mutiny be now diminishing?—Yes, but there are a large number of them still on the pension list.

5519. But I should have thought that after 40 years—very nearly 40 years—the decline would have taken effect?—Yes; but men who remained in the service for many years after the mutiny—for instance, the youngest of them was comparatively a young officer—have gradually reduced in numbers, and have taken their pensions in the intermediate period.

5520. Mr. Jacob, do you think you could give us any figures showing the sub-division of the heading, and showing how it is made up; for instance, take 1875–76, or 1883–84, to what extent the colonels' allowances come in, and whether there is any other sub-division which would bring out what Sir Edwin Collen has mentioned, viz., the number of mutiny officers who are on the pension list?—(*Mr. Jacob.*) There is no sub-division of them in the accounts, but I will see whether the India Office can give any sub-division of them.*

5521–2. Thank you; because you see the increase is a very large one?—Yes.

5523. (*Sir Donald Stewart.*) Is it not due to the fact that every officer who entered the service before a particular date was entitled to a colonel's allowances after 38 years' service?—That is the case.

5524. That is one cause; there is something due to the fact that officers are now compulsorily retired?—Yes; that would increase the charge.

5525. I think the maximum was calculated to arrive about the year 1900?—About 1901, I think, the maximum would probably be.

5526. And after that date it will gradually be reduced to the normal condition?—Yes. (*Sir Edwin Collen.*) It was calculated too that the amount of colonel's allowances would decrease after the year 1895, because those who entered in 1881 do not get colonel's allowances.

5527. (*Chairman.*) Has any calculation been made, Mr. Jacob, of what the normal charge may be expected to be?—(*Mr. Jacob.*) I am not sure; I will see what calculations have been made.

5528–9. One question more about the British item, Column 5; has any calculation been made of what the normal charge under that head will be. You see it has been a rising charge owing to the change of 1886–87?—No. I am not aware of any calculation having been made as to what the maximum will be.

5530. Well, then, we pass to stores, Table XVII. Sir Henry Waterfield divides the stores under the headings of "clothing," "ordnance and miscellaneous," and "other." I think we have learned in the course of these examinations, that the tendency of late years has been to get a much larger quantity of stores locally than formerly, and I think Sir Edwin Collen told us yesterday, taking one instance, that boots are now got in India which were bought in England formerly?—Yes.

5531. And we learn that the policy of the Indian Government has been to buy on the spot where possible?—Yes.

5532. But taking "clothing" in 1875–76 the charge was 225,470*l.*, and in 1895–96, 236,400*l.*?—Yes.

5533. Therefore one does not see any corresponding diminution of this side to set against the increased expenditure in India?—There has been a very large decrease if an average of years is taken. I do not think it is possible in a case of this kind to compare one single year with another, but the actuals generally from 1875–76 down to 1880–81 are very much higher than in subsequent years. The total of 1880–1 was 385,000*l.*, in 1879–80 307,000*l.*, in 1878–79 207,000*l.*, in 1877–78 347,000*l.*, so that the average of those four years was very high, and there has been a considerable reduction compared with that, and as far as my recollection goes, it was about the year 1881–82 that the

* *See* Appendix 2 A.

matter of the purchase of stores in India was first taken up with any vigour.

5534. But I presume from that time and in consequence of the new policy, the charge of getting stores of this nature in India has increased?—Yes, certainly it has.

5535. And yet there does not seem any notable decrease in the expenditure in England?—There is a very notable decrease in the charge for clothing stores in England as compared with the four years I have mentioned.

5536. Then come the ordnance and miscellaneous stores which were 470,000*l.* in 1875-76 and 426,000*l.* in the budget of 1895-96. There, again, we learn that the policy of the Government of India is to get all the ordnance stores they can in India—its ammunition for instance?—Yes.

5537. Then, I suppose, if there has not been any large decrease, the reason would be that those expensive warlike weapons that are still got from England are not likely to show a reduction?—Yes, that is the case; in some years the charge has been very heavy under this head. For instance, in 1890-91 it was 717,000*l.*, and in 1891-92,826,000*l.*

5538. That is when a change of arm, I suppose, took place?—Yes, but I think it has been carried on into subsequent years. (*Sir Edwin Collen.*) That was owing to the equipment of the artillery with the breech-loading gun; then the British troops were equipped with the Martini-Henry, and the native troops with the Snider, then later there was the equipment of the native troops with the Martini-Henry and the British troops with the Lee-Metford.

5539. And lastly we come to the stores which Sir Henry Waterfield qualifies as "other." Can you tell us what they are, 381,000*l.* in 1875-76, which has sunk to 42,000*l.* in the budget for 1895-96?—They are the stores of all the other departments of the army.

5540. There there has been a very heavy decrease indeed?—I think that includes the decrease in malt liquor for one thing. (*Sir Edwin Collen.*) It would; and commissariat stores. (*Mr. Jacob.*) And the commissariat generally.

5541. Therefore under this head you show a result from the new policy of buying in India?—Yes.

5542. How are the stores required for special operations and special defence works, separated from the other kindred services?—It is only in a very few years that the charges for special operations have been separated from the other military stores.

5543. Supposing there is an expedition, I suppose, in the first instance, the stores that are required for that expedition come out of the general balance of stores in hand, do they not?—Yes, that is so. (*Sir Edwin Collen.*) As a rule.

5544. Then if stores are demanded from here to replenish the stock is it very easy to ear-mark those stores to the special expedition?—(*Mr. Jacob.*) It is not easy; there has been a proposal made, I think quite recently, by the Government of India that an attempt should be made to ear-mark them, but I understand that the India Office has raised some difficulty about it, and it seems doubtful whether it will be carried out. The attempt was, however, made in some years as, for instance, in 1879-80, 1880-81, and 1882-83. The other charges shown lower down in that column are for stores for the special defence works; they are kept separate.

5544*a*. Would you find it difficult, Sir Ralph, to charge stores, which you ordered from your general store balance, against an expedition?

(*Sir Ralph Knox.*) No, I do not think so; we should value the stores as they were issued; that is what we always do when they are shipped abroad and in that way we get a very fair approximation.

(*Chairman.*) Take the Chitral expedition, stores ordered here would probably only reach India after the expedition was over.

(*Sir Ralph Knox.*) But these would probably be ordered to replace stores taken from the magazines in India.

(*Chairman.*) And therefore you would keep an account in India against the general store account and charge the expedition with all the new stores brought in to make up the general balance.

(*Sir Ralph Knox.*) Yes. We should ascertain what was returned and credit the account with the amount.

5545. (*Chairman.*) But supposing the stores are not actually replaced, would not that tend to a fictitious charge for stores issued? Supposing, for instance, that in the case of an expedition you do not order the full number of rifles to replace those issued for the expedition, an account of this kind would not be quite correct, unless you replace exactly the number that you have issued for the expedition?—(*Sir Edwin Collen.*) We should follow the principle Sir Ralph Knox has described, that is to say, in arriving at an account in India, the stores would be valued and the cost of replenishing the stock of ammunition. It would not be possible to show it in the home accounts exactly, but we know what demands we should make on home for the purpose of the expedition for the replenishing.

5546. If you always replenish exactly to the extent that you issued, that would give a true result; and I understand Sir Ralph Knox's method is that he charges the expedition with the stores actually issued out of stock for the purpose, whereas in this case there is an order sent to England, and the stores, it seems to me, as far as an expedition is concerned, would probably come into receipt after the expedition ended?—Yes.

5547. And if you did not order exactly the same amount of stores that you issued, which I presume is not always done, then you would not have a correct result?—We have a very accurate scale of reserves laid down, for instance, so many thousand water-proof sheets are issued, say 20,000; a demand is sent to England for the replenishment of that reserve which is kept up to a certain point, to replace the 20,000.

5548. Therefore there is an automatic process?—I think so.

5549. You replace the stores up to a certain level?—Yes, because we have actual scales of reserves.

5550. (*Mr. Courtney.*) Suppose you issued for any special expedition 10,000 rifles, but your stock happened to be rather abundant, and you only ordered 5,000, would you charge to that expedition the cost of 10,000 or 5,000?—We should charge 10,000, but I may say that we do not issue rifles because those are in the hands of the troops.

5551. Anything; it does not matter what it is?—Yes.

5552. Why was this sub-head of account "special operations" ordered; it only commenced in 1878-79?—(*Sir Edwin Collen.*) There was a special column for special operations because we had the sanction of the Secretary of State up to a certain limit. (*Mr. Jacob.*) That is the special operations for the four years named above. As I said, an attempt was made to separate the charge, but it was afterwards abandoned. No attempt has been made since then to separate the charge for special operations.

5553. (*Chairman.*) You find a difficulty in ear-marking the stores for special operations?—I do not remember the exact facts of this case, but I know nothing is done in that way now.

5554. (*Sir Donald Stewart.*) Was it by order of the Secretary of State that this column was opened?—I do not know the facts about the opening of that account, but I know a representation has been recently made to the Government of India asking whether something of that sort could not be done again now.

5555. Precisely, but I think the whole thing was dropped?—It certainly was dropped when it was previously attempted.

5556. And all these further figures given here are really on account of special defence works?—That is so

5557. (*Chairman.*) Those, I think, complete the items which make up the general heading Military Expenditure in India. There is only one further heading and that is exchange. I do not know whether you would have any points on that to which you would like to call attention. I think, Mr. Jacob, you propose to call our attention to the fact that Sir Henry Waterfield in his account of the Indian expenditure, has omitted the item of exchange, which is included in most of the published accounts relating to army expenditure?—Yes, that is so.

5558. Would you please describe to us that charge and the reason that Sir Henry Waterfield had for omitting it from the Indian side of the expenditure?—One of the charges omitted, is that on account of

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

12 March 1896.

Military.

British soldiers' pay. That is fixed at a sterling amount and from the year 1883–84, the amount actually paid to the British soldier, has been the equivalent of that sterling at the official rate fixed annually.

5559. That is to say, in Sir Henry Waterfield's account of money expended in India, the account is charged with the amount paid to the soldier at what I may call for my purpose here, an arbitrary rate of exchange, namely, the rate of exchange that obtained in whatever year it might be, 10, 15, or 16 years ago. As the rupee has fallen, India has made a separate account of the additional amount, that became due to the soldier in order to provide him with the equivalent of the sterling?—Yes.

5560. Of course the question arises, on what basis did you take the sum that is charged to India as the normal rate, because there is no real equivalent between the rupee and the sovereign?—The amount shown is possibly the difference between the rupee at 2*s.* and the actual amount paid. It is not shown separately in the accounts, I may explain.

5561. You have called our attention to the fact that the English soldier in India receives a certain number of rupees in respect of each sovereign due to him, that is to say, he receives for each fall in the rupee so many more rupees in order to make up his pay?—Yes.

5562–3. Well, Sir Henry Waterfield makes a separate account of these additional rupees, and keeps it outside his statement of army expenditure; what is the rate which he admits into his account? how many rupees to the sovereign does he admit into his account on page 10? Here you have net military expenditure, you know? I understand from you, that from that net military expenditure, is excluded this amount, which you may say is paid extra to the soldier to make up his sterling pay?—Yes.

5564. What is the amount included in the net military expenditure per sovereign?—That I believe is ten rupees to the sovereign.

5565. Well, that was only an old and convenient method of calculation. Except for a moment, the rupee scarcely ever in history reached 2*s.*, did it?—Oh, yes.

5566. Only for a very short time?—For some time it was above 2*s.*

5567. Just at the time that the gold discoveries were at their highest, was it not?—No.

5568. Was it over 2*s.* early in the sixties?—Yes, it was above 2*s.* in 1859–60 and 1860–61, and was very close to 2*s.* even in 1871.

5569. It was 1*s.* 11*d.*?—It was over 1*s.* 11*d.*

5570. The case is that for every 1*l.* due to the British soldier, in this column here is charged 10 rupees?—I believe that is the way the calculation is made; but I am not sure.

5571. Whatever he received more than 10 rupees Sir Henry Waterfield has carried into this separate account?—That, I believe, is the way in which his account is made out, but I am not sure as to the initial rate upon which the increased charge has been calculated.

5572. In what account of Sir Henry Waterfield does that allowance which is paid in India appear?—In this Table XIX, column 5.

5573. Column 5, British soldiers' pay?—Yes.

5574. Ought not that to be counted as a charge in India when we are looking at the charge of the army in India. It is a payment made in India?—It certainly is a payment in India, but it is a payment which depends entirely upon the rate of exchange.

5575. Quite so, but it is an Indian charge?—It is.

5576. And therefore when we come to put the charges together we ought probably to put in an extra column for that?—Yes, that is a charge in India.

5577. You see, it comes to a very large sum?—Yes.

5578. And, in reality, without going into the niceties of its being caused by exchange, so many more rupees are paid to the soldier in India. That is a payment in India, and it ought really to be added on to the head of "other charges," column 6 in table IV.?—Yes, if you are taking out the total charges in India.

5579. You would agree with that?—Yes, it certainly is a charge in India, and in our accounts, of course, it is not stated separately at all.

5580. Are there any other points under this heading of exchange?—The exchange compensation is also separated, too, and shown in that table.

5581. Column 6?—Yes.

5582. Therefore may we take column 5 and column 6 as both representing payments in India?—Yes, those both represent payments in India, but column 6 does not represent only military payments; it includes both civil and militay charges.

5883. That is quite a recent charge?—Yes, that is the exchange compensation.

5584. Can you separate the military portion from the civil?—Yes. The army charges for exchange compensation have been:—1893–4, Rx. 264,620; 1894–5 (Revised), Rx. 518,600; 1895–6 (Budget), Rx. 610,000.

5585. Are there any other points in connexion with Table XIX. to which you would wish to call our attention?—I would only call attention to the remittance accounts; that is also an Indian charge; that is not a charge on account of English expenditure.

5586. That is an Indian charge?—That appears in the Indian accounts.

5587. But that is given by Sir Henry Waterfield as an English charge?—Yes; it is brought to account here because it is directly due to exchange.

5588–9. But that is not confined to military officers?—No, that is not military at all.

5589*a*. We must take that into consideration when we come to the other headings?—Yes. The only portion of column 3 that is military is the exchange on the sterling military expenditure in England.

5590. Quite so; stores, pensions, and so forth; the other things that are paid in England?—Yes.

5591. But clearly, when we are making a charge for expenditure on the army in India, as apart from the corresponding charge in England, columns 5 and 6, so far as column 6 refers to military officers, ought to appear in Table IV., the Indian expenditure?—Yes, if you want to give the whole of the Indian expenditure. Sir Henry Waterfield's Table IV. is headed, "Net Military Expenditure in India apart from Exchange," and that is why he excluded these items.

5592. I should rather like to see the evidence of yesterday and to-day, so as to put rather more carefully together what the joint expenditure is, and I should propose to call your attention to that probably when next we meet, because if we try now to work out in question and answer what the joint charge is it will take up some time, and we shall get through it quicker if we come with the table prepared which will show the joint military expenditure in England and India; therefore I do not propose to go into that now?—Yes.

5593. (*Mr. Buchanan.*) I would only ask Sir Edwin Collen this; I see that in 1875–76 you paid the home authorities 4*l.* 12*s.* 6*d.* per head, and now you pay them at the rate of 7*l.* 10*s.*, which is a very large increase in the cost of the British soldier to the Indian Government. I suppose the contention of the Indian Government would be that that increase is greater than ought to have been charged to them?—(*Sir Edwin Collen.*) I think so. I think they would say that a certain organisation, for instance, depôts which have been created at home, has conduced to the increase of that charge. Take for example the portion of the charge, such as that for the cavalry depôt which came originally into the accounts, but which now is included in the 7*l.* 10*s.*; what we always contended, was that the organisation of the depôt was on a higher scale than was absolutely necessary to supply us with the numbers of cavalry recruits we required.

5593A. That addition to the cost of training the British soldier, undertaken at home from the point of view of convenience at home without any regard to the necessity for it in relation to his service in India, that change was made without consulting the Government of India, and with the view to British exigencies and not to Indian?

(*Chairman.*) No doubt there is force in what Mr. Buchanan says, but these charges were arranged practically by a Commission which had Lord Northbrook at its head with a representative of the War Office in Sir Ralph Knox, and a representative of the Indian Government, Sir Thomas Seccombe, therefore this was not a mere autocratic act of the English Government.

(*Mr. Buchanan.*) No

5594. (*Chairman.*) It was fixed by the committee. It was quite open to the Indian Government to object to the result?—If I may venture to say so, some of the members of various committees, the Indian members of various committees, although they accepted for the purpose of the settlement of the claims of the War Office certain rates and certain calculations, yet recorded their opinion that this depôt organisation, for instance, was on a higher scale than was necessary for the requirements of India, and they particularly asked that inquiries might be made into that subject.

5594*a*. (*Chairman.*) At the same time, it was a committee on which India was represented as well as the War Office, and, in addition to this, at the head of that committee was placed a statesman who certainly would not be charged, I think, with a disinclination to India; he was as impartial a man between England and India as you could find.

5595. (*Mr. Buchanan.*) That is one of the questions we propose to investigate, though whether it should come now or under the apportionment of charge I do not quite know; all I was going to ask just now was whether the Government of India would acquiesce in this great increase from 4*l.* 12*s.* 6*d.* to 7*l.* 10*s.*, as having been fairly imposed upon them?—No, I should say that they would say that that increase had been greater than was absolutely necessary.

5596. (*Chairman.*) When we come to the apportionment of charge we shall have your views upon this point?—Well, we may be entirely in error, but we have never been quite satisfied as to the details upon which the calculation was founded.

5597. But I presume you will be prepared to give us, when we come to the apportionment of the charge, your view upon the result of this Committee, will you not?—Well, in a general way, but I have, of course, no technical or expert knowledge of all the calculations made by the War Office at home.

5598. We shall be looking to you to give us the Indian case?—Yes, I shall be very glad.

5599. (*Mr. Buchanan.*) That will come next time. There is only one other question I should like to ask you about—could you tell us what in the old days when India did her own recruiting, and had her British force independently of the home Government, would be the corresponding charge to the Indian Exchequer to this 7*l.* 10*s.*?—I do not know the exact charge. I know, when we had the Warley Depôt, we recruited at a very small cost.

5600. There is no possibility of giving a figure, but I presume we may assume that it was considerably less than the 4*l.* 12*s.* 6*d.*; the former system was very much cheaper?—That is to say the special recruiting for the East India Company's forces.

5601–2. (*Chairman.*) The Indian Government have constantly put before the Treasury their view that the recruiting system was much cheaper when they did it themselves, but I do not know where to refer you to it?—(*Mr. Jacob.*) It is in the papers laid before the Commission.

(*Sir Ralph Knox.*) It comes up like King Charles' head in every letter they write on the subject.

5603. (*Mr. Buchanan.*) The Indian Government think, I suppose, as far as financial reasons go, that they would like to revert to the old system and have their British force independently?—(*Sir Edwin Collen.*) That opens up a very large question. I am not prepared to answer that in the affirmative.

5604. It has not been practically considered by the Indian Government in recent years?—No; not within recent years.

5605. It would certainly be very much cheaper?—I should say certainly that it would be cheaper.

5606. (*Sir William Wedderburn.*) I should like to ask Sir Edwin Collen a question that I forgot to ask as to the Indian charges with regard to the Volunteers. Do you consider from a military point of view that the Volunteers of India are of value?—I do.

5607. To the extent of the cost that is shown here?—Yes, I think so.

5608–10. I see that it has increased. At page 58 of this return of the reduction of expenditure it gives the cost for the volunteers, and it has risen. In 1884-85, it was Rx. 68,100. It has gradually risen till in the estimates of 1892–93 this item is shown as Rx. 166,000. That is a very large increase?—Yes.

5611. Is it likely to go on increasing in that same ratio?—I think not, because part of the increase depends upon certain concessions which were made to the volunteers in the way of assistance and money, and capitation allowances and so on, which are not likely to occur again within a few years, and the limit will be the limit of numbers of volunteers who can be obtained in India.

5612. Then the increase has been a sort of annual increment each year?—Each year, yes.

5613. It has not jumped up suddenly?—No, as a rule it has gone on gradually. There were very few volunteers at one time, now there are a considerable number—28,000 to 30,000 I think.

5614–17. May I ask in what way they are valuable from a military point of view?—I should say from a military point of view they are valuable for garrison purposes, to hold certain stations in case of any internal disturbances, or when the troops were withdrawn in other directions. They are auxiliary forces to the regular army and they would be valuable in occupying certain positions in India, and securing the safety of an unprotected population.

5618. If it were desired to reduce that expenditure upon the volunteers, in what direction could it best be effected?—The only possible way would be by the Government of India saying they would not allow any more volunteers to be enrolled. I see no possibility of reducing the expenditure so long as you continue to enrol them.

5619. Those different items at paragraph 18, page 58, of the paper headed, "Reduction of Expenditure," would all have to continue?—Yes, undoubtedly.

5620. There is just one other question I wish to ask with reference to a map of the boundaries; could you give me the reference to the map which is at present the working map of the Government of India in dealing with such questions—boundary questions?—No, I am afraid I cannot give you any special reference.

5621. I mean could you ascertain, and at the next meeting perhaps give us that?—I might be able to do so.

5622. It is an important point to know upon what line the Government of India depend in these matters?—Yes.

5623. (*Mr. Naoroji.*) I have just only one question. I think it was declared in some despatch by the Government of India that they were not legally bound to pay this compensation for exchange; are you aware of that?—(*Mr. Jacob.*) Yes, there could be no legal claim.

5624. They are not legally bound to pay it?—Yes, I believe so.

5625. And can you say that when, as was the case very often, exchange was above 2*s.*, any account was taken of that at all in paying the salaries in those days?—I was not happy enough to be in India then.

5626. But from the India Office you can ascertain whether they have always paid the regular rupees without any reduction at all or so much higher. From records I daresay they can find out whether any such deduction was ever made?—I think I can safely say that no such deduction was ever made in the matter of civil pay.

5627. (*Sir Ralph Knox.*) There is one point which I should like to clear up which I think these figures do not make very clear, but rather confuse. The first figure stated in table 14 as payment made to the War Office is stated at 320,000*l.*?—Yes.

5628. It is hardly correct, I think, to state that that payment was made to the War Office. It was made on account of the War Office claim, but it was really made to the Treasury; are you aware of that?—Yes, it was made to the British Treasury.

5629. At one time all the payments of these expenses formed a proportion of the extra receipts of the revenue. That year, 1875–76, was, I think, in the middle of the period during which there was considerable dispute as between the War Office and the India Office as to the payment that should be made, was it not?—Yes, I believe so.

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

12 March 1896.

Military.

5630. It is the middle of the period, and during that time it would appear that, as against the claims which the War Office was making, the India Office was taking a very sanguine view as to what the amount would be which they would have to pay; for I find here, in referring to the papers in which a settlement was come to, that the War Office claims during the seven years were 486,000*l.*, 444,000*l.*, 388,000*l.*, 403,000*l.*, 430,000*l.*, 468,000*l.*, and 679,000*l.* As against those claims the India Office appears to have paid the Treasury 505,000*l.*, 435,000*l.*, 450,000*l.*, 400,000*l.*, 380,000*l.*, and then comes this very sanguine year, 320,000*l.*; the next year 400,000*l.* The settlement that was come to ultimately as regards those seven years was that a certain portion claimed by the War Office should be written off, and that the sums which had been advanced to the Treasury on account of those years should be taken as approximating the sum which should be paid by the Indian Government to the Treasury. The average payment throughout those years would have been 410,000*l.* and none of them fell so low as 320,000*l.*?—No payment for any one of those years appears really to have been so low as 320,000*l.*

5631. So that the insertion of this figure, practically for comparison, shows as if some very large increase, as compared with that year, had been made in the claims on the part of the War Office?—I stated before that it was only a payment on account, that there were some arrears.

5632. But supposing the sum of 410,000*l.*, which is the average, be taken for that year, the increase would be reduced by about 90,000*l.*?—Yes, that is so.

5633. The increased charge in the later years has risen, has it not, from the fact that there has been an increase of force, and also from the fact that a larger number of recruits are sent out in consequence of the full development of the short-service system. Is not that the case?—I think Sir Edwin Collen could answer that question. (*Sir Edwin Collen.*) Yes, I think so.

5634. The increased charge under the 7*l.* 10*s.* charged for the period is by reason of the fact that a charge per man had been the main element in making the calculation, and that the number of men shipped as recruits has been larger than it was under the former system; that is so, is it not?—(*Mr. Jacob.*) The charge per man formed a considerable element, but not the only element in the charge.

5635. Quite so, but still a considerable element?—Yes.

5636. So much so that, supposing the number shipped had increased from, say, 9,000 up to 14,000, that would make a considerable difference?—It would make a considerable difference.

5637. But are you not aware that that is one of the main causes of the increased charge?—On the details of 1889-90 the charge per man was less than 50 per cent. of the whole charge.

5638. But it was the charge which varied the most?—That I cannot say.

5639. Then as regards the non-effective British charge, could you state what the sum was that was paid under the system of capitalisation in the last year?—The amount paid in 1884-85 was 830,994*l.*

5640. Do you know how much of that was on account of officers, and how much on account of men?—I am not sure whether that is stated in the accounts or not. No. I find that it is merely stated as a payment to the Imperial Government on account of retired pay pensions, &c. of Her Majesty's British forces serving or having served in India, 800,000*l.*; pay of non-effective colonels of Royal Artillery, 30,994*l.*

5641. But after the cessation of the system of capitalisation the charge was very much reduced?—Yes, very much.

5642. Do you know at what rate the non-effective charge for men was increasing at about that time? You have stated just now that you are unable to distinguish between the two; I am afraid that is an answer to my question?—I do not think I could state that now.

5643. Have you figures which would show at what rate the out-pension charge for British soldiers is increasing now?—Do you mean the total charge?

5644. No, for pensions to soldiers. What I was trying to do was to contrast the charge under the longer service system with the charge under the shorter service system for pensions for soldiers?—The amount is not distinguished in the accounts at all.

5645. Would you be surprised to hear that in the last years of the system that is in 1881, 1882, 1883, the additions to the annuity which the Indian Government capitalised, amounted in the year 1881-82 to 39,000*l.*, in 1882-83 to 34,000*l.*, and in 1883-84 to 21,000*l.*, an average of something like 35,000*l.* a year of increased charge, whereas the increased charge at present amounts to from 7,000*l.* to 10,000*l.* a year. Would you think that that would be the natural effect of the change?—I do not know to what charge exactly you are referring.

5646. The charge for out-pensions for soldiers?—Yes, I have not got the details of that. The total charge is increasing much more rapidly than that.

5647. The total charge?—Yes.

5648. But the pensions to the soldiers in the two periods are according to figures which I have before me just what I have stated. Before the system of short service had come completely into operation, the annual increase amounted to as much on an average as 35,000*l.* a year, whereas now the annual increase amounts to not much more than from 8,000*l.* to 9,000*l.* a year?—No, I am not at all surprised to hear that, because it would be the natural result of the change of the system. In the one case the capitalised value was given which, of course, very largely exceeds the annual value. In this case it is an increase in the annual value; in the former case it was an increase in the capitalised value. An increase in the annual value of 9,000*l.* or 10,000*l.* shows a very much larger increase than an increase in the capitalised value of 35,000*l.*

5649. Quite so, but the increase I have stated is not an increase of the capitalised sum, but an increase of the annuity upon which the sum paid by India was capitalised?—I did not understand that.

5650. That is to say, India in 1881-82 paid a capital sum respresenting the value of an annuity, representing 39,970*l.* for pensions granted in that year; in the year 1882-83 they paid a capitalised value of 34,560*l.*; in 1883-84 it fell to 21,300*l.*, so that if there had been a system of annual charge in existence at that time, the vote would have gone up by 39,000*l.* in the one year, 34,000*l.* in the next year, and 21,000*l.* the next year?—What increase was that?

5651. The increase of the annuities which India capitalised?—I do not understand that.

5652. Every year a certain number of men were being put upon the pension list?—Yes.

5653. The annuity representing the value of those pensions was ascertained and then India paid the capital value of that?—Yes.

5654. That was the system. Well, I have before me a figure which informs me that for the year 1881-82 the annuity which India capitalised on account of out-pensions of men was 39,970*l.*?—Not the increase?

5655. Those were the new pensions created that year in addition to any pensions that had been in existence before?—Yes, but India only paid the value of those.

5656. That is all?—Yes, exactly.

5657. But the addition to the annual charge amounted to 39,970*l.*?—No, certainly not, the addition to the annual charge would not amount to that. India paid only the capitalised value each year of the pensions.

5658. Of the pensions?—The amount may have been increasing or decreasing from year to year.

5659. Yes, but the figures I have before me show that the increase in that year in the annual charge was 39,970*l.*?—Not the increase in the annual charge, the pensions of which we had to pay the capitalised value during that year were of that amount; we may have had to pay more or less in the previous year.

5660. More or less?—Certainly.

5661. In the previous year?—Yes; the two things have no connexion with each other that I can see.

5662. You paid in that year 484,000*l.* for the capitalised value of the pensions that were granted to soldiers for their Indian service?—Yes, but we did not pay 484,000*l.* plus the amount that we paid in the previous year.

5663. What you paid in the previous year was a final settlement?—A final settlement exactly.

5664. And then you paid the next year 484,000*l.*?—Yes.

5665. That represented an annuity of 39,000*l.*?—Yes.

5666. The next year you paid 420,000*l.* on account of out-pensions, capitalised sum?—Yes.

5667. That was the capitalised value of an annuity of 34,000*l.* a year. The next year you paid 259,000*l.*, which was the capitalised value of 21,000*l.*, and so on?—Yes..

5668. Therefore the annual increase to your pension list represented, then, just as much as I have stated, 39,000*l.* one year, 34,000*l.* the next year, and 21,000*l.* the next year?—No, I do not admit that that is the annual increase in the same sense in which the expression would be applied under the present system. That was, as I understand you, the charge for which we were actually responsible in each year; now we carry on from year to year the balance of the pensions which, according to the actuarial calculation, are payable during the previous year, and the additional payment, if any, is an actual addition to the payment of the previous year.

5669. But surely you will admit that your payment under the capitalised system was the capital value of the new pensions that were granted in that particular year?—Yes, that was the way we paid.

5670. Your new pensions meant an additional charge to India?—No, they would not be an additional charge in the same sense as under the existing system. When you pay from year to year there are certain pensions coming on and there are certain pensions which go off, and you get a net annual increase or decrease, but in this case you merely take an absolute figure for the year and you pay the capitalised value of that. The two systems cannot be compared except by bringing the figures to some common denominator, as, for instance, by taking the totals over a very considerable period. You cannot compare them by taking merely the increase from one year to another, or the actual payment from one year to another.

5671. I see what you mean, you say there would be a decrement to set off against this additional charge?—Certainly.

5672. (*Mr. Naoroji.*) As I understand it, say that in any particular year 400,000*l.* were paid?—Yes.

5673. This means that for those people whose annuity began in that year, out of that 400,000*l.* every annuity would be paid for them for as long as was necessary by the government here?—Certainly.

5674. That account is settled altogether?—Yes, absolutely settled.

5675. In the next year new pensions arise?—Yes.

5676. In that case, again, the Indian Government pays another 400,000*l.*, to meet all the annuities that apply to these new pensioned men?—Yes, that is the case.

5677. And so on year after year. What Sir Ralph Knox wants to show is that every year you pay the capitalised amount for the annuities, to be paid afterwards as long as they lived from that sum by the Government here?—Yes.

5678. Well, that I suppose is clear enough?—That is clear enough.

5679. That has nothing to do with what was paid last year for those pensioners only who were added last year. What you pay this year is only for those who are coming on this year, and whose annuity is to be paid afterwards by the War Office regularly?—That was the previous system, but under the present system we pay the annual value.

5680. You pay only the annual value every year?—Every year.

5681. Has that diminished, or has it increased?—Well, it is actuarially calculated, it is not the actual value, but it is the annual value calculated for the one year only.

5682. You pay the annuity for that year only and not the capitalized value?—That is so.

5633. (*Sir Ralph Knox.*) What you said is that against these additions that I have stated here as the annual additions, we must ascertain what would have been the falling-off of the pensions that had ceased during those years?—Yes, if we had distributed the capitalised value over the whole period for which the pensions were payable, there would have been a decrement in each year on account of the old pensions as well as an increase on account of the new pensions, and the difference between those two would have represented what is now shown as the increase.

5684. There might have been a decrement; there would have been sure to have been some increase?—There might have been some net increase, but I say what you would have to compare with the present increase is not the total new pensions of the year, but the difference between those new pensions and the amount which actuarially calculated would have fallen off in that year.

5685. (*Mr. Mowbray.*) On Table XIX, Mr. Jacob, could you explain to me why, if the rupee was falling between 1871 and 1883-84, the column of British soldiers' pay, and the column of increased expenditure, owing to exchange, does not begin till 1883-84?—That is because, as a matter of fact, we did not pay the equivalent at the official rate of exchange until that year. It was a new system that was introduced in that year. (*Sir Edwin Collen.*) In 1873 a change was made by which the British soldier was paid at 1*s.* 10½*d.*, and that went on, I think, until 1883-84.

5686. Then you mean that between the years 1871 and 1883-84 the British soldier did not get any increased number of rupees to make up for the fall in exchange?—(*Mr. Jacob.*) He got his pay at 1*s.* 10½*d.* instead of 2*s.*

5687. At a fixed rate of 1*s.* 10½*d.*?—At a fixed rate during all that period, and I presume, therefore, with reference to what I said above, that the fixed rate with which the existing rate is compared for the purpose of calculating the increased charge for exchange on the British soldier's pay is 1*s.* 10½*d.* and not 2*s.*

5688. And what were the steps which led to the alteration of that fixed rate into the calculation at the annual official rate?—(*Sir Edwin Collen.*) A representation was made by the Commander-in-Chief in India on the subject.

5689. (*Sir Donald Stewart.*) I was commander-in-chief at the time I think, and it was on a complaint received from a private soldier?—Yes, of the Royal Fusiliers.

5691. (*Mr. Mowbray.*) Was it done by the Government of India on their own initiative?—In communication with the Secretary of State.

5690. Was it in any way forced upon them by the Government at home in consequence of the representations of the soldiers in India?—No, I do not think it was in any way forced upon them by the Government at home; they took it up and discussed it on their own motion.

5692. (*Sir Donald Stewart.*) It was strongly recommended by the Government of India?—Yes.

5693. (*Mr. Mowbray.*) Are there any facilities given to the soldiers for remittances home?—Yes.

5694. I believe there is some system by which officers can remit on more favourable terms?—(*Mr. Jacob.*) They used to be able to remit through Government before compensation for loss by exchange was granted.

5695. That old system has been abolished since the compensation for loss by exchange was granted?—Yes.

5696. Was there any system?—Perhaps I may be allowed to explain; that the arrangements previously in force did not allow the officers to remit at a very favourable rate; they were merely allowed to remit at the official rate of the year, which generally happened to be slightly higher than the actual rate, because the rupee was falling; it was fixed with reference to past facts, and the rupee fell in the interval.

5697. But was there any similar arrangement with regard to the remittances of private soldiers who were being paid at the sterling rate?—(*Sir Edwin Collen.*) That is to say, who were being paid, you mean, at the rate of 1*s.* 10½*d.* since 1873?

5698. Since 1873 at the rate of 1*s.* 10½*d.*, or since 1883-84 at the current official rate?—Yes; they were allowed to remit for some years at 2*s.* 0½*d.* A despatch from the Government of India in 1883: "The question "was referred to the Commander-in-Chief for opinion, "who in his reply dealt mainly with the question of "remittances, and objected to any change being made "in the rate of exchange, 2*s.* 0½*d.*, at which the soldier

Major-Gen. Sir E. H. H. Collen, K.C.I.E., and Mr. S. Jacob, C.S.I.

12 March 1896.

Military.

" was allowed to send home remittances for the benefit " of his family and friends, and to take home his " savings bank balances."

5699. Of course, I quite understand that where people are paid in rupees, and wish to remit, there may be a reasonable ground for allowing them to remit at a rate higher than the current rate of exchange, and that, I understand, was the case with officers before the exchange compensation allowance was made?—(*Mr. Jacob.*) The rate at which officers were allowed to remit was not intended to be higher than the current rate of exchange; it happened to be so because the rupee was falling; they were merely afforded facilities for remittance, but not with the intention of giving them a favourable rate. It happened in some years that the rupee did rise slightly, and in those years the rate, which they were offered by the Government, was lower than the actual market rate.

5700. But, of course, the same argument would not apply to people who are being paid at the sterling rate?—No.

5701. And what I wanted to know was whether any similar advantages for remittance were given to private soldiers, who were being paid, not as the officers were being paid, in rupees, but in sterling?—The British soldier has no privileged rate of remittance. (*Sir Edwin Collen.*) No, he had, as I pointed out, but he has not now. (*Mr. Jacob.*) He has not had a privileged rate since he has been paid at the official rate of exchange.

5702. Since he has been paid at the rate of exchange of the day he has no special advantages?—No. (*Sir Edwin Collen.*) What the Government of India said in the despatch was this: " If fixed in sterling, it should be " paid in India at the exchange of the year; if a local " allowance, it should be fixed and paid in rupees. " any money remitted to us from India for us or for the " soldiers should be dealt with in the same way."

5703. (*Mr. Naoroji.*) I want to ask just one figure. Can you give me the total amount for any one year of the salaries of soldiers and the pay of officers; European officers and European soldiers?—(*Mr. Jacob.*) I am not sure that that could be given.

5704. European military officers and European soldiers, the total pay and expenditure, and also the total pension of soldiers. All the officers I think we have in the return; it is the soldiers' pay and personal expenses or allowances I want?—I will see if any such statement can be prepared.

The witness withdrew.

Adjourned till Thursday next, at 11 a.m.

(For the 12th to the 14th days' Evidence, *see* pages 385, *et seq.*)

At the India Office.

FIFTEENTH DAY.

Thursday, 23rd April 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. S. Jacob, C.S.I.

23 April 1896.

Debt.

Mr. STEPHEN JACOB, C.S.I., Comptroller and Auditor-General to the Government of India, recalled and further examined.

7184. (*Chairman.*) I am sorry to say we have been obliged to make an alteration in the arrangement which we contemplated when we parted. We did our best to get the evidence given by Captain Hext in proof to the Admiralty, and I saw Mr. Goschen on the subject of his giving us a witness, and he promised me that if I would send him the evidence as soon as it came out, he would lose no time whatever in giving us a witness. But the evidence did not reach us till Tuesday. He wanted to look through it himself, and that was too short a time for him to be able to send us a witness. About to-day or to-morrow I shall probably hear from him as to who will come, and, in that case, I think we had better take the Admiralty witness next week, so as to have Captain Hext the week after, as the India Office is anxious not to detain him over here longer than is necessary. I have also agreed with the Admiralty and the other Departments on the subject of the case upon which Lord Rosebery's award was based, and I hope that that will be very soon in the hands of the Commission. In the meantime, in consequence of the Admiralty not being able to send us a witness, I was obliged to make another arrangement, and I asked Mr. Jacob to come to-day. I propose, as on a former occasion we took " Law and Justice," to-day to take with him the " Debt Services." Mr. Jacob, have you seen the memorandum which was prepared for the use of the Commission by Sir Henry Waterfield on the " Debt Services "?—It was prepared by Sir Henry Waterfield and myself, jointly.

7185. I will, if you please, take that as the paper on which my questions to you will be chiefly based?—Yes.

7186. Would you in the first place tell us what is the law or the practice of the Government of India as to the repayment of debt; is there any sinking fund?—In India there is no sinking fund as regards the rupee debt, but in England there is a small sinking fund for the general debt. It is not a fund prescribed by law; but the practice originated as follows: Formerly loans were raised at such a rate of interest as would attract offers at about par, and, the amount of discount or premium being small, it was included in the expenditure or revenue of the year without materially affecting the finances. When, however, it was decided in 1885 to issue a loan with a low rate of interest, in the form of a stock at a considerable discount, it was determined to enter as a receipt the money raised, not the debt incurred. But, lest, by borrowing at a discount, and subsequently repaying at par, the difference should fail to be charged against the revenue, it was provided that, if the discount in any one year was moderate, it should be charged against revenue; but that, if the amount was so large that that course would be inconvenient, such a sum should be annually invested and charged against revenue as would

at 3 per cent. compound interest amount to the discount incurred by the date when the option of redeeming the loan would first arise. The cases in which the discount on loans was not charged against revenue were—

	£
In 1885-86 - - - -	515,014
In 1886-87 - - - - -	792,554
And, on the purchase of the Oude and Rohilkund Railway, in 1888-89 -	285,482
	£1,593,050

The sums applied to the sinking fund have been invested in the purchase of India 3½ per cent. stock; the debt extinguished in 1893-94 was 10,237*l.*, and in 1894-95 10,507*l.*; the total extinguished, since 1885 to 31st March 1895, is 85,416*l.*

7187-8. Then, perhaps, you can give us an instance of the manner in which that sinking fund works. Supposing, for instance, that the Indian Government borrowed here three millions, we will say, at 3½ per cent., at which, I think, your stock is now, is it not?—3 per cent. we issue at now.

7189. Would there be a sinking fund attached to that, or is it merely a sinking fund arising, as I understand from your last answer, out of the discount arrangements? Could you show us how it would act upon such a sum as 3 millions borrowed in 3 per cents.?—There would be no sinking fund for the general debt; it would be merely for the discount if it were of so large an amount as to render it inconvenient to charge the amount against the revenue of the year.

7190. That is to say, if the loans were issued at 98 or 96 you would make up the difference between that and par?—Yes, we should charge that to Revenue Account.

7191. So that in the long run you would be able to show that you had 100*l.* for every 100*l.* of stock?—Yes.

7192. You have no other sinking fund but that?—There are special sinking funds in a few cases, in connexion with the purchase of certain of the guaranteed railways. The practice in respect of the principal of these railways has been to purchase them by means of annuities; and when stock is issued in lieu of, or in exchange for, annuities, provision is made by law for the creation of sinking funds by the investment of the difference between the amount of the annuity which would have been payable, and the interest on the stock originally created in redemption thereof.

7193. I shall have to ask you a question on that subject afterwards; but while we are dealing with this point I am struck by the fact that from this memorandum it appears that of recent years the interest on the debt attributed to public works in India considerably exceeds the amount of the interest on debt charged in India. If you will look at the page which gives the interest on the debt ("Public debt "other than that charged to railways and irrigation," page 1) it appears that interest on debt in India in the Budget of 1895-96 was 3,633,400 Rx. The total interest on the total debt charged to public works is then stated as 4,909,800 Rx., leaving the interest on the Public Works debt at 1,276,400 Rx. more than the total interest on the debt in India. It rather puzzles one to understand how that has been effected. You may have lent to railways or to public works surpluses with which you charge them as debt, or you may have transferred to the Public Works Account in India part of loans raised in England?—Yes. We charge against the Public Works the interest on the actual capital expenditure on public works, and that may exceed the amount borrowed in India during any given period, and, as a matter of fact, it does now exceed the total of the Rupee debt. Of course, we have to take into account, besides the actual debt which is shown under this head, our net Savings Bank receipts. These we do not fund in India, but they come in aid of the Government balances and become one of the liabilities to meet which the Government balances generally are responsible.

7194. And which you use for such things as railways?—We use them for any purposes for which we should use money raised by loan.

7195-6. What rate of interest do you charge on such expenditure?—We charge 4 per cent. on the Public Works capital expenditure.

7197. Four per cent. all round?—Yes.

7198. You use such moneys as Savings Bank receipts; do you also use for the same purpose surpluses arising at the end of the year which strengthen your balances?—They of course enable us to avoid borrowing, thereby lessening the amount we should borrow in any given period and so increasing the amount of the credit to the Ordinary Debt and of the charge for the Public Works Debt.

7199. Therefore supposing that in one year there was a surplus of 2 millions which went into your balances, and supposing that during that time your expenditure on public works was 4 millions, you might borrow 2 millions to be added to your debt and lend 2 millions out of your balances, and at the end of the period your Public Works Budget would be charged with a debt of 4 millions?—Yes.

7200. But the debt of India would only be increased by 2 millions?—That is so.

7202. I think I understand it now. You divide the debt of India into two divisions, which I shall qualify as non-productive and productive debt. I do not know whether you use those expressions?—Those expressions used to be employed. The two divisions are now called Ordinary Debt and Public Works Debt.

7203. And how would you define and limit the Public Works Debt? On what conditions and for what services is that debt raised?—The total expenditure on the construction of railways and irrigation works is treated as capital expenditure on which interest is chargeable.

7204. Nothing else?—No, nothing else. We include all railway capital expenditure, whether it is actually incurred from revenue or incurred from debt.

7205. You may either advance the money out of balances or you may raise it in the open market?—Yes.

7206. As far as the Public Works Budget is concerned it does not matter: they owe the same whether it is advanced from balances or raised from loans to the Government of India?—Yes.

7207. And whether it is advanced from balances or raised in the market, it is a debt against the Public Works Department?—Yes. Of course, we do not treat the Public Works Department as if it were separate from the Government of India; the arrangement under consideration is merely a distribution of the debt which it has incurred which the Government of India thinks it convenient and prudent to make in its accounts.

7208. Quite so. It is very important we should get into our minds that a part of this Public Works Debt has been advanced out of the surplus revenue or out of other funds—out of the savings banks fund for instance—which may be at the disposal of the Government of India; and that it does not follow that the debt of India increases in precise proportion with the increase of the Public Works Debt?—Yes, that is one way of looking at it. Of course you may look at it from another point of view. A great part of the railway capital expenditure is incurred in England, and, though loans have been raised in England during this period, we do not charge any of the English debt as Public Works debt except that portion which is raised expressly for such purposes, as, for instance, for the purchase of a specified railway. We do not charge any of the ordinary debt raised in England to Public Works, and the consequence is that we have to show a minus entry in India under the Ordinary Debt, whereas the result would be just the same if we showed a plus entry in India, and a smaller positive entry in England.

7209. Studying these figures I come to the same conclusion, that the way in which it is stated here is a method which might be equally well, and perhaps more intelligently stated, if that part of the debt was charged against the debt raised in England?—A proposal to that effect has actually been received at the India Office from the Government of India, but it has not been answered yet, and I cannot say what the decision of the Secretary of State will be upon it. The Government of India have, however, proposed that the minus entry in India should be done away with by transferring to interest on Public Works debt certain portions of the interest charged on the ordinary debt in England.

7210-2. But still that is a method of account?—Merely a method of account.

7213. The debt of the Public Works Department is in part due to advances by the Government of India, either of surpluses or of other funds, which they may have in their balances for the time being?—Yes, the principle on which we proceed is that, as we are borrowing every year, or almost every year, it is not worth while keeping up a distinction between the different portions of our balances, or paying off debt with one hand and raising it with the other; and that the simplest way is to raise in any year the net amount we find we shall require for the satisfaction of the whole of our outgoings.

Mr. S. Jacob, C.S.I.

23 April 1896.

Debt.

7214. Quite so. What interest do you allow on the Savings Bank deposits in India?—Till last year we were allowing 3¾ per cent., but it was reduced in 1894 to 3½ per cent.

7215. You are still obtaining from the Public Works Department 4 per cent. on those deposits, if they are lent to the Public Works Department?—We charge the Public Works Department 4 per cent. all round.

7216. And so far you make a fair profit?—No, I do not think any profit has been made on the Savings Bank debt. Till last year, as I said, we allowed interest at 3¾ per cent., but the cost involved to the Government was probably fully 4 per cent.

7217. Now it has got down to 3½ per cent.?—Yes. It was calculated last year that the whole cost of the Public Works Debt was considerably over 4 per cent. really, if we went back to the origin of the debt. We are paying 3½ per cent. in sterling, for instance, upon a considerable portion of the English Debt, which comes to more than 4 per cent. when converted into rupees.

7218–9. (*Sir Edward Hamilton.*) Is the actual amount of the Savings Bank deposits large?—The total of what is classed as Savings Bank deposits, which includes a few service funds, is Rx. 10,791,000.

7220. (*Chairman.*) In what year is that?—At the end of 1895.

7221. (*Sir Ralph Knox.*) What is the limit of deposits in savings banks in India?—The limit is 200 rupees a year, and 2,000 rupees in all.

7222. (*Chairman.*) But if you give 3½ per cent. at the present moment, and charge 4 per cent. when you lend that money out to the Public Works Department, that would give you I should think a distinct profit, would it not?—I do not think on the whole that the 4 per cent. charge to the Public Works Department would give us any profit.

7223. Do you think that the administration in India of that Savings Bank fund of 10,000,000 Rx. would really cost as much as ⅛ per cent.?—No, that alone does not cost ⅛ per cent.

7224. Is it Rx. 10,000,000 capital?—Yes, it is a very small amount compared with the Savings Bank deposits in England. I did not mean that the Savings Bank debt costs us 4 per cent., but I meant that, if you took the whole of the Public Works Debt all round, we do not make a profit by charging 4 per cent. for that.

7225. But Sir Edward Hamilton's question was rather directed to the Savings Bank debt, and on that I think that at the present moment you are making a profit?—Yes, but I do not know that you can say definitely that any particular part of the debt is applied to any particular part of the expenditure.

7226. (*Sir Edward Hamilton.*) No, but you are lending at 4 per cent., I understand, and only paying 3⅛ per cent., therefore there is a margin of 17*s.* 6*d.*?—I should say that, as far as this money is concerned, we are not lending at all; it is merely a distribution of the charge between the different departments of the Government. On the whole the Public Works Debt costs us fully 4 per cent., and I think it is fair to charge 4 per cent all round for that. If we assumed that the Savings Bank debt had all been applied to public works, and charged only 3⅛ per cent., or a little over, upon that, we should have to follow the other debt, and see what sterling debt had been incurred for public works, and what the charge for that was; and, if we did that, the whole of the charge would, in my opinion, come to more than 4 per cent.

7227. (*Chairman.*) Do not you really keep any account of what you do with Savings Bank money?—We do not earmark the money in any way; it merges in our general balances.

7228. (*Mr. Courtney.*) Of course it is a loss to allow 3⅛ per cent. if you can get money for 3 per cent. in the open market?—Yes, if we can.

7229. And do you float loans at 3 per cent.?—Not yet.

7230. (*Sir Edward Hamilton.*) There is about to be a loan at 2½ per cent., is there not, presently?—That is a sterling loan. We have not raised a 3 per cent. loan in rupees yet; our lowest loan that we actually raised was 3½ per cent. at 96.

7231. (*Chairman.*) Over here?—No, in India, in rupees.

7232. (*Mr. Courtney.*) How long ago?—In 1893.

7233. (*Chairman.*) What is your last loan here?—That was a 3 per cent.

7234. Within the last year or two?—Yes.

7235. Did you raise it at par or over par?—On the average nearly at par—99*l.* 18*s.* 3*d.*

7236. (*Mr. Courtney.*) The discrepancy arises from the uncertainty still hanging over the rupee?—Certainly.

7237. (*Chairman.*) This division between the ordinary debt and the Public Works Debt is, I presume, only a matter of account?—That is all.

7238. There is no separation in the stocks themselves?—None.

7239. (*Sir James Peile.*) Do you know what the 2½ per cent. loan now being issued is quoted at to-day?—I have not seen the quotation to-day; yesterday it was about 103.

7240. (*Sir Edward Hamilton.*) It is 105 to-day.

7241. (*Sir Donald Stewart.*) It was 105 yesterday afternoon?—It may have risen after the quotation I saw, which was 5 premium on the minimum named, that is, 104.

7242. I think so?—I did not see that.

7243. (*Sir James Peile.*) It is not yet issued, but it is quoted?—That is so.

7244. (*Chairman.*) Perhaps we may now take the debt as a whole. I see that the total debt of the Indian Government in 1875 consisted in India of Rx. 69,850,000, and in England of 48,600,000*l.*, making a total, accepting for the moment the valuation of the rupee at one-tenth of a pound, of 118,450,000*l.*?—Yes, those are the correct figures in round numbers.

7245. In 1895 the debt in India was Rx. 104,373,000, and in England it was 116,005,000*l.* Putting them together on the same basis they amount to 220,378,000*l.*?—That is so.

7246. Therefore the increase is in round figures 102,000,000 Rx.?—Yes.

7247. The figures I go upon are the amounts of 1875–76 and the Budget of 1895–96.

7248. (*Sir Ralph Knox.*) We have not got them.

7249. (*Chairman.*) I am taking the rupee at one-tenth of a pound, because the India Office follow that rule and charge the difference between the rupee at one-tenth of a pound as loss by exchange. I think it is very questionable whether that is a right method of doing it, but it is customary and intelligible. The interest on the debt in 1875 in India was 3,017,000 Rx., in England 2,161,000*l.*, making a total of 5,178,000*l.* In 1895 the interest on the debt in India was 3,633,000 Rx., in England 3,857,000*l.* Putting those together on the same principle I get 7,490,000*l.*?—Yes, that is so, if pounds sterling and Rx. can be added together. The figures for 1895–96 are, however, only the Budget estimate and not the actuals.

7250. Quite so. That shows an increase apart from exchange of 2,312,000*l.*, of which 1,696,000*l* is in England?—Yes.

7251–2 The average rate of interest I make out to have been, in 1875, between 4¼ and 4½ per cent.; the average rate, in 1895, between 3¼ and 3½ per cent.?—Yes, that is about it.

7253. And therefore the average saving over 1875 in 1896 is very nearly 1 per cent., or 2,200,000*l.*?—It works out to very nearly 1 per cent., and would give a saving of between 2,100,000*l.* and 2,200,000*l.*

7254. I suppose that the Indian Goverment would hold that the amount borrowed between 1875 and 1895 was borrowed necessarily and for the benefit of India?—Yes.

7255. But if the rate of interest, especially in England, had been the same in 1895 as in 1875, the charge would have been, in round figures, 2,200,000*l.* more than it is—that is, 1 per cent.?—Yes, 1 per cent.

7256–7. On the other hand, taking the rupee at the fictitious rate of 2*s.*, the cost of exchange was in 1895 2,215,000*l.* against 237,000*l.* in 1875, an increase of 1,978,000*l.*?—That is the increase in Rx., on account of exchange.

7258. Therefore the reduction of the rate of interest rather more than counterbalances the cost of exchange, even when the rupee is taken at the fictitious rate of 2*s.*?—That is not taking it at the fictitious rate; you have now taken in the exchange which gets rid of the fictitiou rate.

7259. I am first of all taking the rupee at one-tenth, an then I say that, when we take the charge which you pu down as exchange, it shows an increase over 1875 o 1,978,000*l.*?—Yes.

7260. We need not dwell upon the fictitious rate; I only guard myself against acceding to that method of calculation. But my question was intended to elicit the fact that the reduction in the rate of interest rather more than counterbalances the cost of exchange even when the rupee is taken at the fictitious rate of 2*s*. If the rate of interest had remained the same in 1895 as it was in 1875, would not the interest on debt have been 2,200,000*l*. more?—Yes.

7261. But according to the India Office method of calculation the loss by exchange is 1,978,000*l*.?—That is the difference between the amounts shown in the Exchange column.

7262. Therefore the reduction in the general rate of interest rather more than counterbalances the loss by exchange?—Yes.

7263. And that, really, states the case of the debt as a whole; that in spite of the inconvenience caused by the exchange to India owing to the fall in the value of silver, her position is very nearly the same—rather better—as it would have been if the rates of 1875 had continued?—The total interest charge is higher now than it was then.

7264. Yes, but only because you have borrowed more?—Yes.

7265. And that does not affect the fact that, if the rates of 1875 had continued, you would have been paying 2,200,000*l*. more than you are now?—No.

7266. Let me put it in another way. If the exchange had continued exactly as it was in 1875, and if the rate of interest had continued exactly the same as in 1875, as far as your Budget in India is concerned, you would have been worse off than you are now by some 300,000*l*.—between 200,000*l*. and 300,000*l*.?—Yes, I suppose that would have been the case.

7267. And that states the general result of the incidence of the debt on the Budget of 1895 as compared with that of 1875?—It seems to me that the general result can be just as well put in another way; the fall in the rate of interest has no direct connexion with the fall in the rate of exchange, so I do not understand why the one should be set off against the other. I should not state the general result in that way.

7268. I am looking simply at the result on the Budget?—Yes.

7269. But much stress is laid upon what we all admit to be the inconvenience to India of the fall in exchange. Dealing with the debt alone, as far as the charge to the Budget in 1895, as compared with 20 years previously, is concerned, the fall in exchange is counterbalanced by the fall in the rate of interest; therefore it does not matter how the position arises, in reality you are no worse off in 1895 than you were in 1875?—That is a fact, but I do not see the connexion between the two.

7270. No. As far, however, as the Budget is concerned, no more is taken out of the taxpayers' pockets?—Of course that is one way of putting it; but it would be equally correct to say that the general result would have been that we should have had a large saving if it had not been for the fall in exchange.

7271. Certainly that is another way of putting it, but the point to which I am confining my question is the effect on the Budget, that is all?—Yes.

7272. The result on the Budget is almost the same as if the state of affairs that exists now had existed in 1875?—That is arithmetically correct; but I want to guard myself against the impression that that is the way in which I should myself put the result.

7273. I am not asking you in the slightest way to connect the two facts; I only say that, in the financial manner of looking at it, that is how the taxpayer is affected?—Yes.

7274. The one counterbalances the other?—Yes, very nearly.

7275. (*Sir James Peile*) You would say that, in consequence of the fall in exchange, you do not enjoy the benefit which you otherwise would from the fall in the rate of interest?—Exactly. Other countries have reaped the benefit from the fall in the rate of interest without suffering the inconvenience and loss which results from the fall in the rate of exchange.

7276. (*Chairman.*) I quite admit that; but, as far as it goes, in spite of the inconvenience and the loss arising from the fall in exchange, you have, nevertheless, been able to raise these large sums of money without taking more out of the taxpayers' pocket?—Without paying a materially higher rate of interest on the whole of our debt. But I should add that the fall in exchange has really affected the rate of interest adversely to us; we should have been able to borrow in rupees at a much lower rate than that at which we have been, and are now, able to borrow, but for the fall in exchange.

7277. That is quite possible. Now, passing to the debt as divided between ordinary debt and Public Works Debt, I gather that in 1875 the total debt of India was rather over 118,000,000*l*.?—Yes, adding Rx. and pounds together.

7278. As I did before?—Yes.

7279. While productive debt was 22,000,000 Rx. or pounds?—Yes.

7280–1. Leaving a net ordinary debt of 96,000,000 Rx. or pounds?—Yes.

7282. And that debt, at the rate of interest which you were paying then, would have cost India about 4,000,000*l*., would it not?—The interest on the Public Works Debt?

7283. No, the ordinary debt?—The charge on the ordinary debt was slightly more than 4,000,000*l*.

7284. You have got 96,000,000*l*. at 4¼ per cent.?—Yes.

7285. It is sufficiently near; it would be rather more, because the actual average was rather over 4¼ per cent.?—Yes.

7286. In 1895 the total debt was 220,000,000*l*.?—Yes.

7287. And the Public Works Debt was 150,000,000*l*.?—Yes.

7288. Leaving 70,000,000*l*.?—Yes.

7289. Which at 3¼ per cent. would cost about 2,275,000, would it not?—Yes.

7290. Showing a reduction in the charge of the ordinary debt, apart from the question of exchange, of something like 1,700,000?—Yes, that would be so.

7291. That, I think, would show the difference between the ordinary debt of the two periods, would it not?—Yes.

7292. Then, leaving apart the question of exchange, that, as a matter of ordinary administration, is a very satisfactory result?—Yes.

7293. We have heard a great deal of the difficulty of getting along in India; would you not think that any State which, passing through a very difficult time,—1875 precedes the Afghan War—started with a debt of 96,000,000, and at the end of 20 years had reduced that to 70,000,000, and had been able at the same time to benefit by a very considerable reduction in the rate of interest, would show a satisfactory result? I think you will find very few States that could show such a result as that?—I suppose that that is so.

7294. Do you doubt it?—No, I cannot say that I do.

7295. I should have thought that it was a point of which a financial administrator would have been rather proud?—Of course, that is stating only the ordinary debt; our actual debt has increased.

7296. I will come to the other debt afterwards, but the ordinary debt is that which marks the course of ordinary administration, apart from the money you lay out productively?—But there are the other obligations which we have incurred, such as the Savings Bank Debt.

7297. Those are comparatively small, are they not? I notice that your receipts go a long way to counterbalance the cost of those other obligations?—Yes, we have some corresponding receipts.

7298. The Chancellor of the Exchequer the other day in the House of Commons congratulated this country upon the rapid decrease of the ordinary debt, which, I think, hardly showed the same per-centage as that?—I think it is a satisfactory result.

7299. Now, passing to the productive debt, which stands now at 150,000,000; on that you say a charge is made of 4 per cent.?—Yes.

7300. That is to say, that on 150,000,000 the Government requires from the department that manages those works a sum of 6,000,000?—Yes, that is so as regards the debt which is not specially raised for any special public work, such, for instance, as the purchase of a railway. In the case of debt raised for the purchase of a railway, the actual cost of the debt is charged against the public works.

7301. Can you tell us out of that 150,000,000 how much is specially raised, and how much is lent at the rate of 4 per cent.?—I can put in a statement showing that.

Mr. S. Jacob. C.S.I.

23 April 1896.

Debt.

7302. Perhaps you will put it in, because I think it will enable the Commission to understand the regulations of the Public Works Debt better?—I will prepare a statement and put it in.*

7303. Would it be a large sum?—Yes. The debt specially incurred is, in round figures, 12,000,000 for the East Indian, 1,500,000 for the Eastern Bengal, 10,000,000 for the Oudh and Rohilkund Railway, 5,000,000 for the North-Western Railway, and 5,000,000 for the South Indian Railway.

7304. But perhaps in your statement you will give the figures?—I will show them exactly.

7305. For our purpose, in order to understand this question, taking an assumed figure, it may be that 30,000,000, we will say, out of the 150,000,000 is raised specially, and 120,000,000 is advanced at 4 per cent. I put it in that way in order to understand the operation of the case. For those sums which are not raised for special purposes you require 4 per cent. from the department?—Yes. We charge the Railway Revenue and Irrigation Accounts with 4 per cent. on the balance, which must have been somewhere about 120,000,000 in 1895-6, as the total charge for interest on the above accounts was estimated at Rx. 4,910,000.

7306. That is to say, on something like 120,000,000 you charge 4 per cent.?—Yes.

7307. And on the remainder you charge the actual rate?—Yes.

7308. Therefore on that amount of 120,000,000 you make a considerable profit, I suppose?—No, I do not think we make profit on it.

7309. You are raising money at 3 per cent., are you not, and charging 4 per cent.?—It was only last year that our general rate in India was even below 4 per cent.

7310. How do you mean "your general rate"?—The rate on our general Rupee Debt in India stood at 4 per cent. until the 1st August 1895; and only a year or two before we were paying 4½ per cent. on a considerable portion of our Rupee Debt.

7311. That I will come to. I am going to ask you some questions about the process of conversion?—Yes.

7312. Therefore, though at present you are making that profit, it is only for a very short period, if that is the case?—I should say that we are not making a profit even now; but at any rate it can only be argued that we have been making a profit for the last few months.

7313. Will you explain a little farther the reason why you do not think there is a profit, if you are charging the department that is entrusted with those works 4 per cent. on what you advance to them, and you are raising that money for them at 3 per cent. or thereabouts?—We have never raised it at 3 per cent. yet. Our general Rupee debt stands at 3½ per cent. in India. Further, a great part of the expenditure was incurred in England when the exchange was a much higher rate than at present, and on English debt a rate of 3 per cent. comes to more than 4 per cent. in rupees, if the debt was raised in gold some years ago.

7314. I rather want to keep apart the question of exchange, because both you and Sir Henry Waterfield have from the beginning kept it apart, and I will bring it in afterwards. I understand that the India Office method of calculating, which I wish to follow, is that of keeping exchange apart, and I am trying to do that?—If we had transferred certain portions of the ordinary sterling debt to the Public Works Debt, I should see no objection to having a lower rate for the sterling portion. In fact the Government of India recently made certain proposals to the India Office with a view to getting rid of the *minus* entry in the Indian Accounts in respect of the Ordinary Rupee Debt; and they recommended, among other things, that certain portions of the debt should be transferred to the sterling debt, the rate of interest thereon being charged at 3¼ per cent.

7315. Yes, but you see the larger portion of your debt in England at the present moment—42,000,000—is obtained at 3 per cent. apparently?—42,000,000 is in Three per cents. now; but that is not the larger portion of our English debt; the larger portion, 64,000,000*l.*, bears interest at 3½ per cent.

7316. Yes; therefore you have got 64 at 3½ per cent. and 42 at 3 per cent?—Yes, and the Government of India proposed that, if any of the sterling debt was taken as Public Works Debt, the rate adopted at the present moment should be 3¼ per cent.

7317. You may say that the average between those two rates of interest on the sterling debt is probably representative of something like 3*l.* 3*s.* per cent. Do you not think you are making a profit if you are paying interest at the rate of 3*l.* 3*s.* per cent. and obtaining 4 per cent. for it?—No, I should certainly say not. Supposing we raised 100*l.* 20 years ago at 3 per cent.; we transferred it to India and got Rs. 1,100 for it, which we spent on capital expenditure, and we could then meet the interest by a payment of 33 rupees a year, at 11 rupees to the pound, say. We now have to pay, say, 52½ rupees to pay that interest of 3*l.* That is the charge to us upon the 100*l.* of debt, and we have to pay more than 4½ per cent. in rupees calculated on our original capital expenditure in India.

7318. Just let me put my question more clearly. I am reserving for the moment the question of the exchange, that will come in afterwards?—I do not see how you can reserve the question of exchange if the whole of the Public Works Debt is charged on the Indian accounts.

7319. You have got the rate of interest down to 3*l.* 3*s.* per cent. That rate would be a paying rate were it not that it has to be paid over here; you are getting 4 per cent. in rupees, but have to pay the 3*l.* 3*s.* per cent. in sterling?—Yes.

7320. That is the case; and you say that the fact of having to pay the 3¼ per cent. in sterling makes all the difference?—Yes.

7321. Have you worked out what that difference is, what it raises it to?—No; I could only calculate it by taking into account the rate of exchange in each year in which the expenditure was incurred and taking the difference in the charge.

7322. At the present moment you have got so much—you have got Rx. 120,000,000 lent out, say, on which you are getting 4 per cent. in rupees: you will get Rx. 4,800,000?—Yes.

7323. Then in respect of that 120,000,000 you are paying 3¼ per cent. sterling over in England; do you know what the cost is of remitting to England the 3,900,000*l.*?—At the present time?

7324-6. Yes?—It is a little over Rs. 17·50 to the pound.

7327. On that ground you would hold that, so far from gaining from the 4 per cent., you are rather losing?—Yes.

7328. Then we take the 150,000,000 on which you are charging the Public Works Department 4 per cent., or a smaller amount if it was raised specially for any particular purpose; do I gather that you think that, taking the rate at which you have to remit home in order to pay the interest on a portion, at all events, of that money, the Public Works Debt does not cover its real charge?—I think 4 per cent. is about a fair charge to make to the Public Works.

7329-30. And you think that the 6,000,000, we will say—it would not be quite 6,000,000, but we will say the 5,000,000 odd—that you get from the Public Works Department fairly represents the sum of the interest that you would have to pay upon that 150,000,000?—I should think so. The productive Public Works would be self-paying if they brought in 4 per cent. all round.

7331. But in many cases you get more from these public works than that interest, do you not?—On the whole we do not get more from the railways and irrigation works.

7332-3. Not more than the 4 per cent.?—There is a net charge on the whole.

7334. Therefore, so far, the productive debt does not pay its charges?—No, not on the whole, and that is due to the heavy burden of the sterling debt.

7335. Do you know at all what the charge to the Indian taxpayer would be on that amount?—On what amount?

7336. On that 150,000,000. You say that you do not think that that pays its charges. That, of course, means that on that amount the Indian taxpayer has to pay a sum?—The total expenditure on Railway Revenue Account, which includes the interest and working expenses and all other charges, is 23,592,000 in 1894-5, and the total receipts on the Railway Revenue Account are 21,244,000, which leaves a deficit of 2,348,000 on the Railway Revenue Account.

7337. (*Mr. Courtney.*) Are the receipts reckoned in pounds, too?—In Rx.

7338. And the expenditure?—In Rx. also.

7339. (*Chairman.*) That would leave the balance in Rx.?—Yes.

* Statement not put in, but *see* following answers.

7340. (*Mr. Courtney.*) And is the interest on the sterling loan converted into a corresponding number of rupees?—We show in our accounts the actual number of rupees that we have to pay to meet the interest on the sterling debt, including annuities.

7341. (*Sir James Peile.*) You have to add a deficit on irrigation?—Yes; on the major works of irrigation, the expenditure on which is all that is charged to capital, the expenditure in 1894-5 is 1,994,000 Rx. and the revenue is 1,371,000 Rx.; but to that must also be added 776,000 Rx. as the "portion of the land-revenue due to irrigation," so that the irrigation receipts if you include that land revenue just about balance the expenditure.

7342-3. (*Chairman.*) But that land revenue comes in as revenue; you would not put it into this account?—We show it as a receipt under the head of irrigation.

7344. You see the point I want to make clear. I was putting it to you that in 1895 the ordinary debt of India was 220,000,000?—Yes.

7345. And upon that I took off 150,000,000 for the Public Works Debt?—Yes.

7346. Leaving a net ordinary debt of 70,000,000?—Yes.

7347. But I was assuming that that 150,000,000 Public Works Debt was a productive debt and paid its own charges; I gather, however, from what you say now that it does not, and I put it to you that the difference between the amount which it pays and the amount the debt costs would be a charge upon the Indian taxpayer?—Yes, that so.

7348. Should you be able to make it clear to us how much that is?—That is the amount I have just stated. In 1895 the net charge to the taxpayer no the Railway Revenue and the Irrigation (major works) Account was between 2 and 2½ millions.

7349. Two and a half millions?—Yes.

7350. (*Mr. Courtney.*) That is taking the arbitrary or conventional charge of 4 per cent.?—That is taking the charge of 4 per cent.

7351. (*Chairman.*) And I suppose in those cases where a special loan has been raised only the actual rate is charged?—The actual amount paid, whether in sterling or in Rupee debt, is in such cases charged against the Public Works; and, where railways have been purchased by means of annuities, the amount of the annuities is also charged against such railways.

7352. That is to say, in the expenditure you include the interest charged?—Yes.

7353. And, when you come to make up your accounts at the end of the time, you find that the receipts are short by 2½ millions?—In 1895 by between 2 and 2½ millions.

7354. And that, of course, would be an additional burden. We know that the Indian taxpayer has to pay the total interest on the ordinary debt, and to that you must add the deficiency on the productive debt?—The Government must meet that deficiency from its general resources.

7355-6. Quite so. You have been telling us about the reduction of interest on the debt; would you now tell us what have been the chief conversions of late, taking the notable cases in India, first of all, during the period from 1875?—In 1877-78 a portion of the 5 per cent. debt was discharged, the balance being discharged in 1882-3; in 1878-79 there was a conversion of about 10,000,000 Rx. from 5½ per cent. to 4½ per cent., and by measures taken in 1888-90-92-93 the whole of the general 4½ per cent. debt was gradually converted into 4 per cent. debt.

7357. In 1893?—Yes, the last step in that conversion was taken in 1893, up to which year the greater part of the 4½ per cent. debt was guaranteed.

7358. And, finally?—And, finally, the whole of the general 4 per cent. Rupee debt was converted to 3½ per cent. in 1894-95; this was an amount of 95,000,000 Rx.

7359. Practically, you may say that in 1875 there was some 12,000,000 Rx. bearing 5½ per cent. and 5 per cent., but the bulk of the debt was then 4 per cent., and in 1895 by far the greater portion of the debt was 3½ per cent?—In 1875 there were also some 16,000,000 Rx. of 4½ per cent. debt. In that year the 4 per cent. debt amounted to 42 out of a total of 70 millions. At the end of 1895 the 3½ per cent. debt amounted to about 95 out of a total of 102 millions bearing interest.

7360-1. Is there any limit of time before you can reduce again?—Most of the 3½ per cent. debt was guaranteed for 10 years at the time of the reduction, that is to August 1905.

7362. I see you have a column of "Debt not bearing interest"?—That is debt which is under notice of discharge in connexion with the conversion.

7363. Outstanding?—It is outstanding and has not been presented either for conversion or for discharge.

7364. Of course it is an item which will be cleared off?—Yes, some portion of it was in the course of conversion, the final operation being delayed pending the removal of some technical objection. That portion has since been transferred to the 3½ per cent. debt bearing interest. The remainder has been, or will be, discharged; but in India this portion comes in very gradually when a debt is notified for discharge.

7365. Now, as to conversion of debt in England?—In England 5 per cent. debt of 17,000,000 was converted into 4 per cent. debt, and then more than 50,000,000 of 4 per cent. debt was converted into 3½ per cent. debt. Those are the principal conversions.

7366. (*Sir Edward Hamilton.*) How long is that 3½ per cent. irredeemable?—A very long time—till January 1931.

7367-8. (*Mr. Mowbray.*) What were the dates of those conversions?—The conversion of the 5 per cent. into 4 per cent. debt was effected in 1879-80; and that of the 4 per cent. to 3½ per cent. debt in 1887-8.

7369. (*Sir Edward Hamilton.*) The 3 per cents. were not a conversion, they were new stock?—A new stock, yes.

7370. How long are they irredeemable, do you remember? They are both quoted at enormous premiums, the 3½ per cent. at 122¼ and the 3 per cent. at 114½?—The 3 per cent. are not redeemable till October 1948.

7371. (*Chairman.*) Practically, you may say that the whole debt in England was reduced to 3½ per cent.——?—Yes, the whole debt outstanding in 1875.

7372. With a considerable time to run still before it can be converted. The new debt has been raised at 3 per cent.?—That is practically correct; but we have also raised some small amounts in debentures at 3¼ per cent.

7373. Your new issue is to be made at 2½ per cent.?—Yes.

7374. At par?—It is quoted at above par already.

7375. (*Sir Edward Hamilton.*) How long is that to run for?

7376. (*Sir Donald Stewart.*) Thirty years.

7377. (*Mr. Courtney.*) Would that be issued at a premium?

7378. (*Sir Edward Hamilton.*) Ninety-nine is the minimum.

7379. (*Mr. Courtney.*) You get more than that?—Of course we shall get more than that.

7380. (*Sir Edward Hamilton.*) It is quoted at 104?—Yes.

7381. (*Chairman.*) We have now gathered the heads of information about the debt itself. There are two or three matters connected with debt upon which perhaps you will give us some information; and I will begin with the obligations. There are certain obligations upon which you pay interest, I think?—Yes, there are certain special loans, chiefly endowments by the King of Oude, on which we pay interest, and there are the balances of the Service Funds, and the Savings Banks, and a few other special accounts which bear interest.

7382. They do not amount to anything very much, do they? The capital of these charges on the revenue of India, I see, is only Rx. 13,000,000?—Yes, the charge was only about 550,000 Rx. in 1893-4.

7383. But they are increasing, are they not?—Yes, they have been increasing, but that is chiefly owing to the Savings Bank interest, which increases with the increased deposits. The charge for the interest has, however, fallen in 1894-5 owing to the reduction in the rate from 3¾ to 3½ per cent.

7384. The Savings Banks do not appear to have got much hold in India, if in the whole of India their capital is only 10,000,000 Rx.?—The deposits are, however, increasing every year. The total balance of all kinds of Savings Banks have risen during the 20 years from under 3 millions to over 10½ millions. Of course that increase cannot compare with the similar increase in England. Anything of that kind requires a very long time in India to take hold. Since the principal Savings Banks have

Mr. S. Jacob. C.S.I.

23 April 1896.

Debt.

been made over to the Post Office the balances have increased very rapidly for India.

7385. When was that?—That was in 1883–84, I think.

7386. I suppose the larger part of the interest on these obligations is payable in India, is it not?—I think entirely payable in India.

7387. Look at page 8?—Yes; there is a very small amount payable in England; but, with the exception of about 1,000*l.* interest on the balance of the India Office Provident Fund, the other amounts are really transferred from India.

7388. Then you realise certain receipts with which the debt may be credited, do you not?—Yes.

7389. Can you describe them to us?—The largest item is the interest derived from the investment of the paper currency reserve. We are allowed to invest a certain amount of the paper currency balance in Government paper, and the interest on that is credited to this head. The amount now invested is 8,000,000 Rx.

7390. Bringing in 300,000*l.* a year?—Bringing in somewhere about that now; the amount was larger when the interest was receivable at 4 per cent.

7391. Then there is a heading "Loans and Advances, Imperial and Provincial"?—Yes. We have lent a considerable amount to some of the bigger corporations in India, such as the port trusts and the municipalities of Presidency towns. We also lend smaller amounts to municipalities and other local bodies in other parts of India. We lend to them at a lower rate than they could borrow directly from the market, and the interest received is credited to this head.

7392. But do those advances come out of your balances, or do you borrow for them?—As I said before, we keep no distinction between the borrowed money and the other money when once they have come into our balances. Undoubtedly we could have reduced our borrowing by the amounts lent to the local bodies, if we had decided not to lend money to them.

7393. (*Sir Edward Hamilton.*) You are making, presumably, a profit upon them?—A small profit generally.

7394. (*Mr. Courtney.*) What rate do you lend at?—At various rates from ¼ per cent. upwards, the rate named being generally the minimum. As regards the local bodies at places other than the Presidency towns, the loans are managed through the Provincial Governments. We charge the Provincial Governments 4 per cent., and they are allowed to charge the local bodies any rate that they think fit. It is possible that the rate that we charge to the Provincial Governments has been reduced to 3½ per cent. I am not certain, but the question of reducing it was, I believe, under discussion at the time I left India.

7395. You do not make much of a profit if you only charge 3½ per cent.?—No, we should not make any profit; the Provincial Governments might make a small profit if they chose.

7396. (*Chairman.*) Have they any power of fixing what the rate shall be at which they will lend?—Yes, they have a discretion as to that; the rates actually charged are all stated in the Finance and Revenue Accounts; details of all the loans are given there.

7397. Perhaps you might give us the description of the system in your memorandum; it is rather interesting?—The policy adopted in reference to loans to municipalities, district committees, cultivators, and embarrassed landholders, was explained in Sir David Barbour's financial statement in 1889. Before the year 1888–89 all loans and advances of public money were treated as advances on Imperial account. The loans were made on the advice and through the agency of the Provincial Governments, who were so far responsible that irrecoverable sums were charged off as provincial expenditure. But they had no concern with the punctual and complete realisation of the interest, which was credited as an asset of Imperial revenue. The interest on these loans is almost always higher, however, than that paid by Government on its public loans, and this advantage was surrendered to the Provincial Governments in January 1889, as an inducement to them to undertake complete responsibility for their administration of such loans. At the same time the question of lending to municipalities was reconsidered. Before this time such loans were granted only under exceptional circumstances, but experience had shown that rigid refusal to lend money to small municipalities and local boards had delayed sanitary reform, as such bodies cannot raise money except at high rates of interest, their case differing materially from that of presidency corporations, which have a public credit. It was accordingly ruled that loans might in future be granted to such bodies, but only for works of public and general convenience and utility, such as drainage and waterworks, bridges, and the like, and not for works which are merely or mainly ornamental or convenient, such as town halls, public gardens, or market places. It was provided that a local body, having borrowed from Government, may not borrow from any other source until it has obtained the sanction of the local government concerned, which should not be given until it is clearly shown that the sum lent by Government, with interest thereon, is duly secured. Sir David Barbour, speaking less than three months after the new rules had been published, said that the demands of local governments which had been received, so far as they related to advances to cultivators, or to embarrassed landed proprietors, or for drainage and embankments, merely meant a transfer of administration and responsibility; but that loans had already been granted to local governments for Mofussil municipalities for sanitary purposes, for 254,900 Rx., on account of projects for the supply of water to such places as Allahabad, Agra, Nagpore, Delhi, and Peshawur. The loans and advances on which interest was received by the Government, as they stood on the 1st April, amounted to Rx. 5,000,000 in 1875, and to Rx. 11,000,000 in 1894.

7398. There were some small loans made to Native States, I see?—Yes, there are some small loans made to Native States.

7399. Then again there is a considerable sum, varying with different years, to landowners?—Yes.

7400. What is the object of those?—Those are to distressed or embarrassed landowners. Sometimes special Acts have been passed for the relief of the landholders, and money is lent to them on special terms.

7401. (*Mr. Courtney.*) Has the Provincial Government unlimited discretion as to the amount of interest it charges?—It may not charge less than the amount we charge; I do not think there is any maximum limit, but the highest rate now actually charged to any Municipality is 5 per cent. Landholders are in a few exceptional cases charged at 6 per cent., and cultivators are sometimes charged 6¼ per cent., or one anna in the rupee.

7402. (*Chairman.*) I see there were special advances to Native States; for instance, Mysore and Gwalior, but both of them were to meet cases of famine, were they not?—Yes. The amount outstanding against Native States now is very small; there were only 45,000 Rx. outstanding against them at the end of 1894–5.

7403. Will you look at page 19 of Sir Henry Waterfield's Indian Revenue and Expenditure, 1875–76—1895–96, Table XX., Increase or Decrease of Permanent Debt of India. I want to ask you one or two questions about discharges of debt. Taking India, you will see in various years that large sums are paid apparently in discharge. For instance, in 1876–77 there is 1,265,000 Rx.; in 1879–80, 1,123,000 Rx.; in 1886–87, 1,192,000 Rx.; in 1893–94, 1,110,000 Rx.; and in 1894–95, 1,200,000 Rx. We have understood from you that there is no sinking fund provision for the extinction of debt in India; can you tell us how those considerable sums came to be discharged? Was it in consequence of sums having been paid off on conversion?—Generally that was the case. In 1876–77 Government purchased out of surplus cash balances, and cancelled, Rx. 1,254,000. In 1879–80, 1886–87, 1893–94, and 1894–95 the large amounts shown as discharged were so dealt with in the course of conversion proceeding.

7404. Where we see large amounts entered, we may nearly always conclude that they are sums payable under some action for changing the character of the debt?—Generally that is the case. I think the only exception of any importance is that of 1876–77, when the Government purchased a certain amount of debt which it thought it was profitable to purchase, having regard to the then market price.

7405. What kind of debt was that?—It purchased 356,000 Rx. of 5½ per cent. debt and 688,000 Rx. of 4½ per cent., 179,000 Rx. of 4 per cent., and a small amount of 5 per cent. debt.

7406. They purchased it in the open market?—Purchased and cancelled it.

7407. In fact they were borrowing probably at a lower rate of interest, and they thought it better to buy stock in the open market and cancel it?—They thought the operation profitable, but it has never been repeated.

7408–9. In various other years there are considerable sums discharged, 205,000, 634,000, 549,000, 213,000,

and so forth; in fact some reduction takes place almost every year. If there is no sinking fund, can you tell us what those smaller operations in reduction of debt consist of?—Yes. The reduction of debt in 1881–82 was effected through the money provided for famine insurance; a portion of the famine insurance allotment was actually appropriated to the purchase and cancelment of debt in that year.

7410–11. That was what I might call a casual reduction?—Yes. In 1882–83 also 60 lacs of 5 per cent. debentures were purchased with the famine insurance money. That was the practice followed at that time; since then the amount appropriated for famine insurance has been applied to the reduction of loans and not to the actual cancelment of existing debt.

7412. Take 1888-89, that is 213,000 Rx.; in 1889–90 it was 119,000 Rx.?—In 1888–89 it was part of the proceedings for the conversion of the 4½ per cent. to 4 per cent. debt.

7413. That was a conversion?—Yes, there was a small conversion of 1,790,000 Rx. in that year.

7414. In each of the years 1883–84, 1884–85, small sums like 22,000 Rx. appear to have been applied in discharge of debt?—I think those amounts have been merely casual cancelments: sometimes Government paper escheats to Government, or is confiscated, or comes into the possession of the Government in some casual way, and it is then cancelled instead of being re-issued.

7415. I ask the question as to these insignificant sums because I want to see if there are any casual or exceptional receipts applied from time to time to the discharge of debt?—I may mention one instance of the way in which Government paper comes into the possession of Government, and is cancelled. The Administrator-General, if estates are in his hands for a certain length of time, and if, after issuing notices, no claims are made, hands over the securities to the Comptroller-General, who cancels them. Of course, any claims made afterwards are inquired into and admitted if sufficient evidence is produced, but in the meantime the debt is cancelled.

7416. Turning now to debt discharged in England, there you will see very large sums, which, I suppose, represent the balance of some large debt transaction, do they not?—Yes, sometimes it is temporary debt that has been incurred and discharged. I could give you the details of any particular amounts.

7417. If you please, in order that we may understand what these sums are; take 1879–80, in which year 2,609,000*l.* was discharged?—That means merely that certain liabilities were incurred in connexion with the purchase of the East Indian Railway and certain liabilities were cancelled. The net result really should be taken as the debt incurred during that year, but as a matter of account it appeared as the discharge of certain debt and the incurring of certain other debt.

7418. Take 1885–86, there is 50,000*l.* only?—That was the purchase of stock through the sinking funds.

7419. One more, 1890–91, not a very big one, 179,000*l.*, what was that?—That was partly from the same cause, and partly through a claim to stock outstanding, on which interest had ceased for some time.

7420–1. I should like to ask you one question with regard to the exchange operations. I have here before me the Net Income and Expenditure of British India, a return made on Mr. Fowler's motion, from 1884–85 to 1893–94, and looking at 1893–4 I see that the exchange on the debt cost 1,628,000 Rx., would it be a proper way of apportioning that charge between the Ordinary and the Public Works Debt, if we divided it in the proportion of 150,000,000 to the Public Works Debt and 70,000,000 to the ordinary debt?—No. This is the exchange on the interest on ordinary debt alone.

7422. What becomes of it on the Public Works Debt?—That is included in the sum shown against railways.

7423. But, surely, that is the charge for remitting interest on the 220,000,000?—No.

7424–5. Only on the 70,000,000?—Yes, the net amount is 70,000,000. Of course it is more in England and less in India—a minus amount in India.

7426. Quite so; but the 70,000,000 merely represents the result?—Yes.

7427. But you are quite clear that that charge for exchange only refers to ordinary debt?—Yes, I am perfectly certain of that.

7428. Is there any place where we can see the details—how it is made up?—It is merely the interest calculated on the balance of the ordinary debt in England.

7429. The exchange?—The exchange calculated on the interest of the ordinary debt. It is given in the accounts of 1893–94. You will find it in the Exchange column; 1,628,000 is shown there.

7430. Exactly, "Interest on Debt other than that charged to Railway and Irrigation Works"?—Yes.

7431. Therefore in applying it we have got to put the whole of that charge for exchange to the charge of the ordinary debt?—Yes.

7432. I do not know whether you would like to offer any opinion or give us any information upon the question of borrowing in India and in England—the respective merits of the two policies?—I shall be prepared to answer any question on it, I think.

7433. At the present moment I will only ask you this: Is it the settled policy of the Indian Government to always borrow in England, or how do they decide in what cases they will borrow in England and in what cases they will borrow in the Indian market?—The settled policy of the Indian Government at present is, as I understand it, to borrow in India entirely, as far as that may be possible.

7434. And how do they ascertain or satisfy themselves as to what is possible? For instance, you are, just at the present moment, raising a loan at 2½ per cent. in England, which promises to be a very successful one. In what form would it be decided in India that it would be better for the Government to come to the home market than to try the Indian market?—This loan is being raised merely in order to enable us to pay off other sterling debt; it is not really a new loan, but the substitution of a loan at a lower rate of interest for an already existing sterling loan. No such question, therefore, would arise in this instance.

7435. Still you are going to raise it here. This is to pay off an existing loan in England, and therefore it will not be affected by exchange?—No.

7436. But now, taking loans for railroads or for public works in India. In what way do you satisfy yourselves that the Indian market will not bear it, and that you must come home?—I think we never do come home now for a loan for general public works expenditure.

7437. You have not borrowed in India during this last number of years; you have done all your borrowing in England, have you not?—Not for public works. The only amount which we have borrowed recently in England, other than for the purchase of specific railways, or for the discharge of an existing sterling loan at a higher rate of interest, was in 1893–94, and that was owing to the failure of the Secretary of State's bills.

7438–9. Other increases have taken place in the English debt—that is, debt raised in England. What were they for?—I have here a summary of the increase of the English debt from 1875 to 1895. It gives the following details of the increase: For the purchase of railways—Oude and Rohilcund Railway and the South Indian Railway—10,428,000*l.*; for redemption of railway securities, 13,168,000*l.* (that is, the securities of railways that we have taken over—guaranteed railways); for advances to railway companies, 7,504,000*l.*

7440. And these were all sums raised to be paid in England?—Yes, the first two were practically to take the place of already existing securities which existed in England.

7441. (*Sir James Peile.*) Sterling?—Sterling.

7442. (*Chairman.*) In which case you reckoned you got all the benefit of the low interest in England without any of the complications of exchange?—We could not have purchased the railways in any other way than by offering a sterling security. We were bound to pay certain amounts in sterling, and it would have been quite impossible to raise the required amounts in rupees in India or to remit them to England when raised.

7443. By borrowing in England you get the full benefit of the low rate of interest here with no complications of exchange?—That is the case where we borrow merely to replace existing sterling liabilities. I proceed with the summary: Under Maharajah Duleep Singh's Act, 96,000*l.* (that was a special Act); for purchase of the Madras Irrigation and Canal Company's undertaking, 1,400,000*l.*

7444. No part of those loans was advanced in India?—No. For redemption of 4 per cent. transfer loan, 1,301,000*l.*; for loans for public works in 1885–86 and

Mr. S. Jacob, C.S.I.

23 April 1896.

Debt.

1886–87 (that is the one exception to what I have mentioned as our policy in respect of borrowing in India), 7,700,000*l.* That was, I believe, in consequence of the recommendation of the Parliamentary Committee on Railways of 1884. On account of the famine in Madras and Bombay in 1876–78, 6,100,000*l.*; owing to failure to sell bills on India *in* 1893–94, net amount, 6,000,000*l.*; for discharge of debt, 20,000 000*l.*; liabilities assumed on purchase of railways, net (after allowing for liabilities since discharged) 2,908,000*l.* Then, of course, some of that was raised for the discharge of debt, and we have applied that in discharge of debt. The total of that is 76,765,000*l.*, of which we have discharged 11,356,000*l.*, leaving a balance of 65,409,000*l.* raised in that interval, and there are also temporary bills outstanding for 2,000,000*l.*, which makes up the total increase during the period of 67,409,000*l.*

7445. During this time in India the total debt has been increased by 34,000,000 Rx.; in England the debt has been increased by 67,000,000*l.*?—Yes.

7446. Those figures you have read out, would they go far to make up the total of this 67,000,000?—They make up nearly 79,000,000., including the temporary debt.

7447. They make up 77,000,000?—Yes, 77,000,000*l.* of permanent debt; and then we have discharged 11,000,000, so that the result is 65,000,000, besides the 2,000,000*l.* of temporary debt.

7448. And may we conclude from that, that with the exception of that sum raised when the Secretary of State could not sell his bills, practically, the 34,000,000 increase in India represents all sums that have been raised for expenditure in India?—Yes, except that there was also that 7,700,000 in 1885–86 and 1886–87, the loans we raised in those years in England instead of in India.

7449. For use in India?—Yes.

7450. And the two exceptions would be the loans raised in 1885–86, 1886–87, and 1893–94?—Yes.

7451. Then with regard to these two loans, how did you satisfy yourselves in India that it would be preferable to raise them in England to raising them in India?—I think that borrowing in England for Public Works in 1885 and 1886 was more in the nature of an experiment; it was only tried in those two years, and it has never been repeated since, and it had not been tried for several years before.

7452. Was it criticised at the time, do you remember?—I think it was. The condition of the Indian money market at the time (owing to the serious depression of trade and the great and sudden fall in exchange) was, however, such as to lead the Government of India to urge on the Secretary of State the inexpediency of attempting to borrow in India the large sums required for capital expenditure on public works. The Secretary of State accepted this opinion, and agreed to raise the money required in England. In doing this he was influenced by the report of the Parliamentary Committee of 1884, which, while fully recognising the political and financial reasons for borrowing, as far as possible, in India, if the money required could really be obtained from Indian sources, finally recommended that when the difference between the rates of interest in India and in England is so considerable as to afford full compensation for the great comparative disadvantages which invariably attend borrowing in the latter country, the Secretary of State should not hesitate to borrow such moderate sums in England as would enable the Government of India to carry out their general scheme for public works. The large fall in exchange between 1884 and 1887—amounting to 2½*d.* per rupee—proved that the risk of the additional charge involved exceeded the benefit gained by the lower rate of interest in England; and borrowing in England for State public works has ceased since then.

7453. Then that is the only exception, because I take it that the loan raised in 1893–94 was for general purposes?—Yes, it was for general purposes.

7454. Passing to the loan in 1893–94, how did you satisfy yourself that that could not be raised in India; was it a very big one?—The sterling loan in that year was raised in England owing to the difficulty experienced in making our usual remittances to that country. India then was just in the transition stage in respect of its currency. Moreover, so much uncertainty prevailed that, even apart from the difficulties of remittance, we should not have been able to obtain at all good terms for a large loan raised there; and the balances in India were overflowing.

7455. What do you call the transition stage; the closing of the mints?—Yes, the closing of the mints. We did actually raise a loan at 3½ per cent., a small amount—the nominal amount was 3,000,000, but part of that was applied in discharge of the 4½ per cent. debt; but, as I said just now, we raised it at 4 per cent. discount.

7456. Then, in fact, you may say that out of this large amount—67,000,000—there are only two cases in which the question arose as to borrowing the money over here or in India, namely, 1885–86 and 1893–94. The first of these you say was rather experimental, and it would be a test case, because it was for public works in India?—Yes.

7457–8. The experiment has not been repeated?—No.

7459. And that only leaves the loan of 1893–94?—There was also the occasion of the famine in Madras and Bombay, in 1876–78, when 6,000,000*l.* was borrowed in England.

7460. Was that because of the distressed state of India at that time?—We did raise considerable sums in India at the same time; we could not, I think, have raised any larger amounts than we did on the Indian market.

7461. (*Sir William Wedderburn.*) I think that the 1893–94 loan was to make sterling payments in this country so as to avoid the necessity for remittance?—Yes, we had ample balances in India, but we could not remit them to this country at the rate for which the Secretary of State was holding out.

7462. (*Chairman.*) But still, of course, being raised here, it increased the interest charge payable here and loaded with the loss by exchange?—Yes; but I may say that the amounts that were added to our balances in India owing to the loans raised in England have been almost entirely expended on public works; the expenditure of the last few years on public works has been very large.

7463. And that money has almost entirely been provided by the Indian market?—Yes, with the exception I have mentioned.

7464. The increase of debt in India, 34,000,000 Rx., is the means by which that large outlay has been made?—With the exception of the amounts raised in England in 1885–87 and in 1893–94.

7465. Quite so. Now, are there any other points connected with the debt to which you would like to call our attention?—I do not think there is any other point. The only point on which I would desire to lay stress has already been anticipated by Sir James Peile's question, namely, that had it not been for the fall in exchange we should have been able to reduce the rate of interest on our rupee debt very much lower than we have been able to reduce it, though the reduction has been very considerable. The uncertainty as to the value of the rupee has affected our rupee credit, so that we cannot borrow at nearly the same rate in rupees that we can in sterling.

7466. Would you explain your view of that a little more fully. In what way does the fact of the variations in the value of the rupee on payments made over here affect the Government transactions in India? Your credit in India, I suppose, is as good as it can be; and why should people in India be unwilling to lend you money for use in India on good terms, because the adjustment of transactions between England and India is made expensive by fall in exchange?—The rate of interest prevailing in India has, for many years past, been much higher than that prevailing in England. But, besides this, a very large amount of the rupee debt is held in England, although the interest can only be drawn by bills on India. The sterling price at which our rupee debt is quoted in England accordingly governs, or helps to govern, the rupee price prevailing in India; and the fluctations in the rupee seriously affect this price. A man who invested, say, 100*l.*, in our rupee debt when it was nearly at par, expected that he would get about 4*l.* by the remittance of the Rs. 40 he would obtain as interest on his investment. If after a few years the investment produced less than 3*l.* 10*s.*, or even 3*l.*, the value of the security in sterling necessarily depreciated.

7467. That leads up to a question that I wanted to ask you. When you talk of borrowing in India, it is always a question whether the money, or much of it, is not really subscribed in England, is it not?—Yes.

7468–9. One great objection to borrowing in India is that it is a method, and an expensive method, of bringing money from here?—Yes, it may be.

7470. And that is what you mean when you say that your credit has been affected in India; you are unable to borrow, in consequence of the fluctuations in the rupee in India, at so good a rate as you might otherwise have done?—Yes.

7471. It is not that the Native Indian market would not lend money on favourable terms owing to the variations in exchange, but that from that cause you draw funds

from here at a disadvantage?—Yes. A very large proportion of the rupee debt is held by Europeans either in India or in England; and the European, whether in India or in England, values his investment with reference to the sterling amount it will produce.

7472. (*Sir William Wedderburn.*) And the objection, as I understand, is that the rupee paper investment is speculative, owing to the variations of silver, and therefore not suitable for investments of trust funds and other small investments for people who depend upon a regular income?—Yes, for some time past the fluctuations in the exchange value of the rupee have rendered rupee paper investments more or less speculative.

7473. They are speculative; I understand that that is the difficulty. I have heard it objected that to put a small sum in rupee paper does not give a certain return?—That is certainly the case.

7474. (*Chairman.*) Sir William Wedderburn's question only brings out more clearly this point, which I think is the gist of what you have been saying, namely, that raising money in India is not really raising it in the Indian market and from the Natives, but it is a method of drawing money from England?—That is certainly so. The latest return shows that Rx. 25,000,000 of the total rupee debt of Rx. 103,000,000 was actually held in England, and that 48,500,000 was held by Europeans in India, and 29,500,000 by Natives.

7475. Therefore, you will say, in answer to the question of why there is not more borrowing in India, that one reason is that the Native does not lend?—He does not lend at so low a rate, as a rule; he can get a higher rate.

7476. Your credit is too good for him?—Yes.

(*Sir Donald Stewart.*) I should just like to bring out this; I think it would be implied from your question that this money all came from England, and is subscribed by Europeans.

(*Chairman.*) I did not mean to say all, but it was a grave objection to borrowing in India, that it was another method of getting money from England, and that a large portion of the sums raised in India really comes from England.

7477. (*Sir Donald Stewart.*) Yes, but is it not a fact that we would never come to England for money at all if it could be raised in India?—Certainly, if it could be raised in India at a reasonable rate.

7478. And we know exactly the amount that India can absorb of any loan that is offered there; we know what India can absorb annually?—Yes, but our estimates of that include what is likely to come from England.

7479. Yes, no doubt subscriptions come from England, but you could not raise more than five crores of rupees in India with any degree of certainty in one year?—The estimate recently made by the Government of India is that when our demands upon the market exceed five crores of rupees, it is absolutely necessary that we should come to England.

7480. (*Sir William Wedderburn.*) But is not a considerable portion of the rupee debt of India held by Native States or Native Chiefs, under more or less pressure; that is to say, investments during minority, and that sort of thing?—No, I should say that a very small proportion was held in that way. Of course, there are special loans that have been made by Native chiefs. We have the Holkar loan of Rx. 1,000,000; the Sindia loan of 1½ millions; the Rampur loan of Rx. 470,000. Those were loans made by Native States with the object of having railways constructed in their dominions.

7481. But have not balances during minorities been invested in rupee paper, generally balances during minorities of Native Chiefs?—I think so, but the amount is not large, and, such as it is, it would generally be shown as held by Europeans; because such investments are always held by the Comptroller-General.

7482. That is hardly money borrowed or contributed by the Indian market.

7483. (*Chairman.*) 30,000,000 for India is not a very large amount to be invested in Government stocks by Natives, is it?—No, it is not a large amount.

7484. And therefore you have no very large field there from which you can draw supplies?—Not from the Natives themselves; of course there are Europeans carrying on business in India who hold large amounts—banks and others.

7485. (*Mr. Courtney.*) If you take your mind to Australia, up to recently at all events, if not now, would it not be true that the rate of accumulation of capital in Australia was so much less than the demand for capital for investment, as compared with the same rates in Great Britain, that any loan for Australian purposes would be more cheaply raised in Great Britain than in Australia?—I believe that is so.

7486. And the mass of the debts, the public debts of Australia, would be held here?—Yes.

7487. Would not the same relative state of facts obtain between India and Great Britain, so that, even if you had the same currency and there was no question whatever about the rupee, the mass of the capital raised might be more easily and cheaply raised here than there, because the rate of the accumulation of capital of late here so much exceeds the demand for capital to be employed here, as compared with the rate in India?—If it were not for the difference in currency, I suppose we should raise our loans chiefly in England, and should raise them very much more cheaply.

7488. And when the currency was stable, and you nominally raised it in India, you did in fact raise a good deal here?—Yes.

7489. Persons took the opportunity of sending out the capital to tender for loans that were raised there?—Yes, that was the case.

7490. (*Sir William Wedderburn.*) In regard to the division of the Public Debt into the ordinary and the productive debt, in what year was the existing division decided upon and acted upon?—I do not quite understand.

7491–2. There are two kinds of debt as shown in the accounts—the ordinary debt and the productive debt?—Yes.

7493. When was that separation, as it at present is shown in the accounts, first acted upon? When was the distinction first adopted?—I do not remember at this moment the year in which it was adopted, but the division has been carried back so as to include the whole of the capital expenditure.

7494. It was calculated backwards?—Yes.

7495. Oh, I see; then in 1875 the accounts are in that respect the same as in 1895?—Yes.

7496. I did not, perhaps, hear the explanation of the principle upon which an amount is put into the productive side?—We now call it Public Works Debt, not Productive. All the capital expenditure on railways and irrigation works is taken to account which is chargeable with interest.

7497. So that it does not really depend upon its being productive or not?—The question whether a work shall be undertaken as a productive public work is decided with reference to the question whether it is likely to produce within a given time 4 per cent. or not.

7498. And this 4 per cent. is a matter of account; it is not an actual payment by the province?—It is a mere matter of account.

7499. Was not the original idea of General Strachey in making this separation, that there was to be a certain actual per-centage received upon the works before other works were undertaken upon the same footing?—Such an idea has been put forward several times and been considered; that is to say, that there should be a separate Public Works Account as it were, the net amount of which only would enter upon the general account, and would have to be kept within a certain specified limit.

7500. Has anything of that sort been acted upon?—No, never.

7501. And this amount of 2½ millions, which is now charged upon the public works, has that been increasing from year to year?—It has varied very much from year to year, principally according to the exchange.

7502. Then I should like to ask you, with regard to the power of raising money, would it make a very considerable difference if the Imperial guarantee were given to the Indian debt?—I should doubt if it would at the present time. The Imperial credit is doubtless better than that of the Government of India, but the difference at present is not large; and my experience is that a loan merely guaranteed by any particular authority is not raised on as favourable terms as if it were raised directly by that same authority.

7503. I think for a good many years past the credit of the Indian Government has been increasing with reference to the Imperial credit, it has been approximating, I think?—Yes.

Mr. S. Jacob, C.S.I.

23 April 1896.

Debt.

7504. And I suppose that the reason of that approximation is a belief that, practically, the Imperial Government is responsible for the Indian debt?—That I could not say, though I have no doubt as to the existence of such a belief generally.

7505. Would you be in favour of the Imperial guarantee being given to the Indian debt?—For the reasons I have stated, I do not think it is a matter of much practical importance.

7506. I think that if you made a calculation you would find that it would make a considerable difference in the charge?—If, as has been stated, the 2½ per cent. loan now under issue is already quoted at 104 to 105, I do not think that is very much below the credit of the English Government. I doubt if the difference in credit is much greater than would exist if Indian loans were raised under an express guarantee of the Imperial Government.

7507. (*Mr. Naoroji.*) Is it not because of the conviction of the people here that the Indian Government are despotic enough, and powerful enough, to exact any amount of money from the people to pay their debts that there is all this confidence in what is called the credit of the Indian Government?—I should not put it that way.

7508. Then will you kindly give me those figures again of the debt held in this country by Europeans and by Natives?—Yes, Rx. 25,000,000 held in London, Rx. 48,500,000 held by Europeans in India, and Rx. 29,500,000 by Natives.

7509. Out of this 29,500,000*l.* held by Natives can you give us any idea of how much is held by the Native States and subjects of Native States?—No, I could not do that.

7510. You cannot?—No.

7511. Because every Native State invests its balances very largely in Government of India security, and can you in any way give us some idea of the amount that is held by those foreign Indians as we may call them?—No, I cannot give that information.

7512. No, well I can say that it must be a very large portion, and therefore, strictly speaking, the people of British India, who are special subjects of the British Empire, give but very little towards these loans?—I do not know at all what the proportion is that is held by Natives of British India.

7513. It must be, at least, not as much as 29,500,000*l.*, because the Native States do hold a large amount?—Yes, they certainly do hold some portion of that total.

7514. I suppose that there must be information enough here to give us the figures of what is held by the different Native States?—I do not think there is any information of that kind.

7515. They have got all the information by the Residents of the administration of all the Native States. You cannot give it, but there is one thing certain that there is a large portion of this debt held by, strictly speaking, foreigners, either European foreigners or Indian foreigners?—Yes, that is so.

7516. The people of British India itself can hold but very little?—Yes, that is so.

7517. Then with regard to any accumulation of capital in British India, we have first to take into account that there are something like 200,000,000 of rupees paid to Europeans, military and civil Europeans, and that goes to the benefit of Europeans, and is entirely taken away from any accumulation of capital that the Indians themselves can make, is it not so necessarily? The Natives have to pay 200,000,000 of rupees every year for the salaries of Europeans?—I do not remember the exact amount, but, whatever it is, a very large amount of it is spent in India.

7518. Yes, but it is for the consumption of the Europeans, not for the consumption of the Natives. Every European consumes so much which a Native would have consumed, had that European not been there occupying his place in the services in India. It is a mere matter of fact, of course, there is no opinion in the matter?—I do not quite understand which part of the question I am to answer.

7519. What I mean is this; with regard to what is spent outside, of course, there is no question in your mind, such as all the savings which are remitted to this country, and all the pensions which are paid here, that, of course, is a pure loss from the country, a pure drain from the country, is it not? It goes clean out of the country?—It goes out of the country, as far as the Europeans are concerned.

7520. Of course we are talking only of Europeans, and what is spent by the Europeans, there is also depriving Natives who would have occupied their places, had they not taken these places themselves; that is clear?—No, I should not admit that.

7521. Take, say, any European who gets his 1,000 rupees now; if instead of that European, it had been a Native, he would have got his 1,000 rupees, and he would have been provided with all that he wanted; whereas he is now deprived of it and the European gets it, his food or his shelter?—But the European spends a great deal of that salary in India.

7522. Yes, but it is spent for his own consumption, not for the consumption of the Native?—For the advantage of the Native.

7523. He consumes so much food—he consumes so much this, that, or the other—whatever is enjoyed by that European is so much taken away from a Native who would have occupied that place?—As far as the expenditure in India is concerned, it is just as much for the benefit of India whether it is by a European or a Native, I should say.

7524. Yes, but his expenditure means so much consumption of the material products of the earth—he consumes so much, either in services or in whatever he consumes—which a Native would have consumed if he had not been there, is not that clear?—It is clear as a matter of fact.

7525. Yes, well that is all I want; as a matter of fact it is clear that it is so. Now is there any indication therefore from this debt, that, because India is able to borrow so much money, that in any way proves that British India—the Indian people of British India have made any accumulation of capital, when they have to part with 200,000,000 of rupees every year merely for salaries?—I have made no assertion about that.

7526. You cannot say; there is nothing to prove that British India and the Indians of British India are making or accumulating any capital?—There is nothing in these particular figures.

7527. There is nothing to show that?—No.

7528. It cannot be asserted positively that it is so?—I think it can be asserted. I say in these figures there is nothing to prove it.

7529. These figures do not prove anything of the kind?—No.

7530. That is all right. Then it is said, although Australia makes capital, still it finds it cheaper to borrow from a different country in the same manner. Can we say that India is making capital and that it only comes to England for the purpose of borrowing cheaper? Or is it because British India, or the Indians of British India, cannot find that money that the Government are compelled to come here and get that money. It may be one of two ways?—We borrow in India, when that is possible, because we then know exactly what our liability is.

7531. Yes, but when we borrow in India we find a difference that, though we borrow in India, we can hardly get it from the Indian people of the British territory. Can we get a return of the holders of any of this debt who are subjects of British territory and not foreign Indians or foreign Europeans; can we get some such return?—Possibly some such return could be prepared.

7532. It would be a good thing to know this exactly—what is drawn from the people of British India itself?—I will see if any information can be obtained; I do not know that it can.*

7533. (*Sir Donald Stewart.*) But that would not prove anything; it would simply prove that the Natives of India do not like the low interest?—Yes, that is what I should say.

7534. (*Mr. Naoroji.*) It is said because they do not like lower interest; it is simply because they do not have the money to give at lower interest. The capital is so small and, for business purposes, so insufficient that the very commercial current rate—business rate—of interest is 9 per cent., is it not? All accounts between merchant and merchant are at 9 per cent. interest, is not that a fact?—The ordinary mercantile rate of interest is certainly much higher in India than in England.

7535. Of course if they make a special contract for any particular lower interest, that is a different thing; but what is here supposed to be regular 5 per cent. interest as between merchant and merchant, there is 9 per cent. interest, and even with this 9 per cent. interest the bankers actually who possess capital to any extent—I mean the Indian bankers—are able to get more than

* It was found to be impossible to obtain the required information.

9 per cent. because capital is so very deficient there; it cannot be accumulated because it is taken away from the country?—I do not appear as an expert witness on questions of political economy, and I can only say that my own experience after about 25 years in India is that there is certainly an accumulation of capital going on in British India, and that India as a whole is wealthier than it was when I first went there.

7536. Can we have any proof; can you show any increase?—As I say that is only my opinion.

7537. It is merely an opinion, therefore, you cannot give any proof?

7538. (*Sir James Peile.*) Have the imports and exports increased?—Yes, they have very largely increased.

(*Mr. Naoroji.*) Mr. Chairman, may I go into the subject of imports and exports now?

(*Chairman.*) I do not think it comes in at the present point.

7539. (*Mr. Naoroji.*) Of these Rx. 29,000,000 we are talking about, I suppose there is some amount held in different kinds of trust?—Yes, some portion of it would be so held.

7540. (*Sir James Peile.*) I should like to ask a few questions to clear up the subject of railway finance. Take this statement of East India Income and Expenditure, page 31, and take the figures for 1893–94 as an illustration; you have there the railway receipts net—that is deducting working expenses—12,000,000 Rx. in round numbers?—Yes.

7541. And the charges are, in round numbers, 13,500,000 Rx.?—Yes.

7542. That is all in rupees; those charges include all interest?—Yes.

7543. Both in England and in India?—Yes.

7544. They also include exchange on payments in England?—Yes.

7545. And exchange means the amount of rupees that you have to add to make up the silver equivalent of the sterling paid in England?—Yes.

7546–7. Then the result is in that year a deficiency of revenue over charges of 1,500,000 Rx.?—Yes.

7548. Are there any special reasons why that apparently unfavourable result should come out? The railways, on the whole, taking the receipts in rupees, and the charges in rupees, show a deficit of receipts on charges of 1,500,000 Rx. in the year. What is the reason of that? Is there any special circumstance which accounts for it; would you expect that to go on always?—It is very largely owing to the fact that works are still under construction which are not yet producing any revenue, but mainly to the large charge for exchange.

7549. And does that arise on any special item?—On the interest.

7550. But what is the interest in the case now of the old guaranteed lines; we pay that interest at a special rate, do we not?—Yes, we pay it at 5 per cent.

7551. And, also, is it not the case that for every rupee appropriated to a payment of that 5 per cent. interest we have to pay 1*s.* 10*d.*?—We have a special rate of exchange for them, too.

7552. And that makes the amount of exchange much larger, does it not, because for every rupee we have to give them 1*s.* 10*d.*, which we have to provide by remitting at 1*s.* 2*d.*, or whatever is the exchange of the day. It has increased in that way, the charge, has it not?—We do not remit the net profits at 1*s.* 10*d.*

7553. Not the net profits, but the guaranteed interest?—Yes, we convert the interest paid in this country at an exchange of 1*s.* 10*d.*, in order to calculate the surplus profit earned in India.

7554. That has increased the exchange charge?—Yes, it increases the surplus profit we have to pay to the Company.

7555. Well, when the lines are purchased that extra charge will vanish, will it not?—Yes, that will disappear.

7556. So that we may hope in future that that deficit on the Railway Account will decrease and disappear?—Yes, with a rise of exchange it certainly will diminish.

7557. On purchase, or with the rise of exchange?—Yes; I may say that in some years the loss has been very much less than that, as is clear from this statement; 1891–92 shows a deficit of only Rx. 315,000, and 1885–86, of Rx. 731,000 The variations have been chiefly due to those two causes, either that there has been a large expenditure going on which is not yet productive, or that there has been a large fall in exchange.

7558. (*Sir Andrew Scoble.*) Could you say in regard to that amount of Rx. 13,500,000, how much can be allocated to railways under construction?—I think I could take it out.

7559. I only want it approximately?—No, I could not state it from the accounts themselves.

7560. (*Sir Ralph Knox.*) How much of this large loss is due to the loss by exchange—the deficit in the year that has been mentioned?—In that year Rx. 3,732,000 is the exchange charged.

7561. That is more than the whole loss?—Very much more—that was Rx. 1,500,000, so that the exchange charge is about Rx. 2,250,000 in excess.

7562. It adjusts itself, in fact; if there had been no loss there would have been a profit?—Rx. 2,250,000.

7563. (*Mr. Mowbray.*) If the rupee was 1*s.* 10*d.*?—If the rupee was 2*s.*

7564. (*Sir William Wedderburn.*) With regard to the subscriptions to the Rupee debt from Natives of British India, it may be stated generally, I suppose, that the fact that so few Natives of British India subscribe to the loans, and that the current rate of interest is so high, points to a scarcity of floating capital in British India, so far as it goes?—A scarcity compared to the demands for it, yes.

7565. That it is scarce, rather?—Yes.

7566. (*Chairman.*) Mr. Jacob, you were telling us some little time ago, that in 1885–86, and I think again in 1893–94, occurred about the only instances in which loans raised here on account of India were remitted to India?—Yes.

7567. Would it be possible to ascertain the amounts so remitted in those two years, and the amount of rupees realised by those remittances in India?—They were not actually remitted; they merely had the effect of reducing the remittances from India. Of course the actual remittances from India far exceeded the amount of the sterling debt raised, and the result of the loans was merely that a smaller amount was remitted than would otherwise have been necessary.

7568. But of course it would come to the same thing, the loss by exchange was diminished by every rupee that was so saved from remittance?—No, not in the way we keep our accounts.

7569. Supposing, we will say, that the sum going to be transmitted from India was 13,000,000 Rx., and the Indian Government at home said—"No, we will not take "13,000,000 Rx. we will only take 11,000,000 Rx., and "we will intercept 2,000,000 Rx. of this loan:" well, so far as that 2,000,000 Rx. goes there is no loss by exchange?—Whether we raised the amount here by loan, or raised it by the sale of our bills, the cost to us is just the same for the year.

7570. Eventually the cost is; but on whatever you pay in England out of money raised in England, you do not have to incur loss in exchange on remittance. If you do, it is only a question of account. Supposing the sum due over here was 17,000,000 Rx., and you raised and paid the equivalent of that 17,000,000 Rx. here, there would be no loss by exchange here because there would be no remittance?—The amount that we bring to account as exchange is not the amount paid on the remittances actually made during the year, but the amount calculated on the expenditure of the year at the average rate at which the Secretary of State has drawn his bills.

7571. It is not an actual fact, though it is, no doubt, approximate; it is assumed?—Yes, it is on the assumption that we ascertain, by the sale of our bills, what the average value of the pound is in rupees, and so, in converting our expenditure in pounds sterling into rupees, we enter in our accounts the equivalent amount in rupees at the rate so ascertained.

7572. Therefore, in such a case as this, you imagine that this sum of money had been sent out to India and been sent back again?—We converted the expenditure out of it into rupees at the same rate of exchange as if it had been met by a remittance from India.

7573. I asked whether you ever remitted money to India in these cases as a test, in order to see the amount of rupees which is realised by such remittance; but you say that in the cases of 1885–86 and 1893–94, if I understand you, no

Mr. S. Jacob, C.S.I.

23 April 1896.

Debt.

such remittance took place?—No actual remittance took place.

7574. Therefore you could not give us such a test case?—No.

7575. In the case of old debt which has been in existence for some time, when you have to remit the sterling interest here, you are damaged by the whole amount of the loss of the exchange, are you not?—Yes.

7576–7. But were you to borrow at this moment, and send the money to India, you would get so many more rupees in India; and you would have to set the profit, if you might so call it, that would arise in that case, against any loss in the payment of interest back again, would you not?—I should like it to be clearly understood that in our accounts we very carefully avoid the use of the term loss by exchange in respect of the conversion of our sterling payments into their rupee equivalent. In our accounts we charge it as "exchange." The Sterling column and the Exchange column of the accounts, added together, give the actual amount of rupees which it has cost us—according to the average rate of our remittances—to pay any sterling liability that we have met in England. The loss as between any two given periods would be roughly ascertained by deducting the figures in the Exchange column in the one from that in the Exchange column in the other year, not by taking the actual figure of the Exchange column in the later year as the loss. We have eliminated from our accounts the term "Loss by Exchange," except as regards the head of charge which is called by that name, and which is the outcome of certain contracts under which we have to remit at a certain rate, while we actually can remit only at another rate.

7578. That explains the term; but I do not know whether you understand what I mean. It strikes me that, in the case of an old-established charge for debt on which the debtor is bound to remit 3, 4, or 5 per cent., if exchange falls constantly, the loss must be measured by the fall of exchange, because it is exactly the same sterling liability as existed 10 or 12 years ago, and every year you have to send a larger number of rupees to discharge it; but if you incur new liability, and borrow at the present time in England, the remittance being in the other direction, you gain, do you not?

(*Sir Donald Stewart.*) There is never any remittance of cash to India.

7579. (*Chairman.*) No, but you must get the benefit somehow, it seems to me, and I want to know whether Mr. Jacob has ever turned his attention to it?—I think the distinction which your lordship draws between earlier and later liabilities is a very important one, and I intended in my last answer to bring out the fact that we do observe that distinction.

7580. That is what I wanted to get out; it is a very important distinction, and I want to get your assistance in endeavouring to work it out to see how it acts?—It is very important.

7581. The main case that I put before you is this: that where there is an old existing debt you must allow the full weight of the loss by exchange; where it is a new debt you must consider that in some shape or another India gets a benefit out of the sovereigns raised here. She raises sovereigns here, and in some shape or other those must be the equivalent of a larger number of rupees for her purposes than was the case 20 or 30 years ago?—I do not think it can be said that she gets any benefit from that; for instance, say that we raise a sterling loan this year, and we employ it in India, either by remitting the money there, or—as would always be the case with us—by reducing our home remittances. We get a certain number of rupees in India as the equivalent of the sterling receipt here, say 17 rupees to the 1*l.*; but, unless the exchange rises, we get no profit upon that.

7582. Do you not draw a distinction there? If that or its equivalent in some shape or another went out to India and merely came back, of course one transaction would obliterate the other; but when these pounds get out to India for your purpose, they now fetch 17 rupees to the sovereign where they formerly fetched 10?—Yes.

7583. In some shape or other, where you are drawing money from England, it seems to me you must get the benefit from the exchange, just as I am admitting that, where you are paying money in England, it tells against you. If it tells against you in one sense, in some shape or other it must tell for you in the other?—A fall after we have incurred the liability tells against us.

7584–5. Yes; but at the moment when you incur the liability, it seems to me you must get a benefit somehow on the money you raise, which acts as a make-weight to what you will lose when you pay the interest afterwards?—I should demur to that. Say this year we raise 1,000,000*l.*, and remit it to India at 17 rupees to the 1*l.*; we have then Rx. 1,700,000 available for expenditure, and as long as there is no variation in the rate of exchange, our liability is Rx. 1,700,000.

7586. Quite so?—We derive no benefit from that, which can be called a profit. Whenever we want to pay off the loan, on the assumption that exchange does not vary subsequently, we have to pay Rx. 1,700,000, and when we pay the interest, we pay it on the Rx. 1,700,000.

7587. In some shape you get the Rx. 1,700,000, instead of a smaller number?—We get a larger number of rupees, the equivalent of which is stated in a smaller number of pounds sterling, but there is no profit to us in that.

7588. (*Sir James Peile.*) You would be able to borrow a smaller amount of pounds?—Yes.

7589–90. (*Chairman.*) One of the inconveniences of the present state of things is the larger amount you have to pay owing to what is generally called loss by exchange?—We do not call it loss by exchange. I do not pretend that we do not suffer a great loss by exchange. What I wish to express is that we do not allege that the figures in the exchange column in the accounts of any given year are an exact measure of that loss.

7591. (*Sir William Wedderburn.*) In the case of that 1893–94 loan was it not feared that if the money had been remitted—if Council's bills had been sold—the rate of exchange would have gone down still further? Was not the main benefit of that loan mainly to avoid a further fall of exchange?—It was in order to avoid the sale of bills below a certain rate at which the Secretary of State wished to sell.

7592. Therefore the main benefit was to avoid a further fall in exchange?

(*Mr. Naoroji.*) It was a speculation.

7593. (*Chairman.*) My object in asking the question is to call your attention to this point, which always seemed to me a very obscure and difficult one. At a future time I may ask you some more questions on it, and perhaps I may have the opportunity of having some conversation with you, to see if we can obtain any figures which would test what I mean. I do not mean to press it further now, because I am perfectly aware it is a very obscure question?—I quite admit the force of your lordship's point, and I am anxious there should be no misunderstanding on the question of what is our real loss by exchange. Suppose we have in 1875–76 sterling liabilities amounting to 15,000,000*l.* to pay, and we meet those liabilities by a remittance of Rx. 16,500,000. Now suppose that we have the same sterling liability of 15,000,000*l.* in 1895–96, and we can only meet it by a remittance of Rx. 22,000,000, then, I should say, there can be no doubt that in the intervening period—our revenue being measured in rupees—we have lost the difference. There has been no change in our sterling liability, but we have to pay a larger number of rupees, merely because the rate of exchange has fallen.

7594. Up to that point we are in complete agreement?—Well, then, suppose that at any intervening period—say, half-way between—when the rate of exchange was something between the rates first mentioned, we incurred some new sterling liability, then I should say that the loss that we have incurred in respect of this new liability between that period and 1895–96 is measured by the difference in the exchange for those two periods.

7595. Between the time at which that fresh liability was incurred and the present?—Yes.

7596. I am not sure that we are very far apart from each other?—No. I think it probable that I entirely agree with your lordship. But what I would point out is that we studiously put the column only as an exchange column, and not as "Loss by Exchange" in our accounts, and that this way of stating the account—while not expressing the actual loss by exchange at any given period—affords an easy means of ascertaining that loss, while at the same time it facilitates the comparison between the sterling amounts shown in our London accounts and the equivalents of them which are incorporated in our Indian accounts. Our accounts are intended mainly to be a statement of facts. It is absolutely certain that, whether the liability is an old one or a new one, the interest which we have to pay on every 100*l.* of sterling 3 per cents this year is,—assuming an exchange of 17 rupees to the 1*l.*—51 rupees, whether the interest is payable in respect of an old liability or a new liability. This, accordingly, is the fact we state in our accounts. We show 30*l.* in the

"England" column, and Rx. 21 in the "Exchange" column; and this brings to account Rx. 51 which we have actually paid. But we do not allege that the loss that we incurred is measured by the Rx. 21. And I personally should say that the loss would in such a case be measured by the difference between the Rx. 21 and the amount which would, on the same method of account, have been shown in the exchange column at the time that we incurred the liability.

7597–600. It occurs to me to take the exchange in regard to the debt of 1875. The exchange is stated at 237,000 Rx., I think, in 1876, and in 1896 it is stated at 2,215,000 Rx. I do not say that you do it in your accounts, but certainly I think you would gather from official statements that the difference between those sums, 237,000 Rx. and 2,215,000 Rx., is an absolute and dead loss. I cannot help thinking that that statement, which has a certain amount of force in it, exaggerates the position, because you have to consider how far that 2,215,000 Rx. is affected by the fact that it arises in part from recent loans?—Certainly, for ascertaining accurately the actual loss by exchange you would have to make various detailed calculations.

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

At the India Office.

SIXTEENTH DAY.

Wednesday, 29th April 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. STEPHEN JACOB, C.S.I., Comptroller and Auditor-General to the Government of India, recalled and further examined.

7601. (*Chairman.*) Mr. Jacob, you have sent me a short further memorandum on the police, supplementary to the evidence you gave before, and I would ask you, if you please, one or two questions arising out of it. You explain the great increase in the charge for the police, amounting to 55 per cent. or thereabouts, on the cost of the service. In 1875 the charge was Rx. 2,238,604; the increase is Rx. 1,262,000. I presume Upper Burma, as a province acquired in the interval, accounts for a considerable part of that increase?—Yes, the cost of the Upper Burma police in 1893–94 accounts for Rx. 631,675 out of the total increase of Rx. 1,262,558.

7602. That is to say, very nearly 50 per cent. of the increase is due to the acquisition of Upper Burma?—Yes, that is so.

7603. With regard to the remainder, does not more than half of it arise in the provinces of Lower Burma, Bengal and Bombay. Can you give us the causes of those increases?—Yes; Rx. 136,000 arises in Lower Burma. That is largely due to the employment of a force of military police, costing Rx. 84,000. The ordinary force also has been strengthened, the number of the subordinate officers being very largely increased.

7604. May I ask you, with reference to the appointment of a military police, what is the meaning of that? Previously, was there merely a civil police such as exists, I suppose, in the remainder of India, and was that force abolished and a military force substituted?—No, the civil police was not abolished, but shortly after the taking of Upper Burma, outbreaks of dacoity and other serious crime occurred in certain districts of Lower Burma, and it was thought necessary to have an organised military police in certain parts of the Province. This force was in addition to the civil police, and has some semi-military duties to perform. It has been increased from time to time.

7605. Then taking Upper Burma and Lower Burma together, should you anticipate that, as those provinces become organised, you may look for a diminution in the cost of the police?—I should certainly expect that there would in time be a very considerable diminution in the cost of the police in Upper Burma. The cost of the military police in that province, I may say, has begun to decrease already, and I think there will be a further large decrease as time goes on.

7606. What would you put the cost of the police in Upper Burma at, supposing it were possible to organise it as the police is organised in the settled provinces of India?—The military police in Upper Burma now costs Rx. 450,000. I do not suppose that the whole of that would be saved, but, looking at the cost of the police in the other provinces of India, I should think that eventually probably one-half of that amount might be saved.

7607. So that the eventual cost of the police in Upper Burma would not be more than from Rx. 300,000 to Rx. 400,000?—I should think so.

7608. Will you now tell us the causes of increase in Bengal and Bombay?—Yes, in Bengal there has been an increase of Rx. 103,000. There the cost of the police of the town of Calcutta has been increased by Rx. 41,000; the district executive force has been largely increased, and special charges have been incurred in South Lushai, amounting in 1893–94 to Rx. 38,000.

7609. In the case of the Calcutta police, is it met at all by municipal rates?—They pay, indirectly, a certain portion of the police charges, but the police actually have always been, and, I believe, still are paid by Government and under the control of Government officers.

7610. And therefore, whatever the municipality pays would be treated as a receipt in aid?—Yes, that would be the case, if the Calcutta municipality paid a direct contribution for the police. Then in Bombay the increase has been Rx. 103,000; there again this increase includes a large force of special police for Kathiawar, costing Rx. 60,000, and a sum of Rx. 43,000 on account

Mr. S. Jacob, C.S.I.

29 April 1896.

Police.

of village police. The greater part of the charge for the Kathiawar police and the whole of that for the village police is covered by increased receipts under other heads.

7611. (*Sir James Peile.*) That is to say, the Kathiawar police is paid for by the Native States?—Yes.

7612. In fact, it is a Native State force; it has nothing to do with British India?—No; it is merely managed by the Government of Bombay.

7613. (*Mr. Caine.*) It is intended to put down dacoity chiefly, is it not?—Yes.

7614. (*Chairman.*) And in the case of the Calcutta police, when an increase is found necessary, caused practically by the increase of the city, do the increased receipts levied from the municipality cover the increase of the expense?—They would not always do so. The Government has made a special arrangement regarding the Calcutta police, and they would not, under that arrangement, recover the amount of any such increase at once. Eventually, I suppose, the cost of the municipal police, as distinguished from what might be considered as the police required for purely Government purposes, would be recovered from the municipality.

7615. That would be the object the Government would have in view?—I think so.

7616. (*Mr. Jackson.*) Is the arrangement regarding the Calcutta police renewable from time to time?—It is a somewhat complicated arrangement. Up to 1889 the municipality paid a contribution towards the cost of the police, but in that year an arrangement came into force under which the Government agreed to exempt the municipality from payment of that contribution on condition that it pledged itself to spend annually three lakhs (which was about the amount of the previous annual police contribution) on certain works in the suburbs (then for the first time included in the municipal area of Calcutta) which were considered essential to the public health. This arrangement was sanctioned by legislation, and is still in force. The Government of India, however, in sanctioning this legislation, intimated that this exemption from police charges was not to endure permanently, and that it reserved to itself the right to determine at what time the exemption should be withdrawn. The intention undoubtedly is that the municipality shall eventually bear its share of the cost of the police employed within the municipal area.

7617. (*Mr. Caine.*) As a matter of fact, does the cost of the police in the municipalities spread over a number of years fall upon the rates or fall upon the government?—Do you mean in all the municipalities?

7618. Yes; we will take Calcutta, for instance; do the contributions from the Calcutta municipality taken over a number of years, meet the cost of the police?—I should say that they certainly have not in the past covered the whole cost.

7619. Is it the idea that they should in the future?—I think it is the intention in the future that municipalities generally, apart from special temporary arrangements, should bear the cost of their police. The question has been, I believe, the subject of considerable argument with the Bombay municipality. That municipality does pay a contribution towards the charges of their police; but I am not sure that it has been possible, as yet, to make them bear the whole cost.

7620. Then, if that idea were carried out, the contributions from the municipality to the Government would cover the cost of the police?—Yes, they would, but that is not the case in the municipalities of the Mofussil; they do not all bear directly the cost of the police.

7621. Not the small municipalities?—No.

7622. (*Chairman.*) But the general idea is, that in the large towns the municipality should meet the cost of their police?—In some of those cases also an arrangement has been made by which the Government bears the cost of the police, while the municipalities bear a larger share of the educational and medical charges. This arrangement was described in the financial statement of 1882–3 in the following paragraph:—"One important step in advance has already "been taken by the Lieutenant-Governor of Bengal, "who has throughout most cordially co-operated with "the Government of India in carrying out the policy "now under discussion. It was indicated in the "Government of India resolution of September 30th, "1881, that it would be desirable to relieve municipalities of police charges and transfer to them "other items of charge, such as primary education and "minor public works, the cost of which, within the "limits of the municipalities, has up to the present "time been borne by provincial revenues. The in-"tention was, wherever such a course was possible, "merely to effect a transfer, and not either to increase "or diminish provincial or municipal charges in the "aggregate. It has been found difficult, however, "more especially in the case of the smaller municipali-"ties, to carry this policy into effect without either "increasing municipal taxation or providing extra "grants from provincial revenues. It appears that "out of a total sum of 140,000*l.* expended by the "different municipalities, &c. in Bengal (exclusive of "Calcutta, the suburbs, and Howrah) in 1880–81 about "44,000*l.* was spent on police. The Government of "Bengal has, therefore, decided that the charges now "borne by Government in municipalities on account of "dispensaries and hospitals, amounting to something "less than 10,000*l.* a year, shall be transferred to those "bodies, and that at the same time the Provincial "Government should take upon itself the cost of the "police. The practical result of these orders will be "to set free a sum of about 35,000*l.* a year, which the "municipalities will be able to spend on conservancy, "lighting, drainage, water supply, and similar public "wants. The Lieutenant-Governor has also increased "the grant for primary education in the ensuing year "by 10,000*l.*, and has announced that he will be ready "to make liberal grants-in-aid to the funds of district "road committees for the execution of well-considered "projects. In other parts of India, notably in the "North-Western Provinces, Assam, and the Central "Provinces, the transfer of police charges from the "municipalities to the Provincial Governments is "either in active progress, or will very shortly be "taken in hand; and generally it may be said that the "policy of the Government of India has been cordially "accepted by the local governments."

7623. These educational and medical charges otherwise would fall upon the Government?—Yes.

7624. (*Mr. Caine.*) Is there any demand from the greater municipalities for the control of the police?—I have no information on this point, but I believe the question has been raised in Bombay.

7625. You have no facts to show as to whether there would be any saving by transferring the control of the police of great municipalities from the State to the municipality?—No, I have no information about that.

7626. (*Chairman.*) Are there any notable increases in other provinces to which you would call our attention?—There have been increases in some of the other provinces; under India there has been an increase of 41,000 Rx., which is chiefly due to the police force for Beluchistan.

7627. By India, you mean Central India, I suppose?—I mean the smaller provinces which are classified under the "India" column in the published accounts.

7628. (*Sir James Peile.*) Directly under the Government of India?—Yes, they are the smaller provinces which are immediately under the administration of the Government of India. Then, in the North-West Provinces and Oudh there has been an increase of 66,000 Rx. The district executive force has been strengthened; the head constable class being specially increased; and there has also been an increase in the village police. In the Punjab, a large force of special police, costing Rx. 31,000, has been entertained; the chief and head constable classes have been strengthened, the proportion of these officers at the earlier period being markedly low. In Madras the force has been strengthened including the higher grades.

7629. (*Chairman.*) Has there been any increase of police on the frontier in consequence of the frontier being pushed forward?—There has been an increase in the Punjab, and I think that is partly on the frontier.

7630–1. Apparently, the increased cost is due to increase of force and not to increase of pay. Can you give us the total number of the police force in 1875–76 and in 1893–94?—There has been some increase due to increased pay, but the increase is largely due to an increase in strength. I cannot give the details of the figures for 1875–76, but I have taken out the figures for the district police force for 1876–77 and compared them with 1895–96, and they show an increase of 6,542 in Upper Burma, which, of course, is a new force entirely, and of 6,747 in the rest of India.

7632. Those numbers almost exactly correspond with the relative increases of cost?—They may do so, but I have not worked it out.

7633. What is that increase of 6,747 upon; what was the force in 1876-77?—In 1876-77 the total district police force was in round numbers 110,000 men, and in 1895-96, 117,000 odd.

7634. That includes the whole of the body of men that you have classed as police?—No, it does not include all the men that are classified under the major head "Police." It includes only what is called the district police force. I could not get the exact number employed in the earlier years for the village police and municipal police, and for some other of the minor heads, but the district police force comprises the main body of the police.

7635. Would this include the police at Calcutta?—No, this does not include the Calcutta police. I have not been able to obtain details of several of the municipal police forces in the earlier years.

7636. The increase of 7,000 which you have just given us on 110,000 would hardly lead one to expect an increase of very nearly 50 per cent. upon the cost of the police in 1875-76, would it? The cost of the police in 1875-76 was 2,238,000 Rx., and the increase in the meantime was, I think, something like 1,262,000 Rx., was it not?—The increase which I have given is in the district executive force only, the cost of which was 1,860,000 Rx. in 1875-76, and 2,093,000 Rx. in 1893-94, or an increase of 233,000 Rx.

7637. But when we talk of the whole of the police budget, am I not right that in 1875-76 it was 2,238,000 Rx., and in 1895-96 it was 3,501,000 Rx.?—Yes; but the 3,501,000 Rx. includes Upper Burma.

7638. That you see is an increase of rather more than 50 per cent.?—Yes.

7639. Which the increase in the numbers would hardly lead one to expect?—As I said, I was not able to get out the details for the whole force, but I have given the details of the district executive police force as a sample of the general increase. The percentage of increased cost for that force corresponds pretty closely, I think, with the percentage of increase in the total cost.

7640-1. 1,860,000 Rx., rising to 2,090,000 Rx. in 1893, is an increase of something like 11 per cent., whereas the increase in the total charge is over 50 per cent.?—The increase on the charge under district executive forces is about 11 per cent.

7642. Yes, and the increase in the total budget is about 55 per cent., is it not?—Yes, but that includes Upper Burma, which, as has already been explained, should be left out; that is purely extra.

7643. The Burma charge is extra to the 2,090,000 Rx. in 1893, is it?—Yes.

7644. What would the Burma charge carry the 2,090,000 Rx. in 1893 to?—I should say that in making the comparison between the two periods you must exclude Upper Burma altogether. Upper Burma accounts for 671,675 Rx. of the increase, so that the increased cost of the rest of the police is only 630,883 Rx., and that on 2,238,000 Rx. is only a little over 20 per cent. There have been increases in various other minor heads. The special (chiefly military) police, as I have already explained, in Lower Burma and in the Punjab has been increased; that is not included in the district police.

7645. Then, in order to assist us in forming an opinion upon the progress of the increase of expenditure, would you put it in this way: The budget of the police of the whole of India in 1875-76 was 2,238,000 Rx; in 1895-96 that had risen for the whole of India to 3,500,000 Rx.; but from that you would deduct 600,000 Rx., being the cost of the police in Upper Burma?—Yes.

7646. That 600,000 Rx., taken from 3,500,000 Rx., would leave about 2,900,000 Rx.?—2,900,000 Rx.

7647-8. And, therefore, the increase with which we deal is an increase in round numbers from 2,200,000 Rx. to 2,900,000 Rx.?—Yes.

7649. That is, 700,000 Rx. on 2,200,000 Rx.?—Yes. Of that increase, 233,000 Rx. is in the district police force, 279,000 Rx. in special police, chiefly the military police, 74,000 Rx. in village police, and 69,000 Rx. in the expenses of cattle pounds. Those last two—village police and cattle pounds—are covered entirely by a corresponding increase in receipts.

7650. (*Sir James Peile.*) Therefore a very large portion of the increase is due to military police?—Yes, to military police.

7651. And I think you have explained to us that a considerable portion of that increase is due to the unsettled state of Lower Burma?—Yes.

7652. (*Chairman.*) But you said just now, when I asked you a question as to whether any increase of pay formed part of this general addition to the budget, that there had been some slight alteration in favour of the police?—Yes, there has been some slight increase in the pay of the force in several provinces, and that would account for the additional cost of the district executive force over and above the cost which would appear due to the increase in the strength of the force. The increase in strength is 6,500 on 110,000, or about 6 per cent., and the increase in the charge is about 11 per cent. It is impossible for me to say exactly in what grades the increase in strength has occurred, because the earlier accounts and estimates do not give details by grades, but I can say with certainty that only the lower grades have been strengthened; there has been no increase in the number of officers in the highest grade, namely, that of district superintendent of police, except to meet the case of new forces organised in consequence of the annexation of new provinces.

7653. That would look as if the increase of pay and charges other than the increase of force would be something like 5 per cent.?—I should say so.

7654. (*Sir James Peile.*) That was to ensure better men?—Yes.

7655. More trustworthy men?—Yes.

7656. (*Chairman.*) That is over the 20 years?—Yes.

7657. (*Sir Ralph Knox.*) Is it the pay throughout the force for all ranks, officers and men, that has been slightly increased?—The improvement has been confined almost entirely to the lower grades.

7658. The lower grades of men?—Yes.

7659. (*Sir James Peile.*) The increase was not simultaneous all over India; but the police of different provinces was taken up for reorganisation one after the other?—Yes, I think that some of the provinces are still engaged in reorganising their police force.

7660. (*Mr. Mowbray.*) But is that done by the Provincial Governments, or is it done by the Supreme Government?—It is done by the Provincial Governments, the charge for police being everywhere Provincial; but the Government of India is much interested in the improvement of the general police administration; and I believe that it has put some pressure on the Provincial Governments in some of the provinces to improve the police force.

7661. The whole of the expense is defrayed by the Provincial Governments?—Entirely, except in the few provinces that come under India and in Upper Burmah; Upper Burmah is at present Imperial.

7662-3. (*Chairman.*) What has been the increase in the receipts between 1875-76 and 1895-96?—I have given the net charges in every instance, so that the increase in receipts is allowed for in all these figures that I have quoted; but I should add that in some cases there are additional receipts on account of the police which come in under another head, so that they do not reduce the net charge here. Thus the charge for village police in the North-Western Provinces (Rx. 26,241 in 1893-94) is met from receipts credited under provincial rates; and in Bombay a portion of the charge for village police (Rx. 49,661 in 1893-94) is a mere book entry, the corresponding receipt appearing under the head of Land Revenue. It is possible that some other local charges are met from receipts under Provincial rates, but the two mentioned are the only large charges against which receipts are credited under other heads.

7664. Have you a copy of the receipt figures under Police?—Yes, I have them here, the receipts in 1875-76 were 234,736 Rx. and in 1893-94, 417,531 Rx.

7665. And in the estimate of 1895-96 is the amount rising?—It has been gradually rising. The revised estimate for 1895-96, however, is 412,000 Rx. only, which does not show any rise over 1893-94.

7666. That is almost stationary?—Yes, and in the budget of 1896-97 the figure of 412,000 Rx. is repeated.

Mr. S. Jacob. C.S.I.

29 April 1896.

Police.

7667. (*Mr. Buchanan.*) I did not quite understand about the military police. Are there two separate forces in India, a military police and a civil police?—In most of the provinces there is only a civil police, but in a few of the frontier provinces a police is maintained with slightly more military organization than the civil police. They are intended to act against armed bands of dacoits, or marauding tribes, and consequently have to be trained to act together more than the civil police are ordinarily required to do; they are chiefly officered by military men.

7668. Are they on a different scale of pay?—Yes.

7669. A higher scale of pay?—In Upper Burma it is a much higher scale of pay.

7670. And are they chiefly in the frontier provinces?—Entirely.

7671. Beluchistan?—In Beluchistan.

7672. And has there been, in the last 25 years, a larger increase in the military police than in the ordinary police force?—Yes, practically there was no military police in 1875-76.

7673. It is a growth entirely since that time?—Yes.

7674. Beluchistan, I suppose, has been annexed since that time?—Yes, but I find that the special police levies in Beluchistan are included in the political charges, and are not under the head of "Police."

7675. But does the annexation of Baluchistan represent any large increase of force or expenditure?—Yes, that accounts for a great part of the increase of 41,000 Rx. under India.

7676. And then Upper Burma, of course, has also been annexed since then, and that would represent a large additional amount?—The total extra charge for Upper Burma is 648,190 Rx., and the military police there cost 456,314 Rx. in 1893-94.

7677. I do not know whether you have stated it already, but what is the total amount of the expenditure on military police?—The military police are not shown separately, they are classed under what are called special police, but the special police came in 1893-94 to 763,000 Rx. the greater part of which is for the military police.

7678-9. That is really an additional charge imposed during the past 20 years, and mainly due to these additional provinces on the frontier having been taken?—Yes, mainly; a portion of it is, however, due to other causes; as, for instance, to the organization of a special detective force in some of the provinces, but the cost of that is not really very large.

7680. Do they rank as military police too?—No, they do not rank as military police, but they are included under the term "special police."

7681. Are the military police under the Government of India or under the Provincial Governments?—They are under the government of the province.

7682. (*Chairman.*) Is that the case in Upper Burma?—Yes.

7683. (*Mr. Caine.*) Do you think that the cost of police generally is likely to increase steadily as years go on; have you got to anything like the limit?—I think the cost of the civil police will certainly increase. For a time that may be absorbed by a decrease of the military police, but we cannot ever expect the cost of the police force to remain stationary, and so, gradually but surely, there must eventually be an increase in the cost of police.

7684. There is a strong feeling in favour of getting a better class of men into the police force?—Yes, there is a good deal said as to that in some quarters.

7685. There has been a good deal of trouble and a good deal of scandal with the class of men we have in the police in India?—There have been complaints.

7686. Of extortion?—Yes.

7687. You have not been able to form any estimate, or you are not in possession of, any estimate which has been formed, of the probable increase of the cost of the police during the next few years?—No, I do not know that any such estimate has been or could be formed.

7688. Still, it is your opinion that there must be a steady increase in the cost of the police for some years to come?—Yes, that is my opinion, based on the experience of the past; there must be a gradual increase in a charge of this kind.

7689. (*Chairman.*) Do you consider that that increase will be in consequence of an improvement of the force itself, of the men who are engaged?—Partly in consequence of that, and partly owing to the mere increase in the population.

7690. (*Mr. Ryder.*) Is there any special rate levied on the district when a special police force becomes necessary?—Every Provincial Government has power to put a punitive rate upon a village or tract of country, if it is necessary to increase the police there.

7691. That power is generally resorted to?—No, it is not very largely resorted to; in extreme cases it is.

7692. Speaking generally, the military police is not paid for by any special police receipt?—No.

7693-4. (*Sir Ralph Knox.*) You look to an increase in the cost of the civil, or non-military, police, in regard both to numbers and to an increase of pay to secure improved efficiency?—Yes. In some provinces improvements have recently been made, and I suppose there the further increase would be very gradual; but in other provinces the police has not been very lately re-organised, and I should think that they certainly will have to follow the example of the other provinces.

7695. Are the scales of pay subject to the control of the Central Government, or are they regulated by the Provincial Government?—They are subject to the control of the central authority. No general scale of pay may be altered without the sanction of the Government of India.

7696. So that any increase which has been proposed from a certain province or district is received by the central authority with the view of controlling it with reference to demands from other localities?—Yes.

7697. (*Mr. Mowbray.*) But as a matter of fact the rates of pay have been raised in some provinces and not in others?—Yes, as a matter of fact they have. The rates of pay, for the police, whether fixed recently or long ago, are not the same in all provinces.

7698. (*Chairman.*) I suppose when you say that the rates of pay of the police cannot be raised without the consent of the central authority, that falls under the general rule of Indian administration, by which increase in scales of pay, to whatever class of employé they relate, have to be approved by the Central Government?—Yes, that is so.

7699. The Provincial Governments have not got a very large discretion, have they, in increasing scales of pay?—No general rate of pay may be altered without the sanction of the Central government.

7700. Now, if you please, Mr. Jacob, we will pass to the memorandum put in by Sir Henry Waterfield, and yourself, which you have headed, "Commercial services" I propose, inasmuch as last time we had under consideration the progress of the debt, to begin with railways, because the railway expenditure is so closely connected with the subject of the debt, that it comes rather fitly after debt. You include in these "Commercial services," railways and irrigation. Are these the only two classes of reproductive public works which the State undertakes in India?—Practically they are. There are certain collieries which belong to Government, but their receipts and charges are included in the Railway Revenue Account, because, I suppose, they are generally worked in connection with some railway; they are, however, shown separately in the Railway Account.

7701. They are part of the State railway management, I suppose?—Yes, they are under the same management. There are also some petroleum operations in Baluchistan, but they are comparatively small.

7702. Practically then the railways and the irrigation works are the only two classes of reproductive works?—Yes.

7703. (*Mr. Jackson.*) You referred to collieries; is that an important item?—No; it is quite a minor item. There are only a few collieries that are managed by the State.

7704. They are worked in connexion, I understand, with some of the railways, and managed by the State?—Yes, they are.

7705. And owned by the State?—Yes.

7706. (*Chairman.*) Is the coal raised sold generally, or is it merely worked for the purpose of the State railways?—No, it is sold to the other railway companies, and, I believe, to the public also.

7707. As a matter of fact, are the coal fields in India widely spread, or are they confined to that part near Calcutta, where there are coal mines?—No; there is coal in other parts of India. The coal mines that the Government owns are in the Central Provinces.

7708. The Indian Government promotes railways in India does it not, partly by itself undertaking the construction and working of railways, and partly by assisting private companies?—Yes.

7709. Can you tell us the course of policy with regard to railways which the Indian Government has pursued? Did it begin by assisting private companies, and, if so, when?—Yes, it began by assisting private companies. The first guaranteed railway company was formed in 1849-50, and for some years no other mode of constructing railways in India was adopted by the Government.

7710. But later the Government took to constructing railways itself. Can you tell us when that change of policy was adopted?—Practically it was in 1868-69, that the Government of India began to construct railways itself. A very small amount had been spent on direct railway construction before that.

7711. That date may be taken as marking the change of policy?—Yes.

7712. And from that time did the system of guaranteeing new railways cease?—No, in one sense the practice of guaranteeing the interest on capital did not cease, but no more additions to what are technically called guaranteed railways were made after that.

7713. You mean by that that any new railways started after that time were not considered eligible for guarantees?—Yes, they have been given guarantees, but not in the same form as those which were given to the original guaranteed companies.

7714. Are those the railroads you call subsidised companies?—No, they are included among the State lines, but, as a matter of fact, part of the capital has been raised by companies on the guarantee of interest by the Government of India.

7715. How would you make the distinction between the old form of guarantee and this new form of guarantee, which, you say, is given in a different manner?—The agreements differ in many minor particulars, but the main difference is, I think, that, while the older guaranteed lines are the property of the companies, the new lines generally are the property of Government from the first, and they may be looked upon merely as leased for a certain number of years to the companies that work them.

7716. But have not all the railroad companies got a clause in the Act which incorporates them, which enables the Government to buy them up at a given time if it pleases?—Yes; the old guaranteed companies can be purchased by Government at certain fixed periods, but in their case the Government pays the full market value; under the later guarantees the railways are from the first the property of the Government; though they have to repay to the companies their capital at par on terminating the agreements.

7717. These railroads are organised in the same way as I think the French railroads are, they have a lease for a considerable number of years, and then they pass over to the hands of the Government without any payment?—There was a clause in the agreements of the old guaranteed railways which provided for their becoming the property of Government without any payment on the expiration of the periods for which the agreements were made; but another clause providing for surrender by the company at any time on due notice, which would entitle it to repayment of its capital, apparently neutralises the first-named provision. The later railways, in connection with the raising of the capital for which a guarantee has been given, are from the first the property of Government, but are leased to the companies for a term, on the expiration of which the Government is generally bound to repay the capital.

7718. Are the leases long ones?—The leases of the new railways are for various terms extending in one case for 99 years; but generally they are for shorter periods (25 and 30 years), and if not then terminated may be determined by notices at intervals of about 10 years.

7719. (*Sir James Peile.*) And the rate of interest guaranteed is lower than the old rate of interest?—Yes, considerably lower, and the terms upon which surplus profits are divisible are generally much more favourable to the Government than under the old contracts.

7720. (*Chairman.*) Then may we take the policy of the Government of India in regard to railways to be divided in this manner: that first of all there was an absolute guarantee given to a number of lines with power to the Government to buy up those lines on terms agreed upon; that next, in 1868-69, the Government adopted the policy of making railroads for itself, but at that time or some time after, by the side of that policy it adopted a policy of allowing railroad companies to construct railroads for various periods up to 99 years?—The agreements with the old guaranteed companies were for fixed periods (99 years in every case), but the agreements were terminable at earlier periods. It was some time after Government began constructing railways on their own account—about 10 or 12 years after, in 1880-81, I think—that they adopted the policy of allowing railways to be constructed by companies on a guarantee of interest, but on somewhat modified terms.

7721. Am I right in thinking that that was the policy initiated by Lord Hartington on becoming Secretary of State, when he was endeavouring to induce private enterprise to come forward in India?—I think so. I think it was the result of the report of a Parliamentary Committee on Railways; in 1879, I think.

7722. (*Mr. Caine.*) Could Mr. Jacob indicate a typical railway of each kind?—The railways which are classed as guaranteed railways are the Bombay and Baroda, the Great Indian Peninsula, and the Madras Railway. Those are the only remaining guaranteed railways.

7723. (*Mr. Jackson.*) That is the old form of guarantee?—That is the old form. Then the railways in the new form are those which are classified in the railway report as State lines worked by companies, such as the Bengal-Nagpur, and the Indian Midland.

7724. (*Mr. Caine.*) Are those on the lease system?—Yes.

7725. With a guarantee as well?—Yes.

7726. (*Mr. Jackson.*) The guarantee covering, in some cases part, and, in some cases the whole of the capital?—Yes, in some cases the Government advanced part of the capital itself.

7727. And guaranteed the balance?—And guaranteed the balance.

7728. And they were practically lines constructed at the cost of the State, and leased for a period for working?—The companies raised a considerable amount of the capital for the purpose of constructing the railways.

7729. Is not the capital guaranteed by the Government?—Yes, the capital raised by the companies is guaranteed by the Government, and inasmuch as the Government is liable for the whole of the interest, it may be said that the lines were practically constructed at the cost of the State.

7730. The whole of the capital is practically guaranteed, is it not?—It is either borrowed direct by Government or raised through the companies on a guarantee.

7731. If the Government advances money for the construction and does not charge interest, that is equivalent to the guarantee?—It generally does charge interest upon the capital it advances.

7732. That is to say, if there is a surplus?

7733. (*Mr. Caine.*) If it is earned they get it?—Yes.

7734. If it is not earned they do not get it; it is not cumulative, is it?—In some cases it has been, I believe, cumulative, but not as against the guaranteed interest.

7735. (*Chairman.*) As a matter of fact they have not got interest in most cases on the amount they have advanced?—In some cases they have.

7736. (*Mr. Caine.*) They paid on the first three guaranteed lines for years; there has been no guarantee paid on the Bombay and Baroda for many years?—The total guaranteed interest has not been covered by the Government share of the earnings.

7737. I thought it had run off. The Great Indian Peninsula has of course run off?—There is no interest outstanding against that line.

Mr. S. Jacob, C.S.I.

29 April 1896.

Railways.

7738. Is there any outstanding against the Bombay and Baroda?—Against the Bombay and Baroda, no.

7739. The Madras?—Yes, it does not even now pay the guaranteed interest.

7740. But the other two are quite clear?—I am not sure about the Great Indian Peninsula at present.

7741. Oh, I think it is clear; it has been paying $1\frac{1}{2}$ and 2 per cent. over the guarantee for many years?—Yes, in the past it has, but I am not sure as to the present.

7742. I should think with the 100*l.* shares at 186*l.* there would not be much due to the Government of India?—I am afraid I have misunderstood your previous questions. There is nothing due to the Government of India in any of these cases in respect of past arrears. There is no cumulative claim on account of them. The surplus profits are calculated with reference to the net earnings for each half year. I find on reference to the accounts that the Government share of the earnings has not wiped out the excess interest paid in the past in the case of either the Great Indian Peninsula or the Bombay-Baroda Railway. That does not, however, affect the companies' share of the net profits. The companies are all the same entitled to half the net profits after deducting the guaranteed interest for the half-year.

7743-5. (*Chairman.*) With reference to what Mr. Caine says, it appears from a table in the memorandum which you have given me that the guaranteed interest of the Bombay-Baroda Company in 1893-94 was practically 418,000*l.*; that is to say, 417,517*l.* in England and Rx. 424 in India The surplus profits were Rx. 266,000?—Yes.

7746. Therefore should I be right in supposing that the State was at the cost of the difference between Rx. 266,000 and 418,000*l.*?—No, the former is a payment to the company in addition to the 418,000*l.*

7747. (*Mr. Caine.*) That 418,000*l.* has been set aside?—Yes.

7748. (*Chairman.*) The Rx. 266,000 remains after the 418,000*l.* has been set aside?—Yes.

7749. That would go to the company?—Yes.

(*Mr. Jackson.*) That is to say, in this case the 418,000*l.* would not be called upon?

(*Mr. Caine.*) No, that is it; they earned the guarantee and did not call upon the Government for it.

7750-2. (*Chairman.*) Yes, quite so?—That was the case with both the Bombay-Baroda and the Great Indian Peninsula in 1893-94; but the conditions applicable to both the lines are such that the payment of the surplus profits does not show necessarily that there is a profit to Government even for a half-year for which such surplus profits are paid, because for the purpose of calculating the surplus profits the guaranteed interest is converted into rupees at the rate of 1*s.* 10*d.*

7753. (*Mr. Jackson.*) But would you put it so high as this, that in any case where there was a surplus profit shown, there had been no call on the Government guarantee?—No, I should not say that.

7754. That there might be a surplus shown notwithstanding the fact that the whole of the Government interest had not been provided?—Yes, at the current rate of exchange. The interest is converted at 1*s.* 10*d.* to the rupee in calculating the surplus profits, so that unless the surplus exceeds the difference between the equivalent in rupees at the actual rate of exchange and at 1*s.* 10*d.*, there might still be a loss to Government.

7755. Ah! a loss to Government; but so far as the working of the line was concerned there would be no surplus until they had carried out their engagement to Government?—The surplus is calculated merely as a matter of account in the following way. The 5 per cent. sterling interest is converted into rupees at 1*s.* 10*d.* to the rupee, and the amount so calculated deducted from the total net receipts in India; the balance gives the surplus profits which are divisible between the Government and the company in moieties.

7756. And, therefore, if there was any loss to the Government it would be by what you call loss by exchange?—It would be due to the fall of the exchange value of the rupee below 1*s.* 10*d.*

7757. (*Chairman.*) But now, on page 1 of your memorandum, we have the heading of guaranteed railways' interest, surplus profits, land, &c. There are the charges in India, England, and exchange, making a total—I am taking 1893-94—of Rx. 4,162,750, and the guaranteed railways net receipts were Rx. 3,383,812, leaving a deficit under the heading of guaranteed railroads of about Rx. 800,000?—Yes.

7758. That means, does it not, that the Rx. 800,000 had to be paid by the Government of India?—Yes.

7759. Now, if you will take the Bombay and Baroda again, does not that mean that the 265,000 Rx. profits are to be deducted from the 418,000*l.* before you get at the real cost, because if you look at that column of 1893-94 you will see that for the guaranteed interest the payment was 2,154,720*l.*?—Yes.

7760. Which is the same figure as appears in this first table, which gives the whole of the charge, and in that sum of 2,154,720*l.* is included the 417,517*l.*, being the charge of the Bombay and Baroda?—Yes.

7761. If you turn to the receipts you will see that the guaranteed railway net receipts are 3,383,812 Rx., being the same figure as appears in Table I.?—Yes.

7762. And just now I asked you whether the general result of the guaranteed railroads would not be this, that the charges were 4,162,750*l.*, the receipts 3,383,812 Rx., and the difference between those two sums would be a charge upon the Government of India, I understood you to say yes; but, if that is the case, I am rather puzzled to make out how the Bombay and Baroda can be said to show a profit which I gathered you to say just now. I am quite aware that we must bear in mind that that 4,162,750*l.* includes exchange?—You have left out the India charge on page 1 of 607,753 Rx. under guaranteed railways. That includes the charge for the Company's share of the surplus profits.

7763. No, I beg your pardon, I have read you the sums that make up the 4,162,750*l.*; they are: India, 607,753 Rx.; England, 2,154,720*l.*; Exchange, 1,400,277 Rx.; total, 4,162,750*l.* That is the total of the charges?—Yes, but I mean on the subsequent page; the 2,154,720*l.* includes only the total of the English charge.

7764. Quite so, of the English charge?—And it is in the Indian charge that the payment of surplus profits to the Company is included.

7765. Oh. However, we may come again to that question; but as it stands now, we have got these three kinds of Government assistance to railroads, the guarantee with a right of purchase, the guarantee on lease, and the State-made railway?—Yes. There is also another class, the subsidised railways.

7766. (*Mr. Jackson.*) Is not this the real explanation, that the surplus is the surplus on the working of the railway calculated at a certain rate of exchange?—Yes.

7767. The loss to which the Chairman refers is a loss by exchange which the Government makes in carrying out its contract of paying a certain guarantee at a certain rate, and only getting for that a less rate?—Yes.

7768. (*Mr. Mowbray.*) I should like to ask what is the object of this intermediate calculation, if I may call it so, at 1*s.* 10*d.*?—The object is to find out what the company is entitled to as surplus profits.

7769. Yes, but you pay, not at the rate of 1*s.* 10*d.*, but at the rate of the day of course?—We pay the surplus profits upon what is virtually a fictitious calculation that the interest that we have paid in England can be remitted at 1*s.* 10*d.*

7770. The surplus is a fictitious surplus then?—Yes, entirely a fictitious surplus.

7771. And does the company get the benefit of that?—Yes, it gets its share of that fictitious surplus.

7772. (*Mr. Jackson.*) So that it gets the benefit of the higher range of exchange which the Government guarantees, and it also gets the benefit of the surplus which is the result of the fall in exchange?—I do not think it can be said that the surplus is the result of the fall in exchange.

7773. Well, which is calculated at a fictitious rate?—Yes, it is the result of a fictitious calculation.

7774. Which is only another way of saying that it is calculated at a higher rate than the actual rate?—Yes; practically the contract assumes that we can remit the whole of the net earnings to England at 1*s.* 10*d.*, or, at any rate, so much of them as will meet the guaranteed interest.

7775. (*Mr. Mowbray.*) And, as a matter of fact, you have to remit them at the exchange of the day?—Yes, at about 1*s.* 2*d.* now. The actual figures of the Great Indian Peninsula Railway for 1893–94 sufficiently illustrate what I have been saying about the fictitious nature of the surplus profits as far as Government is concerned. The net receipts of that railway amounted to Rx. 1,875,000; the interest paid by Government, including the exchange on interest paid in England, amounted to Rx. 1,988,000, so that there was a net loss on the interest alone of Rx. 113,000; yet, converting the interest into rupees at the fictitious value of 1*s.* 10*d.* to the rupee, it was calculated that surplus profits had been earned, the company's moiety of which amounted to about Rx. 300,000. The net loss to Government, therefore, was considerably over Rx. 400,000, and this was due entirely to the difference in exchange calculated at 1*s.* 10*d.*, the assumed rate, and 1*s.* 2$\frac{1}{2}$*d.*, the actual rate, on an interest payment of 1,200,000*l.*

7776. (*Chairman.*) Can you give us the amount of capital guaranteed, first, in 1875–76, and second, in 1894–95 or 1895–96?—The capital of the railways, classed as guaranteed up to 31st March 1875, was 92,100,000*l.*

7777. We are talking now only of the guaranteed capital?—Yes. On the 31st March 1895 it was 45,900,000*l.*

7778. You gave us three classes, and you added another, subsidised railways. Can you tell us the difference between a subsidised railway and the two classes of guaranteed railways?

7779. (*Mr. Jackson.*) May I just say this; you gave us first the guaranteed, illustrated by the Bombay and Baroda?—Yes.

7780. Then you gave us what you called the State railways, which, I take it, are the lines constructed by the State practically, and worked and leased by companies?—Yes.

7781. Then I think there was another class?—Yes, the subsidised.

7782. (*Chairman.*) Wait one moment. As I understand it, there are three classes before we get to subsidised. There are first of all the old guaranteed, of which the Bombay and Baroda is the type, then come the State constructed railways leased to companies and the State railways, which are worked by companies?—The State railways are not all worked by companies; there are some worked by the State.

7783. Leased by the State?—Worked by the State.

7784. (*Mr. Mowbray.*) Might we have an instance?—The North-Western Railway; of course that was originally guaranteed though; I will give you one that has been made by the State and worked by the State all through—say, the Burma State Railway.

7785. (*Mr. Jackson.*) That was a line that was made by the State and is worked by the State?—Yes. That is a line which was constructed by the State and has hitherto been worked by the State without the intervention of a company.

7786. Then there was no private capital in that, I take it?—No, none at all.

7787. (*Chairman.*) Then we come to the second kind of guarantee, in which the State guarantees the interest or advances the money, the line being simply leased to the company for a term of years?—Yes.

7788. Now give us a sample of that?—That I gave before; the Bengal-Nagpur, and the Indian Midland.

7789. And then, fourthly, we come to the subsidised company, do we not?—Yes.

7790. And wherein does that subsidised company differ from those other guaranteed companies?—The interest on their capital is not directly guaranteed, the subsidy is given in some other form.

7791. (*Mr. Jackson.*) Is it a subsidy to revenue or a subsidy to capital?—The subsidy may be to either capital or revenue, or both. In some cases the subsidy is given in the shape of the free supply by Government of land or timber required for the railway, but in one or two cases a money subsidy is paid every year.

7792. So much a year?—Yes.

7793. A fixed sum per annum?—Yes.

7794–5. (*Chairman.*) Whatever the profits of the company, so that as long as the arrangement continues, if the company were paying 10 per cent., the Government would still have to continue the payment of this liability?—I am not sure if there are any cases of that kind. I know that in most of these cases the Government has made an arrangement that it shall share in the earnings after a certain amount of profit has been made.

7796. (*Mr. Jackson.*) There is more incentive to develop the company if they get the whole, I suppose?—On referring to the Finance and Revenue accounts I find that in the only instances in which at present a money subsidy is paid, it is paid when required to make up a specified rate of interest on the capital, and is limited to a fixed maximum. We have hitherto paid the maximum subsidy each year because the net earnings of these lines have fallen short of the specified rate of profit by an amount not less than this maximum. There are very few companies that are merely subsidised companies; the Bengal and North-Western is the most important.

7797. And the subsidy may be in the form of a gift of land which you would call in aid of capital, or it may be in the form of a yearly payment towards revenue?—Yes, and in some instances aid is given in other forms, as in the free gift of fuel.

7798. (*Mr. Mowbray.*) Are those terminable arrangements or permanent?—All of them are terminable.

7799. The agreements with the subsidised lines are all for fixed terms?—Yes.

7800. (*Chairman.*) You have given us the amount of guaranteed capital in 1875–76 at 92,000,000*l.*, and in 1895–96 at 46,000,000*l.*?—At 31st March 1895, about 46,000,000*l.*

7801. Does that cover the whole of the liability of the State on railways other than the State railways?—No.

7802. It does not cover the subsidised railways?—I do not think the State has incurred any present capital liability in respect of the subsidised railways. It is liable in certain cases for the payment of an annual sum to the subsidised companies, but there is no capital liability.

7803. There is no capital liability in the case of the subsidised railway?—No present capital liability, though a liability may arise in future out of the agreements as to the terms on which these railways may be taken over by the Government.

7804. Therefore, that sum of 46,000,000*l.* represents the whole of the State liability under the head of guaranteed railways?—Yes, if under State railways are included those lines which belong to the Government, though they are at present leased to companies.

7805. The liability on their account does not come into this 46,000,000*l.*?—No.

7806. Quite so. Now have these guaranteed companies of which we have been speaking any capital which is not guaranteed?—Only the premium on issue of shares, and such small items as that. The unguaranteed capital is under Rx. 100,000 altogether.

7807. That is to say, they were never under any contract to accept a guarantee for a certain amount of capital with a liability to complete the line, if they exceeded that amount, on their own security?—I think the arrangements always provided for a guarantee on the capital of the old companies. The interest has not always been guaranteed at 5 per cent., but the greater part of the capital was guaranteed at that rate.

7808. And for what period would those guarantees run, as a rule?—They run for about 99 years.

7809. Therefore, the State is bound to pay 5 per cent. on the guaranteed capital for the whole of that period?—It has the option of purchasing at certain intervals—25 and 50 years from the beginning of the contract—and it is under that option that the number of guaranteed railways has been reduced now to three, the other guaranteed railways having been purchased by the State.

7810. Under no circumstances, therefore, can a further liability be imposed upon the State in respect of these railways beyond this 46,000,000*l.*?—No; that, or somewhere about that, is the whole of the sanctioned capital at present.

7811. What would happen if a guaranteed railway ceased to work the line; is it a guarantee on working?—Yes, there is provision for the State taking the line and working it itself, if it is not worked satisfactorily.

Mr. S. Jacob, C.S.I.

29 April 1896.

Railways.

In that case, the Government would have to pay off the actual expenditure on the line.

7812. But, in order to do that, the Government must work the line? — That is the arrangement in the contract.

7813. There is no possibility of a line being left derelict because it does not pay?—No.

7814. (*Mr. Caine.*) I suppose if the Government paid the companies off, and chose to leave the line derelict, it could?—I suppose so.

7815. There is no obligation to continue working the line?—No.

7816. (*Chairman.*) Are there any railways constructed and worked by private companies without any aid from the Government? — I do not think there are any in British India that do not receive at least free land from Government.

7817. And the policy of giving assistance in land or the like, if I understand you, originated about 1880 or 1881?— The construction of lines which were the property of the State, and were leased to companies for a certain number of years, was introduced in 1880 or 1881. This policy came in somewhere about the same time, or, if anything, a little earlier.

7818. (*Mr. Jackson.*) It comes rather under your category of subsidised railways, does it not?—Yes, they receive land free of charge.

7819. (*Mr. Nuoroji.*) Did the guaranteed companies pay anything for the land, or was it given to them also free?—No, it was given to them free also.

7820. (*Mr. Caine.*) Is there any provision made for payment for the land in the event of brilliant success or getting biggish dividends early? For instance, the Great Indian Peninsula keep their land and never pay anything for it, although they are making large dividends?—No, they do not pay for the land.

7821. (*Chairman.*) Passing now to the railways constructed by the State, can you tell us the amount expended on these railways in 1875–76, and in 1894–95 or 1895–96?—The total expenditure up to the end of 1875–76 was Rx. 12,361,000, and up to the end of 1893–94, Rx. 114,701,000.

7822. The difference being the difference between Rx. 12,000,000 and Rx. 114,000,000?— Yes, but that does not include the State lines leased to companies.

7823. No, I was going to ask you about that. What do those figures include?—It includes the actual expenditure incurred directly by the State on the construction of railways and the amount of capital charge involved in the purchase or in the redemption of the liabilities of companies whose lines have been taken over by the State.

7824. And those figures are divided into Rx. 80,000,000, is it not? for actual construction of line, and Rx. 33,000,000 for purchase? — Yes, between Rx. 33,000,000 and Rx. 34,000,000.

7825–7. Now could you add to that any sums advanced by the State on account of these leased lines?—Perhaps I ought to explain, before going on to that, that this capital liability for purchase, &c. only includes the capital liability involved to Government by incurring a specific amount of debt for the purpose; it does not, therefore, show any liability on account of the annuities which were created in purchasing any of the guaranteed lines; so that it does not really state the full amount of that liability, if the capital amount included in the annuities is taken into account.

7828. (*Mr. Jackson.*) That is to say it does not state the full amount of the capital expenditure?—It does not state the full amount of the capital expenditure.

7829. It does state, as I understand you, the full amount of the liability of Government?—Only if you consider that there is no capital liability included in the annuities. That liability, whatever it is, is, of course, being gradually paid off by a certain portion of the annual payment.

7830. (*Chairman.*) May I put it in this way. The purchase of the railroads probably cost, we will say, 60,000,000*l.*?—We may take that figure for the purpose of explaining the point, but I think the actual cost exceeded that.

7831. You have given 33,000,000*l.* as the actual liability?—Yes.

7832. But, in addition to that, there are 27,000,000*l.* which are represented by a terminable annuity?—Yes, on the assumed cost as above.

7833. I was just asking you about what additional amount would represent advances made to these leased guaranteed lines?—I suppose, in the capital, you would include the capital which the companies themselves have raised, because we are liable for that capital.

7834. You have given a guarantee upon it?—Yes.

7835–6. Yes, certainly?—The total capital liability involved on that account at the end of 1893–4 is 25,143,000*l.* sterling.

7837. It is a liability in England, is it not?—Yes.

7838. Would you, turning to page 1 of your memorandum, show me where the interest on that 25,000,000*l.* would appear?—It is included there in the first item of interest and annuities, in the interest paid in England in 1893–4, which was 3,589,593*l.*

7839. Therefore, if you want to find out what the average interest upon the Government advances was, we will say, in 1893–4, there is very nearly 7,000,000 in Rx. and pounds in India and England?—Yes.

7840–1. And if you were to take that 25,000,000*l.* advanced to the leased lines and the 114,000,000*l.* representing the expenditure on State lines, that would give you 139,000,000*l.*; call it 140,000,000*l.* That is the capital sum upon which this 7,000,000*l.* is paid?—No, that 7,000,000*l.* also includes the annuities.

7842. In that case you would have to add perhaps another 25,000,000*l.* of capital on?—Yes; you would have to add whatever the capital value of the annuities is.

7843. But at all events taking the capital value of the annuities, and the 25,000,000*l.* due upon the leased lines and the 114,000,000*l.* spent in actual construction, those three sums put together represent the capital sum upon which this 7,000,000*l.* is paid?—Yes.

7844. That is the liability that India has in respect of advances to Indian railroads?—Yes.

7845. (*Mr. Jackson.*) But that does not represent the total amount of capital expenditure?—No.

7846. (*Chairman.*) That, I think, is about 246,000,000*l.* is it not?—That is the total amount of capital outlay on railways in India to the end of 1894; but that figure includes the expenditure in certain Native States.

7847. The 246,000,000*l.*, to meet Mr. Jackson's question, throws a sheet over the whole of the railway expenditure in India, does it not?—Yes.

7848. Now, of this 114,000,000*l.* which was laid out on the construction of railways, was the whole met out of borrowed money, or was it in part supplied out of surplus of revenue which has swelled the cash balance to an extent which enabled part to be devoted to capital works?—For the whole period from 1876–7 to 1894–5 both inclusive, there has been a net deficit of Rx. 3,345,000, so that it cannot be said that any of the expenditure on railways during that period has been met from the surplus of revenue over expenditure.

7849. That is to say that although in the interval there may have been several years of surplus in which case part of the sum advanced to the Indian railways was met without borrowing, yet in other years, especially in such years as the Afghan War, when the expenditure was very heavy, the amount borrowed by India for the necessities of Government would have more than counterbalanced the surpluses in the years in which advances were made to railways; and, therefore, you conclude from that that the proper method of stating the account is to take it for the whole period, and finding there is a deficit of revenue, to show that the full amount of the railway expenditure has been borrowed?—I think that the conclusion is that the whole of the expenditure shown as so met has been met from borrowed money, including in that term the Savings Bank receipts. Of course, in any individual year a surplus would be applied to reducing the borrowing for that year.

7850. Quite so, but that is more than counterbalanced by the deficits in other years which necessitated borrowing?—Yes, I have a statement here showing the surplus and deficit for each year of the period. There were surpluses in ten years and deficits in nine years. The total of the surpluses was Rx. 15,960,000 and the total of the deficits Rx. 19,305,000, so that the net deficit is Rx. 3,345,000.

7851. That includes all the period of the Afghan War, does it not?—Yes it does, as well as the great famine of 1877-78.

7852. (*Mr. Jackson.*) In the case of the State railways that are owned and worked by the State, is the transport of troops and of material and so on paid for as it would be if the line were conducted by any company?—Yes, they are worked purely as commercial concerns.

7853. Therefore the accounts of the line are credited with the ordinary rate charged for carrying that traffic?—Yes, we pay it to them either in cash or by a transfer.

7854. (*Chairman.*) And do you include in these State railways those which are constructed for purely military purposes?—We include those lines which are undertaken chiefly for military purposes, and are generally called frontier lines.

7855. The 114,000,000*l.* includes them?—Yes.

7856. I thought there had been a separate arrangement made for those frontier railways?—No, they are included in the capital expenditure.

7857. And those railways are an absolute loss, are they not; they were never constructed with a view to profit?—Yes they certainly are a loss. The greater part of them are mixed up with the North-Western Railway, so that I cannot give any separate account of the results of their working, but they certainly are the least paying part of that railway.

7858. (*Mr. Jackson.*) Do they come into the deficit in the general account?—Do you mean are they charged to borrowed money?

7859. No, I mean, are they included in the total number of State Railways, or under the heading of liability of the State on account of the railways, in arriving at what you call the loss on the whole transaction?—Yes; they are treated in our accounts exactly in the same way as the commercial railways.

7860. (*Chairman.*) That is to say, taking page 1 of your memorandum, their charge comes into that total of 9,281,000 Rx. stated as the charge of the State Railways, and their receipts come into the total of 8,615,000 Rx. which is given as the net receipt?—Yes.

7861. Was there not some arrangement made by which the Government of India provided the funds for, at all events, a part of those frontier railways, out of taxation?—Yes, for a time the charge for them was provided out of revenue, but that charge has now been included in the debt charged against the railways.

7862. And they are provided by borrowing, just like a productive railway?—Yes.

7863. In fact they are mixed up with the productive railways?—Yes.

7864. And you cannot give us a separate account of the productive railways and the military railways which are not constructed for the purpose of being re-productive?—I can give you the total capital expenditure incurred on military railways at the end of 1893-94.

7865-6. Would you do so?—The total is Rx. 14,062,000 to the end of 1893-4.

7867. Therefore, if you take that off the Rx. 114,000,000 expended on State railways, it would leave Rx. 100,000,000 on productive railways and 14,000,000*l.* on what we may call unproductive?—The Rx. 100,000,000 includes also protective railways.

7868. (*Mr. Jackson.*) Would it be possible to show the loss on working those railways as well as the capital expenditure on them?—I think not, because they are generally worked as part of another system. For instance, the principal part of this Rx. 14,000,000—Rx. 12,000,000—was incurred on account of what is called the military section of the North-Western Railway, but that section is worked merely as a part of the North-Western Railway.

7869. (*Sir James Peile.*) I think we can get a separate account; we have returns of the results of the railway for each year, in which the result for each part of it is given separately?—A return for the railway is prepared?

7870. And it gives the results of each part. Some parts show a deficit and some a surplus, and then there is the general result. I think you can get it from the office here?—I was not aware of that, but I think possibly I may be able to get it from the Director-General's annual report.

7871-2. (*Chairman.*) It would be rather interesting if we could get the result of the working of these railways as well as the capital expenditure. You have given us the capital expenditure. Perhaps you would consider if you could give us an account?—Yes.

7873. If it is very short and you have it there you might put it in answer to the question; if it wants any statement perhaps you would put in a short account?—Yes, I will.

7874. (*Mr. Jackson.*) The real object would be to show to what extent the result of working the commercial railways is watered down by these military railways?—Yes. I see they do give an account for the military section, separately, in the administration report. I have the figures here: I can give you them at once if you wish.

7875. (*Chairman.*) Perhaps you will give us them?—The railway administration report is drawn up for the Calendar year. I find the gross earnings of the North-Western Railway for 1894 were Rx. 3,231,410; and the gross working expenses Rx. 1,948,892, leaving net earnings of Rx. 1,282,518. Then the gross earnings are distributed between the commercial section and the military section; the commercial section Rx. 2,898,354, and the military section Rx. 333,056, and the working expenses commercial section Rx. 1,539,412 and the military section Rx. 409,480, so that the commercial section shows a net return of Rx. 1,358,942, and the military section a loss of Rx. 76,424.

7876. That, however, would not include the whole of the frontier railways?—Practically that includes the whole of the open lines of frontier railways. The Mushkaf-Bolan Railway and the Mari-Attock Railway, the capital expenditure on which is included in the Rx. 14,000,000, are still shown among the unopened lines.

7877. That would be the cash result of the expenditure of Rx. 14,000,000, would it?—Yes, at present.

7878. (*Mr. Caine.*) Does it include the Quetta Railway?—That is included under the North-Western Railway; and, as far as it is considered a military railway, its results would be included in the figures I have just given.

7879. The North-Western goes down to Kurrachee, does it not?—Yes.

7880. (*Chairman.*) Would you say it is quite sound finance to group these military railroads with the productive railroads in the method of providing funds? What I mean is, would you not think that the original method pursued by the Indian Government was more correct than the later one?—I think, as a matter of provision of funds, that it is justifiable to provide the military railways out of borrowed money.

7881. Without any sinking fund?—Yes.

7882. Would you really approve of a system of finance which made a permanent charge of a simple military work?—They are not, in my opinion, simple military works; though the principal object of them may be military.

7883. They are railroads which probably would not have been made had it not been for military exigency?—That was the principal cause for their being made, but, as a matter of fact, they are worked as commercial lines, and not merely for military purposes.

7884. (*Mr. Caine.*) Is there any hope that they will ever pay as commercial lines?—The deficit now is not very large.

7885. What is the deficit on the Quetta line, for instance; can you give me the commercial and the military figures of the Quetta line?—They are included in the totals I have given.

7886. They are not separated?—No, they are not shown separately.

7887. (*Sir James Peile.*) If the Ameer changed his policy as to the traffic with Afghanistan, the Quetta line might come to pay?—It might, I think, certainly more than cover its working expenses.

7888. (*Mr. Caine.*) It is part of a great commercial system into Russia, is it not—the first step?

7889. (*Chairman.*) But at the present moment, when you say the deficit is not very large, it is of importance to note that the military lines do not pay working expenses?—That is so; but the deficit is under 1 per cent.

Mr. S. Jacob, C.S.I.

29 April 1896.

Railways.

7890. Not only is there no interest paid, but they do not pay working expenses?—Yes, but the deficit is less than 1 per cent. on the capital expenditure.

7891. (*Mr. Caine.*) On the Quetta Railway?—On the whole of the military section of the North-Western Railway.

7892. (*Chairman.*) Wait a moment. The working expenses, as I understand, are Rx. 409,000?—Yes.

7893. The gross earnings are Rx. 333,000?—Yes.

7894. Very well then; first of all, there is a loss of 1 per cent. upon the working, we will say. I think you called it 1 per cent. just now?—I said it was less than 1 per cent.; it is more accurately ·63 per cent.

7895. And, in addition to that, there is the interest on construction, because this is only a comparison of the working expenses and the receipts?—Yes.

7896. And therefore you have got to add to the ·63 per cent. the interest on construction?—Yes, that is so.

7897. That makes the deficit very large?—Yes, if you include the interest.

7898. (*Mr. Jackson.*) That is to say, the working expenses do not include any payment of interest on capital?—No, they do not.

7899. (*Mr. Caine.*) Could you say how much of the income is paid by the State for military services, and how much is earned by commercial traffic? You have Rx. 330,000 of income and receipts: where do they come from?—I could not say that offhand.

7900. (*Chairman.*) They are receipts from that portion of the railroad which is used for military purposes——?

7901. (*Mr. Caine.*) Surely some portion of them is for carrying troops. It would be very interesting if you could find out. Taking that Rx. 330,000, how much was really freight, and how much was paid by the State for military services?—I will see if I can find that out; but I do not think any return exists, which would show such receipts separately.*

7902. (*Chairman.*) Would you just tell us what the original arrangement was with regard to these frontier railways as to the provision of funds?—They were charged against revenue and to a separate head of account.

7903. And was any revenue particularly raised for the purpose, or was it a charge upon the general revenues?—It was merely a charge against the general revenues.

7904. How long was it before the change was made which transferred those railroads to the list of productive railways?—The expenditure charged separately was Rx. 4,215,000 from 1879–80 to 1883–84.

7905. (*Mr. Jackson.*) Does that mean Rx. 4,000,000 out of Rx. 14,000,000?—Yes.

7906. And Rx. 10,000,000 was provided out of revenue?—No, Rx. 4,000,000 was provided out of revenue.

7907. (*Chairman.*) Then if that is the case we must only take Rx. 10,000,000 off the Rx. 114,000,000?—In calculating the capital expenditure on railways and irrigation works, upon which interest is charged, we do not make any distinction between the expenditure incurred from revenue and from borrowed money. A great deal of the capital has actually been charged against revenue, but as a matter of account between the Public Works Department and the Government it is all charged as capital expenditure of the railways and irrigation works.

7908–9. But pardon me, a little while ago I asked whether you could make a distinction between that amount of the railway debt to the State, that was provided by the State out of borrowed money, and that amount which the State had advanced; and you said, and I think with a considerable amount of reason, that whatever might have been done in the years of surplus, taking the period with which we are dealing, the 20 years 1875–6 to 1895–6, upon the whole range there had been a deficit, and therefore it was fair to consider that the whole of the sum required for railroads had been borrowed?—Yes.

7910. But in this case part of the railroad advances were actually made out of revenue?—In answering the previous questions, I had in my mind the expenditure shown as incurred from borrowed money, and the question whether any of the expenditure so shown could be said to be provided from surpluses. Certain of the capital expenditure on both railways and irrigation has been charged against revenue from time to time, as a matter of fact, in the accounts, but the whole of the expenditure is included in the debt chargeable against the public works.

7911. That is to say, as between the railroad and the State, the amount is Rx. 114,000,000 of which Rx. 14,000,000 is due to these military railroads?—Yes.

7912. But when you come to the actual borrowing that has taken place, if it is a question of how the State had provided that money, you could show that Rx. 100,000,000 had been provided by loan and Rx. 14,000,000 or something of that kind out of revenue. Would that be putting the account into two sides?—The Rx. 14,000,000 spent on military railways has not all been provided out of revenue. The amount to the end of 1893–4 charged against revenue was Rx. 22,000,000, but that is for railways and irrigation taken together.

7913. (*Mr. Jackson.*) Is that in the one year?—No, that is the total expenditure then incurred.

7914. Up to that time?—Yes, and the amount shown as not charged against revenue is Rx. 88,000,000.

7915. (*Chairman.*) Out of that Rx. 114,000,000?—No. The figures I have given include both irrigation and railways. The amount spent out of revenue for irrigation is Rx. 8,000,000, and for railways, Rx. 14,000,000.

7916. Therefore you do not think it would be a desirable thing to provide that these unproductive military works should be, at all events, terminable loans. I call your attention to the matter because it seems to me a different policy to that which is adopted in this country, under which, I think, all military and naval works are defrayed out of yearly votes, that is, out of revenue, or are made the subject of at least a short loan, and provision is made for paying off the capital out of revenue within a comparatively short number of years. I think, Sir Edward, there is no exception to that. Do you know of any exception to it?—

(*Sir Edward Hamilton.*) No.

(*Chairman.*) The fact of borrowing for military and naval works is questionable finance. I do not say it is not justifiable; but it is more than questionable to borrow on permanent loan for them.

(*Sir Edward Hamilton.*) Certainly.

(*Sir James Peile.*) Are there any railways among the military works in this country?

(*Sir Edward Hamilton.*) We do not provide funds for them?—The distinction is rather in that. For all other military works we do provide absolutely out of revenue, and not out of loan at all.

7917. You look upon these as absolutely permanent works?—I think there is a clear distinction between them and ordinary military works, such as barracks or even roads.

7918. (*Mr. Jackson.*) In fact the military and naval works in India are maintained out of the revenue which they bring in?—That seems to me to make a distinction. I do not suppose that any revenue comes in from the ordinary military or naval works for which the Home Government provides; in this case there is a revenue coming in.

7919. (*Chairman.*) But I am afraid from your account the result is something less than revenue. (*Mr. Jackson.*) There is a receipt?—There is a receipt.

7920. (*Sir James Peile.*) Which is increasing?—Which is, I believe, increasing.

7921. (*Chairman.*) Barracks and works of that kind do not involve working expenses, so we are only put to loss of interest on the outlay in these cases. In the case of railways there is not only loss of interest but loss of working expenses?—There may be loss of working expenses.

7922. (*Sir Edward Hamilton.*) But you would hold that it is not wholly unproductive expenditure?—It is not, in my opinion.

7923. Whereas ordinary military work is wholly unproductive expenditure?

7924. (*Chairman.*) Are you not somewhat sanguine, because the position of the account is a much worse one than would be the account of a loan for barracks or a dock or anything of that kind? In that case we

* *See* Question 9631.

only lose the interest on the money expended; whereas in the case of railways you not only lose the interest on the money expended, but you are obliged to work the railroad at a loss, which clearly makes the expense greater, and, therefore, there is all the more reason, I should put it to you, why the expenditure should be treated at all events as a terminable loan?—I have not at hand the correspondence regarding the introduction of this policy, but I will send for it, and I shall then be able to give the grounds, which at the time induced the Government of India to adopt the policy. All I can say at present is, that it must always be borne in mind, that we are borrowing every year, and not paying off debt as you are in England, and there would be no great advantage in borrowing with one hand to pay off with the other. Also it is possible that such lines might make a sufficient profit to more than cover the working expenses.

7925. Do you seriously think that there is a prospect of profit on them?

7926. (*Mr. Jackson.*) Is the loss on working diminishing? I mean this receipt of Rx. 333,000 against expenditure of Rx. 409,000; is the Rx. 409,000 a diminishing quantity?—I cannot be sure, but I will put in a statement showing the figures for the last few years.*

7927. (*Chairman.*) We may now make up an account of the whole railway capital expenditure of India under the different heads. First of all there are the productive railways constructed by the State of which the cost has been Rx. 114,000,000, is it not?—Yes.

7928. Then we come to the amount of capital expenditure in the case of guaranteed lines under the new system?—Yes.

7929. That you have put at Rx. 25,000,000, have you not?—Yes.

7930. Then before we leave the State railways we ought to put the present capital value of the annuities, which represent part of the purchase money?—Yes.

7931. You do not happen to have that, have you?—I have here a statement, which is drawn up with the intention of including that, and the total expenditure for State railways is there shown, as Rx. 155,000,000. That includes the Rx. 114,000,000.

7932. That includes the Rx. 114,000,000 and the Rx. 25,000,000?—No, not the Rx. 25,000,000.

7933. Therefore the annuities would represent at that rate Rx. 41,000,000?—Rx. 41,000,000. That is the additional amount included in this account, but I do not think it is due solely to the inclusion of the capital amount of the annuities.

7934. I suppose we may put that figure down may we not?—Well there is a doubt as to about Rx. 8,000,000 of that. Excluding that, the additional liabilities would be really about Rx. 30,000,000 to Rx. 32,000,000.

7935. What is the nature of the doubt?—I think the Rx. 8,000,000 ought to be included; but the question is whether you should show as the charge against the capital, the actual capital expenditure incurred by the companies, or the cost to Government of purchasing the lines.

7936. That is to say, it costs the Government more or less than the actual expenditure?—It cost the Government more to purchase the lines than the actual capital expenditure incurred in the construction of the lines.

7937. But if you did not count in that excess, where would you put the Rx. 8,000,000?—It must be counted in estimating the cost of the lines to Government.

7938. But where would those who think differently from you put it? In what part of their capital account would it appear?—It would have to appear somewhere against the Government, but I think the object in excluding it is to show more fairly the return from the railways. The railway administrators think that it is not fair to the Railways to show this larger capital against the return from the railways. That Rx. 246,000,000 that your lordship mentioned just now as the total capital expenditure on all railways in India excludes the Rx. 8,000,000. The total, including that sum, comes to about Rx. 255,000,000.

7939. Then the object of excluding it is to show what has been the actual expenditure on railways?—Yes, the actual outlay on construction.

7940. Leaving out of view what I may call the premiums paid for buying them?—Yes, that is so.

7941. (*Mr. Jackson.*) In fact, you have got something for the premium; in addition to the railway constructed, you have got a revenue which has been growing during a period of time?—We were bound to pay the premium, as it has been called, by the terms of our contract; but the railway administrators, I understand, object to that being charged as capital when calculating the net return from the railways.

7942. (*Chairman.*) If you take the cost to the Government, that premium must of course be included?—Yes.

7943. If on the other hand you only take what has been the cost of construction, it is excluded?—Yes, that is the distinction. The sum of Rx. 155,000,000 includes that Rx. 8,000,000.

7944. Quite so, we have got that; and those three sums will cover the whole of the expenditure on State railways?—Yes.

7945. Including therein those railways which belong to the State but which are at present leased out to companies?—Yes.

7946. Then we come to the guaranteed capital of companies that constructed their own roads?—Yes, that is Rx. 45,713,000.

7947. Then we come to the capital of the subsidised companies?—Yes, their total capital is Rx. 6,296,000, but that sum includes an amount advanced to one of the subsidised companies by the Secretary of State.

7948. (*Mr. Jackson.*) Is that the amount of expenditure on the construction?—Yes.

7949. (*Mr. Mowbray.*) Is that pounds or Rx.?—It is given as Rx., but in the case of sterling liabilities the pounds are converted either at 10 rupees to the pound or at rates fixed by the contracts with the companies.

7950. (*Chairman.*) Now I carry this up, including the Rx. 8,000,000 to Rx. 232,000,000; and if I exclude the Rx. 8,000,000, it is Rx. 224,000,000, but the statement which you have given us of the total railway debt of India is Rx. 246,000,000?—Yes, that is stated in Rx. The capital of the State lines leased to companies, is converted at an artificial rate which is provided for in their agreements.

7951. Which companies are these?—These are the State lines leased to Companies, 25,000,000*l.*, and that is taken at Rx. 31,000,000.

7952. That carries us up to Rx. 230,000,000; that still leaves Rx. 16,000,000?—Then the capital of the guaranteed railways, is converted at 1*s.* 10*d.*, which makes it Rx. 50,000,000.

7953. We get up then to something like Rx. 235,000,000—Rx. 234,000,000?—Then there are the Native State railways.

7954. Oh, Native States. You have not mentioned them as yet; would you describe the conditions under which there is a liability on account of those railways?—I do not mean that there is a liability on account of them.

7955. (*Mr. Jackson.*) This is a question of capital?—They must be included if you want to get the whole capital expenditure on railways in India.

7956. (*Chairman.*) Exactly?—The subsidised railways generally do not involve us in any direct capital liability unless and until we take over their lines under their agreements.

7957. Has any assistance been given to the railways by the State in any other form except in railway construction?—I think none of any importance except what I have mentioned.

7958. Land?—I have mentioned land.

7959. But is the value of the land included in these different sums?—I should suppose not. It is not included in the direct capital expenditure.

7960. That would be an additional assistance, would it not?—It is an additional assistance, but it is not an additional liability.

7961. No, but if on the one side you are showing what the total expenditure on the railroad has been, and if you excluded the premium paid on the purchase of the railway in order to show the true cost of the railway, on the other hand you ought to include in the cost of the railway land given gratis, ought you not?—Yes, and I now find that the charge for land is included in the total figure of Rx. 255,000,000.

* *See* Appendices 26 and 27.

Mr. S. Jacob, C.S.I.

29 April 1896.

Railways.

7962. In what form is the guarantee given to guaranteed railways? Does the railway apply its net receipts, as far as they will go, to payment of interest on the guaranteed capital and draw on the Government for the balance?—No, the whole of the receipts of the railway are paid into the Government treasury, and the Government pays the interest here in London in sterling.

7963. The whole of the net receipts?—The whole of the gross receipts are paid into, and the expenditure is drawn from, the Government treasury.

7964. Then how are the working expenses paid?—By drawing on the Government treasury; the railway account is treated as a drawing account with Government.

7965. (*Mr. Naoroji.*) Does the Government keep a separate account of what is spent in that manner in keeping the accounts of the railway income and expenditure?—Yes.

7966. Is that included in the railway accounts?—Yes.

7967. Or does it go into the Government revenue accounts?—It is not always charged against the railway concerned, but the total charge is shown against the railway revenue account.

7968. In fact it is from the revenue of the country that this is paid and not deducted from the revenue of the railways?—It is shown against the railway revenue, but is not always charged against the revenue of the particular railway.

7969. (*Chairman.*) In a guaranteed railway is there any provision that the Government shares the profits if they exceed the sums necessary to pay the guaranteed interest?—Yes; the conditions vary, but there is, I believe, a condition in every case, in which the Government has given a guarantee, that the Government shall have a certain share of the surplus profits, if any are earned. An abstract in tabular form of the chief conditions laid down by the contracts with the various railway companies has been drawn up in the India Office, a copy of which I put in.*

7970. And this has come into force once or twice; did it not come into force in the case of the East Indian?—Yes, it has come into force frequently. It comes into force now every year in the case of the Bombay and Baroda railway on the fictitious method of calculation, which I have described above.

7971. Is there any provision for the creation of sinking funds in case the net receipts show a surplus over the interest?—Of the guaranteed railways?

7972. Of the guaranteed railways?—No.

7973. I suppose the contract for the guarantee has always been that the payment is in sterling?—Yes. As regards some of the railways, there is a very small amount that is shown as rupee capital, but it is quite inappreciable.

7974. In fact, the companies, which made the guaranteed railways, raised the whole of their money in England, and did not attempt to raise it in India?—That is the case.

7975. In regard to the subsidised companies, in what form is the subsidy paid to them?—Where there is a lump sum to be paid, it is paid annually to the railway company by Government, and the land is provided free.

7976. (*Mr. Jackson.*) When you say a lump sum, do you mean a defined sum?—A defined sum. Yes. The only payments that we make now are Rx. 10,000, which we pay to the Assam Railway Company, and Rx. 4,000 to the Rohilkund and Kumaon. These are the maximum sums payable in each of these cases, but we pay the full amount for the reasons already explained.

7977. Those are the only amounts that you are now paying annually?—Yes. We have also to bear the cost of the land which we provide for these subsidised companies.

7978. In the case of the subsidised companies, where you pay an annual sum for a period of years, does that come out of income or out of capital?—It is charged against revenue.

7979. (*Chairman.*) Can you give us the charge on the State on account of guaranteed companies in 1875-76, and in 1894-95 or 1895-96, together with the receipts which may be set against them?—The total charge for guaranteed railways?

* *See* Appendix 42.

7980. In those years, yes?—The total charge for interest and surplus profits of guaranteed railways in 1875-76 was Rx. 5,456,721.

7981. And against them can you give us the receipts?—The receipts were Rx. 4,281,672.

7982. Leaving a deficit of?—Rx. 1,175,000.

7983. And now for 1894 or 1895, whichever year you find it most convenient to take. Supposing we take 1895-96?—The figures in the memorandum are those of the Budget.

7984. I suppose it is close enough for all practical purposes?—Yes, except that the rate of exchange has varied slightly.

7985-6. But in favour of India, has it not?—Yes, I can give you the revised, figures, which will be nearer the actuals. The total charge is Rx. 4,403,800 in 1895-96.

7987. And the receipts?—And the receipts Rx. 3,233,000.

7988. Therefore, the guaranteed railway account shows in 1875-76 a deficit of Rx. 1,175,000, and in 1895-96 of Rx. 1,170,000?—Yes.

7989. But if we could put the cost of exchange on the same footing in 1895-96 as it was in 1875-76, would there not be a substantial surplus?—Yes, there would.

7990. That is, the cost of exchange in 1875-76 was represented by one-ninth of the whole sum paid in England, was it not?—One-ninth of the sterling amount represented roughly the exchange.

7991. If we were to apply the same rule to 1895-96, the charge for exchange would be about Rx. 240,000, would it not?—Yes.

7992. The actual cost of exchange is put down for 1895-96 at Rx. 1,600,000?—That is in the Budget. The figure in the Revised Estimate is Rx. 1,611,000.

7993. Therefore, the increased rate of exchange as between 1875-76, and 1895-96, though the sum to be paid in England is halved, or more than halved, is Rx. 1,371,000?—Yes.

7994. And therefore if the rate of exchange had remained in 1895-96 the same as it was in 1875-76, the *bonâ fide* surplus would have been over Rx. 300,000, would it not?—Yes, somewhere about Rx. 300,000; and that is after paying interest at 5 per cent. upon a large part of the capital.

7995. I think that method of statement brings out very fairly what has been the inconvenience to India in the fall of exchange since 1875-76?—Yes, undoubtedly, if the rate of exchange had remained what it was in the fifties, there would have been a profit.

7996. There would have been a substantial surplus on the guaranteed railways?—There would have been a substantial surplus on the guaranteed railways account.

7997. (*Mr. Buchanan.*) Was the exchange falling; had it begun to fall at the time that these guaranteed railways were first constructed?—No, not at the time they were constructed. They began to be constructed in 1849-50—the East Indian Railway was the first.

7998. (*Chairman.*) Now can you give us the same figures with regard to subsidised companies, that is to say, comparing them between 1875-76, and 1895-96?—In 1875-76 there was nothing paid on account of subsidised companies. They were not in existence then.

7,999. And in 1895-96?—In 1895-96 the charge is estimated at Rx. 25,500 and the receipt at Rx. 29,200.

8000. Therefore the net receipt was?—Rx. 3,700.

8001. You mentioned certain miscellaneous charges such as surveys, central establishment and so on, can you give us any description of them?—They are for the most part the charges for preliminary surveys of railways, which are not yet being constructed.

8002. (*Mr. Jackson.*) Are they charged to capital?—They are eventually, if the lines are constructed, charged to capital. This head of charge also includes certain charges for the general management of railways such as the cost of the Director-General's establishment and the Port Storekeeper's establishment and certain other miscellaneous establishment charges which cannot be charged to any particular railway.

8003. (*Chairman.*) I have got here the headings of these charges as you have given them to me. They are

under four headings, surveys, establishment, and miscellaneous, an insignificant sum, share of Director-General's establishment, Port Storekeeper's establishment, &c., which come to from Rx. 16,000 to Rx. 20,000. Are those salaries charged to capital?—They are not all charged to capital; the survey charges are charged to capital under the conditions stated in the previous answer.

8004. Then the chief charges for surveys range from Rx. 70,000 to Rx. 80,000, and they are eventually charged to capital?—Yes, if the lines are constructed.

8005. Therefore it would not be quite correct to say that the whole of the miscellaneous charges go to capital. so far as they represent establishment?—I may say that the share of the Director-General's establishment charged under this head forms only a very small portion of his establishment. As far as possible the cost of his establishment is distributed over the various railways, the administration of which he supervises, but certain of the railways are not under their contracts liable for a share of his establishment and their share is brought to account here.

8006. And they are not eventually charged to capital?—No they are charged to revenue. A portion of the Director-General's establishment is, I believe, charged to capital, because he supervises the construction, as well as the revenue administration, of railways, but not this portion.

8007. Now trying to establish the same comparison with regard to exchange as we have established in the case of the guaranteed railroads would you give us the figures of the expenditure on the State railways leading up to the same comparison?—The State railway charges in 1875–76?

8008. (*Mr. Jackson.*) This is the second category?—This includes all the rest of the State railways.

8009. You mean the subsidised?—No not the subsidised, but it includes those lines which are leased to companies.

8010. (*Chairman.*) In 1875–76?—In 1875–76, Rx. 433,534 was the charge and the net receipts, that is to say, the gross receipts minus the working expenses, were Rx. 96,601.

8011. And there was no exchange then was there, in that?—No.

8012. All the money had been raised in India?—Yes.

8013. That therefore left in 1875–76 Rx. 337,000?—Yes.

8014–5. Then comes 1895-6?—The total charge for interest and annuities for State railways according to the revised estimate for 1895–96, was Rx. 9,996,000.

8016. Perhaps for our purposes you would take the Budget unrevised because we have to analyse afterwards?—Yes, the Budget figure was taken at Rx. 10,225,000.

8017. And the receipts?—The net receipts Rx. 9,304,900.

8018. Showing a deficit of?—Rx. 970,000.

8019. But now in that Budget estimate, the sum payable in England was Rx. 3,585,000, was it not?—Yes.

8020–1. Applying the rule which we applied to the guaranteed railroads, by which we saw that exchange in 1875–76 was equivalent to one-ninth of the sum remitted, one-ninth on Rx. 3,584,000 would be. Rx. 400,000 would it not?—Yes, roughly.

8022. Therefore, if exchange had remained as in 1875–76, the cost of exchange would have been Rx. 2,600,000 less than it was?—Yes.

8023. There is a deficit of Rx. 970,000 you have just shown us?—Yes.

8024. Deducting that deficit of Rx. 970,000, which for our purpose we will roughly call Rx. 1,000,000, as we only want to indicate results, if exchange had remained as in 1875–76, there would have been a surplus of Rx. 1,600,000?—Yes.

8025. And we already found out in the guaranteed railroads, that on the same method of calculation, there would have been a surplus of Rx. 300,000, would there not?—Yes.

8026. Therefore, if exchange had remained the same as in 1875–76, upon the State railways and the guaranteed railways, there would have been in the year 1895–96 a surplus of very nearly Rx. 2,000,000?—Yes. I may say that I have prepared a statement here for the whole period; I did not apply the rate of exchange for 1875–76, because that would have involved calculations for every intermediate year, but I have given each year from 1875–76 to 1896–97, and shown the result as on our actual accounts, and then deducting the exchange, I have shown the result, and for the last 14 years the amount shows a surplus, deducting the exchange.

8027. It is not quite fair to deduct the exchange altogether, because at all times you would have to pay something, under that head, and the reason for taking the basis of 1875–76, is that that is the year from which our comparison starts?—But the liabilities were incurred, many of them at least, before the Rupee began to fall.

8028. Quite so; but in a comparison with 1875–76, we get on a level with 1875–76, by putting the exchange at the same rate?—Yes, that shows the difference between the two years.

8029. May we understand that, with an insignificant exception, the capital required for construction was raised in India, and the capital for purchase in England?—Yes, that has been generally the case with respect to capital raised directly by Government.

8030. And in the latter case the companies would have to be paid in England, and, therefore, you thought it desirable to raise the required sum in England?—Yes.

8031. I suppose with regard to that, there can be no great question as to whether that money would be cheaper raised in India or in England?—It would have been quite impossible to raise in India the amounts required for the purchase of the guaranteed lines.

8032. It would appear that the amounts payable to guaranteed railways are diminished proportionately as those railways are bought up by the State. I gather from your paper, that the interest on railways bought from the guaranteed companies, was *nil* in 1875–76 and Rx. 2,686,000 in 1895–96?—Yes, that is the amount of the interest and annuities payable in connexion with guaranteed lines purchased by the Government of India.

8033. The guaranteed interest payable in England in 1875–76 was 4,607,000*l.*, and in 1895–96 it was 2,161,000*l.*, showing a decrease of 2,446,000*l.* Apart from facts not shown on the face of the account, it looks as if the purchase had resulted in an increase of burthen?—Yes, that is the case; the burthen of the annual payment has been slightly increased.

8034. Can you tell us how and why that occurred?—I could take one railway as an example—the East Indian Railway. By the contract with the East Indian Railway Company, the Government could purchase the main line on the 1st of January 1880, and the Jubbulpore branch four years afterwards. As it was important to secure the branch at the same time as the main line, and also to obtain the co-operation of the Company in the subsequent management, a proposal was made to purchase the whole line by an annuity running from January 1st, 1880 to February 14th, 1953; calculated on a rate of interest of 4*l.* 6*s.* per cent., on a commuted price of 125*l.* per 100*l.* of capital stock, giving 5*l.* 7*s.* 6*d.* per 100*l.* of stock so commuted, to which was added 5*s.* per cent. for redemption of capital, making 5*l.* 12*s.* 6*d.* per 100*l.*, so that the charge there shown as interest includes also a portion of the repayment of capital.

8035. And how much do you say that amounted to?—In the case of the East Indian Railway it was 5*s.* per cent.

8036–7. What would be the sum that that would amount to?—The total capital that had been raised was 26,200,000*l.*

8038. Five shillings would be 65,000*l.*?—Yes, 65,000*l.*

8039. 65,000*l.* about represents the sinking fund?—For one railway.

8040. But the cost of that railway was a biggish amount?—Yes, but the normal capital was also increased; it was taken as 125*l.* for every 100*l.* of stock.

8041. Where was the corresponding advantage? Because, of course, so far as the sinking fund goes, you may put that aside; but what was the advantage that made the Indian Government think it desirable to take some extra charge upon itself for the purpose of buying the railroad?—Well, the East Indian Railway Company had under its previous agreement a right to a much larger share of the surplus profits than under the agree-

Mr. S. Jacob, C.S.I.

29 April 1896.

Railways.

ment effected on purchase, and the line was already making a profit at the time it was taken over.

8042. And have those profits increased since it has been taken over?—They have been very large.

8043. Is there any minute of the Government of India which lays down the policy of constructing railways and irrigation works by means of borrowed money?—There have been several declarations of policy. The main one is that which was laid down in a despatch from the Secretary of State dated January 1881, after the report of the Parliamentary Committee of 1879-80.

8044. And is that in force now?—The amount which was to be spent on works outside of revenue was then more restricted, but otherwise the general principles remain in force.

8045. How was the amount to be borrowed regulated? There was no free hand as to the amount to be borrowed, but there was an amount laid down for each year, was there not?—Yes; the amount laid down in this despatch of 1881 was fixed with reference to the report of the Parliamentary Committee.

8046. And what did that say was the amount that should be yearly spent; or perhaps you would go further back. There was a Committee in 1878-79, was there not?—Yes.

8047. And they made recommendations as to the amount to be laid out yearly on productive works by borrowed capital?—Yes.

8048. What did they put it at?—They put it at 2,500,000*l.*

8049. And that was independent of the amount provided by companies or supplied by the Government from revenue?—Yes.

8050. Well now, dating from that time, 1878-79, the amount that might have been provided out of revenue up to the present time would have been considerable, would it not? The surpluses have very much exceeded the deficits, have they not?—They have exceeded the deficits, but not by very much, I think.

8051. When we take 1875-76 as our basis, that includes the heavy deficit of the Afghan war?—Yes, as well as the great famine of 1877-78.

8052. Therefore during the remainder of the time from 1880, there were a great many years of prosperity, and should we not find that the balance of surplus was considerable?—There is a net surplus on those years.

8053. And therefore during that time, without actually going into the figures, a considerable amount of revenue possibly had been applied as advanced to railway companies?—The amounts spent from revenue were considerable, but I do not think it can be said that there were considerable advances out of the surpluses of revenue during that period.

8054. Out of balances?—The expenditure outside the revenue account was incurred almost entirely out of borrowed money. Out of borrowed money the advance is made.

8055. You say in this memorandum which I have before me: "This amount of 2,500,000*l.* every year "might be borrowed independently of the amount pro- "vided by companies or supplied by the Government "revenue;" and that led me to ask whether that amount of 2,500,000*l.* was fixed after the close of the Afghan war. Should we not find that it was supplemented, in the intervening time, when there were a good many years of surplus, considerably by the amounts advanced from revenue?—No, I do not think so.

8056. Well, you were so good as to quote from a return of surpluses intervening in various times; have you got it there?—Yes.

8057. Will you look at the years?—I do not mean that there is not an excess of surplus from that time, but I mean that there has not been a large expenditure out of those surpluses.

8058. You think that they have not been applied to that purpose?—Not to any large extent.

8059. The memorandum points to that as a means of supplementing the 2,500,000*l.*?—The intention was that the amount should be provided, if the Government thought fit, from revenue and the application of surpluses was subsequently permitted; but taking the whole period from 1880 onwards, I do not think it can be said that the application of surpluses has considerably increased the expenditure charged otherwise than against revenue, for the total net surplus for that period amounts to only about Rx. 2,500,000.

8060. That was followed in 1884 by another Select Committee, was it not?—Yes.

8061. And what did that Committee recommend?—They thought that the limit might be enlarged for outlay on railways, and the Secretary of State thereupon fixed the maximum allotment chargeable against borrowed money in any year at 3,500,000*l.*, for both railways and irrigation works.

8062. And that allowed 2,750,000*l.* to 2,950,000*l.* for railroads?—Yes, about that.

8063. Did the 2,500,000*l.* fixed in 1878-79 relate to railways and irrigation or to railways alone?—To both of them.

8064. Well, that was a considerable advance in the amount that might be provided?—Yes.

8065. Then after that came the great scheme of railways for the defence of the frontier?—Yes.

8066. And the limit of 3,500,000*l.* was sometimes exceeded?—Yes.

8067. Was any further allotment made in consequence of these sums of 2,950,000*l.*, 2,500,000*l.*, and so forth?—Yes, the capital expenditure on railways was increased during certain years.

8068. And was the limit made larger?—Yes.

8069. Now, I observe you give us a table of the amount so allotted in the Budget and the amount expended as it appears in the accounts, and, with very few exceptions, in the earliest years the sums expended have been very much smaller than the amounts allotted. Can you give us the reason for such discrepancy, because in this case, where the money had to be provided by means of loan, there was not the usual objective reason for economy at work?—There were special reasons in each year for the difference between the allotments and the actual expenditure. Sometimes the actual expenditure exceeded the allotments, and sometimes it was less. In 1885-86 the allotment was specially large, and was largely exceeded by the actual charge. There were special allotments of 340,000 Rx. for the East Indian and 483,000 Rx. for the Eastern Bengal Railway, and a contribution of 70,000 Rx. from North-West Provinces provincial balances; and there was large expenditure on frontier railways, sanctioned after the Budget allotment was made.

8070. There was a large expenditure on frontier railways in 1886-87?—Yes.

8071. And also in 1885-86?—Yes.

8072. Then would those frontier railways account for the excess over the ordinary allotment in those two years?—No, not for the whole of it. A large part of it was due, as I said, to special allotments for the East Indian and Eastern Bengal Railways in 1885-86.

8073. Well, then, we come to six years in which the amount always fell below the allotment?—The apparent deficiency in the actual charge in the first two years is largely a matter of account; considerable amounts were brought to credit of Government on the transfer of certain Government lines to Companies, and these credits were brought to account by deduction from the charge. For instance, in 1887-88, 1,390,000 Rx. was brought to credit by the transfer of lines to the Bengal-Nagpur Railway, and in 1888-9, 1,406,656 Rx. by transfer of lines to that railway and to the Indian Midland Railway.

8074. But how would that diminish the allotment?—It did not diminish the allotment. The allotment remained at 4,294,000 Rx., but the actual expenditure brought to account in the accounts of the year was diminished by these credits from the Railway Companies on account of past expenditure by Government on lines transferred to them.

8075. I do not quite understand?—We received in those years, I think, 2,800,000 Rx. from the Bengal Nagpur Railway, and from the Indian Midland Railway for railways which had been constructed out of State money.

8076. Why did they repay the State?—Because they took over our railways.

8077. You mean that it came about in this way, that during that year you spent, whatever the sum might be, 1,390,000 Rx., and then immediately handed that railroad so built over to the Bengal-Nagpur Railway Company, who paid you for the 1,390,000 Rx.?—No; we had incurred the expenditure in previous years, but the Companies repaid us in 1887-88 and

1888–89; and, as the repayment was brought to credit by deduction from the charge in those years, it is obvious that the expenditure actually incurred in those years was very much larger than that shown on the accounts.

8078. They paid you that money, and you employed that money instead of borrowing?—Yes, it was really merely a transfer of account. We transferred the charge for the capital of these railways from the capital charged to borrowed money to the capital charged to those railways, and that, of course, reduced the charge during the year on the accounts.

8079. Therefore, to come to the main result, these deficits on the expenditure below the allotment do not mean that the money was not spent, but that the amount brought to account appears smaller on account of adjustments of account?—I was speaking before of the years 1887–8 and 1888–9. In these years the greatest part of the deficiency was due to that cause. As regards the four years, from 1889–90 to 1892–93, I think the deficits were chiefly due to the fact that the Public Works Department did not spend up to the allotments. And this cause also accounts for part of the deficiency in 1887–8 and 1888–9.

8080. You speak in one place of money being laid out in redemption of liabilities, of money spent in construction, of money spent in purchase of railways and in redemption of liabilities. What do you mean by "redemption of liabilities" in that case, as apart from purchase?—We take over the liabilities of the various companies existing at the time of the purchase, such, for instance, as their debentures. In some cases those debentures still exist; in other cases we have converted them into our own stock; it is the amount of liability which we have incurred on that account that we include under this head. And also we have redeemed some of the annuities.

8081. Oh, you have?—Yes; and in those cases I may say that we maintain a sinking fund, as required by the law, to replace the capital amount within a certain specified time.

8082. I now come to the table explaining the charge arising out of railways purchased by the State. How does the difference arise between the sum of liability which the State contracted towards the railroads and the amount of capital debt incurred? I see that the purchase money, for which the Secretary of State became liable, amounted to 59,384,000*l.*—Yes.

8083. That is to say, the sum is 32,750,000*l.* for the East Indian Railway, 3,391,917*l.* for the Eastern Bengal Railway, 14,009,124*l.* for the Scinde, Punjab and Delhi Railway, 5,036,049*l.* for the Oude and Rohilkund Railway, and 4,197,557*l.* for the South Indian Railway. That makes up 59,384,000*l.*; but the sum that you have told us was laid out in the purchase of these companies in capital money was 33,000,000*l.* out of the 114,000,000*l.*?—That was the amount of the debt incurred in, or created for, the purchase of the lines.

8084. Debt incurred?—Yes, by the actual creation of stock or otherwise.

8085. That leaves a difference of 26,000,000*l.*, and that we understand was defrayed by means of an annuity?—The figures you have quoted above include only the purchase-money payable in redemption of capital; the debentures taken over are shown lower down in the table before you, and amount to just over 12,000,000*l.* more; so that the total purchase-money, including liabilities assumed on purchase, would be about 71,000,000*l.* That leaves a balance of 38,000,000*l.*, which, however, includes 1.000,000*l.* on account of the South Indian Railway, the liability for which has been deferred, so that the amount of the purchase-money defrayed by annuities may be taken at about 37,000,000*l.*

8086. Can you tell us any particulars of the annuities, or did they all run generally upon the same lines?—The amount of interest, that we had to allow, differed in the case of the different lines. On taking over the East Indian Railway, we made a new contract for working the line for 50 years from January 1st, 1880, terminable in 1900, and in each succeeding fifth year; the holders of one-fifth of the capital were allowed, in lieu of the annuity, to receive interest at 4 per cent. on the commuted value, together with one-fifth of the surplus profits, reverting to their deferred annuity whenever the new contract should be terminated. This arrangement was sanctioned by 42 & 43 Vict. Cap. ccvi. As certain shareholders were unable or unwilling to accept an annuity, power was given by 42 & 43 Vict. c. 43, to the Secretary of State to issue 4 per cent. stock at the rate of 125*l.* stock for each 5*l.* 12*s.* 6*d.* of annuity. The total capital that had been raised was 26,200,000*l.*, on which 5*l.* 12*s.* 6*d.* per cent. gave an annuity of 1,473,750*l.*; of this one-fifth was deferred—*i.e.*, 294,750*l.*,—so that the annuity payable during the new contract was 1,179,000*l.* Conversion into stock has, however, been accepted by holders of portions of the annuity amounting to 328,462*l.*, leaving a balance of 850,538*l.*, which represents the annuity still payable.

8087. How does that agree? In this paper before me I have got annuity payable 1,473,750*l.*?—That is the amount which I stated as the total annuity, including the deferred annuity.

8088. Then was the annuity 5*l.* 12*s.* 6*d.* for 73 years, so much, on every 100*l.* stock of the capital of the company?—Yes.

8089. Well, of that 4*l.* was the interest according to what you say?—The interest was 4*l.* 6*s.* per cent.

8090. The interest to which the stockholder was entitled on taking the annuity?—Yes, and we were bound to give him that rate per cent. upon 125*l.*

8091. 125*l.*?—That was taken as the price we had to pay for each 100*l.* of capital stock.

8092. How much then represents the sinking fund?—The amount payable for interest, apart from the sinking fund was 4*l.* 6*s.* per cent. on a commuted price of 125*l.* per 100*l.* of capital stock.

8093. What did that come to?—5*l.* 7*s.* 6*d.* per 100*l.* of stock so commuted.

8094. And is the sinking fund 5*s.*?—5*s.*

8095–6. And 5*s.*, at 4·6 per cent., extinguishes the loan in 73 years, does it?—Yes.

8097. But the general upshot of the matter is that out of this sum of 71,000,000*l.*, which is the price to be paid for the railways, 37,000,000*l.* or thereabouts was put into the form of an annuity?—Yes.

8098. 33,000,000*l.* being met by the ordinary loan capital?—Yes; or by the assumption of the existing liabilities of the companies; and the assumption of liability for 1,000,000*l.* was deferred.

8099. A considerable portion, therefore, took the form of an annuity?—Yes.

8100. But, so far as it did not take the form of an annuity, we should find that portion represented in the 33,000,000*l.* of debt which formed part of the 114,000,000*l.* spent by the State on railways?—Yes. As far as the annuities were concerned, the terms arranged with the other companies were much the same, except that the rates of interest allowed differed.

8101. Quite so. Perhaps you would tell me, in that case, why there was a difference in the case of the Eastern Bengal, because there is a very large amount of difference between 5*l.* 12*s.* 6*d.* and 6*l.* 3*s.* 4*d.*?—The difference arose out of the terms of the original contracts, under which we were entitled to take over the railways. We were bound, if we took them over, to pay the equivalent of the average market value of the shares for the preceding three years. In the case of the East Indian Railway this was taken at 125*l.*; but in the case of the Eastern Bengal Railway the price of the stock was higher, and we had to pay just over 150*l.* for every 100*l.* of stock.

8102 How many guaranteed companies were there?—Eight.

8103. That is the total number that have been guaranteed?—Yes.

8104. Upon the old system, I suppose?—Upon the old system, yes.

8105. And of those how many have been purchased?—Five have been purchased.

8106. Namely?—The East Indian, the Eastern Bengal, the Oude and Rohilkund, the Scinde, Punjab and Delhi, and the South Indian.

8107. Leaving still liable to the guarantee?—Three companies, the Bombay Baroda and Central India, the Great Indian Peninsula, and the Madras Railway.

8108. Is it probable that those will be bought up at some time, or is that not a thing in contemplation now?—The three remaining guaranteed lines fall in for purchase in 1899, 1905, and 1907 respectively; and the question of purchase will have to be considered in each case. The quotation for the stock of one of these lines,

Mr. S. Jacob, C.S.I.

29 April 1896.

Railways.

however, the Bombay and Baroda, which rules the price we have to pay on purchase of the line, is very high. This stock is now quoted at 230*l.* to 240*l.*

8109. But still if you do not buy it up you are liable to pay this guarantee for ever, are you not?—Till the termination of the contract we are bound to pay the guarantee; that would be till 1954 in the case of this line. If taken over about that time the maximum amount payable for the line would be the actual capital of the company; but, if taken over in 1905, we shall have to pay the average market value of the stock for the preceding three years.

8110. Does that railroad show a surplus or have we to pay a guarantee upon it; is there an actual charge?—There is a small net gain.

8111. That railroad has?—Yes, it pays a small sum to Government over and above the guaranteed interest.

8112. What is the railroad you have mentioned?—The Bombay and Baroda.

8113. Yes; that was the one we were looking at before?—Yes.

8114. That shows a charge upon the State, does it not?—It shows a small gain in 1893–94.

8115. Therefore, if things go on as now, it does not inflict any charge upon the taxpayer?—It did not in that year.

8116. (*Sir James Peile.*) May it not inflict a charge in one half of the year?—For the whole year there was in 1893–94 a small net gain to Government. It does sometimes impose a charge, and I find there was a small net charge in 1894–95.

8117. (*Mr. Buchanan.*) Is each half-year taken separately in the Bombay and Baroda?—The surplus profits payable to the Company are calculated independently for each half year. The net gain or charge to Government in the preceding answers is calculated for the whole year, after payment of guaranteed interest (with the exchange upon it), the Company's surplus profits, and charges for land and supervision.

8118. (*Chairman.*) Then how many subsidised railways are there?—The Companies assisted in 1884–85 were the Bengal Central (which has since become a guaranteed company, though the line is classed with those belonging to the State and leased to companies), Tarkessur, Bengal and North Western, Rohilkund and Kumaon, and Assam Railways and Trading (now called the Dibru-Sadiya Railway Company). In 1893–94 and the subsequent years they are the Bengal and North-Western, Rohilkund and Kumaon, Delhi - Umballa-Kalka, Dooars, Nilgiri. and Dibru-Sadiya.

8119. But the subsidies to those railroads are not very large in amount?—No, they are not very large. They mostly consist of land, a grant of free land.

8120. Then the land would stand outside these subsidies. Would the land be covered by these figures which you give here; compensation for land taken up for railways 1884–85, Rx. 33,749, and in 1895–96 Rx. 20,000. Is that the value of the land?—Yes, I think in the case of these railways it is charged against revenue.

8121. The land is?—The cost of the land is, yes.

8122. And that is really in addition to the cost of the railways?—Yes.

8123. Perhaps, in conclusion to the questions which I shall have to ask you on this subject, you would give us a resumé of the mileage, the capital outlay, the gross earnings, the working expenses, and the net earnings in the years 1876 and 1894, beginning with the open mileage?—In 1876 the open mileage was 6,862; and in 1894 it was 18,841; in 1876 the capital outlay to date was Rx. 112,000,000, and in 1894 it was Rx. 246,880,000; in 1876 the gross earnings were Rx. 8,794,000, and in 1894 Rx. 25,510,000; in 1876 the working expenses were Rx. 4,229,000, and in 1894 they were Rx. 13,530,000. In 1876 the net earnings were Rx. 4,565,000, and in 1894 they were Rx. 11,980,000.

8124. That is a summary of the condition of railroads in 1894 in India?—Yes.

8125. The Rx. 246,880,000 practically covers all capital expenditure?—Except that Rx. 8,000,000, which I mentioned before.

8126. Which, at all events, it is open to argument that it ought to be included?—Yes.

8127. That Rx. 11,980,000, or in round figures that Rx. 12,000,000 represents the return on an outlay of about Rx. 247,000,000, or something like 4·85 per cent. in earnings?—Yes.

8128. And the net earnings on the whole system of railroads are 47 per cent.; 53 per cent. representing the working expenses; is not that the result?—Yes.

8129–30. Generally speaking, in the railway world people are generally very fairly contented if the working expenses do not very much exceed 50 per cent. are they not?—Yes, I think what they aim at is to keep them below 50 per cent.

8131. At all events a big railroad system that presents that result, that pays net very nearly 5 per cent., and in which the working expenses exceed by very little 50 per cent., is a very fair account to have to show, is it not?—Yes, of course, in modification of that result it must be remembered that we are liable for interest on some of the capital outlay in sterling; at the present rate of exchange we suffer a loss upon that.

8132. That is in bringing it over here—I am looking at it now as earned in the currency of India?—It is actual expenditure which we have to incur.

8133. That of course is a point to take into consideration as it affects the outlay. For the moment I am only confining myself to the general result of the working of the railway system?—Yes.

8134. You have to consider the cost of sending it over here?—Yes, as regards a portion of the interest which is guaranteed in sterling.

8135. On one side that return would be rather affected by these two circumstances, that, if you put on the Rx. 246,000,000, the liability for sterling, that percentage of 4·85 would be lowered?—It would generally work out to a loss.

8136. On the other hand if, as I think you might reasonably do, you put aside your military railroads and confined yourselves in this account to those railroads which are avowedly productive, the result would be improved. In fact on the balance, if you take out that Rx. 14,000,000 you laid out on non-productive railroads, you would probably find that the result was five per cent.?—Yes, in rupees.

8137. And the percentage of working expenditure would be rather less?—Yes.

8138. You think yourself that it would be a fair thing to put productive railways by themselves, stating the military railways outside?—Administratively that is desirable, and it is done; but, as far as our Finance Accounts are concerned, I think that there are advantages in maintaining no distinction between the accounts of productive and unproductive railways. The Parliamentary Committee of 1884 expressed the opinion that the technical distinction hitherto made between one class of unproductive lines—namely, the protective lines—and productive lines could not be maintained; and I think that the arguments then used would apply to this class of lines also.

8139. One of the most important objects we have before us is to see what is the effectiveness, if I may so call it, of Indian administration. The State in India takes a great many duties which in many other countries are left to private enterprise and of course it is an important thing to see in what manner they are carried out. When you take account of these railroads, the greater part of which have been made to open up the country for commercial purposes, do you not think it is fairer on the whole to judge them by themselves rather than put in with them a certain number of railroads made simply to protect the frontier? The finance of military railroads stands by itself. They may be necessary for the security of the Empire, but when we are looking at the question purely as an economic question, do you think it right to mix up these railways with the others?—For certain purposes it may be perfectly legitimate to separate off the results of the various classes of railways, and to show the return from the commercial railways distinctly from the results obtained in the case of non-productive railways, such as military and protective railways. But I do not see the necessity for such separation in the case of our general finance accounts. I think that our plan of including in one general account the results of all the railways of every kind, helps to increase our financial check upon the construction of unproductive railways. It enlists on the side of financial control the influence of the Public Works Department, who are interested in

showing as good a general result as possible; and it gives a concise general view of the total burden we have to bear on account of the railways.

8140. I venture to think in matters of finance it is a very good thing to keep like to like if you want to see how things are working, and that it is a mistake to mix up a system of purely military works with commercial undertakings?—Certainly purely military works; but these are not, I venture to think, purely military works; we provide for all the purely military works out of revenue.

8141. They are so much worse than an ordinary military work, as I put before you before, that not only have you to pay the interest upon them but a great portion of the working expenses?—Yes, but they are used for the public and not merely for the military. I may add that I find from the correspondence (which has now reached me) which took place at the time the change of procedure in respect of the construction of frontier railways was introduced, that the Secretary of State recognised in the orders which he passed the distinction between these military railways and other military works, such as roads. The Government of India proposed to construct not only military railways but certain military roads from borrowed money, but the Secretary of State, while sanctioning the construction of the railways from borrowed money, said that he could not admit the propriety of so treating the outlay on the roads. He did not state his reasons, but I would submit that they may be found in the distinction drawn by the Government of India between the two classes of works. "The outlay," it said, "is a burden, entirely "so in the case of roads or fortifications, to a greater "or less degree so in that of railways according to the "estimate of their net earnings." This correspondence, I may add, gives in detail the views of the Secretary of State which led him to sanction the change of procedure, regarding which some previous questions were put, and I may refer the Commission to that correspondence, which has been printed as a Parliamentary Paper on 12th June 1885. At present I need only say that the Secretary of State decided that the frontier railways were so urgent that they must be completed with the utmost speed consistent with economy, and that, while their cost should, as far as possible, be provided from revenue, yet when the revenue available after meeting other essential charges of administration was exhausted the Government of India should not allow the works to be retarded but should prosecute them with borrowed money, and the limit of borrowing was accordingly raised to 350 lakhs in any one year, which was to cover all the expenditure from borrowed money "whether "for ordinary railways and irrigation, open lines, "arrears of previous grants, protective works, frontier "communications or any other purposes," while it was enjoined as regards all these purposes that "no resort "must be had to borrowing unless the amount cannot "be provided from revenue." The Government of India recognised, as I have said, the permanent burden which these works would impose upon the revenues, and to meet any objection on this ground they proposed to raise special loans for the frontier communications, with provision for a sinking fund, or preferably to raise the money by means of terminable annuities. The Secretary of State set aside this part of the proposal on the ground that when the Government was borrowing every year, it was less wasteful to lessen the amount of fresh borrowing, than to add to the new debt in order to pay off a portion of the old and special debt. He also doubted the practicability of raising the required amount by means of terminable annuities on any reasonable terms.

8142. (*Mr. Buchanan.*) With reference to the last point, whilst you can show that on railways there has been a return in rupees of about 4¾ per cent. on the amount of rupees spent on railway construction, has the construction of railways by the Government of India been a source of profit to the Exchequer as a whole?—No, it has been a loss upon the whole.

8143. It has been upon the whole a loss?—Yes, I mean leaving out all indirect advantages, and looking merely at the actual direct result upon the finances.

8144. Financially it has been a loss?—Yes.

8145. Mainly due to the fall in exchange?—Yes, and the high rates of sterling guaranteed interest.

8146. And all these high rates were given at a period nearly 50 years ago?—Not all of them.

8147. When was the last railroad constructed under the original guaranteed system?—It was before any serious fall in exchange took place.

8148. Putting the guaranteed railroads out of account can you tell us whether the railway construction since that period has been a source of profit or not to the Indian Government?—I have not made out a statement showing that. I will endeavour to do so if you would like to have it. It must be remembered, however, that even though we have got rid of the old contracts in some cases, in taking over the railways the terms carried on from the old contracts were so onerous that we still are liable for very much larger sterling interest, even on some of our State railways than we should have been if we had constructed them directly from borrowed money in rupees.

8149. What I was rather driving at was this, whether the loss that has been entailed upon the exchequer has been almost exclusively due to these original contracts with guaranteed railways; whether one could say that the railway construction of the Indian Government since the old system of guarantees ceased, has been less unprofitable or rather balanced?—I have not prepared any statement over a series of years; but I can give the results for 1893–4 in a form which will, I think, serve to show that the loss on State Railways does not occur on the railways which have been constructed directly by Government. The net loss on them, after paying interest on capital, works out to Rx. 666,180, which is made up thus:—

	Rx.
Old guaranteed lines, purchased by Government and now become State Railways with large sterling liabilities:—	
Loss	231,120
Lines on the new guarantee system:—	
Loss	813,418
Deduct:—	
Other lines:—	
Gain over and above interest	378,358
Total *loss*	666,180

As regards the guaranteed lines, it must be borne in mind that the loss on the old lines is calculated after including annuities, which involve the part repayment of capital, and that the new guaranteed lines include three protective lines (Southern Mahratta, Indian Midland, and Bengal-Nagpur), and one—the Assam-Bengal—still under construction.

8150. And with regard to the future, is the Government of India likely further to develop this system of building railways?—At present it is spending very largely upon railways. The amount provided for expenditure in the Budget which is just out is very considerable. In 1895–96 we have provided for a capital expenditure on railways of Rx. 4,157,000 out of borrowed money, and in the Budget of 1896–97 of Rx. 5,980,000 on railways, in addition to Rx. 750,000 on irrigation, making a total of Rx. 6,756,000; that is on railways and irrigation together.

8151. Do the Indian Financial Authorities consider themselves justified in going on with this expenditure in the hope that no further loss will be entailed upon them?—The new commercial railways that are being constructed are expected to bring in fully the amount of interest due from them. As long as we are constructing railways, and there are railways still under construction which are not producing any revenue, that, of course, adds to the burden and involves a certain excess of expenditure over income. We do not charge the interest during construction in the case of our railways to capital, but we charge it against the railway revenue account; so that a large portion of the capital expenditure, on which interest is charged, is not producing any revenue at all. I have taken out for the last eight years the amounts of capital expenditure on lines under construction or surveyed and unopened lines. The balance remaining at the end of the year on such lines in 1886–87 was Rx. 3,000,000; in 1887–88 Rx. 1,500,000; in 1888–89 Rx. 1,000,000; in 1889–90 Rx. 500,000; in 1890–91 Rx. 1,500,000; in 1891–92 Rx. 4,000,000; in 1892–3 Rx. 6,500,000; in 1893–4 Rx. 9,000,000; and in 1894–5 Rx. 11,000,000: so that there is a burden of Rx. 11,000,000 of capital, which at present is producing either no revenue at all or very little revenue.

8152. And from these figures that sum is increasing?—Yes.

Mr. S. Jacob, C.S.I.

29 April 1896.

Railways.

8153. Then you are really embarking further in the policy of railway extension?—Yes, and we are constructing some large railways, which only gradually come into working.

8154. And has the Government satisfied itself that there is a fair prospect that these will not throw an increased financial burden upon the exchequer?—In the case of every individual railway, except in the case of those which are constructed as military or protective lines, the Government does ascertain, before construction is commenced, that there is a reasonable prospect of the railway producing a net return of at least 4 per cent. upon the capital expenditure.

8155-6. But they believe that these railways which are included in their present programme and the programme of their immediate future are likely to be productive, or at any rate to pay their expenses?—Yes; and in proof of this I need only quote the following extract from a speech by Sir James Westland in the course of the debate on the last Budget, which has reached England only by this week's mail. He said: "Another matter "which was referred to in the Hon. Mr Bhuskute's "address, was his declaration that the vigorous "prosecution of railways has caused us heavy loss, and "in the same way the Hon. Rai Ananda Charlu says "that we are imposing a new and unnecessary burden, "because we are raising four crores of rupees during "the current year for the construction of railways. I "can only say that the vigorous prosecution of railways "during the last ten years has not caused loss of "revenue. Our railways have produced more than "the interest on the loans raised for the purpose of "construction, and as regards these four crores of "rupees that we are to raise this year, every single "railway project has been separately investigated and "the greater part of them will produce a great deal more "than the amount we will have to pay as interest on the "loan. At the present moment the whole of our loss "on railway transactions is about two crores of rupees, "that is to say, we have constructed and we are "running 19,000 or 20,000 miles of railway, part of "them constructed on military grounds and without "reference to commercial returns; part of them "constructed for protective purposes—protection "against famine; and most of them constructed for "commercial purposes. Taking the whole of them, "the charge to Government is only two crores of rupees. "I would ask, simply as a question of policy, whether "the possession of these 20,000 miles of railway is not "worth, to the people of India, two crores of rupees. "There is not a soul in the room who would not admit "that India would be better for these railways, even if "the people had to pay ten crores a year instead of two. "With reference to these two crores of rupees, I have "also to state that the loss which we have to bear, "mostly arises upon railways constructed on the "guaranteed system. The loss a few years ago was "only 70 lakhs of rupees. It has since mounted to "two crores mainly because we have to bear a "heavy loss of exchange upon the sterling debt "connected with the older railways. But it is obvious "that this heavy loss has nothing to do with the "present construction of railways. We would have to "bear this loss, even if we were not constructing any "railways during the last ten or twenty years. The "later construction and expansion of railways has "therefore been, on the whole, a financial gain."

8157. Then we need not apprehend in the immediate future that there will be any increased charge put upon the Indian Exchequer from railway construction?—I should think that, apart from any further fall in exchange, there is very little chance of the net charge increasing materially, notwithstanding the large scheme of construction now in hand. And, of course, if exchange rises to any considerable extent, the burden will be considerably diminished. Further, I wish to take this opportunity of saying that, in estimating the value of railways to India, one has to take into consideration, not only the indirect benefits mentioned by Sir J. Westland, which are derived by the country generally from railway construction, but also the indirect financial gain to the Government itself. In the case of irrigation we attribute a certain amount of land revenue to irrigation, and we actually credit it to the head of irrigation. We could not do that in the case of railways, nor do I wish it to be understood that I at all advocate any such plan; but at the same time it is an undoubted fact that the railways have, in many districts, served to increase our land revenue by opening fresh markets for the produce of the land, and thus raising the value of that produce and consequently the assessable value of the land. Further, in some parts the railways have removed all fear of any serious distress from famine.

8158. Do you ever raise any amount now for railway construction on the guarantee principle?—We do sometimes guarantee a sterling interest, but it is at a very much lower rate than that guaranteed to the old companies.

8159. (*Chairman.*) You were speaking of a certain amount of the capital expenditure not being productive at present, but which would be productive hereafter?—Yes.

8160. That in one sense makes the return of which we have been speaking rather more satisfactory, does it not?—It does.

8161. (*Mr. Naoroji.*) Is there any portion of the railway capital held by the Indians of British India, do you know?—Some small portions certainly are. The shares in the Tarkessur railway in Bengal, I believe, are held chiefly by natives, and there are a few provincial lines in the North-West Provinces, shares in which are held by natives of India.

8162. I am talking of the capital which we are speaking of as having been spent, the 246,000,000*l.*?—Yes.

8163. And can you say what the amount is?—No, I could not say. I do not know how much is held in railways other than those I have just mentioned.

9164. Are you able to distinguish how much of this capital invested by natives, belongs to natives of Native States, and how much to natives of British India?—No.

8165. You have no means of saying?—No, I have no means of ascertaining.

8166. According to a return given here, we have got something like Rs. 1,16,00,000 paid in salaries to servants on railways. This is a Parliamentary return of salaries above 1,000 rupees per annum paid to servants on railways, and you have a total of nearly Rs. 1,16,00,000, and out of this more than 80½ lakhs, or nearly three-quarters, are paid to Europeans. In that case the Indians do not get the benefit of the amount spent in India so far as the *employés* are concerned?—I should not say that they do not get the benefit of it.

8167. As employed by them, and having so much paid to Europeans, and not having the same employment which the Europeans occupy, if Indians were employed in this place they would receive all this benefit of money expended in the country for the railways as in any other country?—Yes, if they were employed instead of Europeans; or rather, if they could be so employed, they would receive the amount.

8168. They would receive the amount, and so that amount is lost both in amount as well as in employment to the Indians themselves?—I should not describe it in that way.

8169. I am asking it as a mere fact that there is so much money paid to the Europeans?—There is no question as to that fact.

8170. Take for instance this country, or the United States, whatever is spent in connexion with railways is earned by the people of the country, and it goes every year to their benefit, although it may be borrowed money or their own revenue spent?—Yes.

8171. And that is nearly three-fourths; then there is also 54,000*l.* spent in this country in some shape or other, such as directors and their offices and other expenses?—Yes.

8172. So it is nearly one crore of rupees which the people have to find which does not return to them, but goes to Europeans—as matter of fact?—That amount is paid to Europeans. Of that there is no doubt.

8173. Now there is something like 200,000,000 of rupees paid in the various different services in India to Europeans. I mention that as a fact from this return?—I have not got the return, but I should not have thought the amount was so large.

8174. And were Indians largely employed, and if even half of that had been saved to the Indians, would they not have been able to produce or supply more capital than they are at present able to do? They would have so much capital to invest in various ways, and during the time of the railway existence—all this money which has been paid to Europeans—had even

half of it been paid to natives or saved to the Indians as their capital, they would have been able to supply a large portion of the capital required for the railways?—I really cannot say; it involves so many considerations.

8175. There would have been so much more capital available in the country?—Not, perhaps, if the Europeans had not been there.

8176. I say if the Europeans had not been there so far, and Indians had earned all that instead of 200,000,000, say 100,000,000 Indians had earned instead of all that going to Europeans who use it there and take it away from the country also?—If the Europeans had not been there, it is possible that the natives would not have been in a position to earn these amounts.

8177. I beg your pardon; what is it?—The premise, as I understand it, is that the Europeans are not there to earn the money.

8178. So many less employed, instead of to the extent to which they are. If that was done, and if the Act of 1833 were fairly carried out, without distinction of race or creed in the employment of the Government services, so that more Indians would have been employed than Europeans are, and they would have been able, therefore, to save so much capital to the country itself, would not then Indians have been able to supply more capital than they are at present?—Possibly they might be. But this assumes that they could be employed in the place of the Europeans—that they could do the work.

8179. At present, owing to this drain, there is much scarcity of capital in British India, and consequently the Indian capitalists can command a greater return for their little capital than they would otherwise do?—The ordinary rate of interest is certainly high.

8180. The Native States have built mostly their own railways from their own revenue, have they not? Can you give any idea of what railways have been built by different Native States, how much by borrowed money, and how much from their own revenue?—I can give you the amounts expended by Native States on railways, but several of our main lines run through the Native States—the Rajputana-Malwa, for instance.

8181. Yes, but they are your own railways; I mean special railways built by Native States for their own territory?—There are such railways; the Nizam's State Railway, the Gaekwar's railways, the Kashmir and the Rajpura-Bhatinda Railways, and several other smaller lines.

8182. And are all these railways built entirely from their revenue, or is any portion built by borrowed money?—Some of these have certainly been constructed from borrowed money; but I cannot state in every case the exact proportion of the capital which has been supplied from revenue and from borrowed money.

8183. Well, I can just give a few figures with regard to one Native State. I have not been able to look into the railways of Hyderabad-i-Nizam, but I have got some figures of Mysore given by the Diwan last year, and it appears that they were able to raise a local railway loan, as it was described, of 20 lakhs of rupees, and they borrowed from the English Government a crore and 63 lakhs of rupees for railway purposes?—Yes.

8184. Out of that they have already a sinking fund of 27 lakhs 81,000 for the loan from the English Government. They have themselves now from their own revenue spent 1 crore and 48 lakhs on the Mysore-Harikar Railway, and they have on other railways also invested 41 lakhs from their revenue only, and they have not spent nearly 16 lakhs from the loan which they have received from the British Government. The position thus stands that out of the loan from the British Government they have 27 lakhs of sinking fund, and they have 15 lakhs in hand which they have not employed, so that we see that a large portion of the railway is built from their own revenue, and they are in a fair way of repaying the whole of the loan in this Native State. We in British India do not appear to have any chance of coming to that condition of affairs?—I have no information about those figures.

8185. Then in addition, on account of this guarantee to the loss that accrues from the necessity of paying up to the guaranteed interest, we have, as has been already explained, the additional loss of exchange on account of having these loans in sterling. We have a double loss; we have to make up the guarantee, which is in sterling, and then to pay in sterling; whatever may be the earnings in rupees, we must make it up in pounds, which is not earned, and, as it is called, a fictitious amount which we have to pay, which has already been discussed?—There is a double loss; first, in the payment of the sterling interest; and, secondly, in the fictitious rate of exchange which is applied in the calculation of surplus profits.

8186. Then the question was put to you, I do not remember by whom, that taking the whole result of the railway expenditure and earnings up to this time, how much remains as a deficit to the Indian revenues which they have filled up, up to this time and which must be earned hereafter as a balance against us in favour of railways?—There is a net balance against the railways.

8187. And how much do you think it is, taking the result from the beginning to the end of revenue?—I cannot state the amount offhand, but I will put in a table showing the net results of the railways as far back as possible.*

8188. The extent of railways now in India is about 20,000 miles, is it not?—Up to the end of 1894 it was 19,000 miles; I daresay it is 20,000 miles now.

8189. Have you any idea what is the extent of railways built in the United States about this time?—I have not any idea of the exact amount.

8190. Then in the working of those railways, do you not think the Government, having direct or indirect control over it, should compel or insist upon the railways to adopt the most economical plan and therefore employ largely Indians, and save as much as possible from the heavy expenditure. Would not that go a great way towards making the railways more profitable than they are at present?—I believe the policy followed both by the State Railways and the Companies is that they employ natives wherever they think they possibly can do so with due regard to both efficiency and economy.

8191. Still, where you have three-fourths of the salaries paid to Europeans, as it is at present—within three or four years this return—there is large room for Government as trustees of the revenues of the people to do their utmost to see that the railways are made really more profitable?—I think that the Companies certainly look more to their profits than to the employment of Europeans, and that they would employ natives wherever they thought it more profitable to do so.

8192. Yes, that is more reasonable, it would appear; but with the exception of the Baroda railway, where there is a good manager who tries to make use of as large a native element as possible, they are not carried out. The Great Indian Peninsula has different ideas, I cannot mention them. Therefore we have no capital invested by the subjects in British India, and if the large amount that is paid in salaries to Europeans continues, and the indirect benefit that non-officials derive from the trade, and from all that they do there because the British Indians are not able to compete with them, there seems to be very little chance that the Indians will ever be able to help themselves, and become owners of those railways, or to pay their debts, if this drain continues as it is at present?—Some of the capital is owned by natives of British India.

8193. Natives of British India?—Yes.

8194. Because I know natives of Native States and even Princes of Native States hold very largely, such as, I think, the Maharaja of Gwalior is lending a large amount of money to the British Government. Is it about a crore?—More than that.

8195. Three crores?—The Gwalior loan of 1887 was 3½ crores of rupees, and there is also a loan from Maharaja Sindia for State Railways of 1½ crores.

8196. The Maharaja of Holkar has also lent?—Yes, a crore for the Indore State Railway.

8197. Therefore we are in the position of borrowing from every quarter; when will we be in the position of Native States of taking from their own revenue and from their own capacity? As long as this drain continues there does not seem to be much chance?—Some of the capital of the railways is held by natives of British India.

8198. Can you give us any idea of how much is held by them?—No I cannot state how much. The amount is not considerable for the reason you have already mentioned, viz., that the rate of interest in India, on good security is much higher than that obtainable even on railway loans.

* *See* Appendices 27 and 28.

Mr. S. Jacob, C.S.I.

29 April 1896.

Railways.

8199. (*Sir James Peile.*) There are no limitations on the employment of natives on railways in India except their fitness I suppose?—That is all I know of.

8200. And they would be cheaper than Europeans, if fit, and they naturally would be employed?—I should think so.

8201. (*Mr. Naoroji.*) If they are properly trained and if there is full fair opening left to the Indians; do you mean to say that the Indians—out of 300,000,000 of people in India, that you will not find a sufficient supply to do all this work as efficiently as any European?—I do not pretend to give any opinion on that point myself. I should judge from the action of the railway companies, and railway managers in employing Europeans for certain posts, that that is the view that they take.

8202. The guaranteed railways companies take very good care that as long as they get their guarantee and any benefit they do not care whether the Indians derive any benefit from the expenditure or not. It is an idea of patriotism among them to employ Europeans instead of Indians. You cannot say that the Indians will not be found competent to undertake the work if encouragement were offered, and if the proper class of men were drawn.

8203. (*Sir James Peile.*) India has been developed by railways since about the middle of the century has it not?—Yes.

8204. During that time the opening of the railways has enormously increased the trade?—Yes.

8205. India being an exporter of raw produce it has been particularly beneficial in opening up the country?—Yes, the railways have produced an enormous effect in that way.

8206. Now during the development of the railway system have the natives taken any part in promoting undertakings such as railways?—Only, as far as I know, in the case of very petty undertakings. There is the Tarkessur railway in Bengal, which, I think, is mainly a native undertaking, and there are one or two tramways, I believe. But I cannot speak on this point with any authority.

8207. Yes but generally speaking they did not come forward and take a leading part in developing India by railways?—No.

8208. Besides the frontier protective railways there is another class, I think, of protective railways, is there not?—Yes.

8209. That is?—For protection from famine.

8210. Those railways are not designed so much for paying as for another purpose — for protecting the people?—Yes that is the main object of them.

8211. They are not expected to be as profitable as what we should call the commercial lines?—No, but generally they do produce a certain amount of revenue in excess of the working expenses.

8212. Yes but still they are not expected to be as profitable as lines made entirely as avenues of trade?—No. They are not expected to produce 4 per cent.

8213. Those were all in the programme laid down by the Famine Commission I think in 1880?—Yes, they were all included in that.

8214. And they have now almost entirely been carried out?—Yes those that were mentioned by the Famine Commission have, I think, been completed, or are approaching completion.

8215. So that that least productive class of railways will now cease to be constructed because it has been completed?—I believe that is the case. The East Coast Railway, which is a protective railway, is still under construction, and a considerable amount of money may still be spent on that railway. The Secretary of State has also sanctioned the classification as protective of certain additions to the South Indian Railway. It is considered protective.

8216. But future railways may be expected to be of a more profitable class?—I should say so.

8217. Therefore the prospect is a good one for large profit in future from railways?—I should say that, apart from a serious fall in Exchange, there is a good prospect of an improvement in the financial outcome of our Railway Revenue Account.

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

(For the 17th Day's Evidence, *see* page 441.)

At the India Office.

EIGHTEENTH DAY.

Wednesday, 13th May 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. W. T. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. STEPHEN JACOB, C.S.I., Comptroller and Auditor-General to the Government of India, re-called and further examined.

Mr. S. Jacob, C.S.I.

13 May 1896.

Railways.

Irrigation.

8718. (*Chairman.*) Mr. Jacob, we will take up to-day the irrigation branch of our inquiry, which properly follows the railway branch, as forming part of the productive works which the Indian Government undertakes?—Yes.

8718*a*. But before I ask you any questions on that subject, I will ask you one question with regard to railways. I see in the Statistical Abstract that there are certain railways charged to the Famine Relief Fund (page 110); was that expenditure before us, and did you include that expenditure in the figures which you gave in your answers upon the subject of railway expenditure?—Yes.

8719. Would you tell us the form that that expenditure takes, when it is charged to the relief fund?—The charge is for protective railways and is taken directly against the revenue.

8720. And, therefore, that is capital expenditure which is charged against the railways, but which is not represented by any corresponding addition to debt?—Yes, that is so. I mentioned, I think, in the course of my examination last time, that some of the capital expenditure was charged directly against the revenue.

8721. Do you know at all what the total amount devoted to railways out of the Famine Fund amounts to?—Yes, the total for railways charged against famine insurance up to the end of 1894–95 is 5,934,000*l.*

8722. And, without entering at present upon the nature of the Famine Relief Fund, we may take that amount as charged against revenue?—Yes.

8723. But we should find it included in the total sum charged against railways?—Yes.

8724. Would you tell us in what form the irrigation works are undertaken?—Irrigation works, that is canals and tanks, are, for financial purposes, divided into two main classes. The first class consists of major works, and includes all the works which have been undertaken from loan funds in the expectation that they would be sufficiently productive to cover the interest charges on the sums spent on their construction; and also the works classed as famine protective, which are constructed not from borrowed funds but out of the annual grant from revenue for famine relief and insurance. The second class consists of minor works, the cost of constructing which is met from the ordinary revenues, though for a great part of this class of works, distinct capital and revenue accounts are not kept.

8725. Who administer these works?—Officers of the Public Works Department administer them immediately; under the general control of the Provincial Governments.

8726. Do the officers of the Public Works Department belong to the Provincial Governments, or are they part of the central administration?—They are under the Provincial Governments.

8727. Is there a Central Public Works Department at Calcutta?—Yes, there is a Public Works Department of the Government of India at Calcutta or Simla. Special officers of the Irrigation Department administer the works; they generally have no other work to do except the irrigation work.

8728. Is there any minute or report which describes the irrigation policy generally?—Yes, there must be such; I have not brought any such with me.

8729. I think it would be useful for the purposes of the Commission if you could refer us to some report or minute (so long as it is of moderate length) which would tell us what the general policy of the Indian Government in respect of these works is?—As regards the construction of the major works, the policy is that works are undertaken as productive works, if there is a reasonable prospect of their producing 4 per cent. within 10 years after their construction, and protective works are undertaken upon satisfactory proof that they are required for the protection of the country from famine. But I will endeavour to get any minute there may be on the subject, and put it in.*

8730. Then who would be the person or persons who would decide upon the adoption of a work of any magnitude?—It depends entirely upon the magnitude of the work. The powers of the Provincial Governments vary, but any work which is estimated to cost over $2\frac{1}{2}$ lakhs requires the sanction of the Government of India, and over $12\frac{1}{2}$ lakhs of the Secretary of State. No work may be undertaken as a productive or protective work without the Secretary of State's sanction.

8731. But I mean upon whose recommendation would the Secretary of State decide?—The initiative would be taken by the Provincial Government which would report to the Government of India, and the Government of India would report to the Secretary of State.

8732. And who would be the person who would move the Provincial Government to undertake such a work?—There is a Chief Engineer for the Irrigation Department in every province in which irrigation works exist, and it would be part of his duty to consider what irrigation works were required.

8733. In fact, the initiative lies with him?—Generally, yes.

8734. (*Sir Andrew Scoble.*) Or with the district officer, does it not?—Any district officer can make a representation to the Chief Engineer, but the professional estimate would be made by, or under the control of, the Chief Engineer.

8735. (*Chairman.*) But practically the Chief Engineer is the responsible person to the Provincial Government?—He would be the professional adviser of the Provincial Government in such matters.

8736. The work would not be undertaken except upon his recommendation?—It would certainly not be undertaken, except after inquiry by him, and generally, I should suppose, his recommendation would be accepted.

8737. Would the Provincial Government ever initiate a work of this kind and propose it themselves, referring it merely to the Chief Engineer to report to them as to its desirability?—Local inquiry would always be made as to the desirability of any such work, and as to the probable return from it.

8738. Then is any sum set apart every year for irrigation works out of that sum which you have told us is provided or sanctioned for public works?—Yes. It is not an absolutely fixed sum, but now about Rx. 700,000 to Rx. 750,000 are generally granted out of borrowed money for capital expenditure on irrigation works, besides whatever sum can be spared from the Famine Insurance Grant.

8739. And what sort of sum is provided out of the Famine Insurance Grant?—In 1894–5 it was Rx. 43,000; in 1893–94, 56,000: in 1892–93, 61,000; in 1891–92, 78,000.

8740. Then you may say, on the whole, speaking in round figures, about Rx. 800,000 is voted every year for irrigation works?—Yes, that is about the amount granted at present for capital expenditure on irrigation works.

8741. And that covers all, major and minor?—No, that is for major works.

8742. Minor works being provided out of revenue?—Yes. The capital expenditure on minor works is shown under the head of Irrigation.

8743. Is there any limit to the sums which may be devoted to minor works?—No, there is no limit. For the most part the minor works are provincial, and the Provincial Government can assign such portion of its revenue as it thinks fit for expenditure upon them.

8744. Is not the approval of the Central Government necessary for these works?—Not unless the work is of a magnitude which requires the sanction of the Government of India.

8745. (*Mr. Jackson.*) Is there any contribution by the locality in any of these cases to the irrigation works?—There are a few cases in which there are small local charges, but they are very petty indeed; as a rule there is no local contribution.

8746. (*Sir Ralph Knox.*) About what proportion does that form of the total famine fund expenditure?—A very small proportion.

8747. (*Chairman.*) Less than one-tenth?—Yes, considerably less than that. In 1894–95, the amount granted for Famine Insurance was reduced to Rx. 1,000,000; out of this total the amount charged directly to Famine Insurance was 610,000, of which 43,000 was for irrigation, 557,000 for protective railways, and 10,000 for direct famine relief. The balance of Rx. 390,000 was made up of the net charge on the Revenues on account of protective railways constructed through the agency of companies.

8748. (*Sir Ralph Knox.*) But would the other years follow that very much?—No, the amount in 1893–94 was Rx. 56,000 out of 1,118,000 charged directly to Famine Relief and Insurance.

8749. (*Chairman.*) But that was a year in which there was an unusually large sum devoted out of the famine relief fund, was it not?—In 1892–93 there was also over a million charged directly to this head; in these two years the amount so charged was specially large.

8750. But if you look a year or two previous, the amount is very small?—Yes, the famine relief grant was not devoted in those years to capital expenditure on protective railways; and in some of those years the grant for protective irrigation works was larger than the sums mentioned just now.

8751. Take, first, the case of the major works, do I understand aright, that they are treated in the same way as State railways, that their capital and revenue accounts are kept entirely separate, and that interest on

* No such minute was discovered.

Mr. S. Jacob, C.S.I.

13 May 1896.

Irrigation.

the cost of construction is charged against the revenue account of the works?—That is the case. The cost of construction is now charged either to loan funds, *i.e.*, to the head of "Expenditure not charged to Revenue," or to "Famine Relief and Insurance." The Revenue Account is kept under the head of "Irrigation," and on the charge side is included 4 per cent on the total capital cost of the works included under this head.

8752. (*Mr. Jackson.*) Has the charge for interest during construction risen; has there been any change in the system?—No, not as far as our Finance and Revenue accounts are concerned.

8753. It has always been the case that you have charged interest on capital during construction?—We do not add the interest during the construction to the capital.

8753*a*. Oh, I thought that was the question.

8754. (*Chairman.*) No; the question was as to interest during construction charged against revenue?—It is charged against revenue.

8755. And, therefore, during construction there is no interest charged against the work?—Interest is charged to the revenue account under the head of Irrigation, but it is not added to capital as far as our Finance and Revenue accounts are concerned. The Public Works Department, however, keep their capital account on rather a different method; they add any interest which is not met by the net receipts from the works to the capital account, and they deduct from the capital account any excess interest which is recovered from those receipts.

8756. But in the accounts to which reference is usually made the interest charged during construction is not brought to account?—The 4 per cent. which we charge against the revenue account of the works in our published Finance Accounts is calculated on a capital account which does not include the interest during construction.

8757. Can you tell us what is the total capital outlay on irrigation works for the period we have usually taken, namely, 1874–75, 1875–76, and 1892–93, or 1893–94, whichever year is convenient?—The total capital expenditure has increased from Rx. 12,897,901 at the beginning of 1875–76, to Rx. 30,343,404 at the end of 1894–95. The total capital expenditure incurred up to the end of 1896–97 is estimated at Rx. 31,921,000; that includes estimates for 1895–96 and 1896–97.

8758. (*Mr. Jackson.*) For what period is that?—That is the total capital expenditure up to date.

8759. 31,000,000*l.*?—Rx. 31,921,000.

8760. The amount of Rx. 12,897,000 which you gave us, then, was the amount expended up to the period of 1875–76?—That was the total expenditure incurred at the beginning of 1875–76.

8761. (*Chairman.*) How long before that year, 1875–6, had there been capital outlay upon irrigation?—I do not remember when first capital expenditure was incurred, but it was certainly before 1859.

8762. Am I not right in thinking that Colonel Cotton's work was considerably anterior to the Mutiny?—It must have been.

8763. And, therefore, irrigation works have been carried on over a long period, though they were not charged to capital in the early days in this form? or would the 12,897,000 include such capital expenditure as was made by Colonel Cotton?—It would include any expenditure by Government on those works which are classed as major works, at whatever period it had been incurred. When the present system was introduced the account was carried back to include all past capital expenditure.

8764. And may we take it that that Rx. 12,897,000, which we will call 13,000,000, really includes all anterior expenditure on major works?—Yes, all the expenditure which had been incurred by Government. At that time there were companies in the field.

8765. Which have since been bought up?—Yes, at least there was a company, I should say.

8766. Can you tell us how much of these sums of 12,897,000 and of 30,343,404 are represented by loans borrowed either in England or in India?—Of the Rx. 30,343,404, about Rx. 22,000,000 have been incurred from loan funds.

8767. And 8,000,000 would represent about the amount advanced out of revenue?—Yes; that includes the old expenditure which was incurred entirely from revenue. The expenditure which was first brought to account when the present system was introduced was Rx. 5,293,000*l.*; when we first began to keep separate capital accounts, Rx. 5,293,000, which had been incurred out of revenue previous to 1867–68, was brought to account against the capital.

8768. Up to that time there had been no borrowing for the purpose?—No.

8769. Then, in reality, the amount advanced of late years out of revenue has been comparatively small?—Yes.

8770. Not above three millons?—That is all.

8771. And all the rest has been borrowed?—Yes.

8772. (*Mr. Jackson.*) Is there any sinking fund, or any provision for repaying the borrowed money?—No, there is no sinking fund.

8773. (*Chairman.*) As we have understood from your evidence on the subject of the debt, the settled policy of India, inasmuch as it is a constantly borrowing power, is not to set any sinking fund against the debt?—Yes. There have been proposals at various times to have sinking funds for certain portions of the debt, but they have invariably been disallowed, upon that principle, that, as long as we are borrowing, we should merely borrow a larger amount with one hand, in order to create a sinking fund to pay off other debt with the other.

8774. But in the case of irrigation works, do they last for all time?—Charges for maintenance are, of course, incurred every year.

8775. They are maintained out of revenue, I presume?—Yes.

8776–7. Supposing damage occurred to any of them involving a large expenditure, how would that be charged? Have there been such cases?—Yes, there have been such cases. As far as I recollect, the repairs have always been charged to revenue.

8778. (*Mr. Jackson.*) I am speaking of extraordinary repairs due to flood or some disaster, where the works, say, were all washed away?—The general rule is that renewals and replacements are charged to Revenue unless they exceed the cost of the original work, in which case a charge to capital may sometimes be made.

8779. (*Sir Ralph Knox.*) There is no charge for depreciation of any kind to the famine fund?—No, we charge the 4 per cent. upon the full amount of the actual capital expenditure.

8780. (*Chairman.*) But then, it is only supposed to be interest, is it not, on actual expenditure?—Yes.

(*Sir Ralph Knox.*) On the capital amount borrowed?

8781. (*Chairman.*) No, on the total amount expended, is it not?—On the total amount expended.

8782. Four per cent. is charged on the whole amount of 30,000,000*l.*, but of that, as we have heard, 8,000,000*l.* is advanced out of revenue. Then it has been the settled policy, has it not, that the money required for these irrigation works should be borrowed in India?—Yes.

8783. I see that out of this total amount of outlay on construction, which amounted to 29,000,000*l.* in 1892–93, 3,045,000*l.* is charged as outlay in England?—Yes, that was for the purchase of the works of two companies, the East India Irrigation and Canal Company, and the Madras Irrigation and Canal Company.

8784. Which were bought up?—Yes. The former surrendered its works to the Government in 1869–70, the Orissa undertaking for 1,043,698*l.*, and the Sone works for 48,711*l.*; and 1,404,154*l.* was paid to the Madras Company for the purchase of the Canal which has since been called the Kurnool Canal, an unrecovered loan from Government of 358,428*l.* being also written off.

8785–6. Those sums altogether make up a total amount of about 2,853,000*l.* or 2,854,000*l.*, and a certain difference is left between that sum and 3,045,000*l.*, which is stated as the outlay in England; do you know how that difference is accounted for? If you look at the outlay on construction in the year 1892–93, it is stated as 3,045,525?—Yes.

8787. And if you add up those sums which you say were paid in England or written off, they would amount to 2,853,000*l.*, or rather, I think we must not take the sum written off; the outlay in England was

2,400,000, very nearly 2,500,000?—You would have to include the amount written off.

8788. How does that come to be outlay in England?—Because the money was advanced in England, and, when written off, it was charged in England.

8789. Those sums together make up 2,853,000 or 2,854,000?—Yes.

8790. That leaves a difference between them and the sum stated as outlay in England of 192,000?—Yes, this balance is made up of small sums spent for stores required for the capital expenditure and obtained from England; these sums are shown against the English account; they are very small amounts in each year; they are all shown in detail in the statement at pages 194 and 195 of the Finance and Revenue accounts for 1893-94.

8791. Very well. This sum of 3,045,000 laid out in England was, as far as the larger part of it is concerned, capital paid over to these companies, was it?—Yes.

8792. And it was, I suppose, raised in England, therefore?—Yes, it must have been raised in England.

8793. Then can you explain how, if the money was raised in England and paid over in England, there came to be an exchange charge of Rx. 471,000?—There must be an exchange charge in bringing it to account in India. We have converted the liability into Rx. for the purpose of determining the amount upon which four per cent. interest is to be charged in Rx., and we have, therefore, included the actual exchange at the time when the capital sum was paid.

8794. But you did not pay that exchange?—In one sense I think we may say that we did pay it.

8795. If you raise the money over here; supposing there is a company working one of these canals, and you buy it, and you pay the money in sterling here?—Yes.

8796. You do not then pay exchange, do you?—In my opinion you incur a charge for exchange just as much if you raise the capital here, as if you remit it from India.

8797. You do not actually pay it?—You incur a liability for it.

8798. Do you?—Your pound, when the exchange rate is 12 rupees to the pound, is worth 12 rupees; and if you have to convert a sterling liability, and bring it into a rupee account, it seems to me that you must take each pound as equivalent to Rs. 12, whether you have actually to remit the money, or whether you raise the money here.

8799. (*Sir James Peile.*) You enter the gold payment in your accounts as a payment in India in rupees at the exchange rate of the day?—Yes.

8800. (*Chairman.*) I am trying to make out whether that is quite an intelligible transaction, I mean as far as actual loss goes. I understand that, if you have to remit money over here to pay a charge, you have to raise so many rupees—17 rupees for a pound where you used to raise 12 or 13—and when we compare, we will say, 1875-76 with 1893-94, the difference in the sum of rupees that you have actually to raise in order to remit a given sum is evident to everybody. But when you liquidate a purely English debt, in which no remittance takes place, is it quite clear that in that case a loss by exchange occurs?—I do not say that a loss by exchange occurs; but I do say that there is an exchange charge which must be brought to account, if you convert a sterling liability into a rupee liability.

8801. At all events, that is a sum upon which you charge the four per cent?—Yes. The sterling payment or liability was brought to account at the exchange rate of the year in which it was incurred.

Does that seem quite clear to you, Mr. Jackson?

(*Mr. Jackson.*) It is more or less a system of book-keeping.

(*Chairman.*) That I understand, but we are trying to make out why in this case there should be a charge for exchange.

(*Mr. Jackson.*) Ten rupees to the sovereign—the difference between that and the sum actually paid is a——

8802. (*Sir James Peile.*) It is not a payment certainly?—We do not actually pay the amount we enter in the exchange column when we receive money in sterling in England to meet an English payment; but I do not see how that affects the fact that the pound paid is the equivalent of so many rupees at the rate of exchange of the time.

8803. No, but you have to pay the pound?—We have to pay the pounds, and, if they are received or raised in England, we remit so much less from India. But that does not affect the fact that all the pounds we pay at the same time are of the same value.

8804. (*Chairman.*) My puzzle is, you get a certain number of sovereigns over here and you pay off a debt here without there being any question of remittance. Whereas it is a loss to you when you have to remit from India here on account of the fall in exchange, when you borrow over here is it not a converse proceeding because you get a benefit from the transaction?—I demur altogether to that view. I do not see what benefit we get. If we raise in England, say, 1,000,000*l.*, where the rate is Rs. 12 to the pound, and 750,000*l.* when the rate is Rs. 16 to the pound, our liability is, in the latter case, stated in a less number of pounds, but it must be stated in exactly the same number of rupees.

8805. You mean that if ever you had to pay that debt off, you would have to pay it off by rupees raised in India at that rate?—Yes. As a matter of fact this system charges to the Irrigation Department less than would be charged, if we treated the liability as a sterling liability in England, and charged the Department with the actual payment of the sterling interest upon that liability plus the exchange.

8806. It is right to represent the view in that way, but you have got this sterling liability; if ever you paid it off, you would have to raise the additional number of rupees, namely, 17 to the pound?—Yes, at the present rates of exchange.

8807. (*Mr. Jackson.*) But it is only in the same way, is it not, as, if you were in France, you would enter the debt according to the Indian system, not in pounds but in francs?—Yes, and you would enter it at the equivalent exchange or an average equivalent exchange. If you incurred expenditure in England, and the exchange rate was 25 francs to the pound, you would enter every pound paid in England as 25 francs in your French accounts.

8808. (*Chairman.*) I am not demurring; I am not raising any question about the book-keeping. I am only anxious to distinguish what is real loss by exchange, and I may be wrong in putting it so, from what appears to me fictitious loss by exchange?—I venture to say that our accounts do not pretend to show what the loss by exchange is. They are, as I said before, a statement of fact; they show the equivalent number of rupees for any sterling payment that we make in England. If it is desired to find out what the loss by exchange is, separate calculations must be made for that purpose; our accounts do not profess to show what it is.

8809. We must be careful when we speak of the loss by exchange to understand that it really is loss by exchange, to separate that part which may be attributable merely to book-keeping from that part which may be really and properly put as inflicting the necessity upon India of raising an additional number of rupees?—There is, I think, a very clear distinction between the amount shown as "exchange" in our accounts, and the loss by exchange which we actually suffer.

8810. Does irrigation, on the whole, work out to a net charge, or to a net receipt?—As a whole, taking major and minor works together, the result of the irrigation receipts and charges, as shown in our Finance and Revenue Accounts, is a net charge. But the major works taken separately produce a small net revenue, over and above the interest at 4 per cent. on capital expenditure which is charged against them.

8811. Then, taking the major works, will you give us their results for some recent year?—I think it will be well for me to give the figures for the last four or five years, because the Canal Revenue is necessarily of a very fluctuating character, being largely dependent on the seasons, and this is somewhat strikingly illustrated by the results actual or anticipated of these years. The total revenue in 1892-93 was Rx. 2,233,036; the expenditure Rx. 1,932,337; leaving a net revenue of Rx. 300,699. The total revenue in 1893-94 was Rx. 2,096,611, the expenditure Rx. 1,954,515; leaving a net revenue of Rx. 142,096. The total revenue in 1894-95 was Rx. 2,146,726, the expenditure Rx. 1,993,874;

Mr. S. Jacob, C.S.I.

13 May 1896.

Irrigation.

leaving a net revenue of Rx. 152,852. The total revenue in 1895–96 was, according to the Revised Estimate, Rx. 2,121,300, the expenditure Rx. 2,014,000; leaving a net revenue of Rx. 107,300. The total revenue for 1896–97, according to the Budget Estimate, is expected to be Rx. 2,673,600, the expenditure Rx. 2,074,800; leaving a net revenue of Rx. 598,800.

8812. What is the cause of that very large increase in the Budget of 1896–97?—It is entirely due to the season. The poor result in 1895–96 is owing to the heavy rainfall of the cold weather of 1894–95, in the North-West Provinces, having reduced the need of irrigation to such an extent as to diminish the receipts there by nearly Rx. 200,000. On the other hand, to the failure of these rains in the same Province, and in the Punjab in the present year (which is responsible for a large reduction of revenue under another head—land revenue) is attributed the large increase under this head, which is anticipated in 1896–97.

8813. (*Sir Ralph Knox.*) Is there a corresponding increase of land revenue in a year of heavy rainfall?—No, there would not be any increase in the land revenue. We cannot increase the land revenue when there is a good year, but we may be obliged to suspend revenue or remit it, when there is a bad year.

8814. (*Mr. Jackson.*) Then really an increase in the net revenue of irrigation works is rather an indication of distress?—It may be so; but I would rather say that the irrigation revenue prospers when some other heads of revenue fail.

8815. (*Chairman.*) Then perhaps you would explain to us now in what form the irrigation revenue is raised; is it, so to say, a voluntary contribution, or a voluntary payment, made by the cultivators, who buy the water more largely in bad seasons than in good?—To a certain extent it is so. The revenue is made up of direct receipts paid for the supply of water for irrigation purposes. That is a voluntary payment in one sense, but it is levied under an Act of the Legislature.

8816. Oh, quite so. The occupier, if he wants water, buys it; that is what it comes to?—Yes, he buys it.

8817. (*Mr. Jackson.*) But is he charged a rate if he does not buy it? Is there a rate levied upon him for irrigation purposes whether he takes the water or whether he does not?—As a rule there is no such rate levied. In some parts, for instance, in Madras, there is what may, perhaps, be called an irrigation cess; it is not collected separately, but forms part of the land revenue; irrigated lands pay a higher rate of land revenue than unirrigated lands.

8818. Yes, but really in the main it is the result of sales of water?—The direct receipts are; but there is another class of receipts credited to irrigation under the title of "Land Revenue due to Irrigation." The true financial result of the irrigation works would not be shown, unless a portion of the land revenue were credited to them. I have already referred to the case of Madras, where direct water rates are not imposed, but the irrigation revenue is collected with, and for the most part consolidated with the land revenue. It is in that province that the bulk of the revenue credited under this head comes in. The irrigation revenue is assessed and collected in the same way in Sind; in some parts of that province cultivation is entirely dependent on irrigation, and there 90 per cent. of the land revenue is credited to irrigation and only 10 per cent. to the land revenue. In the North-Western Provinces and the Punjab also there are some credits under this head. In those Provinces the irrigation revenue is assessed separately in the shape of occupiers' rates and owners' rates, but in addition to this it is estimated that the value of the land for the purposes of the assessment of land revenue is raised by the canals, and when a fresh assessment of irrigated or irrigable land is made, a certain portion of the increase is assigned to irrigation and is credited to this head.

8819. Then really, in the case where you gave us the figures of 90 per cent. and 10 per cent, ——?—That is in Sind.

8820. Is that another way of saying that, except for the irrigation, probably the land revenue would only have been 10, and that it has been increased by 90 by the fact of the irrigation works having been provided?—The fact probably is that there would have been no land revenue at all except for the irrigation.

8821. (*Chairman.*) Then may I take it that in this account, which you have laid before us, the direct receipts may be said to represent what I call the voluntary payments?—Yes; they include also the owners' rate, which I have already mentioned, but they consist mainly of the voluntary payments.

8822. The water-bought?—Yes.

8822*a*. Well, those receipts run in this way: 1892–93, 1,500,000; 1893–94, 1,350,000; 1894–95, 1,370,000; 1895–96, 1,260,000; and 1896–97, Budget, 1,750,000. I am putting them in round figures.

(*Mr. Jackson.*) About 60 per cent. of the whole.

(*Chairman.*) But you see what an enormous increase is expected in 1896–97 in receipts from the buyers of water.

(*Mr. Jackson.*) Quite so.

8823. (*Chairman.*) Then we come to land revenue due to irrigation, and I am not sure whether I gather from you rightly, that that really means land revenue due to irrigation? I thought at first you put it as if it was a rate levied upon the landowner, very much like that in our drainage districts down in the eastern counties, where the people, who are supposed to be benefitted by the drainage of the fens, pay a heavy rate?—Yes.

8824. And may we take it that the land revenue due to irrigation is in reality a rate levied on the landowner or the occupiers in consideration of the benefit which is attributed to the work?—It is not assessed as a separate rate; it is merely assessed as an addition to the land revenue. The revenue officers determine that so much of that additional assessment is due to the fact that the land is irrigated or irrigable, and that is credited first of all to land revenue and then transferred to the head of irrigation at the end of the year.

8825. That is to say, supposing a man is paying now 10 rupees, we will say, for a certain area of land, and irrigation work is carried out in the neighbourhood, the land revenue officers say that that irrigation work has made that land worth so much more; instead of being worth 10 rupees it is now worth 20 rupees; the assessment is raised to 20 rupees, of which 10 are attributed to the irrigation?—Yes. Of course I must explain that in some parts of India the land is held under fixed settlements for longer or shorter terms, and it is only when the land comes under re-settlement, that the land revenue can be re-assessed.

8826. Quite so, and therefore in cases where that permanent settlement, or a settlement under contract for a long period of years, is in force, these irrigation works, if they are carried out, simply go to the benefit of the landowner or cultivator who pays nothing in respect of it to the State?—There is an owners' rate, as I have already mentioned, which is levied in the North-Western Provinces and in the Punjab. That is levied under the Irrigation Act, and is not mixed up with the land revenue. The amount of it is not large. Owners' rates in the Punjab and the North-Western Provinces produced Rx. 73,550 in 1894–95.

8827. Therefore, as a rule, you may say that there is no additional rate levied as a matter of course upon land improved by irrigation if the land is improved; as long as the settlement is in force, the cultivator gets the benefit of the irrigation without any payment, but at the end of the time a re-assessment takes place, and the revenue officer takes into consideration that a certain portion of the increased value of the land is due to this irrigation and raises the assessment accordingly?—The cultivator in Northern India has to pay as soon as he uses the water; the owner's assessment of land revenue cannot be raised until the land revenue can be re-settled; but in Northern India, he might be brought under the owners' rate as soon as he derives any benefit from the fact of his lands being irrigated.

(*Chairman.*) But I thought I had understood from you before, that in some cases the cultivator was not charged for the use of the water?

(*Mr. Jackson.*) I think you are not distinguishing between the cultivator and the owner.

(*Chairman.*) No. I have not been distinguishing, I am taking them both now.

(*Mr. Jackson.*) I think that is where the witness differs from you.

8828. (*Chairman.*) Then is it always the case that the cultivator, if he uses the water, has to pay?—He has to pay either in the shape of a special rate, in which shape the charge is levied in the North-Western Provinces and the Punjab, or in the shape of additional land revenue, in which shape it is assessed in Madras.

8829. You see I do not quite follow the case; I thought I understood you to say that in some cases the water is bought direct; here are the direct receipts when the men use the water, but in other cases, and here perhaps I am under a misapprehension, no charge is made for the water?—In every case a charge is made to the cultivator, in some shape or other, for the water.

8830. That is to say, to the cultivator?—To the cultivator; but you can get at the landowner in Northern India, if the value of his land is improved, either through the owners' rate or by an additional assessment when the land comes under re-settlement.

8831. But then how do you avoid in that case two men making a double payment for the same service? Supposing the cultivator buys the water and pays you a proper sum for it, and afterwards, when a re-settlement of the land takes place, the owner is made to pay a higher amount because of the benefit given by the irrigation. how do you avoid in that case there being a double payment?—The land revenue is merely assessed with reference to the rent, and if we do assess any additional payment for the land revenue it is because the landowner has already derived a benefit from the fact of his lands being irrigable, and has in fact charged a higher rent, which is paid by the cultivator in addition to the payment made to Government.

8832. That is to say, the benefit that the cultivator gets when he buys the water is so much greater than the sum he pays for it, that he is able to pay a larger rent?—Yes.

8833. (*Sir James Peile.*) But the case where the cultivator buys the water by the gallon is not the case in which you credit a portion to land revenue due to irrigation?—You do in some cases even where the occupier's rate is levied: in the North-Western Provinces and the Punjab there is a credit to land revenue due to irrigation in addition to the direct receipts. For instance, in the North-Western Provinces land revenue due to irrigation in 1894–95 was taken at Rx. 117,498, and in the Punjab at Rx. 30,758.

8834. Does that deal with the same cases in which the cultivator buys his water?—Yes.

8835. (*Chairman.*) Then may we understand that, when the Government comes to re-assess the land tax upon land which has been benefited by irrigation, they re-assess it upon the rent actually received; and, therefore, any portion of that which they attribute to irrigation is arbitrary?—That is, I believe, the case.

8836. It is not an exact calculation?—I should not suppose it would be possible to make an exact calculation in such a matter.

8837. (*Mr. Jackson.*) But though it is an arbitrary sum which is fixed arbitrarily, it is probably fixed by experts who can, more or less, appreciate the relative proportions?—Yes. It is fixed by the revenue authorities, who are more interested in seeing the land revenue as high as possible than in the irrigation revenue.

8838. Though arbitrary, it may be approximately correct?—Yes.

8839. (*Sir Ralph Knox.*) In that year, in which there was an increased yield for irrigation, what was the corresponding loss to land revenue; was it anything of the same amount?—You refer, I think, to 1896–97. We have not yet realised that revenue; the figure I gave you is the revenue which is expected to be realized in that year.

8840. (*Chairman.*) I think, in answer to Mr. Jackson's questions, it would be interesting if you would read the amount of land revenue due to irrigation in those different years. I read out to you just now the direct receipts, showing a variation from Rx. 1,500,000 to Rx. 1,265,000 up to 1895–96, and then the enormous increase, of 1,750,000, pretty nearly, in 1896–97; but what is interesting is that in the same year there was a very considerable increase in land revenue due to irrigation; perhaps you would read that column?—The Land Revenue due to Irrigation was, in 1892–93, Rx. 722,306; in 1893–94, Rx. 746,926; in 1894–95, Rx. 776,139; in 1895–96, Rx. 856,100; in 1896–97 the Budget estimate is Rx. 929,900.

8841. (*Mr. Jackson.*) The last being an estimate?—Yes.

8842. (*Sir Ralph Knox.*) Practically an estimate for the land revenue?—That is only the land revenue due to irrigation. The total land revenue, excluding that due to irrigation, was estimated in 1895–96 at Rx. 26,369,000, and the estimate in 1896–97 is Rx. 26,093,000; that is a reduction of Rx. 276,000.

(*Chairman.*) Although the land revenue due to irrigation shows a considerable increase—Rx. 80,000.

(*Mr. Jackson.*) As I said before, a bad season causes more water to be used, but produces less land revenue; it is an indication of distress.

(*Chairman.*) No; look at this. In that year the payment for water is expected to be very great indeed—Rx. 1,750,000—and yet the land revenue due to irrigation rises too.

(*Mr. Jackson.*) I thought the land revenue was less in a bad season, and the land revenue due to irrigation was greater?—That is often the case.

8843. (*Chairman.*) And when there is a fall it is no doubt due to a bad season?—Yes.

8844. (*Sir Ralph Knox.*) And there was a net loss?—Yes. The fall in the land revenue proper largely exceeds the rise in the land revenue due to irrigation. And I may add that the land revenue is ordinarily increasing year by year, so that if we get considerably less revenue in one year than in the preceding year, the probability is that we lose more than the actual amount of the difference between the revenue of the two years.

8845. (*Mr. Jackson.*) Besides, it would follow that in a bad season the proportion of revenue attributed to irrigation would be larger than it would in a season when water was not so necessary?—It might be so.

8846. It would necessarily follow, would it not?—I am doubtful whether it would, according to the principle which is followed in determining the account of such revenue. But I have not at hand the detailed rules regarding that matter.

8847. The value of it certainly would be increased?—The value of the land would be increased by the irrigation, but the landowner might not derive any immediate benefit from such increase.

8848. (*Chairman.*) You have given us the total revenue received—the total working expenses and interest, and the net revenue; now would you tell us what has been the progress of the working expenses in relation to the revenue. As far as I can see, roughly, the working expenses represent, in the first and last year, about one-third, do they not?—About one-third of the direct receipts?

8849. About one-third of the total receipts?—Yes.

8850. First of all, there is some Rx. 800,000 as against Rx. 2,233,000; in the last year there is Rx. 820,000 against Rx. 2,673,000; that means that the working expenses are rather falling, are they not, in proportion?—Yes, they do not seem to increase in the same proportion as the revenue.

8851. Exactly; the revenue is rather outstripping the working expenses?—Yes, that is the case comparing the first and last years.

8852–3. For instance, in the Budget of 1896–97 the working expenses would be perceptibly less than one-third—Rx. 820,000 to Rx. 2,670,000?—Yes.

8854. Whereas in the first year, 1892–93, they are more than one-third?—They are rather more than one-third.

(*Mr. Jackson.*) Practically it is a larger output from the same fixed expenditure; that is the principle.

(*Chairman.*) That is it, but it is satisfactory to see that the working expenses do not increase in quite the same ratio as the revenue.

8855. (*Mr. Jackson.*) It is dividing the fixed expenditure over a larger out-put?—Exactly. And where there is a fall, they do not fall in quite the same proportion.

8856. (*Chairman.*) Then we come to the interest charge. The interest charge in 1875–76 appears to have been Rx. 595,000, rising gradually to the estimate for 1895–96 of Rx. 1,222,000?—Yes, and Rx. 1,254,000 in the Budget of 1896–97.

8857. And the whole of that is in India?—Yes.

8858–9. How comes it that nothing is charged in England as against that sum of 3,045,000*l.* which you have told us was outlay in England?—We transferred those amounts to India in the year in which they were incurred, and that is the reason, as I have already explained, that the exchange charge comes into the

Mr. S. Jacob, C.S.I.

13 May 1896.

Irrigation.

capital account. From that time we treat them as rupee expenditure, and charge 4 per cent. upon the rupee equivalent.

8860. Well, I suppose that really is fair, is it not? Because, when you come to pay the interest upon that sum of 3,000,000*l.*, in England, you have to pay a larger sum in rupees in order to meet that interest?—Yes. If we had retained the liability as a sterling liability, then even 3 per cent. in sterling on the 3,000,000*l.* would come to more than 4 per cent. does on the rupee equivalent.

8861-2. Yes, that appears to be intelligible. Therefore, we have got a rise from Rx. 600,000 to a sum which, I think, in 1896-97, is approaching Rx. 1,300,000?—Yes, Rx. 1,254,000.

8863. But in 1875-76 the revenue was so small that there was a very large deficit, was there not?—Yes.

8864. However, I notice that in 1875-76 there is no attribution of any portion of the receipts under land revenue to irrigation?—That is the case.

8865. And, therefore, 1875-76 is not quite a fair year to take, is it?—No, it would not be fair to compare the results of 1875-76 with those of 1895-96.

8866. The deficit upon this basis of comparison is unduly large?—Yes.

8867. Therefore we will take 1884-85. In that year the net receipts were Rx. 37,000, were they not?—Yes.

8868. Which had risen in 1895-96 to Rx. 244,000 in the Budget?—Yes, but it is now expected that the actuals will be much below that; Rx. 107,000 only are taken in the Revised Estimate.

8869. But for the year 1896-97 you anticipate Rx. 600,000?—Yes.

8870. Is that a safe estimate, do you think?—I should suppose so; it was stated in the Financial Statement that it was believed to be a perfectly accurate estimate.

8871. But, according to what you have told us before, that would not be a normal estimate, because in this particular year the receipts are expected to be abnormally large?—Yes. Sir James Westland said in his Financial Statement:—"The Irrigation Revenue will be "unprecedently high in the North-Western Provinces "and Oudh and in the Punjab. Though the increase is "so large, Rx. 160,000 in the former, and Rx. 233,700 in "the latter Province, it is confidently anticipated that "it will be realised, as the very magnitude of the "estimates proposed by the local authorities led to a "careful scrutiny of them before they were accepted."

8872-3. Still we could not take that as a normal or anything like a normal net receipt, could we?—No. I have taken out the net receipts for every year from 1884-85 onwards, and they show that while the revenue fluctuates very much from year to year, there is a considerable gradual improvement. The net revenue in 1884-85, which was a somewhat exceptional year, was Rx. 37,000; then from 1885-86 to 1888-89 there were still deficits; 130,000 in 1885-86; 112,000 in 1886-87; 142,000 in 1887-88; and 29,000 in 1888-89. From that time there has been no deficits, they have all been surpluses; 1889-90, 34,000; 1890-91, 153,000; 1891-92, 206,000; 1892-93, 300,000; 1893-94, 142,000; 1894-95, 152,000; 1895-96, 107,000; and 1896-97 the estimate is 598,000.

8874. Then would you be disposed to put the average or normal surplus at Rx. 200,000, or would that be low?—Yes, between Rx. 200,000 and 300,000 I should think.

8875. And that fairly represents, according to the official view, the result of the working of the irrigation system after charging everything that ought to be charged against the works? Does it include the four per cent. charged against the works, or only the actual interest paid?—That includes the 4 per cent.

8876. That is to say, you charge against the whole expenditure, say of Rx. 30,000,000, 4 per cent. for interest, which is included in these sums of interest mentioned here?—Yes, the surpluses I have given are calculated after payment of that interest.

8877. Therefore you may say that on your major works you get 4 per cent. and still there is a surplus getting on to 1 per cent?—Yes.

8878. Not quite 1 per cent., 13*s.* or 14*s.*?—The net return including the 4 per cent. was 5·04 per cent. in 1892-93; 4·48 in 1893-94: and 4·51 in 1894-95; it will be somewhere about 4·35 for 1895-96; and (if the estimate is realised) nearly 6 per cent. for 1896-97.

8879. (*Sir Ralph Knox.*) Was that due to the heavier expenditure in the earlier years? Is the rate of expenditure on the maintenance of these works less now in consequence of the heavier expenditure in the earlier years? I mean, how is it you get the increased advantage in recent years?—By the increased revenue from old works and by the new works that produce revenue.

8880. (*Mr. Jackson.*) Really your net revenue depends upon your gross receipts?—Yes.

8881. I mean, if the total receipts are increased—from whatever cause, from dry season or whatever cause—then your net receipts are increased, because your net working expenses remain about the same?—Yes, that is so.

8882. (*Sir Ralph Knox.*) There is a greater sale for the same expenditure?—Yes, and of course new works are opened from time to time, and these works take some time to produce their full revenue. That is why ten years are allowed as the period within which an irrigation work must be expected to produce 4 per cent.

8883. How does the growth come about?—People have to see the use of it practically, before they take to it universally.

8884. In fact it wants advertising?—Yes. I may observe also that some of the expenditure which we have included in that capital charge of 31 millions is not yet producing any revenue at all.

8885. (*Mr. Jackson.*) Do you think there is a tendency on the part of the cultivator, to make larger use of the irrigation works?—Oh, yes, I think there is.

8886. Has the extension of railways, and, therefore, presumably the better access to markets, had any effect in that direction?—Yes, I think it has had a very decided effect; I think the railways have had a good deal to do with increasing the land revenue, just as irrigation has.

8887. Better access to markets of course increases the value of the article at the point of output?—Yes.

8888-9. (*Chairman.*) But if that surplus, after charging this 4 per cent. upon the outlay on the works, amounted to Rx. 300,000, it would be exactly another 1 per cent.?—Yes.

8890. And on that assumption I suppose you may take it that the return upon the major irrigation works is something like 5 per cent?—Yes, something approaching that on the average. I must say, however, that some of the works are not productive; they vary in their productiveness, though the general result is that which I have stated.

8891. (*Mr. Mowbray.*) Is it expected that they will all be productive in time, or are there some which you consider will never be productive?—Some of them are constructed simply as protective works, and it is not expected that they will be productive. And I suppose the works which we took over from the companies will never be productive; they are among the most expensive of our irrigation works, and they produce a very small revenue.

8892. So that, on those, which you really intended to be productive, you make more than 5 per cent.?—We do; on some of them we make very large amounts indeed.

8893. Were those works constructed by the companies expensively constructed? And is the fact that they are not paying works due to their having been not so well engineered as they might have been?—I have no doubt that they were expensively constructed; but the return from them is very small. For instance, the capital charge for the Orissa project is taken at Rx. 2,566,000, and it does not even cover its working expenses.

8894. (*Sir James Peile.*) I think that work wants developing by distributaries, does it not?—I suppose it does.

8895. Measures are now being taken to enlarge its use?— I believe that is the case; but I do not suppose it would ever do much more than cover the working expenses. Then the Kurnool Canal in Madras, which we took over from the Madras Irrigation Company the capital expenditure on which is shown as Rx. 2,169,000, also does not cover its working expenses.

8896. That is in a part of the country where irrigation is not appreciated?—Yes, and I have heard that it is not really required.

8897. It is not used by the cultivators in ordinary seasons?— No. The gross revenue is very small indeed.

8898. (*Mr. Jackson.*) Is that due to the kind of crops grown in the district, or is it due to want of appreciation (as it is put) of the benefits? To put it in another way, would not the value of irrigation depend upon the kind of soil, and the kind of crop which can be produced from that soil, in a particular district?—Yes, it would to a very large extent.

8899. Some crops produce more revenue than others?—Yes, certainly. It must be largely due in this case to a miscalculation. The nature of the soil is, I believe, such that irrigation is very little used indeed; with that two millions odd of expenditure we get a revenue of only Rx. 11,000 or Rx. 12,000.

8900. Then practically it is not used at all?—Practically it is not used at all.

8901. (*Sir James Peile.*) There is no continuous demand for irrigation there; that is a fact?—Yes.

8902. (*Mr. Jackson.*) Is that a district which is covered by railways?—There are railways in the district.

8903. And do you happen to know what crops are produced there?—No, I do not know, but I believe a great part of the soil is what is called black cotton soil, for which irrigation is seldom useful.

8904. (*Sir Ralph Knox.*) The demand for irrigation hardly ever comes from the people themselves, does it, it is done as a sort of paternal work?—The works are undertaken largely with the view of protecting them from the fearful results of famine.

8905. But the demand does not come from the people themselves? They are not alive to the advantages to be derived from it?—I do not suppose the original demand would ever come from them.

8906. (*Chairman.*) When you speak of protective works, do you mean protective works against famine, or are some of these works protective works against inundations?—There are some works which are protective against inundations, such as embankments, but the technical term "protective works" means protective against famine.

8907. So far as they are mere protective works against inundations, that outlay would not be remunerative, would it? It would be remunerative, of course, in one sense, in that it would save the cultivators from great loss, but it would not be directly remunerative to revenue?—A rate is chargeable in such cases under the Northern India Canals and Drainage Act (viii. of 1873), but I cannot find any credit of such receipts in the accounts. All such expenditure is, however, charged to minor works; there are no major works of that nature.

8908. (*Mr. Jackson.*) Would they be charged to irrigation works?—Yes.

8909. Even though they are protective works to prevent inundation?—Yes.

8910. (*Chairman.*) One more question upon this return upon the outlay. We have come to the conclusion that on an average probably 5 per cent. is being made upon good and bad alike; that is the general return upon the outlay that has been made?—Yes, nearly 5 per cent. at present.

8911. But in reality the account of the revenue of India of the present year is somewhat better than that, because the 4 per cent. is charged upon the whole of the outlay; in reality the debt which has been incurred on account of these irrigation works has amounted to considerably less, something like 22 millions?—That is the amount of the expenditure which has been charged outside the revenue account.

8912. And, therefore, may we not say in addition to that, that as far as the actual revenue for the present years is concerned, the construction of these works is represented by a debt amounting to about 22 millions, probably or possibly carrying 3¼ per cent. interest, shall we say?—More than 3½.

8913. Yes; but, supposing we only take it as 3¼ per cent., that would represent something like Rx. 770,000, would it not?—Yes.

8913*a*. On the other hand, we get 1,200,000 plus 1 per cent.——

(*Mr. Jackson.*) The return is 6 per cent. on the 22 millions.

8914. (*Chairman.*) Yes, exactly; and therefore, in reality, as far as the revenue of India is concerned, the State is paying about 770,000, while she is getting this 1,200,000 plus 300,000, that is, 1,500,000?—That is correct as far as the figures are concerned; but I should say that, while the distinction between the expenditure from borrowed money and from revenue is observed in our accounts, yet, as far as the Public Works themselves are concerned, we treat the whole of the charge as a charge which should produce revenue.

8915. But it does not give quite an exhaustive view of the financial situation to confine ourselves merely to the effect upon the Public Works Budget. As I have stated it, the result is more favourable, as far as the revenue generally of India is concerned, than that which is represented by the calculations that the Public Works Department make?—It may be considered so from one point of view.

8916. You have told us the method in which the land revenue due to irrigation is calculated, and you have given us the provinces in which such revenue is credited as raised from land revenue: are those the only provinces in which irrigation revenue occurs?—In Bengal also there are major works, but the revenue there only comes in from direct receipts, not from land revenue due to irrigation.

8917. That is where there is a permanent settlement, is it not?—Yes.

8918. And they will never be able to get any addition to land revenue there, will they?—Not in the permanently settled districts.

8919. (*Mr. Jackson.*) Does that quite go the whole length of the case? I thought you said that you had some power under an Act to levy a rate?—In the North-West Provinces and the Punjab we have.

8920. (*Chairman.*) Not in Bengal?—Not in Bengal.

8921. (*Mr. Jackson.*) But, supposing you were going to provide additional irrigation works in Bengal, would it not be within your power by a special Act to make special charges?—I should say it would be within the power of the Legislature to make permanently settled lands liable to an irrigation cess.

8922. And to make such charges practically a condition of providing them?—Yes, it certainly might be made a condition of providing the work.

8923. But that has not been done in the past?—Not in Bengal.

8924. (*Chairman.*) And have there been great irrigation works in Bengal?—Yes, the Orissa and the Sone projects, each of which cost about Rx. 2,600,000, are in Bengal.

8925. And, though the cultivator there buys the water, to whatever extent the result of that irrigation benefits the land and enables the landowner to get more rent from the cultivator, that goes and will go for ever entirely into the pocket of the landowner?—There is no provision in the Bengal Irrigation Act for any rate on the owner.

8926. Ought there not in such cases as that to be some stipulation that a special rate should be paid?—I am hardly prepared to give an opinion upon that point without further consideration.

8927. (*Sir Ralph Knox.*) But does it not a great deal depend upon whether these people ask for the water or not?—On that condition I doubt whether an enhancement of the revenue would ever be agreed to.

8928. They are not sufficiently enlightened?—I doubt if they would be sufficiently convinced of the prospective advantages to agree to a possible enhancement of the revenue in order to secure them.

8929. (*Chairman.*) That is to say, that they would say: "We will go without these works"?—I think that would probably be the case. These two big works in Bengal, which I have mentioned, were works which were begun by a company and not by the Government.

8930. (*Sir Ralph Knox.*) But how did they expect to get their profits then?—That was, I believe, one of the difficulties which arose eventually, and led to the Government taking them over; the irrigation revenue is so much mixed up with land revenue that it seems almost impossible for a company to work canals in India.

8931. (*Mr. Jackson.*) Would that apply to the gentleman whom you describe as the landowner who has this permanent arrangement; would not he be alive to the advatages of irrigation works, inasmuch as it would increase his revenue?—I do not think so. They get a very large profit now from the permanent settlement.

Mr. S. Jacob, C.S.I.

13 May 1896.

Irrigation.

8932. They would be gorged, you think?—I doubt if they would be tempted much by the prospect of a possible increase due to irrigation; I may say, also, that I believe that irrigation is not called for in many parts of Bengal.

8933. (*Chairman.*) Would you say that in Bengal these works are paying you now? The only receipt is that derived from direct payments, namely, for the water that the cultivator buys, and no receipts are realised on account of improved land revenue; would not that presumably lead to the fact that no profit is made in Bengal?—That would of course affect the amount of the earnings. The provision of the Northern India Act is, that, "in addition to the occupiers' rate, a rate "to be called the 'owners' rate' may be imposed, "according to rules to be made by the Local Govern- "ment, on the owners of canal-irrigated lands, in "respect of the benefit which they derive from such "irrigation."

8934. But that is not done?—The rate is imposed in the North-West Provinces and the Punjab, but that provision is not applicable to Bengal.

8935. Could you give us what the result is of the works in Bengal, in the form in which you have given it us for India generally in this return of irrigation major works?—Yes, I can give the results for some years. I have not got them for all the years mentioned before.

8936. No; but give us them for any year?—For 1893-94 the direct receipts in Bengal were Rx. 167,000.

8937. And no land revenue, of course, from what you tell us?—No land revenue is credited to irrigation in Bengal.

8938. That is in 1893-94?—Yes; the working expenses are Rx. 145,000, which leaves a net revenue of 22,000. That does not include any charge for interest.

8939. (*Mr. Jackson.*) Is that so? The working charges do not include interest in such cases?—No.

8940. The 145,000, does not include interest?—That does not include interest.

8941. (*Chairman.*) What has been the cost of those works?—Simple interest on the capital outlay on the works comes to Rx. 246,000, so that there is a net charge of 224,000, including the interest.

8942. You say that, where the landowner is not charged at all, that is the result?—I do not think that is the sole cause; it contributes to the loss, but the direct receipts are also very low in Bengal.

8943. (*Sir James Peile.*) The works, in fact, have never been developed?—They have not been fully developed.

8944. And within the last three years money has been appropriated for developing them?—I believe that is the case. The Orissa project also was constructed largely in view of its being protective. The Orissa famine some years ago is, of course, well known.

8945. Is the profit any better lately? have you the figures of 1895-96?—No, I have not the details for 1895-96.

8946. (*Mr. Jackson.*) What was the capital in that case?—The capital outlay on all the Bengal major works is Rx. 6,180,586 to the end of 1893-94.

8947. Now, can you give us the receipts in any other district with capital outlay of about the same amount?—The capital outlay in the North-West Provinces is Rx. 7,485,000.

8948. What are the direct receipts there?—The direct receipts are Rx. 585,000.

8949. Comparing with Rx. 167,000 in the other case?—Yes.

8950. (*Chairman.*) What is the amount in the North-West Provinces of the land revenue due to irrigation?—The land revenue due to irrigation is Rx. 118,000, making a total revenue of Rx. 703,000.

8951. (*Sir James Peile.*) Could you give an instance from Madras?—Yes, I will give you Madras directly.

8952. (*Chairman.*) Before you pass to Madras would you give us the working expenses in the North-West Provinces?—They are Rx. 255,000.

8953. And the interest on the Rx. 7,485,000 is———?—Rx. 298,000; it works out to a net revenue of Rx. 150,000 after covering the interest.

8954. (*Mr. Jackson.*) The real cause, therefore, of the deficit in Bengal is the small use made of it?—Yes.

8955. (*Chairman.*) I think this comparison is rather interesting. Perhaps it would be possible for you to enlarge this return that you have given us, and which you have been explaining to us, by giving the figures for the several Provinces, for a year or a couple of years?—Yes, I could give it; it would make it rather bulky if it were given for the four or five years.

8956. It would probably do as a sample if you gave us a couple of years?—A couple of years with an interval between.

8957. Perhaps you would choose your years so as to show the result?—Yes, I will.

8958. (*Mr. Jackson.*) And that would include what Sir James Peile wanted for Madras?—Yes, I can give you the figures for Madras now. The capital charge in Madras is Rx. 6,091,000; the direct receipts are Rx. 30,000; the land revenue due to irrigation Rx. 531,000. I mentioned that the system was different there, that the irrigation revenue was derived chiefly from the share of the land revenue attributed to irrigation. The working expenses there are Rx. 117,000.

8959. (*Chairman.*) And the interest?—The interest Rx. 239,000; the net revenue, 205,000. Madras and the North-West Provinces are the two provinces in which the results are so good that they wipe out the loss in Bengal and elsewhere.

8960. (*Mr. Nauroji.*) Were some of these irrigation works originally old works upon which only a small amount was expended?—Some of them were old works.

8961-2. And the capital, that you are including, only is that which is actually expended by you?—That is so.

8963. Therefore, the interest calculated on that will not be quite fair to revenue as so much interest on the capital?—I believe that it is considered by experts that in most cases the expenditure incurred by Government on such works has been almost as great as if they had been constructed *de novo* by them. There may be some exceptions, but I understand that, as a rule, the existing works have been practically reconstructed.

8964. What I mean to say is, that the revenue is calculated simply upon actual expenditure?—Yes, simply upon the amount expended by the Government of India.

8965. All the previous preparations in olden times are used now, and for them no capital is calculated?—That is so, yes.

8966. (*Mr. Jackson.*) Except in so far that you qualify that statement, as I understand, by stating that, in the opinion of the engineers, the cost of reconstruction has been probably as large as it would have been to have constructed the works in the first instance?—Yes, I believe that to be the case.

8967. (*Mr. Nauroji.*) That is in some cases?—In most of the cases, I think, but there may be some exceptions.

8968. Some of the old canals and irrigation works in the North-Western Provinces have been brought into use and reconstructed, I may say, with the same amount of expenditure as if you had built them anew?—I cannot speak on a matter of that kind from any personal knowledge or with any authority, but I have certainly seen a statement to the effect that most of them have been reconstructed at a cost which brings a fair charge against the capital.

8969. It would be very desirable to know the facts accurately, because I have understood it differently?—I will see if I can obtain any definite information on this point. Some irrigation works, however, certainly were constructed by old Native governments.*

8970. (*Sir Ralph Knox.*) Then they were appreciated in those earlier times to some extent?—They were few in number; and they have been extended and amplified by the British Government.

8971. But still the idea of irrigation was one which was familiar to the people?—In some parts of the country it was.

8972. (*Sir Donald Stewart.*) I think the Western Jumna canal is the only one of any importance?—That, I believe, is the largest of the old works, and upon that our capital expenditure is Rx. 1,408,000, while the net return from that canal is not among the largest.

8973. (*Sir Ralph Knox.*) Where is that?—That is in the Punjab.

* *See* Q. 9645 *et seq.*

8974. (*Mr. Jackson.*) I suppose the old works would be in the main nearer the sources of supply?—Tank irrigation was well known and much used in some parts of India before the advent of the British power. But there were also a few river works.

8975–6. (*Sir James Peile.*) In Madras?—There were some river works in Madras and in the North-Western Provinces too.

8977. (*Chairman.*) Would you tell us in detail of what the direct receipts consist?—They consist chiefly of the occupiers' rates, which furnish Rx. 1,147,514 out of the total for 1894-95. Owners' rates in the Punjab and North-Western Provinces produced a further sum of Rx. 73,550, and Navigation Receipts (mostly in Bengal) Rx. 59,985. The balance is made up of various petty items, such as plantations, supply of water power, supply of water to towns, &c.

8978. Then part of this irrigation system is extension of navigation ways?—Yes. There are some receipts from navigation, especially in Bengal; the receipts in other provinces are small.

8979. At the beginning of your evidence you mentioned, as part of the irrigation works, canals, but I judge from this that the canal portion of these irrigation works is small?—No; the canals are the chief irrigation works.

8980. (*Mr. Jackson.*) But not for the purpose of navigation?—Not chiefly for the purpose of navigation.

8981. (*Chairman.*) I meant for purposes of navigation?—Some of them are used for purposes of navigation, but that is not the chief object of them.

8982. How are the occupiers' rates assessed?—The occupiers' rates are assessed under rules framed by the Provincial Government; the Provincial Government has power to fix the rates which shall be charged for the supply of water.

8983. Is that under Act?—Yes. There are different Acts for the various provinces. It is under an Act (VIII.) of 1873 for Northern India.

8984. And in those provinces you have explained to us that there is a power of enforcing a rate which, as a matter of fact, brings in over Rx. 73,000?—Yes, there is in those provinces a rate upon the owner as well.

8985. Is that looked upon as a sufficient charge? Does it fairly represent the benefit to the owners?—It is intended to do so. The rate is stated to be imposed in respect of the benefit which they derive from such irrigation, but there is a limit to the amount which may be assessed. The Act provides that: "The "owners' rate shall not exceed the sum which, under "the rules for the time being in force for the assess- "ment of land revenue, might be assessed on such "land, on account of the increase in the annual value "or produce thereof caused by the canal irrigation."

8986. Then the revenue officers may assess, as I understand by that, to the full extent of what they consider the benefit conferred upon that land?—Yes, they may, subject to the general rules regarding the assessment of land revenue.

8987. (*Mr. Mowbray.*) Does that owners' rate come under the head of direct receipts, or does it come under land revenue?—It comes under direct receipts.

8988. (*Chairman.*) That is a sum which Mr. Jacob told us is part of the Rx. 73,000. I asked the question because the Rx. 73,000 sounds a small sum?—Yes. That is because, when the land comes under assessment on re-settlement, the owners' rate becomes amalgamated with the land revenue, and forms that portion of the land revenue, which is credited to irrigation. It is provided in the Act that "no owners' rate shall be "chargeable either on the owner or occupier of land "temporarily assessed to pay land revenue at irrigation "rates during the currency of such assessment." So that if the irrigation rates are assessed at the time of settlement, no further owners' rate is applicable.

8989. Could you tell us in the Punjab and North-Western Provinces what the occupiers' rates amount to?—In the Punjab Rx. 489,000 in 1894–5.

8990. And in the North-Western Provinces?—In the North-Western Provinces, Rx. 506,000.

8991. That is Rx. 995,000 against —— ?—1,147,000.

8992. For the whole of India?—For the whole of India, yes.

8993. Therefore the bulk of the occupiers' rates are in the North-Western Provinces?—In the North-Western Provinces and the Punjab; because in Madras the revenue is levied in a different way.

8994. And this Rx. 995,000, charged on the occupiers for the water they buy, compares with a sum, directly charged to the owners, of Rx. 73,600?—Yes, plus the amount of land revenue due to irrigation.

8995. Are any of the irrigation works in India now worked by companies, or are they all the property of the Government?—They are all now the property of the Government.

8996. (*Mr. Naoroji.*) They were first started by companies, were they not?—The only irrigation companies which carried out works in India were the two which I have already mentioned, the East India Irrigation Company and the Madras Irrigation Company. But Government was constructing irrigation works before they were in the field.

8997. Those companies did not succeed in making anything out of them, and they sold them to the Government?—Yes.

8998. Can you give us the figures of the amount paid by Government, and on what principle?—I have already given the figures; they were 1,044,000*l.* for the Orissa works, and 49,000*l.* for the Sone works of the East India Canal Company, and 1,404,000*l.* plus the writing off of a debt of 358,000*l.*, to the Madras Company.

8999. And what was the market value of those works at the time when Government bought them over?—That I cannot say.

8999*a*. It would be worth while knowing what the market value of them was at the time, and what Government paid for them.

9000. (*Sir Ralph Knox.*) They were not yielding any profit at that time?—No.

9000*a*. The market value cannot have been very much.

9001. (*Mr. Naoroji.*) They were not yielding any profit at that time, but what was the price of the shares in the market?—As I said before, I think, various complications had arisen as to the method of carrying out the works, as to the raising of the further capital required for them, and, in the case of the Orissa Canal, also as to the assessment of the revenue, owing partly to the tardiness of the people in making use of the water and partly to the fact that the irrigation revenue and the land revenue are so much mixed up, that it is very difficult for an independent company to levy its rates separately in any way which would be considered fair by the Government.

9002. (*Mr. Jackson*) Was that one of the reasons for purchase?—That was one of the reasons in the case of the Orissa Canal. The papers on the subject were presented to Parliament, and printed as Parliamentary Papers.

9003. (*Chairman.*) You do not know on what principle those sums were assessed as payment to the companies?—Yes, they were really the capital of the companies.

9004. The actual capital expended?—Yes.

9005. And, although the companies were not paying, the Indian Government returned to the companies the whole amount they had expended?—Yes.

9006. (*Sir Donald Stewart.*) Was it the whole amount? are you sure about that?—I am pretty sure it was the whole. It was done under an Act of Parliament in the case of the East India Irrigation Company. Papers were presented to Parliament and the carrying out of the arrangement was effected under the authority of Parliament. In the other case the arrangement appears to have been effected under the terms of the original contract.

9007. But it was a liberal arrangement, was it not, when the companies were not paying, to give them the full amount they had expended?—I do not think so, if what I have already said is borne in mind as to the complications which had arisen, and especially that the arrangement was in part due to the difficulty of separating what was irrigation revenue from what was land revenue.

9008. (*Mr. Jackson.*) That is to say, that there was a condition of things existing under which the companies really could not get what they were entitled to?—Yes.

9009. And therefore the financial result of their operations was no guide necessarily to the value of the property?—That was the case, and, though the property does not now appear to be worth the amount which we

Mr. S. Jacob, C.S.I.

13 May 1896.

Irrigation.

paid for it, it does not follow that that was known and recognised at the time.

9010-1. (*Sir J. Peile.*) But the Government would have been unwilling to let great protective works go to ruin, if the Company had abandoned them?—The fact that the works might be of real value to Government, even though they might not be capable of being profitably worked by the companies, seems to have been recognised in the correspondence regarding the taking over of the Orissa Company. And in the other case I may add that Government had guaranteed 5 per cent. in sterling on the capital, and the conditions were such that, unless they induced the Company to make over the canal, they were bound to pay that 5 per cent. during the whole term of the contract.

9012-3. (*Chairman.*) That made a considerable difference. They were really buying up, in that case, an annuity of 5 per cent.?—Yes, that is what they were doing.

9014. That only referred to one company?—That only referred to one company; I am not sure whether the other was guaranteed.

9015. (*Sir Donald Stewart.*) Is that the Orissa Company?—The Madras Company was guaranteed 5 per cent., I know.

9016. (*Mr. Buchanan.*) The purchase was not merely a commercial one; but it was, to a certain degree, influenced by the administrative difficulties?—Yes, there were various other complications; I do not pretend to have stated all the considerations which induced Government to take over these projects. The correspondence on the subject is very voluminous, and the greater part of it has been printed by order of Parliament, and is available to the Commission as a Parliamentary Paper.*

9017. (*Chairman.*) On the whole, as far as the major works are concerned, though the results vary very much in the different provinces, taking the result in its financial aspect, I suppose you would say that it was a satisfactory result, would you not?—Yes, I consider it a most satisfactory result. I do not think the importance of irrigation to India as a protection from famine can be over-rated, and it is a matter for congratulation that the protection can in so many cases be secured on such favourable terms. At the same time, however, it must be remembered that care is necessary in selecting the works to be carried out; all the works that have been carried out are not equally productive, and the total net result is produced by disproportionately large results in some cases and by bad results in others.

9018. (*Mr. Nauroji.*) Is it true that, by the action of some of these irrigation works, a large extent of land has become sterile and cannot be cultivated any more under what is called Rhea, I think?—I believe that that has been the case in some parts of the country.

9019. Can you give us some information about it, as to what extent that effect has been produced, and which canals have produced it?—No, I have not got that information.

9020. Is it only one canal, or is it more than one?—I really have no accurate information on the point, but I believe it is only in one case that any great inconvenience has resulted.

9021. It would be better to know that accurately, because there are some strong impressions about it?—I will inquire.

9022. (*Sir James Peile.*) That is being remedied by drainage, is it not?—I believe remedial measures have already been adopted.

9023. (*Chairman.*) Would you say from your knowledge, as far as it goes, that the newer works that have been undertaken are equally productive with the older ones?—The older canals are the most productive, but some of the new works are doing remarkably well and produce a large net revenue over and above the interest; and nearly all are improving.

9024. (*Sir Ralph Knox.*) Even those erected at the cost of the Famine Fund?—No. Those are not productive. The principal of them is the Betwa Canal in the North-West Provinces, which is not at present productive.

9025. (*Chairman.*) And it was not undertaken, as a work likely to be productive, I suppose, inasmuch as it is charged to the Famine Fund?—No, it was undertaken purely as a protective work.

9026-7 (*Mr. Jackson.*) Is capital expenditure going on on these irrigation works now?—Yes, we are spending about Rx. 750,000 a year now.

9028-9. That is a good deal less than has been spent in the past?—I think it is rather more, if anything.

9030. I thought your expenditure in 20 years had been about 20 millions?—Yes, but that includes the two large payments to the companies.

9031. (*Chairman.*) The average of 20 years is about Rx. 900,000, I think, is it not?—Yes, but excluding these special payments, it would, I think, be slightly less than 700,000.

9032-3. (*Mr. Mowbray.*) Is there not a capital expenditure in keeping up the works which have been constructed?—No, the maintenance charges are taken entirely against the revenue.

9034. There is no capital expenditure on their account?—No. After a certain period the Government declares that the capital account is closed, and from that period, without special sanction for some new work, nothing is charged to capital.

9035. (*Chairman.*) If you deduct that 3,000,000 from the 18,000,000, it leaves almost exactly 750,000 as the average expenditure over the period?—Yes; but I find I was mistaken in saying the payments to both the companies came within this period of 20 years. Only the payments to the Madras Company came within the last 20 years, and, excluding it, the average yearly charge would be about 800,000. The yearly amounts, however, vary considerably, being as low as 459,000 in one year, and as high as 1,181,000 in another.

9036. (*Sir Ralph Knox.*) Then during this earlier period, during which you do not look for any profit, you do look to the revenue to pay the expenses?—No, not necessarily.

9037. Then against what do you make the charge of the deficit? against the general revenue?—We charge it against the general revenue account of irrigation.

9038. (*Chairman.*) Now let us turn to minor works, which result you told us in a small net charge, I think?—Yes, there is a small net charge on their account as far as our Finance accounts are concerned.

9039. What does it amount to?—Here is a table giving the results for the last five years also, of the minor works.*

9040. Perhaps, as in the case of the major works, you would run through those figures to the Commission?—I ought to explain that the Public Works Department keeps separate capital and revenue accounts of some of these works, and that in their administrative accounts they would show a very different result from that which we show in the Finance and Revenue accounts; but in this statement, of course, I give the results as they are given in the Finance and Revenue accounts.

9041. First of all, before you go through this table, would you explain to us the definition of the minor works?—I think that the only possible definition is that they are works which are not major works.

9042. But, I think, you told us that in certain provinces protective works against inundation came under the head of minor works?—Yes, that is so. Embankments and tanks would always, I suppose, be minor works. But I do not think minor works can be defined as including only certain classes of works. They are charged against revenue, and not against borrowed money; but I may add that, though separate capital and revenue accounts of only some of them are now kept, yet, as regards the future, the Government of India has issued an order lately that no works are to be undertaken, either as minor or major works, unless capital and revenue accounts of them are kept, so that, though they may be charged against the revenue, a separate capital account will be kept for all future minor works.

9043. But the general point is that the minor works are charged against revenue?—Yes.

9044. There is no borrowing for them?—No.

9045. And do they consist of maintenance works, and protective works against inundation, and all works in connexion with undertakings of which the capital account has been closed?—No.

9046. Or are they limited by a certain sum? For instance, if the charge is more than a certain sum is it a major work, if it is less is it a minor?—They generally

* *See* Appendix 25

* This paper was not printed as an Appendix.

are smaller works; minor work does, in some way, describe the character of the work. Any work costing a very large sum is treated as a major work; but I do not know of any fixed money limit as to that.

9047. (*Mr. Jackson.*) Who determines the category?—No work can be brought on the list of major works without the sanction of the Secretary of State.

9048-9. (*Chairman.*) But is there not any general division characteristic of these works? Take a major work; would not that usually be the construction of a new irrigation work, while a minor work would be maintenance and repairs?—Oh, no; the minor works are quite distinct from the major works; there is a very large amount of capital expenditure incurred on the minor works, and charged against revenue.

9050. Then there must be some cost limit; is it not 12 lakhs of rupees?—There are many of the major works which have not cost as much as that. I do not know of any money limit.

9051. (*Sir Donald Stewart.*) The Government of India can authorise a work up to 12 lakhs on their own authority?—Yes, up to 12½ lakhs.

9052. But they cannot exceed that without the sanction of the Secretary of State?—No, that requires the sanction of the Secretary of State; but further no work can be included as a major work without the sanction of the Secretary of State.

9053-4. (*Mr. Jackson.*) Does the initiative rest with the same authority as regards both classes of works?—Yes.

9055. Is the question of whether it be a major or whether it be a minor work, determined after expenditure or before?—Before, I think, as a rule. It is possible that occasionally a work may be transferred from minor works to major works, but as a rule it is begun as a major work from the commencement. The definition of major work, which I gave before, was that they were those of which the expectation was that they must be sufficiently productive to cover the interest charges on the sums spent on their construction; and also the works classed as famine protective, which are constructed not from borrowed funds but out of the annual grant from revenue for famine relief and insurance. Any works coming under those categories would be charged as major works.

9056. It is very much like an auditor determining as to whether an expenditure was capital expenditure or a revenue charge, is it not? Your major works are all done out of capital; your minor works are all done out of revenue, I understand?—Yes, except that some of the major works are charged against famine relief and insurance.

9057. (*Sir James Peile.*) Would you name a few specimens of minor works; perhaps that would illustrate it?—In Bombay there is the Sukkur Canal, the Gokak Canal, the Great Marak Canal, the Fuleli Canal, and a number of tanks. Of course the minor works consist largely of tanks, but there are canals included among them.

9058. (*Chairman.*) The major works cost about Rx. 750,000, do they not?—We spend about that amount of capital on them, yearly.

9059. Of which, I think, you have told us that the sum which is appropriated out of revenue to irrigation works is Rx. 50,000 or Rx. 60,000?—About that.

9060. Therefore you may say that the Rx. 50,000 or Rx. 60,000 comes out of revenue, and the Rx. 700,000 out of capital?—That is for major works, but besides that there is capital expenditure on minor works.

9060*a*. Quite so; I was only alluding to the question put by Mr. Jackson, whether the whole Rx. 750,000 was borrowed capital?—The amount spent each year is not fixed; but I think the capital expenditure not charged against revenue may be taken at about Rx. 750,000 a year at present.

9061. (*Sir Ralph Knox.*) But the capital expenditure for minor works is charged against revenue?—Yes.

9062. (*Chairman.*) But surely there must be some general definition of what you call a minor work. I do not quite follow you with regard to that. Do I understand that all maintenance is charged as a minor work?—No, maintenance of a major work is charged against revenue.

9063. From that time it becomes a minor work?—No, it is charged against the revenue account of the major work

9064. Each work has a capital and revenue account?—Each major work has a capital and revenue account, and certain of the minor works have.

9065-6. When you say the Rx. 750,000, of which you have spoken, is appropriated for major works, does that include the maintenance of these major works?—No; that is the charge for capital construction only.

9067. Then there is only an arbitrary division between major and minor works; founded, I suppose, on this principle, that there is no necessity for charging a small work to borrowed money?—Yes.

9068. And they say if this is a small work it can be done out of revenue?—Yes.

9069. But if I understood Sir Donald Stewart, he seemed to think that.

(*Sir Donald Stewart.*) Twelve lakhs is the limit which requires the sanction of the Secretary of State, or 12½ lakhs—something about that.

9069*a*. Then a work that costs less than 12 lakhs——

(*Sir Donald Stewart.*) Can be authorised by the Government of India without reference?

9070. (*Chairman.*) And may be regarded as a minor work?—I am not aware of any fixed money limit. I know that no work may be charged as a major work without the sanction of the Secretary of State.

9071. You keep the distinction of major and minor work, but it becomes a matter of convenience which the Government of India settles according to its revenue. If it is poor it charges expenditure to major works, and it is paid for out of borrowed capital; if it is rich the expenditure is charged to minor works?—I do not think that would be correct.

9072. If there is no definition, and no distinction between them, surely it comes to that?—Any large work which would produce four per cent. within 10 years would be undertaken as a major work.

9073. My puzzle rather is to understand what you mean by a large work?—Possibly there may be some definition; but I have not been able to find it. I will send for a copy of the Public Works Account Code, and read later on what is said about them there.

9074. (*Mr. Jackson.*) May I ask this question for the purpose of clearing this matter up: in the amount of revenue that you gave us and the amount of annual expenditure for these major works, would there be included the cost of maintenance?—Yes, in the working expenses.

9075. (*Chairman.*) Now, we will take your return of minor works?—The total irrigation revenue from minor works in 1892-93 was Rx. 186,000; the expenditure, 1,008,000, net charge, 822,000; in 1893-94, revenue, 200,000, expenditure, 908,000, net charge, 708,000; 1894-95, revenue, 192,000, expenditure, 959,000, net charge, 767,000; 1895-96, revised estimated, revenue, 204,000, expenditure, 1,000,000, net charge, 796,000; the budget of 1896-97, revenue, 210,000, expenditure, 1,129,000, net charge, 919,000.

9076. Therefore, as far as the minor works are concerned, they are altogether unproductive; we might say the receipts from them amount to about one-fifth of the expenditure, and the deficit upon them is a growing one?—That is the case, looking, as I said, to the revenue which we bring to account annually in the Finance and Revenue accounts; but it will be noticed that, in the statements which I have put in, I have shown separately the revenue from the works of which capital and revenue accounts are kept and from other works. The public works administrative accounts in respect of the minor works, of which capital and revenue accounts are kept, take credit for further revenue, namely, the land revenue due to irrigation; and those accounts give the gross revenue for those works as Rx. 560,866 against an expenditure of Rx. 228,781, and show that they produce a good net revenue.

9077. Then what is the distinction between works, of which capital and revenue accounts are kept, and other works?—I do not think there is any distinction in kind as regards them; and I stated just now that the Government of India had decided that, in future, capital and revenue accounts should be kept of all minor works.

9078. Then in reality there is no distinction to be made; they all belong to the same head of minor works, and they must come under that financial category?—No, I think we can draw a distinction between them. If we treated these minor works, of which capital and

Mr. S. Jacob, C.S.I.

13 May 1896.

Irrigation.

revenue accounts are kept, in the same way as we treat the major works, we should show that they produced a large revenue. Whether the others produce a revenue or not I cannot say, because we do not keep a capital and revenue account; they may produce a revenue, and I think it probable that they do.

9079. You say as regards these works, which show a very heavy deficit, that, if their accounts were kept in the same way as the major works, they would show a very different result?—Yes; for instance, the Public Works Department shows the result of these minor works, of which capital and revenue accounts are kept, for 1893-94 as follows:—Direct receipts 157,000, land revenue due to irrigation 404,000, total revenue 561,000, working expenses 229,000; net receipts 332,000.

9080. (*Sir Ralph Knox.*) Do you mean then, that, if you kept a separate capital account for these minor works, and debited them with interest and so forth, just as you do the others, then you would show a net gain in the shape of revenue?—Yes.

9081. You now charge all the capital charges against your revenue for the year?—Yes.

9082. And it is that which throws them into deficit?—Partly that, and partly the fact that we do not credit to them the land revenue due to irrigation. This 332,000 which I have shown as the net receipts for 1893-94, as against a capital expenditure of 4,821,615, gives a net return of 6·89 per cent. on the capital outlay.

9083. (*Chairman.*) Yes; I see that the expenditure includes capital expenditure?—Yes.

9084. It is a capital expenditure?—Yes; and the receipts do not include the whole of the revenue which is due to irrigation. We do not think it worth while, in the case of the minor works, to make the transfer in our Finance and Revenue accounts.

9085. Then it is very necessary that you should bring out the distinction between these two classes of works, namely, that the expenditure on the major works is provided out of borrowed capital; on the minor works it is provided out of revenue?—Yes.

9086. Therefore one cannot expect, so long as these works are going on, that the receipts will balance the expenditure?—No, and, even apart from that, you cannot get at the true net result, inasmuch as we do not credit to them the amount of land revenue which is really due to irrigation.

9087. And, as I understand you, that is going to be done, is it?—Separate capital and revenue accounts are to be kept for all future works; and as regards some of these works this is already done.

9088. (*Mr. Mowbray.*) You will credit them with the land revenue which arises from them?—Not in the Finance and Revenue accounts; but in the Public Works accounts.

9089. (*Sir Ralph Knox.*) This land revenue is a calculated sum?—Yes. I may say that the figures for 1893-4 were rather higher than usual, but for 1892-93 and 1891-92 the results produced respectively 6.48 per cent. and 3.02 per cent.

9090. (*Chairman.*) Can you give us an instance of one of these "other works," which apparently show a heavy deficit?—You mean of those for which capital and revenue accounts are kept.

9091. No; one of the "other works"?—There is the Fuleli Canal, in Bombay.

9092. I should like to see a sample of the expenditure in any one year upon one of these "other works"?—The expenditure I can give; I have that.

9093. And the revenue with which, at all events, you have credited it?—Yes, the Fuleli Canal; we show as direct receipts in 1893-4 Rx. 3,326, and as expenditure Rx. 17,168.

9094. But that is the total expenditure on the work?—Yes.

9095. Rx. 17,168 includes not only working expenses but capital expenditure?—That is the whole of the expenditure; it includes Rx. 4,537 for Capital and Rx. 12,631 on Revenue Account.

9096. Therefore that has been worked at a dead loss unless you could show that the land revenue has improved?—Yes; and, in the Public Works Accounts they show that work as producing a net revenue of over Rx. 17,000.

9097. The difference of Rx. 14,000 being in the land revenue?—The difference is in the land revenue due to irrigation, but it is greater than Rx. 14,000, because the Rx. 17,000 is the net revenue after paying all expenses.

9098. But what I want to see is any one of these minor works, which have been constructed out of revenue; I suppose the cost of construction is included? Now, take 1892-3, the expenditure was 694,000?—Yes, that is the figure for the works of which capital accounts are not kept; it includes the capital expenditure on those works.

9099. I want to understand the difference between these minor works of which no capital account is kept, and those minor works on which you show a profit, namely, those of which capital accounts are kept; in the latter case the capital expenditure is carried to capital?—It is shown separately from the charges against the Revenue Account.

9100. Whereas in the former case, as I understand, the whole expenditure, whether for construction or maintenance, is charged as expenditure?—Yes, the capital expenditure is not distinguished in these cases.

9101-3. Therefore, if you make out a capital account for these other works under the head of "other works"—that Rx. 694,000, for instance, in 1892-93—the net return would be very much diminished, inasmuch as a large portion of the expenditure had been carried to capital?—We charge all the capital for the minor works against Revenue, but, where separate capital accounts are kept, the Public Works Department show the net return apart from the capital expenditure. For instance, in the case I have just quoted of the Fuleli Canal, the Public Works Department do not charge the capital expenditure against the revenue.

9104. Do they not? Is not that one of these "other works" in which capital expenditure would be charged against revenue?—Yes, in our accounts we charge the capital against revenue, but in the Public Works Department they would simply take the revenue receipts and deduct the working expenses.

9105. Then ought you not in your account to separate those "other works," of which no capital account is kept, from the minor works in which a capital account is kept?—We do separate them in the detailed accounts.

9106. That does not appear in this abbreviated account which you have given in?—I think it does.

9017. You have separated them, but you do not show the essentially different character of the two accounts, namely, that those works for which capital and revenue accounts are kept do not include the capital expenditure year by year, whereas in the case of the other works they do?—In both cases the capital charge is included, but in the case of one set of works the capital expenditure is shown separately from the working expenses, and I have shown them accordingly in the table I have put in.

9108. Yes, but, as I understand the matter, in these "other works," if there is any capital expenditure on construction during the year, that expenditure would appear in the 694,000?—Yes.

9109. Whereas, when it comes to the expenditure on works of which capital and revenue accounts are kept, you separate them?—I have shown the capital and working expenses separately in the one case, and the whole expenditure in the other.

9110. Therefore, when you come to look whether it is a paying work or not, you say the receipts in 1892-93 were 131,000, the working expenses were 206,000?—Yes.

9111. But the revenue does not include any allowance for land revenue accruing?—It does not.

9112. Therefore, in all probability, if you could add the land revenue, that account would show a surplus?—Yes.

9113. Because you have separated the capital expenditure?—Yes.

9114. In the "other works" the capital is not separated, therefore it is quite impossible to tell whether the work, taken as a business affair, is paying or not?—Yes; I cannot say definitely; as a matter of fact the administrative accounts show that certain of these other works do pay.

9115. But would it not be better to separate these "other works," and not bring them into the same

total? You bring them into the general total of 185,000 and 1,008,000, but, as they are on a different principle, it would be better to state first of all the works of which capital and revenue accounts are kept, and next those of which none are kept?—That is what I intended to do in the account I submitted. I can, however, give a separate total for the two classes, if desired.

9116. May I suggest to you that in putting in this table you might separate them?—I can give a separate total for each class.

9117. Do not bring works in which the capital is separated and works in which capital is not separated into the same total?—I brought them to a total, in order to show that I was giving the amounts which were shown in the accounts.

9118. (*Mr. Jackson.*) Could you not add the totals together, rather than bring out only the one total?—Yes.

9119. May I ask just one question which I omitted before; are these irrigation works used at all by the municipalities?—In one or two cases water is supplied to towns by the irrigation works.

9120. The revenue from that would come in your direct receipts?—Yes; I stated that water supplied to towns was one of the sources of receipt. I can give the amount that is recovered in that way. The total amount recovered in 1894-95 is only 10,655, of which 9,490 is recovered from one single work, and probably, I suppose, from one single town.

9121. Then really they are not used, say, by the municipalities of such places as Calcutta and Madras?—No, they have their own waterworks, which do not come under this head at all.

9122. (*Chairman.*) Have you now procured the clause in the Indian Public Works Code which distinguishes minor from major works?—I have the clause in the Public Works Code, which runs as follows:—"Irriga- "tion and navigation works (not classed as productive "or protective), and agricultural works which are "undertaken for the general improvement of the "country, or for general administrative purposes, and "are paid for out of ordinary revenues, are classed under "the head 'Minor Works and Navigation.'"

9123. And, therefore, no distinction is there drawn by which the difference between the works is measured by a sum of money?—No.

9124. One question more: Do you not think that the mixing up of these minor works, which you class as "other works," and in which you do not distinguish between capital and ordinary expenditure, with the major works shows the results of the irrigation policy financially in rather an unfavourable light? and would it not be a desirable thing to separate entirely from the ordinary irrigation account those works for which a capital and revenue account is not kept?—Certainly, if it is not understood that the expenditure on minor works includes capital expenditure, it would give a very misleading idea of the results of the irrigation revenue. I do not myself see any objection to showing the results of those "other works" separately in the accounts from the results of the works of which capital and revenue accounts are kept.

9125. I think ordinary people are extremely likely to misunderstand the results as shown. Until I came down here and had the benefit of hearing your explanation of the point, I confess I was entirely puzzled as to how it was that those minor works produced such an unfavourable result: it seemed that there was an absolute loss upon the whole of the policy, though it was evident that upon the major works there was an actual gain?—Yes; I do not see any objection myself to separating them.

9126. (*Sir William Wedderburn.*) I should like to ask a few questions about the credit to irrigation works of part of the land revenue. I think there has been a considerable controversy in India, with regard to different Bills, as to how far it is justifiable to charge an irrigation rate upon land upon the ground that it is protected by an irrigation work, and that the people can get water from that irrigation work if they choose?—There has been such discussion, certainly.

9127. Are you able to tell me, or could you obtain for me, the rules which apply to the different provinces with regard to the charge of an irrigation rate in that way?—I am not sure that the rules are available here; I have already made inquiries as to whether they can be obtained, and, if they can, I will put them in.

9128. What I should like to know is in what way it is decided whether the water is really available for land, in order to increase its value?—In the Northern India Canals and Drainage Act, the only two rates which are recognised are the occupiers' rate and the owners' rate. As regards the occupiers' rate, I have not been able to refer to the rules, but it seems to be implied in the Act that the rate is only leviable where the water is actually supplied. The rule is that, "in the absence of a written contract, or so "far as a written contract does not extend, every "supply of canal water shall be deemed to be given "at the rates, and subject to the conditions prescribed "by the rules to be made by the Local Government "in respect thereof," so that, so far as the occupier is concerned, there seems to be no rate leviable except for the actual supply of water. The owners' rate in Northern India is a rate which may be imposed on the owners of canal-irrigated lands in respect of the benefit which they derive from such irrigation. That rate is actually assessed both in the North-Western Provinces and in the Punjab upon the owners of irrigable land.

9129. Upon the ground that the value of the land is increased by the existence of the tank of water there, even if they are not using it?—In the North-Western Provinces and the Punjab it refers only to canals. Tank works are not treated as irrigation works there.

9130. The reason that I ask the question is because it is very much to the interest of the Irrigation Department to show that their works pay; and, therefore, it is a temptation to them to charge that irrigation rate wherever they can; and what I should like to know is, how far distribution canals are made, and the water brought to the man's door, before any claim is made against him on account of the advantage of that irrigation work?—I will endeavour to get the rules in force in the various provinces, if they can be obtained here, and perhaps you will put the question to me at another meeting of the Commission. All I can say at present is that, as far as I can judge from the Northern India Act, an irrigation rate is assessed, apart from the actual supply of water, only upon the owner, and it is assessed by the revenue officers, and not by the irrigation officers.

9131. Then, what I should like to know, roughly, would be what portion of the revenue comes from actual water supplied, and what portion from this claim on the ground that the people might get the use of the water if they wished it?—I have already given the amount which is levied as occupiers' rate, and the amount which is levied as owners' rate.

9132. But you would be able, perhaps, after looking at those rules, to explain a little more exactly how far that objection might prevail?—I will ascertain whether a rate can anywhere be levied in any other way besides those that I have explained.

9133. (*Sir James Peile.*) The owners' rate, I presume, is levied with reference to the increased rent, which he would take from the tenant in consequence of the increase in the value of the land from irrigation?—That is so.

9134. (*Sir William Wedderburn.*) But I understand that, even if the irrigation is not made use of, there is still a claim made by Government?—I am not aware of any such claim. I believe that the owners' rate is the only rate which is leviable otherwise than for the actual supply of the water.

9135. Yes, I quite see that, if the water is actually brought to the man's field, there is a reason for claiming a certain additional value to his land, even if he does not use it, because if the rain fails he is able to make use of it?—That may be so; but in Northern India there is no such rate.

9136. But I have heard complaints that a large tract of country is claimed to be protected by an irrigation work, although there did not exist those distribution channels which are necessary for the ryots really to use it?—I am not well acquainted with the system in Madras and Bombay, and I cannot speak with assurance as to the manner in which the revenue is levied there; but I will see if I can find out the rules that apply in those cases too.

9137. Thank you. My only object in asking is to test whether the amount claimed for irrigation revenue can really be said to be properly earned by the

Mr. S. Jacob, C.S.I.

13 May 1896.

General Administration.

expenditure upon those irrigation works?—I will see if I can find out.

9138. (*Sir Ralph Knox.*) In a case where there is a permanent settlement of the land, what expectation or hope is there of getting any recompment from the landowner on account of the irrigation works expenditure?—I am very glad you have asked me that question, because I now find that the provisions of Act VIII. of 1873 necessitate a modification of what I said before as regards the permanent settlement. In the North-Western Provinces the law provides that this owners' rate may be assessed on permanently settled land, and, for the purpose of this section only, it says, "the land which is permanently settled or held free "of revenue shall be held as though it were temporarily "settled and liable to payment of revenue."

9139. (*Sir James Peile.*) That would not apply to Bengal?—No, this Act does not apply to Bengal.

9140. (*Sir Ralph Knox.*) But Bengal includes a large portion of the permanent settlement?—The largest portion, yes.

9141. Then in the case of Bengal there would be no great prospect of recovery?—What I meant was that, as far as principle is concerned, the Government of India have affirmed the principle that permanently assessed land may be charged with an owners' rate for irrigation.

9142. Then you think that could be extended to the Bengal districts?—I am not sure about that; but, as far as I know, the conditions of the permanently settled land in the North-Western Provinces are the same as in Bengal.

9143. (*Chairman.*) I think now, Mr. Jacob, that we will pass on to the memorandum, which was given by Sir Henry Waterfield and yourself, which deals with various heads of administration. We have already considered the special budget of Law and Justice, Police and Marine, and we have to consider that item which, I believe, includes several offices, viz., "General Administration." There is also the Education charge, Ecclesiastical charge, the Medical, the Political, and the Scientific and other Minor Departments. Those headings will, I think, cover nearly all the administrative departments of the Government of India, apart from those which we have already considered?—Yes, except those departments which are more immediately concerned with the collection of the revenue, and which are shown under the heads of demands upon the principal heads of revenue.

9144. Quite so, but they naturally form a branch of the question apart?—Yes. The Land Revenue head is as much a branch of administration as a collecting head, I think; but, as regards the others, they are purely collecting departments.

9145. Now taking these departments in order. The first heading is "General Administration." That heading, I think, comprises several offices, does it not?—Yes.

9146–52. Would you tell us what they are?—It includes the salaries of the heads of the Government—the Governor-General, the Governors, and Lieutenant Governors, and the Chief Commissioners in the various provinces; it also includes their staff and household charges, and any charges for Executive and Legislative councils; all the Secretariat charges both of the Government of India and of the various Provincial Governments; also the charges for the Boards of Revenue, Financial Commissioners, Commissioners of Divisions, Inspectors General of Stamps, Registration and Excise (where those appointments are held by a single officer), and the salaries and charges of the Accounts Department, the allowances to Presidency Banks, and the general establishments of Local Funds.

9153. What officers are the Commissioners of Divisions?—They are officers in administrative charge generally of five or six districts; they exercise a general supervision over the work of the collectors who are the heads of the district administration.

9154. Well now, as to the establishment; the cost of general administration was in 1875-76 Rx. 1,464,000; in 1893-94, Rx. 1,957,000; and in the Budget of 1895-96, Rx. 2,032,000. Can you break up that sum? Will you take the Budget of 1895-96, and divide it under the chief different heads, which make up the total?—Yes, I have a classified statement for 1875-76, 1884-85, 1893-94, 1894-95 (Revised), and 1895-96 (Budget), under the various heads.

9155. Will you give the divisions for 1875-76, and for the last Budget that you have?—For 1875-76 the charges are Governor-General, Rx. 25,000; Governors, 25,000; Lieutenant-Governors, 29,000; Chief Commissioners, 20,000; the Commissioner in Scinde, 11,000 (he is generally classed with Chief Commissioners); the staff and household of the Governor-General and Governors, 71,000; the Durbar fund, 12,000.

9156. Up to that point it would comprise the establishment of Governors, would it not?—Yes.

9157–8. And that comes out to about Rx. 193,000, does it not?—Yes, Rx. 193,000. The corresponding charges in the Budget of 1895–96 are: Governor-General, 26,000; Governors, 25,000; Lieutenant-Governors, 30,000; Chief Commissioners, 19,000; Commissioner in Scinde, 12,000; staff and household, 81,000; Durbar fund, 16,000.

9159. Making in all Rx. 209,000?—Yes.

9160. That would be chapter one of this Account?—Yes.

9161. Now will you go on?—The Executive Councils in 1875-76, Rx. 70,000, and the Legislative Councils, Rx. 23,000; that is all the Council charges.

9162. That comes to Rx. 93,000?—Yes.

9163. Now, in 1895-96?—In 1895-96, Executive Councils, Rx. 68,000; Legislative Councils, Rx. 29,000.

9164–5. Amounting to Rx. 97,000?—Yes.

9166. (*Mr. Buchanan.*) The expenditure on executive councils has gone down?—Yes, it has gone down.

9167. Has there been any change in the number?—No; there has been a slight change in the pay.

9168. (*Chairman.*) Now we come to the Secretariat?—Secretariats, Military, in 1875-76, Rx 53,000; Public Works, Rx. 36,000; Civil, Rx. 255,000; and tour charges (I think they may be taken with the Secretariats, as they consist in part of the charges of the Secretariats, though they include also the charges of Governors, &c., when on tour), Rx. 48,000.

9169. What does the Civil Secretariat consist of; does that comprise the Finance Secretary?—In the case of the Government of India it includes the various branches—Foreign, Finance, Revenue and Agriculture, and Home; I think those are all the civil secretaries. Then each Provincial Government has a certain number of Civil Secretaries; sometimes they are distinguished by departments, but generally they are called Chief Secretary, or Joint Secretary, or Junior Secretary, or by various names of that kind.

9170. Now, in 1895-96?—In 1895-96, the Military Secretariat, Rx. 50,000; Public Works, Rx. 33,000; Civil, Rx. 374,000; and tour charges, Rx. 24,000.

9171. I make those come to Rx. 392,000 in 1875-76, and Rx. 482,000 in 1895-96?—That is correct.

(*Sir Ralph Knox.*) An increase of 30 per cent.?—About 23 per cent.

9172. (*Mr. Buchanan.*) And the whole increase is caused by the charge for the Civil Secretariat having gone up?—Yes.

9173. Is there any special reason for that? The others have decreased, apparently—the Public Works, for instance?—There have been large increases in several of the Civil Secretariats.

9174. Has any new department been created?—I can give the details.

9175. I mean, is it due to increase of pay, or is it due to the creation of any new department?—It is chiefly due to increase of staff; as far as any change has been made in the pay of Secretaries, it has been generally in the way of a decrease, but there have been increases of staff, both in the Government of India and in the local Secretariats. Deputy Secretaries have been added in three of the Secretariats of the Government of India, viz., the Foreign, Financial, and Home Departments. The Foreign Department Staff has also been increased by an Assistant Secretary. And a post of officer in charge of records has been created.

9176. Would the annexation of Burma account for a part?—Yes, that accounts for a large increase; the Burma secretariat in 1875-76 cost Rx. 8,000, and in 1895-96, Rx. 28,000.

9177. And do the other extensions of the frontier—I mean Baluchistan and elsewhere—at all affect it?—That, taken with increases of work in other directions,

has necessitated the increased staff of the Foreign Department Secretariat of the Government of India, the cost of which has increased from Rx. 28,000, in 1875–76, to Rx. 41,000 in the Budget of 1895–96.

9178. (*Chairman.*) Now what would be the next chapter?—The next chapter would be the Boards of Revenue and Financial Commissioners, the Inspectors-General of Stamps, Registration, and Excise, and the Commissioners. I think those three might be taken together. In some provinces there are Financial Commissioners, in some Boards of Revenue, and in some both a Board of Revenue and Commissioners. The Boards of Revenue and Financial Commissioners in 1875–76 cost 79,000; the Inspectors-General of Stamps, Registration, and Excise were in that year not brought to account under this head; and Commissioners cost 209,000.

9179. What are those Commissioners?—They are the Commissioners of Divisions; they are generally called Commissioners of Revenue; they form one of the stages intervening between the Government and the district officer.

9180. But you have got a Board of Revenue at the beginning?—Yes. In Bengal and the North-Western Provinces they have both a Board of Revenue and Commissioners. They are very large provinces, and have officers of both these classes. The Lieutenant-Governors have no Executive Councils and it is necessary to relieve them of much of the detail of the Revenue Administration. In Bombay there are only Commissioners, and in Madras there is only a Board; the number of districts is much smaller in Madras and Bombay, and the Governors are aided by Executive Councils.

9181. You mentioned Financial Commissioner?—Yes, he does not exist in the provinces in which there is a Board of Revenue; but in some of the smaller provinces instead of having a Board of Revenue they have what are called Financial Commissioners.

9182. And is he included in the Rx. 79,000?—Yes.

9183. Therefore in 1875–76 there were two headings to that chapter, Rx. 79,000 and Rx. 209,000?—Yes.

9184. Now, will you give us 1895–96?—For 1895–96 the Boards of Revenue and Financial Commissioners cost Rx. 107,000; Inspectors General of stamps, registration, and excise, Rx. 25,000; and Commissioners, Rx. 245,000. Then, under the Accounts Department we might include the payments to the Presidency Banks. The Civil Account and Audit Department cost, in 1875–76, Rx. 163,000; the Public Works Account and Audit, Rx. 15,000; the Paper Currency Department, Rx. 23,000; Reserve Treasury, nil; and Presidency Banks, Rx. 33,000. In 1895–96, the Civil Account and Audit cost Rx. 217,000; the Public Works Account and Audit, Rx. 27,000; Paper Currency, Rx. 28,000; Reserve Treasury, Rx. 1,000; and Presidency Banks, Rx. 30,000.

9185. Is there another chapter?—Yes. There is the Local Funds General Establishments. They were not brought to account under this head in 1875–76, and it is impossible to ascertain what they amounted to. They seem to have been scattered over various heads; now they are brought together under this head, and cost in 1895–96, Rx. 101,000.

9186. Does that complete it?—There are a few miscellaneous charges of which I have not been able to find the nature; they come to Rx. 5,000 in 1875–76 and Rx. 2,000 in 1895–96.

9187. But those charges, which you have enumerated, make up in 1875–76, Rx. 1,210,000, do they not?—Yes; those are the charges in India; the charges in England amounted to 233,000*l.*

9188–9. What do you make the charges in India for 1895–96, Rx. 1,467,000?—Rx. 1,571,000. You probably have not taken the Rx. 101,000 for Local Funds.

9190. Then come charges in England?—Yes.

9191. Do they include the India Office?—Yes. The charges in England include the expenses of the India Office, the Auditor and his assistants, the payments to the Bank of England and Bank of Ireland for the management of debt, law charges, passage and outfit allowance of the Governor of Bombay, and the cost of currency-note forms. All the other charges, I think, may be taken as contingencies of the India Office.

9192. And what do they amount to?—The total charge in 1875–76 was 233,000*l.* altogether in England, and in 1895–96, 252,000*l.*

9193. That would make up these totals?—With the exchange added in.

9194. I mean the totals of Rx. 1,464,000 in 1875–76, and Rx. 2,032,000 in the Budget of 1895–96?—Yes.

9195. (*Mr. Buchanan.*) That increase from 1,464,000 to 2,032,000 was largely in the Revenue and Finance Departments, and the accounts of the Secretariat, was it not?—Yes; in the Secretariats and the Boards of Revenue and Commissioners.

9196. (*Chairman.*) What are the payments made to the Presidency Banks?—They are the payments made for the work which those Banks do for Government at the presidency towns; the Presidency Banks conduct the whole of the treasury work of the Government at Calcutta, Madras, and Bombay; they also manage the Public Debt, and they have till now had small branches of the Savings Bank under them.

9197. I see there has been a decrease there in the 20 years, has there not, from Rx. 33,000 to 30,000?—Yes.

9198. What is that due to, because at the same time there has been an increase in the Government work also, I suppose?—We have considerably reduced the rates of remuneration to the Presidency Banks in that time. The rate which we pay now is paid under a contract which was entered into in 1886, under which we reduced the charges formerly paid. We now pay the Bank of Bengal 43,600 rupees for its general treasury work; we pay a commission at the rate of 2,000 rupees per crore per annum on the amount of the public debt, deducting certain amounts, such as currency investments and amounts of loans discharged, and we pay for the Savings Bank work a fixed sum of 14,300 rupees; to the other banks we pay smaller sums.

9199. Then there is an item called the Reserve Treasury, what is that?—That is the charge for the treasury in which we keep the surplus amounts which we do not leave with the Presidency Banks.

9200. What is the object of that separation?—Our balances at the Presidency Towns are sometimes very large, and it was mentioned in previous evidence that difficulties were experienced on one occasion in calling in a large balance from one of the Presidency Banks; we were obliged to establish a reserve treasury in order to get over that difficulty.

9201. Then the last item you gave was Local Funds General Establishment; what is that?—That is the general establishment of Local Funds, which cannot be assigned to any particular department—the general establishment for the working of incorporated Local Funds.

9202. I do not know whether I quite understand with what object it is established?—It includes chiefly the office charges of Local Funds. Local Funds are sometimes constituted for some particular purpose, roads or education, or medical, but others are for general purposes, and you cannot assign their general charges of establishment to any particular head, such as Public Works, Education, or Medical; the general management charges of those funds are brought to account under this head.

9203. A question has been asked about the increase under certain heads; but can you give us rather more in detail the items of expenditure on which increase has taken place? I do not know whether you would like to take 1893–94, being the last in which the accounts are complete?—I have now the accounts for 1894–95, but at the time I was making out my memorandum I had only the accounts for 1893–94.

9204. Which year will you take?—I do not think there is any very great difference between 1893–94 and 1894–95. Perhaps, as I have taken the figures out for 1893–94, you would take that.

9205. Perhaps you will take that year?—The increased charge for the Civil Secretariats, between 1875–76 and 1893–94, is Rx. 109,000; for the general establishment of Local Funds the increase is Rx. 95,000, that is the whole charge in 1893–94; for the reason explained above, I am not sure whether any of the miscellaneous charges, which I have not been able to classify, are local funds charges; I think probably they are. Then civil Account and Audit have increased by Rx. 45,000; Commissioners and their establishment by Rx. 28,000; the Inspectors General of Stamps, Registration, and Excise—their charge is, as far as this head is concerned, entirely a new one—Rx. 23,000; the Boards of Revenue and Financial Commissioners, Rx. 24,000. There has been a small net reduction in the other heads, of about Rx. 11,000.

Mr. S. Jacob, C.S.I.

13 May 1896.

General Administration.

9206. Now, taking that first item of 108,000, can you divide that between the two first chapters, or three first chapters that we took; namely, the Governors and their staffs, the Executive and Legislative Councils and Secretariat?—The increase of 109,000 is entirely in the Secretariat charges.

9207. Entirely?—Yes; entirely.

9208. In comparing the accounts of 1875–76 with those of 1895–96, if you remember, there was a certain increase on both the other chapters?—Yes, there is a small increase in them.

9209. But nothing worth calling attention to?—No.

9210. How come the Executive Councils to have decreased?—The decrease is in the salaries of the Governor-General's Council. The salary of all the members used to be 6,666 rupees a month; the members belonging to the Indian Civil Service paid 4 per cent. upon that as contribution for Annuity, which reduced their pay to Rx. 6,400. The Secretary of State a few years ago decided that the pay of all the members should be Rx. 6,400.

9211. (*Sir Ralph Knox.*) When was that, do you remember?—It was somewhere about 1880, I think.

9212. (*Mr. Mowbray.*) Might I ask what are the expenses of the Legislative Council?—The expenses of the Legislative Council consist chiefly of the charges of the Legislative Secretariats and the allowances made to additional, official and non-official, members of Council. The amount paid to the non-official members is trifling; it consists mainly of allowances to cover travelling expenses and a temporary change of residence. But official additional members receive a special allowance for having to attend at the Presidency towns when they are appointed to the Legislative Council.

9213. I understand that there are no salaries, but there are allowances?—Yes. The rule as regards an official, additional member of the Governor-General's Council is that he is considered as acting in an appointment about equivalent to that of a Secretary to Government; he gets an acting allowance calculated on a pay of 4,166 rupees, subject to certain special restrictions.

9214. And there are four Legislative Councils, are there not?—There are now five; the North-Western Provinces also now have a Legislative Council, but the bulk of the charges occur in the Governor-General's Council. There is very little expense in the other Legislative Councils.

9215–6. (*Chairman.*) Then I think you have already told us, in answer to Mr. Buchanan, the chief heads of the increase to the Secretariat, have you not?—I mentioned some of them. The increase in the Government of India Secretariats is from Rx. 93,000 in 1875–76 to 133,000 in 1893–94. That is an increase of 40,000. But almost all the Secretariats have increased. The Central Provinces from 8,000 to 13,000; Burma from 8,000 to 27,000; Assam, from 7,000 to 10,000; Bengal, from 35,000 to 55,000; North-Western Provinces and Oudh, a very small increase, from 30,000 to 31,000; Punjab, from 15,000 to 23,000; Madras, from 26,000 to 31,000; and Bombay, from 32,000 to 39,000.

9217. Is that chiefly due to increase of force, or is it consequent on the increase of pay?—It is almost entirely due to increased force; I cannot find any instance of the pay of a Secretariat officer having been increased save where a corresponding decrease has been made in some other pay. Of course I refer only to salaries; the pay of establishments has in some cases been increased.

9218–9. Is any allowance made here for remittances home?—The exchange compensation allowance is included in 1893–94.

9219*a*. And that, so far, you might look upon in the light of an increased allowance?—Yes, that would increase the charge, to a certain extent.

9220. What would that be in the Secretariat, do you know?—For the whole of this head it was in 1893–94, Rx. 78,000.

9221. That is General Administration?—For the whole of the head of General Administration.

9222. I suppose a large portion of that would belong to the Secretariat, would it not?—The charge for the Secretariats appears to be about Rx. 12,000 or Rx. 13,000.

9223. Then taking the Boards of Revenue; they show a very considerable increase; from Rx. 288,000 to 377,000?—That is Boards of Revenue and Financial Commissioners and Commissioners, &c., taken together.

9224. Yes?—A large part of that is due to the creation of a Financial Commissioner for Burma, owing to the addition of Upper Burma; the cost of the Financial Commissioner in Burma is Rx. 9,000.

9225. Well, the total increase is pretty near Rx. 90,000?—Under Boards of Revenue and Financial Commissioners?

9226. 288,000 against 377,000?—That is for the whole of the head taken together, including the Commissioners. I am taking, first of all, the Boards of Revenue and Financial Commissioners, which increased from Rx. 79,000 to 107,000; that is an increase of 28,000, of which 4,000 occurs in Bengal, 4,000 in the North-West Provinces; while in Madras there is a slight reduction of 1,000; in Burma there is a new Financial Commissioner costing 9,000; and in the Punjab there are now two Financial Commissioners where there used to be only one, which accounts for an increase of 8,000; that makes up the whole.

9227. Then come the Commissioners of Stamps, which were not included under this head in 1875–76, which cost Rx. 25,000 in 1895–96?—Yes.

9228. And lastly the Commissioners of Revenue, 209,000 against 245,000?—Yes. In 1893–94 it was Rx. 237,000. The amount varies slightly from year to year owing to the absence of officers on leave. Of that increase 22,000 is due to Upper Burma, 7,000 to Lower Burma, and 6,000 to Assam. There are increases in some other provinces, but these are due to exchange compensation allowance and increased charges for the clerical establishments. In the Punjab there was a decrease, owing to a reduction of the number of Commissioners from 10 to 6 on their being relieved of judicial work, when the judicial system was re-organised, as mentioned in my examination on Law and Justice.

9229. Are the Inspectors General of Stamps, Registration and Excise new appointments? They come under that fourth head, do they not?—Yes, they come under that head. They are not new appointments. The reason for showing them here was that the charge for them used to be distributed over various heads, though it was only a charge for a single officer in each province and his establishment as far as Government was concerned. Certain proportions were charged to registration, stamps and excise, and to save the inconvenience of separating the charge in this way they were brought together as a single charge here. This reduced the charges, of course, slightly under the other three heads.

9230. Then there is a largish increase under the head of Accounts. The Accounts branches proper appear to have increased from Rx. 163,000 to 217,000; what is that due to?—That is partly due to Burma. The charge for the Accounts office in Burma has risen from Rx. 8,000 to Rx. 24,000; but there have also been increases in almost all the Account offices owing to the increased amount of work.

9231. (*Sir Ralph Knox.*) Has not your own department been formed in the interim?—The Auditor-General's branch of the Department has been formed in the interim; that has necesitated an addition of two highly paid Deputy Auditors-General and their establishment.

9232. What does that amount to?—The increase in my office during that time has been from Rx. 32,000 to 42,000; the greater part of that is due to the creation of the Auditor-General's Department.

9233. Then was not the Department in existence before?—The Comptroller-General was in existence before; his pay was not altered; the title of Auditor-General was added, when the additional work was entrusted to him, and two Deputy Auditors-General with the necessary establishment, were appointed to assist him with the work.

9234. But the constitution or the re-constitution of the Department has caused an increase of about Rx. 9,000?—Partly; but the increase is partly due to the increase of work.

9235. (*Chairman.*) The measure of 1880 or 1881 was really the appointment of these two Deputy Auditors and their staff?—Yes.

9236. Was that staff a large one?—No; it was not large. They each have about two clerks, with occasional further temporary assistance.

9237. What would that cost, Rx. 5,000?—It would cost more than that; their pay alone would cost, as a maximum, nearly Rx. 5,000, and the pay of their staff would be about another Rx. 1,000, or possibly a little more. I suppose they account for about 6,000 of the 9,000. The work of the Accounts Department generally has been very largely increased since 1875–76; we have a great many duties now to perform which were not then thrown upon the Department.

9238. (*Sir Ralph Knox.*) Of what kind?—Audit duties; I mean that we audit various accounts which we used not to audit, and we are now charged with the duty of keeping the whole of the Government securities of any kind which are held by any Government officer *ex officio*. They are all now collected in the hands of the Accountants-General.

9239. (*Chairman.*) Well, now, taking this increase generally for the whole head of General Administration; it is as large an increase as I have seen in India, I think, proportionately?—It is one of the largest increases under any head.

9240. And do you think it is due chiefly to increase of force owing to increase of work?—Yes.

9241. There has been no large increase in the salaries?—I think I might say that there has been no increase in the rates of salaries.

9242. (*Sir Ralph Knox.*) Rather a decrease?—Yes, rather a decrease.

9243. (*Chairman.*) As a matter of fact, there has been no addition made to the higher salaries?—No. In several instances, where Secretariats have been increased, the increase has been largely provided for by reducing existing salaries of other posts, not perhaps to the extent of the new salary, but some portion of the additional expense has been met by such reductions. The salaries of all Secretaries of the Government of India are now 4,000 rupees; it is a small reduction, but some of them were 4,166.

9244–5. (*Mr. Buchanan.*) Apart from extension of territory in Burma and other places, there is a considerable increase in population?—Yes, there has been a very considerable increase; I gave the figures before.

9246. (*Chairman.*) Have you there put together what the increased cost of Burma is?—Under this head?

9247. Under this head?—The whole cost of Burma under this head, in 1875–76, was Rx. 37,000; it is now a little over 120,000.

9248. In 1875–76 it only consisted of Lower Burma?—Yes.

9249. Now it is 120,000?—For the two provinces of Burma together. You cannot separate them under this head, because the whole of the charges for the Secretariat, and the Financial Commissioners and Account Offices, Burma, and the whole of the Chief Commissioner's salary and staff and tour charges, are included in the Lower Burma accounts.

9250. Has there been much increase in Lower Burma? Lower Burma was a settled province then, was it not?—I think the increase is almost entirely due to the addition of Upper Burma.

9251. And what is the increase?—From 37,000 to 120,000—it is 83,000.

9252. Therefore you may put down 83,000 of the increase upon this chapter to the acquisition of Upper Burma?—Yes, almost entirely; I should estimate that increase as about Rx. 65,000 out of the Rx. 83,000.

9253. I do not know whether you have any observation to make upon the increase under the different provinces; the increase under the Government of India is very nearly Rx. 40,000 out of 108,000?—Under Civil Secretariats, yes. The increase in the Civil Secretariats of the Government of India has been mostly due to the creation of Deputy Secretaries in the Home and Finance Departments; and in the Foreign Department there have been two Assistant Secretaries appointed since 1875–76, I think; and establishments have been considerably increased everywhere.

9254. Then passing on to the Commissioners' establishments; the same remark appears to apply to that as to most of the other establishments under this head of general administration; there seem to be increases in nearly every province?—Yes.

9255. Except the North-Western Provinces and Oudh, and India general?—Yes, and in the Punjab, as already explained. The increase is not large anywhere except in Upper Burma, Lower Burma, Assam, and Bengal. In Lower Burma 1,000 of the increase is due to exchange compensation, and there has been an increase of one Commissioner in that province: in 1875–76 there were three, the fourth was appointed in 1881. There is also a new post in Assam; in Bengal 5,000 of the increase is for exchange compensation, and the rest is in establishment and contingent charges.

9256. Then, under the head of Tour Charges, we come to a reduction, what is that due to?—That is not entirely due to an actual reduction of expenditure. It is partly due to a re-classification. In the earlier years some of the tour charges recorded against the Government of India were for departments which are not, and have never been, classed under this head; in later years they have been included under those departments. There were also large charges for Commissariat in the earlier years which have not to be incurred now. The increased use of railways now does away with the necessity for those charges; I suppose that it is the railways that have reduced the charge.

9257. An indirect advantage which is derived by the Government from the extension of railways?—Yes.

9258. In your memorandum you say, "The re-"arrangement of the provincial charges has resulted "in a reduction in the Imperial portion of the expen-"diture by Rx. 536,092, and an increase of the provincial "and local portion by Rx. 849,390." What does that refer to?—That means simply that certain Imperial charges have been transferred and made provincial now; it is merely a re-arrangement.

9259. But, if a large proportion of that charge has been transferred to provincial expenditure, ought not that to show a reduction under this head?—No; it includes all charges, Imperial, provincial, and local.

9260. (*Sir Ralph Knox.*) I should just like to ask one question. I have not had the figures before me that you have been quoting; but in this statement of Sir Henry Waterfield's there is a very large decrease put down for the second year, 1877–78. Was that due to a change of system or to a transfer to provincial funds, as was the case with Law and Justice?—Yes; that would be so in 1877–78.

9261. According to his statement, there is a decrease of half a million, roughly?—I think the statement is headed "Imperial," is it not?

9262. Yes, on Imperial account?—Yes, that would be accounted for by the transfer of the charges to the provincial account.

9263. You have not been going through these figures of Sir Henry Waterfield's?—I have not treated Imperial and provincial separately; I have been putting them together.

9264. By putting them together this great reduction disappears?—Yes.

The witness withdrew.

Adjourned till Tuesday next at 11 a.m.

(For the 19th day's evidence, *see* page 460.)

INDIAN EXPENDITURE COMMISSION:

At the India Office.

TWENTIETH DAY.

Wednesday, 3rd June 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. S. Jacob, C.S.I.

MR. STEPHEN JACOB, C.S.I., Comptroller and Auditor General of the Government of India, recalled and further examined.

3 June 1896.

Military Railways.

9614. (*Chairman.*) Mr. Jacob, at your last examination you were asked to supplement the information which was given to the Commission on two or three points—are you able to do so now?—I think so.

9615. In the course of the examination regarding railways, you were asked to put in a statement showing for a few years back the net charge for the working of the military railways with a view to show whether it was increasing or not. Could you put in this statement?—I put in a table showing the results of the working of the military sections of the North-Western Railway for the six years from 1889 to 1894.* The information has been compiled from the Railway Administration Reports, and is not given for any year earlier than 1889.

9616. Could you give us shortly what the result of the paper is?—The gross earnings in 1888-89 were 373,930 Rx., and the working expenses 402,905 Rx., giving a net deficit of 28,975 Rx

9617. Does that cover the whole of what you may call the military railways?—Yes, the whole working charge of the military railways.

9618. That is, what you call the North-Western Railway?—The military section of the North-Western Railway. And for the other years the net charge is, in 1890, 38,844 Rx.; 1891, 80,310 Rx.; 1892, 94,334 Rx.; 1893, 59,449 Rx.; and 1894, 76,424 Rx.; so that the results fluctuate considerably.

9619. Therefore the deficit is very variable, and you cannot say that it is diminishing?—No; it fluctuates very considerably.

9620-1. Those military railways have been increased during this time, have they not? Taking the year you began with, 1889, there are more military lines now constructed than there were then?—There are some under construction, but these lines, I think, have been working all this time.

9622. (*Mr. Buchanan.*) Is there not a larger number in 1894 than in 1889?—No, I think not. The gross earnings are slightly less in 1894 than in 1889.

9623. (*Sir Andrew Scoble.*) In the statement you have just given do you include anything for interest on capital?—No; this is merely the gross earnings and the working expenses.

9624. (*Chairman.*) Therefore the interest on capital expended in building these military lines would have to be added, in order to get the true financial circumstances?—Yes, it would.

9625. When you come to give a summary of the working of the railroads in India, do you not think that such a system as this military North-Western Railway should be stated apart, so as to show at a glance what is the real result of the purely commercial railways and what is the result of military railways; because, if a railway is built for military purposes, and there is a deficit on the working of it, really that is a part of the cost of the military defence of India?—Yes; there is, of course, something to be said for separating them, and in the administrative accounts and report they are so separated. It is from that Report that I have taken these results. But in our Finance and Revenue accounts we do not make any attempt to separate them, and such separation would not accord with the general principle on which our accounts are framed. It was decided, on the recommendation of the Parliamentary Committee of 1879, that no attempt should be made to distinguish in them between the results of the productive and unproductive lines.

9626. Could you give us a statement which would show the general financial result of the working of the railways in India, putting in, as a separate total, the result of the working of the military railways?—I could of course make out a statement of that kind; but those general results include also the protective railways, which are not constructed with the intention of being necessarily productive, so that they would have to be separated too, if we attempt to separate the total railway return between productive and unproductive lines.

9627. The object of my question is this: in the paper which Sir Henry Waterfield and you drew up, you class a certain number of services under the head "Commercial services, including railways"?—Yes.

9628. I think it would be desirable for the Commission to see what has been the real working of commercial railways, apart from the working of those which are probably very necessary railways, but which are intended either for defence or for purposes other than commercial?—Yes.

9629. If you could give us a summary which would put into separate totals the financial results of those railways which are not commercial undertakings, I think it would show us more clearly what is the real working of those railways?—I will endeavour to make out such a statement.

9630. (*Sir James Peile.*) The railways would come under three heads—military, protective, and commercial?—Yes.*

9631. (*Chairman.*) You were also asked if possible to ascertain what proportion of the gross earnings of these railways was due to military traffic. Have you been able to ascertain this?—Yes, I furnish the information asked for. The military traffic furnishes a very small proportion of the gross earnings. The percentages in the six years have been 6, 6, 10½, 9, 11, and 8, and the percentage for the whole period is 8½ per cent. More than 90 per cent. therefore of the gross revenue of these military railways accrues from the services rendered to the public by them.

9631*a*. Mr. Naoroji asked whether you could state the total loss incurred on the railway revenue account to the present time. Can you furnish any information on that point?*—I put in two tables giving the net charge for railways on the revenue account from the time when a railway revenue account first appeared in the accounts of the Government of India I have separated the period, for which the accounts have been re-cast in the form now used, from the earlier period, because the

* *See* Appendix 26.

* *See* Appendices 27 and 28.

results for the latter probably require some small adjustments to make them accurate. They are, however, the figures given in the account, modified only by the addition of "exchange" on the sterling expenditure according to the system now followed. The return for this earlier period may be accepted as approximately correct. The net charge for the earlier period of eighteen years is Rx. 24,474,399, and for the later period of 20 years Rx. 25,359,994, making a total of Rx. 49,834,393.

9632. That you reckon to be, from the commencement of the railway undertakings in India to the present time, the sum which the State has contributed to the establishment and the working of the present system?—Yes, on revenue account, apart of course from the capital expenditure; it includes the interest on the capital expenditure.

9633. Quite so; the revenue account up to the present time?—Yes, up to the end of 1894–95.

9634. That is the sum the State has been out of pocket in the working of the railways, and you do not anticipate she will recoup herself?—I do not know whether she will recoup herself eventually, but that is the amount she is out of pocket up to the present on the Railway Revenue account.

9635. (*Sir Ralph Knox.*) That includes loss by exchange?—It includes the charge for exchange and interest.

9636. (*Chairman.*) Has that loss been provided out of revenue, or was any part of it represented by debt?—It was entirely met from revenue.

9637. And that really, I suppose, extends over a period that began somewhere in the forties?—This account begins from 1857; the construction began about 1849 or 1850.

9638. But then during the construction before 1857 they were out of pocket, were they not?—This includes the whole amount in the Government accounts charged against the revenue account.

9639. Their charge was carried to capital?—I think so.

9640. (*Mr. Naoroji.*) Did not the Great Indian Peninsula commence in 1853–54, between Bombay and Tana, I think?—I believe portions of the guaranteed railways were open before this account begins; but no charge to the Railway Revenue account was made before that.

9641. (*Chairman.*) That was 1858?—Yes, 1857–58. There must have been charges for interest before that. And, as soon as any portions of the lines were opened, there must have been traffic receipts and charges. Even in this account there was a net expenditure for the first two years without any revenue at all.

9642. (*Mr. Naoroji.*) Then the charge before 1858 is not included in this?—It is not included in this statement.

9643. I think that those earlier years might be added as well, in order to show the full extent that has been drawn from the revenue?—I will see if I can find any information about that.

9644. (*Chairman.*) Perhaps it would be better if you made it clear on the head of the account that it begins with 1858?—Yes.

9645. Then as regards irrigation, some questions were asked as to the old works constructed by native Governments, and as to their effect upon the returns from irrigation. Have you any further information to lay before the Commission?—The following extract from the Report on the Moral and Material Progress of India for 1882–83 furnishes information as to the number of old works. It says: "The whole area "of Sind is scored with the traces of artificial "channels of the Indus, which made this thirsty "province the Garden of India in old time. The "works on the Cauvery Delta in Madras, to this "day by far the most remunerative in India, are but "the improvement by an English engineer of a struc"ture that is said to date back for 1,600 years. The "Western Jumna Canal follows in the main the lines "traced by the Emperor Firoz Taghlak in the four"teenth century, while the Eastern Jumna Canal "owes its origin to Shah Jehan in the seventeenth. "Having been reopened by British enterprise, these "two canals are at the present day the most remunera"tive in the Punjab and the North-West Provinces, "respectively."

9646. Then had these old works become useless from not being attended to at the time when the new works were undertaken, or were they still to a certain extent available for distribution of water?—The works in Madras were certainly still available for distribution of water; but I would like to say that the revenue, which we bring to account, is what is due to the new works. Thus, in the case of the Cauvery Delta works the revenue brought to account in 1893–94 does not include Rx. 236,500 due to old irrigation works; and similar, but much smaller, amounts due to other works in Madras and Sind are also left out of the account.

9647. As belonging to the old systems?—Yes.

9648. In what form does that revenue come in?—Merely as land revenue.

9649–50. As part of the increased value given to land by these works?—Yes. As we do not charge anything to capital against the old works, we do not credit anything to irrigation on their account, but merely show the receipts on their account as land revenue. May I just add an explanation with reference to the remark in the extract I have read that some of the old works, the Cauvery Delta and the Eastern Jumna, were amongst the most profitable of the works. With reference to that, I should like to read the following extract from the Report of the Famine Commission: "There has, we think, been some misconception "as to the relative remunerative character of the "older irrigation works, which had been more or "less completely carried out under native rulers, "and those which have been constructed by the "British Government. In the nature of the case "the facilities for executing such works and their "necessary cost vary greatly. It naturally happened "that the old works undertaken by native rulers were "of the class which offered few engineering difficulties "and cost little, while the works carried out by our "Government have been designed to overcome "obstacles, which would have been wholly beyond the "capacity of the engineers of the Native States, and "have been costly in proportion. The Cauvary works, "which provide irrigation for Tanjore, were rendered "possible by remarkably favourable physical features, "such as exist in no other part of India. The ancient "inundation canals of Sindh and the Punjab were easy "of construction, because of the exceptional circum"stances of the rivers from which they are supplied. "The supply of water from the Jumna, by the canal "which is now called the Western Jumna Canal, to "the palaces of the King of Delhi at Delhi and Hissar "was also rendered possible from the few difficulties "to be overcome; but the irrigation it supplied, until "reopened by our engineers, was of a limited extent, "and a very large sum is now in course of expenditure "to remedy original defects in the old alignment, "which led to grave evils from obstructing the surface "drainage. There is much doubt whether the Eastern "Jumna Canal ever carried water at all, owing to "certain difficulties which could not be overcome."

9651. You were also asked to supplement the information you gave us as to the taking over of the company's canals. Have you obtained further information regarding that matter?—The East India Irrigation Company was not a guaranteed company, I find.

9652. (*Sir Andrew Scoble.*) Is that the Orissa?—Yes. In a letter to the Secretary of State, dated the 16th July 1867, the Government referred to the necessary inconveniences caused by the committal of works of irrigation to private companies, to the difficulty which the company had in raising money, to the tardiness of the people in taking the water, and the consequent delay in any adequate return for the outlay; also to the changed condition of affairs, under which the Government were assisting the company with money, instead of the company supplementing the resources of the Government. They proposed, therefore, that the company should make over the undertaking to the Government, receiving a full indemnification for past outlay, and a fair compensation for future possible profits. The Government were disposed to offer liberal terms, and proposed that the company should relinquish all claims in respect of both the Orissa and Sone projects, on the following conditions: (1.) The whole paid-up capital to be converted at par, either into 5 per cent. debentures repayable at par in 60 years, or into terminable annuities, or partly in one way and partly in the other. (2.) The cash balance, liabilities, and claims to be transferred to the Secretary of State with all works, stores, property, books, and accounts. (3.) The establishments to be taken by the Government provisionally, and a compensation of six months' salary granted to all not permanently retained. (4.)

Mr. S. Jacob, C.S.I.

3 June 1896.

Irrigation.

The company to receive all their expenses connected with the Sone project, and 10 per cent. additional to cover interest. (5.) A further sum of 50,000*l.* to be placed at the disposal of the board of directors, either in cash, debentures, or terminable annuities, to be allotted by the board, at its discretion, as a bonus to the shareholders of the company, and as compensation to their officers.

9653. (*Chairman.*) What did you say was the amount to be given as bonus?—50,000*l.* In October 1867, while this letter was under the consideration of the Secretary of State, the East India Irrigation Company applied to the Secretary of State for a guarantee of interest, without which they were unable to raise funds for the Behar project. This was refused on the 22nd of November 1867, Sir Stafford Northcote offering instead to take the works into the hands of the Government, as contemplated by the contract in such a contingency. He, however, proceeded to say that he would not sanction the advance of funds for the Orissa works after the close of the year 1867, and that he was prepared to purchase the rights of the company in both schemes, giving to them in cash the value at par of the whole paid-up capital, and also a bonus of 50,000*l.* to be appropriated by the shareholders in compensation of their officers or otherwise. The transfer of the works, establishments, &c. was to be carried out as proposed by the Government of India. At an extraordinary general meeting called to consider this offer, the shareholders unanimously resolved that the terms were inadequate, and the directors were requested to ascertain the views of the shareholders individually, whether the transfer should be accepted, provided the amount was paid by Government in 5 per cent. stock at par instead of in cash, or whether the company should carry on the work, either alone or under some fresh arrangement by which the Government might participate in the profits at an earlier stage. The Secretary of State replied that he could not consent to enhance the terms, either by giving stock instead of cash, or by referring the price to arbitration; but he intimated his willingness to take into consideration the question of lending the company a sum not exceeding 500,000*l.* (including the sum of 120,000*l.* already advanced) for the prosecution of the Orissa scheme in consideration of their definitive abandonment of the Behar project. A very large number of the proprietors refused altogether to sell the works, and a correspondence ensued respecting the proposed loan, the directors agreeing to resign their claims on the Behar scheme, if the terms proposed by the Secretary of State for a loan to aid the Orissa works should be accepted by the shareholders. In April 1868, however, a meeting was held at which the shareholders offered to sell their works to the Government, either on the terms proposed by the Government of India, the debentures being dated on the 1st January 1868, or for cash equivalent to the market value of such debentures, or for India 4 per cent. Stock at a premium of 25 per cent. The Secretary of State, however, declined to depart from his proposal. On the 20th of July 1868, the Government of India wrote again to the Secretary of State urging the great importance of concluding an arrangement with the company, and stated their opinion that it would not be disadvantageous to accede to the company's terms. Sir Stafford Northcote replied, however, that he was not disposed to make any further offer to the company than he had already made. Eventually, on the 30th November 1868, the company intimated their willingness to accept their paid-up capital with 5 per cent. thereon, and an extra bonus of 50,000*l.*, and the Secretary of State agreed to give this sum for the purchase of the whole of the works as soon as the necessary legal formalities could be completed. The amount to be paid for the Orissa works was 1,040,050*l.* 8*s.* 7*d.*, and that for the Behar project, 14,000*l.* This was announced to the Government of India on the 6th of January 1869, with instructions that they might at once enter on the works.

9654. (*Mr. Naoroji.*) Could you tell us what the market price of those shares was at the time this money was paid over?—No, I do not know what the market price of the East India Irrigation Company's shares was.

9655. Did I understand you rightly that the Government, when this company was started, was in no way responsible, that they did not guarantee them in any way whatever, that the Government was entirely free, and that it was entirely on account of the company itself that the scheme was started and carried out?—I do not think it could be said that the Government had no responsibility whatever, but it did not guarantee any interest on the capital.

9656. They did not guarantee the interest on the capital?—No.

9657. They did not guarantee the payment of capital at any time, nor guarantee to pay a certain interest to the shareholders at any time?—No, there was no guarantee, but the Company entered into a contract with the Government regarding the construction of the canal, and Government provided them with land and gave them various kinds of assistance.

9658. Government gave them some assistance, but Government was not in any way bound to recoup them for any expenses they might incur, either interest or capital, as I understand it?—No, there was no guarantee.

9659. (*Chairman.*) The land and other assistance was a free gift, was it?—I do not think it can be called a free gift; the Government was very anxious that the work should be undertaken by a company, and certain inducements were in consequence held out to the company.

9660. But the inducements were free gifts; they were not to be repaid, were they?—I think the value of the land was to be repaid under certain circumstances—when the canal paid more than a certain amount of interest.

9661. But that stipulation did not come into operation?—No, it did not come into operation.

9662. Do you know what the canal was paying at the time when these negotiations were going on?—It was not paying anything at all. But the Government of India, as will be seen from what I have already stated, constantly represented the desirability of taking over the works. They considered that the canal might be worked advantageously by Government, though it could not be worked advantageously by the company; and it will be remembered that one of the principal reasons was the complication which had arisen as to the assignment of a certain portion of the land revenue to irrigation; that matter was of course very complicated, when the irrigation was in the hands of a company, and the land revenue belonged to Government.

9663. But the canal was paying absolutely nothing to the shareholders at the time?—No, it was not paying anything at the time.

9664. And do you know at all what the Government is making out of these works now?—The Government is making nothing out of them.

9665. (*Sir James Peile.*) But they are in course of development?—Yes.

9666. The whole subject was considered within the last year or two, and the Lieutenant-Governor of Bengal stated his opinion that it would be worth while to develope the system by distributing the water more largely, and to incur certain expenditure for the purpose?—Also they must be looked upon largely as protective works. In case of serious distress or famine they would be extremely useful to the Government, and might bring in in a single year I should think—or at any rate they might save—as much land revenue as the whole cost of the works.

9667. (*Mr. Naoroji.*) Has it ever happened that during the drought the canals themselves wanted water and were not of much use?—I am afraid I cannot give any evidence about that.

9668. (*Chairman.*) Does this canal occur in that heading (*pointing to a column in the Finance and Revenue Accounts for* 1893–4)?—Yes, it occurs; it is the Orissa project.

9669. The Orissa project?—And also the Sone project, which is part of the consideration.

9670. (*Mr. Buchanan.*) Since the Government of India paid this million of money for the canal in 1869, have they made any capital expenditure for the development of the works?—Yes, they have incurred a considerable amount of capital expenditure.

9671–2. (*Chairman.*) The total direct receipts credited to the provincial funds during the year 1893–94, under the heads of the Orissa project and the Sone project, were 130,000 Rx. (I am quoting from the Finance and Revenue Accounts for that year), while the expenditure (taken from the detailed account of working expenses and maintenance of irrigation works for the year 1893–94) amounts to very nearly 1,800,000 Rx., does it not?—No, not the working expenses.

9673. I see that is not for the year; that is the total expenditure to the end of the year, and includes that of previous years?—Yes.

9674. Then for the year it is 120,000 Rx.?—Yes.

9675. May I sum up the subject thus: a very large sum was paid to the company for their interest in an undertaking that was paying them nothing. Since the acquisition of these works a considerable sum has been laid out upon them, which I suppose may be taken as the same which I read out just now as total expenditure to the end of the year?—No, that is not the capital expenditure.

9676. That is merely the maintenance?—Yes.

9677-80. Do you know at all what the capital expenditure has been?—Yes, 3,139,000 to the end of 1893-4 on the Orissa project, and 2,789,000 on the Sone project. That is the sanctioned expenditure; the actual expenditure was 2,533,000 and 2,596,000.

9681. (*Mr. Buchanan.*) Does that include the million that was paid for the works?—Yes.

9682. (*Chairman.*) That includes the whole capital expenditure?—Yes.

9683. That is to say, the total capital expenditure, both in acquiring the works and spent upon them since, is over 5,000,000 Rx.?—Yes, on those two works.

9684. (*Sir Ralph Knox.*) Has any of that been charged to the Famine Fund?—I do not think so.

9685. (*Chairman.*) But then against that, the working, expenses up to the present time have been 1,800,000 Rx.; but the account only gives the receipts for the year, does it, not the total receipts?—We have not got that.

9686. (*Mr. Naoroji.*) There is a column at page 11 of Sir H. Waterfield's paper, Table 5, Construction of protective irrigation works, under the heading, "Increase or Decrease of Expenditure on Imperial Account in India on Famine Relief and Insurance." This would show that there is some expenditure incurred from the Famine Relief Fund on account of irrigation?—Yes, there is some expenditure, but not on account of these works.

9687. I understood you to say there was none?—No. I think Sir Ralph's question was whether there was any expendiure on these particular works which had been charged to the Famine Relief Fund.

9688. (*Sir Ralph Knox.*) Yes.

9689-90. (*Chairman.*) Could you tell us what was actually given under that arrangement to the company? First of all, they received 5 per cent. debentures at par?—No; that was the proposal made by the Government of India. They only received the amount in cash.

9691. That is to say, you borrowed the money and paid it over to them?—We paid the amount over in cash.

9692. And the sum paid to them was the amount of their capital at the time?—Yes.

9693-4. Then in addition to that, there was 50,000*l.* paid as bonus to the shareholders and the officers, as I understand you?—Yes.

9695. And I thought I understood you to say that a sum was also paid on account of the other project connected with the Orissa project?—Yes, the Sone project—the sum was paid for the Orissa works and the Sone project; they had only commenced the Sone project.

9696. A sum in addition to the 1,040,000 paid?—Yes.

9697. (*Mr. Buchanan.*) What sort of an amount?—I gave the amount last time; I have not got it exactly now; I think it was about 50,000*l.*

9698. Was that also purchased at par? Does the 1,040,000 Rx. represent the capital expenditure at par of the company?—The whole of it represents capital expenditure.

9699. They got 20*s.* for every pound they had expended?—Yes.

9700. Although the property was yielding nothing?—Yes; but that was largely, I may say almost entirely, owing to the fact that various complications had arisen, and especially complications as to the distribution of the revenue between the Government and the company; it was almost impossible to settle those complications satisfactorily to either party.

9701. (*Chairman.*) That is to say, difficulties due to the apportionment of the land revenue? Do I understand it in this way: the Government admitted that the land revenue had been benefited by these works?—Yes, or that it would be benefited.

9702. But they were unable to apportion that benefit in such a manner as to give the company what would fairly represent the value they had acquired?—Yes.

9703. Which the Company's works had bestowed upon the land?—Yes.

9704. Had they any idea as to what that benefit was?—I do not suppose that any definite account of that was made out.

9705. (*Sir James Peile.*) Did the company sell the water by the gallon to the people who took it?—No; part of the contract with the Government was that they should sell the water to the Government, and that the Government would arrange for the distribution to the cultivators.

9706. (*Chairman.*) But under those circumstances the Government paid the company something, I suppose?—They would have had to pay, but it was the difficulty of settling the amount which should be paid, which largely led the Government to conclude that it was impossible for the company to work the irrigation canal.

9707-8. I have not the least doubt the Government of India had very good reason for giving so large a sum in order to take over these works which were not paying anything; but *primâ facie* it looks as if they were paying a great deal for nothing. Would it be possible to ascertain the reasons which induced the Government to think that this 1,100,000*l.* or 1,200,000*l.*, whatever the total sum paid to the company was, was not an unfair bargain for the Government?—I can put in a copy of the letter of the Government of India of the 16th July 1867, of which I have given a summary, and which shows the detailed reasons which led them to recommend even more favourable terms than were actually granted by the Secretary of State.*

9709. (*Sir Andrew Scoble.*) Was not the main reason that the Government wished to include the charge for water in the land revenue demand?—I do not know that that was the reason; but there was great difficulty experienced in assessing the irrigation revenue separately from the land revenue, and fixing a rate which would satisfy the company.

9710. (*Chairman.*) It seems to be a very complicated arrangement entered into by the Indian Government, which resulted in rather doubtful pecuniary advantages to the Government?—It was thought beforehand that the system provided in the contract could be worked. A provision for settling the rates in this way, namely, that the water should all be supplied to Government, was entered in the original contract; it was, however, found by experience that this provision really did not obviate the difficulties in working.

9711. It was rather a complicated arrangement, the Government stipulating first of all, that the company should not sell direct to the cultivator, but should sell to the Government, which should sell again to the cultivator; and that then, as soon as they had made the bargain, they should find it was one they could not carry out; it does not sound like a very carefully made contract?—I should not care to say that at all. It is very difficult in these cases to tell, until you come actually to work a scheme of that kind, whether it will work or not.

9712. (*Sir Ralph Knox.*) Were the rates at which the water was supplied to the Government elastic and varying, or were they fixed rates?—No; there was no rate fixed by the contract; the rates were to be settled practically by arbitration; that was really the idea.

9713. It was to depend upon the profits?—To keep them in view.

9714. (*Chairman.*) I think you have told us that there are now no companies working canals?—No, there are none. I have omitted to say that the taking over of the Orissa Canal was carried out under the authority of an Act of Parliament; it was approved by Parliament. I have not given the terms upon which the Madras Irrigation Company was taken over.

9715. Was there any guarantee in that case?—Yes, 5 per cent. in that case.

* *See* Appendix 25.

Mr. S. Jacob, C.S.I.

3 June 1896.

Irrigation.

9716. Therefore in that case the Government was only buying up its own guarantee?—Yes.

9717. Would it be possible for you to tell us what the price of the shares was in the market?—I have ascertained what the price of the Madras Irrigation Company's shares were.

9718. But of the Orissa shares?—I could find that out, probably.*

9719. Perhaps you will put that in in answer to this question I am asking now?—Yes. The terms were that the Madras Irrigation Company was to make over all its property to the Secretary of State; that for each 100*l.* of the capital stock of the company the Government of India should pay 106*l.* with interest at the rate of 5 per cent. from the last day of payment of interest under the existing Act of Parliament up to the day of actual payment; that for each 100*l.* of principal of mortgage debenture, due by the company, the Government of India should pay 75*l.* with interest at the rate of 4 per cent. from the day of the agreement being signed for the transfer, by or on behalf of the Secretary of State for India, and by or on behalf of the Board of the company; that a sum of 12,000*l.* should be paid to the Board for compensation to their officers and clerks, and to themselves for the loss of their offices and emolument.

9720-1. What did that total sum amount to, do you know?—I gave the exact amount last time. It was 1,404,000 Rx.

9722. Do you know the amount for which the guarantee was given?—The original guarantee was on 1,000,000 Rx.

9723. They did not spend that?—Yes, they spent over a million—1,400,000 Rx.

9724. Therefore it may be said that they gave up 1,400,000 Rx. to buy up a guarantee of 50,000 Rx.?—The price of the stock then was 104 in the market.

9725. 104?—Yes; they only paid two per cent. more than the price of the stock. The company were entitled to get the guaranteed interest till 1888—that was the first year in which the Government had the option of purchase.

9726. But the guarantee was a guarantee of 5 per cent. on a million?—Yes.

9727. Which amounts to 50,000 Rx.?—Yes.

9728. For which they gave 1,400,000 Rx.?—They gave only the amount of the capital at the rates I have mentioned.

9729. But practically, in carrying out the bargain, that was the cost to the Government of acquiring the works?—Yes, but Government had also advanced money to the company which it had spent in addition to its capital.

9730-1. But the Government would not have paid the company again the amount which the Government had itself advanced to them?—The money had been actually spent on the canals.

9732. But did the Government lend the money free of interest?—No, there was to be an interest charge.

9733. Then we may separate that for a moment?—There was also a debenture capital.

9734. Had the debenture capital no guarantee?—It carried no direct guarantee, and Government only paid 75 per cent. for the debenture capital.

9735. (*Sir James Peile.*) That payment was included in the 1,400,000, was it not?—Yes.

9736. (*Chairman.*) 1,400,000 Rx. covered everything?—Except the balance of the advances from Government.

9737. Was that written off?—Yes, that was written off.

9738. Do you know what the balance amounted to?—358,428*l.*

9739. Therefore, first of all, the company spent 1,000,000, for which they had a guarantee of 5 per cent.; and then, I think, they had some debenture capital out besides?—Yes.

9740. I think you told us what that amount was?—The amount is not stated here, but it was to be taken over at 75 to the 100. Very careful calculations were made in the taking over of this company, as to whether it would pay Government better to wait until 1888 and take the works over then under its option of purchase; but Government came to the conclusion that it would be more profitable to take them over in 1880, if they could induce the company to accept those terms.

9741. Would you be able to tell us what the debenture capital was?—Yes, I have found it here. 430,000*l.* mortgage bonds.

9742-3. 430,000 mortgage bonds, paid for at 75, amount to 322,500*l.*?—Yes.

9744. Was that the market value of the debentures at the time?—I could not find any quotation for the debentures; I found a quotation for the stock: that was 104. I may say that the Famine Commission considered that it was absolutely essential that the Government should induce the company to make over the works to the Government.

9745-6. (*Sir James Peile.*) Because of its value as a protective work?—Yes. The Famine Commission said "The Irrigation Committee have reported at considerable length on the works of the Madras Irrigation Company, and have shown the nature of the difficulties that have arisen in the management of the canal. We have given our best attention to this subject, and can only conclude that the system created under the terms of the contract between the company and the Secretary of State, under which a divided responsibility was established, the company's servants managing the works, while all dealings with the cultivators were placed in the hands of Government officers, is one which could not possibly succeed; and that, although any really satisfactory result can now hardly be expected, the only prospect of obtaining any return whatever from the large outlay which has been incurred on the works is to be found in the complete transfer of the canal to the State on the least onerous terms that the contract will permit."

9747. (*Chairman.*) And those terms were, first of all, writing off the debt which the company owed the Government of 358,000*l.*?—Yes.

9748. Then giving a million at par for stock that was worth 104 in the market?—No, they gave more than par; they gave 106.

9749. 106; and they bought up (at, I suppose, something like market rate) the debentures?—Yes. The canal was actually in the hands of the debenture holders at the time, so that the matter was further complicated by that.

9750. And was the canal making 5 per cent. at that time?—No, certainly not. It was not covering its working expenses at that time.

9751. What is it doing now, do you know?—It does not cover its working expenses now.

9752. Therefore the State gave something like 1,700,000*l.*, for which it gets no return whatever?—Yes, it gets practically no return.

9753. (*Sir James Peile.*) Except the protection of the country in the case of famine?—Yes.

9754. (*Sir Ralph Knox.*) Practically, it is a relief work?—Government looked upon it as a protective work required for the prevention of famine.

9755. (*Chairman.*) What was the date at which the transfer was made?—In 1880.

9756. 1880. I think you mentioned just now that an opportunity of acquiring the canal would have occured in 1888, did you not?—Yes.

9757. What were the terms upon which it might have been acquired then?—The Government would have had to pay the average value of the share capital during the three preceding years, and they would have had to pay off the mortgage bonds, and to continue paying 5 per cent. interest until 1888.

9758. Yes, and therefore what they said was that they could borrow at less than 5 per cent.; but on the debenture capital they would be paying more than they were under obligation to pay before?—No, not if they paid it off at 75.

9759. As soon as the loan was raised of 1,400,000, they would have to pay the interest on the whole of that. What were they borrowing at? 3½ or 4?—About 4, I should think, at that time.

9760. That is to say, at the time they borrowed this money to pay the company off they would be paying 56,000 a year; 4 per cent. on 1,400,000?—Yes.

9761-82. And if they had carried it on till 1888 they would only have been under obligation to pay 50,000, namely, 5 per cent. on one million?—I cannot give full details of this arrangement at present, as I know

* *See* Appendix 30.

nothing about it, except what I find in some old papers which were only placed in my hands last evening. I can only say now that the point was considered at the time, and it was calculated that it would be more profitable to take it over in 1880 than in 1888. I can put in the papers if desired, or, if permitted, I will put in a memorandum explaining the arrangement, and, as far as possible, the considerations which led the Government to accede to it.

9783. Will you kindly do that?—Yes.*

9784. (*Sir William Wedderburn.*) Was this settled in Lord Lytton's or Lord Ripon's time; they were both Viceroys in 1880, I think?—The Secretary of State's despatch sanctioning the arrangement is dated 6th January 1881.

9785. (*Chairman.*) You were also asked to obtain some further information as to the action of irrigation works in rendering some lands sterile. Have you obtained that?—It was as I thought. In the case of only one canal has there been any serious inconvenience—that is the Western Jumna Canal. The land irrigated by that canal became water-logged, owing to the faulty alignment of the canal, which interfered with the natural drainage of the country. This led to the remodelling of the canal on a new alignment, and steps were taken for the drainage of the affected tracts. In 1891 the Government of India reported that considerable improvement had already resulted from the measures taken, but "the evils which the works were designed to remedy "are of old standing and took many years to reach "their climax, and it must naturally be expected that "the remedy will be equally slow in its action."

9786. (*Sir Ralph Knox.*) Was that a costly improvement?—Yes; I forget the exact cost, but it cost a considerable amount.

9787. (*Chairman.*) Have you obtained the information asked for by Sir William Wedderburn as to the levy in any part of India of a protective irrigation rate?—I have looked into that matter and I can now say definitely that no protective irrigation rate is levied in any part of India. The Government of India imposed such a rate in the Irrigation Act for the Punjab (xxx. of 1871), but the Secretary of State took objection to the provision, and the Northern India Act (viii. of 1873) was passed repealing that Act, and re-enacting its provisions (minus those relating to the protective rate) for the North-West Provinces and the Punjab. In Bombay a similar provision was included in its Irrigation Act passed in 1879; but the Secretary of State again took objection to it, and it was repealed by an Act of 1880. In Madras there is no special irrigation rate; the revenue is collected as part of the land revenue. The land is held on a ryotwari tenure, and is assessed at wet and dry rates, according as it is or is not irrigable.

9788. (*Sir Ralph Knox.*) Do I understand you rightly that the Government of India were prepared to levy a rate for irrigation works, but were overruled by the Secretary of State?—That is the case.

9789. (*Chairman.*) Can you give any more definite information than before as to the financial results of those minor works of which capital and revenue accounts are not kept?—Yes. Since my last examination I have found a Resolution of the Government of India, which gives figures for 1893–4, showing the results of the works of which capital accounts are not kept. They say that the direct receipts of these works comprise only the sums realized by the Public Works Department, which alone are credited in the Public Works accounts. The whole of the revenue due to irrigation is assessed and collected with the land revenue, and is therefore credited as an indirect receipt. And then they give a statement which gives the net revenue for these works in Bombay as 27,000 Rx; Scinde, 115,000 Rx; Punjab, 18,000 Rx; and Madras, 687,000 Rx; showing that these works of which capital accounts are not kept brought in, including land revenue due to irrigation, 847,000 Rx in 1893–94.

9790. And that 847,000 Rx. is put against what expenditure?—That is the net revenue, after deducting from the gross revenue the working expenses.

9791–2. But omitting interest on capital?—Yes.

9793. What would the interest on capital be?—That I cannot say, because separate capital and revenue accounts have not been kept from the beginning.

9794. Therefore they do not know what these works cost?—No, but it is certain that they did not cost anything like the capital represented by a net return of 847,000 Rx. I mean that this amount of net revenue would much more than cover the interest on the capital

9795. Had they not got any idea of what the works cost?—They have no accurate information as to the cost of these works of which no capital and revenue accounts are kept.

9796. (*Sir Andrew Scoble.*) They are not made from borrowed money?—No; they are made from revenue entirely.

9797. (*Chairman.*) I think we will pass on now to the remainder of the heads that come under Administration. I think there are certain points, Mr. Jacob, connected with the Marine, which would not fall within Captain Hext's knowledge, upon which I will ask you one or two questions. Have you anything further to say about the charges of the Indian Marine?—In the course of Captain Hext's examination it was asked that a statement might be put in showing exactly what the receipts and expenditure of the Royal Indian Marine for the last four years were. I have prepared a statement in which I have taken all recoveries as receipts, and shown the expenditure as gross. Some remarks were made as to the variations in the expenditure from year to year, but it will appear from this statement that the variations in the gross expenditure are very slight. (*Statement put in.*) The variations are entirely in the recoveries.*

9798. But in this account, the stores, I presume, only include stores purchased in India?—Yes, that is so.

9799. But do the recoveries cover recoveries on account of stores brought from England?—Yes.

9800. Then to make this complete you ought to put at the bottom the amount of the stores purchased in England, ought you not?—That would be necessary in order to give a complete account; but what was asked for in the examination was a statement of the Indian accounts.

9801. But if you count among the receipts sales of stores purchased in England, and the cost of those stores does not appear in this account, it leads one to a not perfectly correct conclusion as to what the cost of the Indian Navy is?—Of course that would be so.

9802. Could you add a line to this account showing that?—Yes; I have the figures of the stores for 1893–4 and 1894-5.

9803. That would be quite sufficient to show us; if you have got 1892–3 handy, you might put them in?—Yes.

9804. Are any other charges falling under this head incurred in India?—Yes. Certain charges are incurred by the Provincial Governments, which are charged under this head.

9805. But those charges are included in the separate accounts of the Indian Marine, are they not?—No.

9806–7. I have before me, for instance, the Finance and Revenue Accounts of the Government of India for 1893–4; those accounts would include the provincial expenditure?—Yes. They are not included under the "Indian Marine," but they are included in the charges taken under the head of Marine.

9808. In the Budget would they not be included in the Indian Marine?—No. The Indian Marine is the technical term for the Marine Department, which is under the Imperial Government.

9809. Take that paper which you have just handed in; does that include the provincial expenditure?—No; only the Royal Indian Marine.

9810. Would it not be well to make that clear?—I have headed it, "Accounts and Estimates of the "Royal Indian Marine."

9811. Yes, that would carry to you the difference, but not to us?—I will make that clear.

9812. You were going to mention something about other charges falling under this heading?—Yes. They are chiefly for vessels which are kept for local purposes, river steamers and steam launches, and so on; and there are also a few marine establishments, state yacht establishments, lighthouses and lightships, and some subsidies paid to steamers; there are also pilotage charges—which last, however, are more than covered by pilotage receipts.

9813. Can you give any explanation as to their nature?—The total charges for the provincial Marine amounted in 1893–4 to 76,293 Rx.; that is the net charge, deducting receipts.

* *See* Appendix 31.

* *See* Appendix 60.

Mr. S. Jacob, C.S.I.

3 June 1896.

Marine.

9814. And that sum has to be added to these sums which appear in the paper you have just handed in, in order to give us the cost of the marine to India?—Yes. Under salaries and allowances of officers and men afloat there is 26,000 Rx.; victualling, &c., 2,000 Rx.; marine stores, repairs, &c., 23,000 Rx.; purchase and hire of ships, 25.000 Rx. These charges were incurred in respect of inland steamers, flats, and launches, mainly in Burma, Bengal, and Assam, all of which have large waterways.

9815. (*Sir Ralph Knox.*) Captain Hext has nothing to do with these?—No. Any work required in the dockyards is generally done for them by the Imperial Marine Department, but it is charged for.

9816. (*Chairman.*) Now in these Indian Finance and Revenue Accounts for 1893–4, the total Marine charge is put down, including exchange and charges in England, at 754,000 Rx. Would you show us where these provincial charges appear in those accounts as separate from what I may call the Imperial charges?—Under the "charges in the Civil Departments," on page 77.

9817. "Charges in the Civil Departments," those are the totals you read to us?—No, I have given you the net charge. There are certain credits on those accounts, but the net charge is based upon those figures. Thus the figure is 26,947 Rx. for charges for salaries, &c., minus 1,212 receipts.

9818–9. Would you tell us the other charges that come in that are provincial, making up 203,360 Rx.?—The net charge is only 76,293 Rx.; there are a good many receipts.

9820–1. This account, then, begins with Imperial charges for "India general," which make up a total of 145,948?—Yes.

9822. Then there comes 203,360, which are provincial charges?—Yes. The Upper Burma charges are still Imperial, but they are of the same nature as the other provincial charges, and are classed with them.

9823. But, apart from that, the 203,360 Rx. would not be administered under Captain Hext?—No.

9824. Then there come charges in England, 245,443; I see that includes stores bought in England?—Yes.

9825–6. Therefore this account of 754,000 Rx. in the Finance and Revenue Accounts is a complete account?—Yes, that gives the gross charge.

9827. And the only thing that would have to be added to that in order to arrive at the total charge of the Indian Marine, would be pensions, I suppose?—Yes. Stationery and printing is also charged under its own head.

9828. I think you have given us some of your heads of charge?—The first four heads all relate to the steam launches and flats, and so on. The charges for the purchase and hire of ships are also for provincial steamers and steam launches. The charges under that head were exceptionally high in 1893–4, owing to purchases in several provinces. The amounts were, in Upper Burma, Rx. 6,000; Lower Burma, 3,000; Bengal, 13,000; and Madras, 3,000; making a total of 25,000. Then there are certain marine establishments, such as the shipping offices, agency for Government consignments, Marine Courts, and the port officers department in Calcutta; these come to about 5,000 Rx. net: that is, after deducting the shipping office fees.

9829. For what purpose are provincial steamers and steam launches maintained?—For purposes of communication. The district officers in various Departments in Burma, and also in Bengal and Assam in some cases have steam launches as the easiest way of getting about their districts, the waterways being numerous and large.

9830. Under what heading are those steam launches included in the account?—The charges for their officering and maintenance is brought to account under the first three heads, namely, salaries and allowances to officers and men afloat, victualling, and stores, coal, repairs, &c., and then the purchase of them is charged under the next head.

9831–2. Was the charge for the purchase of these steam launches and provincial steamers a normal one in 1893–4, or was it unusually large?—It was much larger than usual.

9833. Therefore, so far as that is concerned, you expect it to be lower in ordinary years?—Yes, the average annual charge would be much lower.

9834. What are the subsidies charged under this head?—Subsidies paid in 1893–4, are as follows: for communication between Rangoon, Bhamo and Chindwin, 4,800 Rx.; between Bhamo, Suibo, and Myitkyina, 550 Rx.; in Lower Burma there are six different lines to which subsidies are paid, amounting to 6,000 Rx.; in Assam, accelerated service on the Brahmaputra, 1,576 Rx., and accelerated service between Narainganj and Cachar, 916 Rx.; in Bengal there are some small subsidies, of which details are not given, amounting to 1,576 Rx., making a total charge of 15,816 Rx.

9835–6. Are those subsidies purely for civil or military services, or do they include postal?—Postal subsidies are charged separately to the Post Office.

9837. Upon what principle are the lighthouses and lightships charges made out; are there any light dues?—The charges for lighthouses and lightships now occur only in Burma; the light dues more than cover the charges shown there.

9838. But in the Finance and Revenue accounts, are not these the gross charges?—Yes; the receipts are given on page 74 of the Finance and Revenue Account of 1893–4.

9839. In the gross charge there is no statement of the cost of the lighthouses and lightships, which, if it is the gross charge, there ought to be. There are only lighthouses, you said just now, in Burma, and the dues more than cover the charges?—In this year they did. Burma is the only case in which we have any lightships for which the Government are directly responsible.

9840. Who carry on the light service?—We do not require lights, except in Burma. We collect dues for the Board of Trade on certain lights passed by vessels going out to India.

9841. Have you no lights on the coast of India?—No, except in the ports, and they are maintained out of port funds.

9842. What is the arrangement under which pilotage charges are incurred? Do you get any receipts on their account?—Yes, the receipts more than cover the charges. They are incurred almost entirely in respect of Calcutta. In Calcutta the receipts were 85,000 Rx. in 1893–4, and the charges were 52,000, net receipts, 33,000. In Bombay there were very small receipts and charges; 125 receipts, 336 charges, net receipts, 90.

9843. What is the nature of the miscellaneous receipts and charges?—They include various small charges: contributions to port funds, lifeboat establishment, harbour master's fees for sea-going and inland vessels, grants to port and pilotage funds.

9844. I think those are all the points to which you would call our attention in connexion with the Marine?—Yes, I think so.

9845–6. I should like to ask you one or two questions upon a paper which is before me, as it gives an example of the audit of the Marine accounts. This paper commences with a report from Mr. J. E. Cooke, and it appears to have been submitted to you, and forwarded with your remarks to the Accountant General in the Military Department?—Yes.

9047. Who is Mr. Cooke?—Mr. Cooke is one of the Deputy Auditors General.

9048. One of your officers?—Yes.

9049. And he goes and examines the books of the Marine Examiner?—Yes.

9050. The report is a lengthy report, showing very careful and minute examination of the books, with a good many criticisms upon them, and also the result of a test examination of a certain number of the vouchers?—Yes.

9051. This is his report to you?—Yes.

9052. On that, you take up those points which you think require notice?—Yes.

9053. Making your notes upon them, and then sending them to the Military Accountant General?—Yes.

9054. Is the Marine Department under the Military Department?—Yes.

9055. And what is done with that report? Do you ever hear of it again, or whether any action has been taken upon your criticisms?—Yes; a detailed report is

submitted to me with reference to any action that has been taken.

9856. By the Military Department?—By the Military Accountant-General.

9857-9. And, supposing there were any points to which you had called attention, on which no action had been taken, what would you do?—As a rule, in any matters of account, my instructions must be carried out.

9860-1. But suppose there are any charges to which you take exception?—If there was a difference of opinion between the Military Accountant General and myself, it would be referred to the Government of India.

9862. Yes, but whom does the Government of India mean? the Financial Secretary?—It would depend upon which of us referred it; I should refer it to the Financial Department, and the Military Accountant General would refer it to the Military Department.

9863. And then it is decided between you in Council, I suppose?—It would be decided by the Government of India as a whole.

9864. Might it be decided in the first instance between the Military Member of Council and the Financial Member of Council, without actually going to the Council?—Yes: if they agreed, it would probably be so decided.

9865. Otherwise it would go to the Council?—Yes, if there was a difference of opinion between the Departments.

9866. But have you not some power to insist that any point to which you take exception, shall come home to the Secretary of State?—Yes. If the Government of India overrules an account officer on a question of audit, as to a matter in which the account officer considers that Secretary of State's sanction is required, it must report the case to the Secretary of State.

9867. That is to say, if you object to a charge, and the Government of India do not think you have made good your objection, they must send it home for the decision of the Secretary of State?—They must either accept such a suggestion as I have mentioned, or send it home.

9868. That is automatic; you are not obliged to demand that it shall be sent home?—No.

9869. The next division, I think, is the Education Department. What department in India administers the educational system?—The Home Department of the Government of India has the general control of the educational system in India.

9870-1. Is the Education Department a branch of the Home Office?—Education is one of the services which are administered by the Home Department.

9872. Who is at the head of it?—There is no special head of the Educational branch.

9873. Is there not an officer corresponding to an Assistant Under Secretary of State?—I do not know what local distribution of departments there may be in the Home Department secretariat; all that can be said is that that branch of the public service is administered by the Home Department.

9874. I see in the Finance and Revenue Accounts the Education Department begins with the Director of Public Instruction, who has an establishment?—There is one in each province.

9875. There is no Assistant Secretary at Calcutta, or person occupying that rank, who is charged with the general superintendence of the Education service?—No, apart from the Home Department of the Government of India.

9876. Does there ever come out a Minute of the Government of India applying to education generally throughout the empire?—Yes: Resolutions are frequently issued in the Home Department with reference to education.

9877. And the chief permanent officer would be the Secretary in the Home Department, and he would prepare, or cause to be prepared, any such general order?—Yes. Of course it would issue with the authority of the Government of India, not with the authority of the Secretary who happens to sign it.

9878. I quite understand that; but, as I understand, there is one great division of the Government of India—the Home Department—which has a great number of branches of business under it?—Yes.

9879. Among them being Education?—Yes.

9880. Of course the Secretary acts under the authority of the Council or the Member of Council who is at the head of that branch?—Yes.

9881. But the Secretary is the man who prepares or drafts under the instructions of his superior, and in this case the general education order would be prepared under the orders of the head of the Home Department by the Secretary in the Home Department?—Yes.

9882. Is the education question left very much in the hands of the Provincial Governments?—The expenditure is entirely provincial.

9883. And is the administration left very much to them?—Yes, subject to the general control of the Government of India.

9884. That is to say, there is no uniform principle of education throughout India. It is very much what the separate Provincial Governments consider necessary?—Each Province has its own code and system; but each such system is based on general principles laid down by the Government of India.

9885. Will you give us the total charges for education in 1875-6 and 1893-4 and 1894-5?—The gross charge for education in 1875-6 was 1,021,000 Rx.; in 1893-4, 1,472,000; and in 1894-5, 1,511,000. Then there are certain receipts which are credited to education: 147,000 in 1875-6, 216,000 in 1893-4, and 214,000 in 1894-5; so that the net charge for education is, in 1875-6, 874,000; in 1893-4, 1,256,000; and in 1894-5, 1,297,000.

9886. Each of these separate charges for education in each different province is the outcome of the code of that province?—Yes.

9887. Are those charges met to any extent from local rates?—Yes, a considerable proportion is now met from local rates. The amount charged locally in 1875-6 was 227,000; in 1893-4, 646,000; and in 1894-5, 665,000.

9888. Out of that total?—Yes.

9889-90. Upon what principle is that expenditure provided? If such large discretion is entrusted to the Provincial Governments, why this subvention, as it were, from the Imperial Government at all? As I understand, you gave us just now the net charge of education in 1894-5 as 1,297,000, or, in round numbers, 1,300,000?—That includes provincial and local charges.

9891. Out of that the provincial expenditure was between 600,000 and 700,000?—The net local expenditure was about 600,000.

9892. Therefore, putting it roughly, 50 per cent. was provided by the Provincial Governments?—The local expenditure is provided, not by the Provincial Governments, but by local rates. The expenditure, except what is local, is almost entirely provincial.

9893. I thought you said that out of the 1,300,000 net 600,000 was provided by the Provincial Government?—No: that is roughly the amount provided by local rates.

9894. By local rates?—Yes, and the rest by the Provincial Government. The only Imperial charges for education are in the small provinces, which are directly administered by the Government of India. They amount to only 28,000.

9895. Therefore you may say that 50 per cent. is provided by local rates and 50 per cent. out of taxes?—Yes. Some of the receipts of course, are local; I was giving the figures of the gross charges.

9896. I am taking your net charge. I understood you that it was something under 1,300,000 for 1894-5?—Yes.

9897. And of that you say that 665,000 was provided from local rates?—665,000 I gave as the gross local charge; the local receipts were 85,000, so that that would reduce the net local charge to 580,000.

9898-9. In round numbers 600,000 out of 1,300,000; that is, local rates provided something approaching one half?—Yes, not quite one-half.

9900. Would you call our attention to any heads of expenditure which deserve notice?—The expenditure under this head is divided mainly into direction and inspection, university charges, Government colleges, Government schools, grants in aid, scholarships, and a few miscellaneous charges. The direction and inspection cost, in 1875-6, 158,000 Rx.; in 1893-4, 220,000; university, in 1875-6, 7,000; in 1893-4, 4,000. Government

Mr. S. Jacob, C.S.I.

3 June 1896.

Education.

colleges, in 1875-6, 107,000; in 1893-4, 151,000. Government schools (general schools), in 1875-6, 435,000; in 1893-4, 540,000. Special schools (that is, technical and training schools), in 1875-6, 42,000; in 1893-4, 90,000. Grants in aid, in 1875-6, 174,000; in 1893-4, 374,000. Scholarships, in 1875-6, 40,000; in 1893-4, 52,000. Miscellaneous charges, in 1875-6, 56,000; in 1893-4, 38,000. Refunds, 1,000 in each year; which makes up a total of 1,020,000 in 1875-6, and 1,469,000 in 1893-4.

9901. The main part of the expenditure may be said to be, first of all, payments to Government schools (secondary, primary, and contributions to schools), which amount to something like 540,000?—Yes, that was the charge in 1893-4.

9902. That is the biggest charge, and, of the total charge you may say that about one-third goes in grants to Government schools?—Yes, rather more than one-third.

9903. And the next is grants in aid, and—what I suppose are akin to grants in aid—payments by results?—In that particular year they came to 374,000.

9904. And, therefore, out of 1,469,000 Rx. you get two items that come to 900,000, covering very nearly two-thirds?—Yes.

9905. What are the Government schools; why are they so styled? Are there other schools?—Yes, there are other schools which receive these grants in aid.

9906. They merely receive grants in aid; but Government schools are schools absolutely kept up by Government?—Yes.

9907. Does that represent the whole of the expenditure on education in India?—No, it does not represent the whole of the expenditure. There is also expenditure from municipal funds which is not charged in the Government accounts; that amounted to 235,000 Rx. in 1893-4.

9908. (*Sir Ralph Knox.*) Is it raised by local rates?—Yes; a great part of the other expenditure is raised by local rates too.

9909. (*Chairman.*) Are there any village schools?—Yes.

9910. And are they paid by local rates too?—Yes. In some provinces a large proportion of the village schools are paid by local rates.

9911. (*Mr. Naoroji.*) Local rates and municipal rates are different from each other?—Yes.

9912. Local rates are levied by the Government?—Yes.

9913. (*Chairman.*) But they would not be included in this budget?—The local rates, as distinguished from municipal rates, are. The local rates are not included under the head of Education, but the Education charges against them are.

9914. Would this 1,469,000 Rx. include any expenditure upon village schools as apart from municipal schools?—Yes.

9915. (*Mr. Naoroji.*) But they are not included in the receipts which are locally raised?—They are not included in Education receipts; they come under Provincial Rates.

9916. Yes, and are not included in the education receipts?—No.

9917. (*Chairman.*) Of course, if you are making up a budget of the education charge, you ought really to put these receipts against the expenditure?—They are general rates; they are not applicable solely to education; certain heads of expenditure have been made over as chargeable to the local rates, but you could not say that any fixed portion of the local rates is for education.

9918. Yes, but a portion of them is for education, is it not?—Yes, they are applicable to education amongst other things.

9919. But you cannot earmark them to education?—No.

9920. But still, if you are stating what the charge for education is in India, you would have to add to this 1,469,000 the municipal schools which cost 235,000 Rx.?—Yes.

9921. Then you would have the total charge of education in India, including any sums spent on what I call village schools?—No; you would have also to include, in the case of the schools which receive grants in aid, the further charges in excess of the grants in aid; and also the charges for private schools, which receive no grants.

9922. I am taking the total, 1,470,000; that includes grants in aid?—But these grants in aid are made to the non-Government schools—schools which are conducted by private parties or associations.

9923. Yes?—The charges of those schools are not covered by the grants in aid; so that if you wanted the total cost of education in India, you would have to include the extra cost of those schools.

9924. But where would you find the extra cost of those schools; where would that be paid from?—That would be paid from private funds—missionary funds, or association funds, or private funds.

9925. But, when I am talking of the total charge of education, I mean to the taxpayers?—Yes, the inclusion of the municipal funds would cover that.

9226. But, if you want to take the net charge to the taxpayer—the Imperial taxpayer—you would have to make an allowance, which is not now made, of those sums which are paid out of what Sir James calls the extra anna of the land tax?—Yes.

9927. (*Sir James Peile.*) Sometimes an extra anna, sometimes more.

9928-9. (*Mr. Mowbray.*) Did Mr. Jacob give us the exact figure of the Imperial charge for education in 1893-4?—28,000.

9930 (*Chairman.*) That is the charge to the Central Government?—No; that is mostly for the small provinces which are administered directly by the Government of India.

9931. But which is incurred under the authority of the Central Government?—It is charged to Imperial funds.

9932. As I understand it, first of all, there is the education provided in the Budget, which in this particular year of 1893-4 amounted to 1,470,000 Rx.; in addition to that there is an expenditure by the municipalities amounting to 235,000. Therefore, if you want to state the whole of what I may call Government expenditure in India it would come to something like 1,700,000 Rx. Now, going back to the 1,470,000, which is the Budget expenditure on education, that is made up, first of all, of a certain amount of something like 560,000 Rx. derived from local rates?—That is about the net amount charged to Local Rates.

9933. Then there come a certain amount of other receipts which are not attributable to local rates?—Yes.

9934. What were they?—Those are mainly the fees which are levied in Government schools.

9935. What did they amount to?—The local amounts to 84,000, Imperial and provincial to 132,000.

9936. Therefore you may say that the Imperial taxpayer pays out of that 1,469,000 something like 800,000; does that represent the result?—Yes, about 800,000 of the gross charge and about 700,000 of the net charge.

9937. I have got it in this way: that the subventions from local rates are 560,000, and the receiptsfrom fees and so forth 127,000; that makes 687,000. The total Budget charge is 1,470,000; deduct 687,000 from 1,470,000, and that leaves in round figures 780,000 Rx. as the charge on the Imperial taxpayer?—That is in round numbers the gross charge to Imperial and Provincial.

9938-9. (*Sir Ralph Knox.*) That is about one-half of the gross?—It is more than one-half of the gross charge.

9940. (*Chairman.*) I now go back again, putting aside the municipal expenditure of 235,000, in order to find out what the charge is on the local rates, and what charges come on the exchequer, out of this 1,470,000. I learn from Mr. Jacob that the receipts from school fees of all kinds were 216,000, and in addition to that the local provincial rates provided 550,000?—The exact amount is 562,000.

9941. 778,000, does not that make?—It makes 778,000; take that from 1,470,000 and you are left with 642,000 as the sum that comes out of the general revenues.

9942. (*Sir William Wedderburn.*) I do not see any reason for treating differently the 562,000 of local rate and the 235,000 of municipal rates.

9943. (*Chairman.*) Only one is put in the Budget and the other is not. That is why I separated them.

9944. (*Sir William Wedderburn.*) I quite follow that, and I only wish to point out that, although collected by the Government and therefore appearing in the Budget, they are really as much a local contribution, and as little a real contribution of the Imperial taxpayer, as the municipal.

9945. (*Chairman.*) That I quite follow. Of what do the University charges consist?—The main part of the charge for universities is at present for the Punjab University. The Calcutta and Madras Universities receive nothing from Government, and the Bombay University only receives a fixed grant of 500 Rx. The balance of the charge is for the Punjab, which is a new institution, so that its receipts do not yet quite cover its expenses.

9946. (*Sir Ralph Knox.*) But the Universities are self-supporting generally?—Yes, they are intended to be self-supporting; the Calcutta and Madras Universities have been absolutely self-supporting for some time, and I believe the Bombay University is to be self-supporting in future.

9947. Have they any property or endowments?—They have various endowments for special purposes. I am not sure whether they have any general endowments.

9948-9. (*Mr. Mowbray.*) This charge is in fact a diminishing and a disappearing charge?—Yes.

9950. (*Chairman.*) Do you think we shall have to look for a continued increase in the education charge?—I should think the net charge would not increase very much, I mean the net charge to the Imperial or provincial taxpayer, as apart from the local rates.

9951. But do you expect to see this total of 1,470,000 rise very much?—I should think that that would increase very much.

9952. But it would probably be met out of local rates?—Yes, to a great extent.

9953. Is the policy of the Government of India at the present moment to extend education largely, which of course would mean a large increase of expenditure, or is it standing still?—I do not think it is extending largely; it is being developed gradually; and every year there is a steady increase of the charge.

9954. But that is probably only because of the increase of population?—I should think it is slightly more than that; but there is not a large increase year by year, though there is a steady increase.

9955. (*Sir James Peile.*) The policy is to encourage private enterprise by grants in aid?—Yes.

9956. (*Chairman.*) Have these grants in aid increased very much of late years?—Yes, since 1875-6 they have increased largely. They were, including payment by results, only 174,000 in 1875-6, and 374,000 in 1893-4.

9957. And that is the head under which you would expect to see an increase year after year?—Yes, I think the largest increase will be there; there may be some slight increase in Government schools, especially technical schools.

9958. (*Sir James Peile.*) Government stimulates weak branches of education by special assistance at the beginning? For instance, you have lately established technical schools, and there is a great increase there?—Yes.

9959. That is special encouragement to technical education?—Yes.

9960-1. And female education in the same way was stimulated by special grants? Yes. I should think the increase will be largely in elementary education.

9962. (*Sir Ralph Knox.*) Since when have those special aid grants been introduced?—They have been going on for a long time, certainly since the Education Despatch of 1854; but they have been very largely increased during the last 20 years.

9963. (*Mr. Naoroji.*) Can you give something like the whole of the Government expenditure, including those provincial rates, on education of every sort, on every grade of education, per head of population. I am talking only of the charge, the whole Government charge, including grants in aid, and grants to the universities and the higher schools and technical schools of every kind?—I have not got it worked out.

9964. Will you be able to give the total per head?—In each province?

9965. In the whole of India, taking the whole educational expenditure?—The rate per head of the educational expenditure of India?

9966. Yes; the rate per head of the educational expenditure of India in every form disbursed by Government, including grants in aid?—I will endeavour to put in a statement.*

9967. (*Chairman.*) That is to say, you mean the Rx. 1,470,000 which is put in the Budget, and the Rx. 235,000 which is not in the Budget?

9968. (*Mr. Naoroji.*) The latter is the municipal expenditure; I am not including that. I mean what is disbursed by Government, from the Government taxes, per head of population, and also a similar expenditure in this country by Government from taxes, so as to make a comparison between the two countries.

9969. (*Sir Ralph Knox.*) What is the system of education; do only those go to school who wish to go to school?—There is no compulsory education.

9970. (*Sir William Wedderburn.*) There is a very strong popular demand upon Government to spend a great deal more than they do spend at present upon education, is there not?—I do not know exactly how to gauge the popular demand in India.

9971. There are continual applications?—I believe there is a constant demand by local associations for increasing the expenditure on education.

9972. It would be very popular if Government would spend more money upon education, would it not?—I believe so.

9973. It would give general satisfaction?—I believe so. But I think the policy of the Government at present is not to incur largely increased expenditure on education, apart from the local rates.

9974. But if they had the money they would be very glad to give it to education, would they not? Is not each of the Provincial Governments hampered very much in dealing with applications by the want of money?—They receive many more applications for aid to education than they can comply with, certainly.

9975. (*Chairman.*) I suppose that in India the education is carried on very much by the priesthood of the religious sects?—A certain amount of elementary education is, but I do not think the proportion of such education is very large now in India generally.

9976. (*Mr. Mowbray.*) Are grants in aid made to schools which are entirely conducted by priests of the different religions?—They are given to any school which complies with certain conditions as to secular education, which are laid down in the code.

9977. And, as a matter of fact, are the majority of these schools managed by Europeans, or by Natives?—I do not suppose the majority of the schools are managed by Europeans; a very large number are managed by Europeans.

9978. But there are also a considerable number of grants in aid made to schools which are entirely under Native management, so long as they comply with the requirements?—Yes, a very large number.

9979. And is there a system of inspection of all these schools which receive grants in aid?—Yes, there is a Director of Public Instruction in every province, and there are inspectors of schools as well.

9980. And does the grant in aid depend in any way upon the result of the inspection?—In certain cases it does; there are payments by results which are given chiefly with reference to the inspector's report. But the grants in aid are sometimes given on some other principle than that of being dependent upon the report of the inspector.

9981. And in fact there are two principles: in one case the grant in aid is made because the school is being properly conducted?—Yes.

9982. And then a special grant is made depending upon the report made by the inspector?—Yes.

9983. (*Mr. Naoroji.*) The whole expenditure on education is very small compared with the whole population?—Yes, that is so.

9984. It requires very much enlarging, if possible, and I think Government would be only too glad to spend more money if they had it?—I think Government would very much like to see the people take up education themselves, and not depend so much upon the expenditure of Government money.

* *See* Appendix 29

Mr. S. Jacob, C.S.I.

3 June 1896.

Education.

9985. But if the people are so poor in British India, it is impossible either for the people or the Government to spend much on education, especially when a great deal is spent on warlike operations and in other ways?—No doubt the poverty of the people affects the amount which they can spend on education.

9986. (*Sir Ralph Knox.*) What proportion of the expenditure would the grants represent; has it been calculated in any way?—Various proportions are fixed in the different provinces; in some provinces the grants amount to as much as half of the expenditure.

9987. Any increased demand that is made for education would be subsidised to the extent of one-half in such a case as that?—Yes.

9988. If the people contributed one-half they would get the other half of the expenditure paid for them?—Yes, where that was the rule, they would.

9989. But in other provinces the proportion would be much smaller?—The proportion varies very much; I do not know what the rates are in the various provinces.

9990. (*Mr. Naoroji.*) You can give the general proportion of the grants in aid to the whole of the Government expenditure—Government expenditure is not all grant in aid?—No; Government expenditure is not all grant in aid.

9991. Then what is grant in aid out of the whole Government expenditure, you can give that?—I have given that already.

9992. (*Mr. Mowbray.*) Are any grants made to educational establishments not in British territory?—They may be made in a few cases where there are political establishments, but they would be quite exceptional cases.

9993. (*Mr. Naoroji.*) Do you think there are any cases?—I think there are, but I think that probably the charge is in such cases covered by local receipts.

9994. Outside of British territory?—Yes.

9995. (*Chairman.*) Public expenditure on education in India is comparatively of quite recent date; I see from the Statistical Abstracts of the sixties, for instance, that the sums there put down as spent upon public education are quite infinitesimal?—Yes, the expenditure was very small in past years.

9996. And therefore, if the development that has taken place since is at all part of a general policy, I suppose we must look upon it that there will very probably be a considerable increase?—Yes, undoubtedly there will be an increase, a steady increase.

Ecclesiastical.

9997. Now we may pass on to the Ecclesiastical branch. The Ecclesiastical budget appears to have been a growing one; perhaps there may be some explanation of that?—The increase in the Ecclesiastical charges from 1875-76 to 1893-94 is only 14,000 Rx.

9998. But I see in the Statistical Abstract that the growth is considerably over that of the 10 years previous to that, in which it was about 144,000 Rx. I should have thought that the Ecclesiastical budget would have been a stationary one—that is to say, that there would not be many new grants made now. Do you consider it a growing budget?—I do not think generally it is a growing one. The number of chaplains is certainly not increasing. Part of the present charge is due to the exchange compensation allowance, which is given to chaplains in common with other servants of Government.

9999. What is the the total amount of charge under this head at present?—177,000 Rx. in 1893-4, and 185,000 Rx. in 1894-5. The difference in those two years is almost entirely due to the exchange compensation.

10,000. And, I presume, there are no receipts under this budget?—No.

10,001. Can you give us any details of these charges?—The charges for 1893-94 for Church of England are:—Bishops, 11,135 Rx., chaplains, 112,978 Rx., establishments, 5,905 Rx.; for the Church of Scotland—, Chaplains, 10,021 Rx., establishments, 594 Rx.; for the Church of Rome:—3,931 Rx.; for other churches 5,815 Rx.; contingent charges come to 20,982 Rx., and cemeteries cost. 5,000 Rx.

10,002. (*Sir Ralph Knox.*) Does that "contingencies" include the exchange compensation?—No, the exchange compensation comes under the salaries of the chaplains.

10,003. (*Chairman.*) Are the "allowances" allowances for the establishment of chaplains for the purpose of Divine service at places which are centres of European population?—The "allowances" are grants in aid. The charges for chaplains are chiefly for such places as you have mentioned.

10,004. Is there any rule to the effect that the Indian Government appoints a chaplain if so many persons of a congregation are found at a certain station?—I do not think the Government of India increases the number of chaplains at all now; it distributes them generally with reference to the requirements of its European servants at different centres.

10,005. What sort of number of chaplains are there, who earn this 112,000 Rx. for the Church of England?—The junior chaplains receive Rs. 500 a month, and the senior chaplains Rs. 800.

10,006. You may say a junior chaplain gets about 600 Rx. a year?—Yes.

10,007. Would not that leave something like 150 or 160 chaplains of the Church of England for all India?—I can get out the exact number. The number of paid chaplains would, I suppose, be about 150.

10,008. If 600 Rx. a year is the pay of junior chaplains, and 800 Rx. (I think you said), the pay of senior chaplains, I am supposing an average of 700 Rx.?—The senior chaplains receive Rs. 800 a month, that would be 960 Rx. a year.

10,009. It is by the four-week month, is it?—No; 12 months in the year.

10,010. Yes, but suppose you take one at Rs. 500 a month, that would be Rs. 6,000?—Yes, that would be Rs. 6,000 a year.

10,011. Would it be fair to take an average of 700 Rx.? Juniors probably would preponderate in number?—No, I do not think that is the case; they would probably be nearly even.

10,012. That would make them about 140 to 150 chaplains?—Yes. I find the exact number provided in the estimates of 1895-6 was 147 fully-paid chaplains.

10,013. (*Sir Ralph Knox.*) The Church of England chaplains perform the duties for the military forces in India, do they not?—Yes; for the military as well as the civil population.

10,014. (*Chairman.*) But are they described as army chaplains and put in places where troops are stationed?—They are always assigned to places where European troops are stationed. They are assigned also to the presidency towns, and to the headquarters of provincial governments, and to some other places as well.

10,015. Because my question originally to you was whether they were allotted according to the European population, which would be a different thing?—The question, as I understood it, was whether the chaplains are allotted to places which are centres of European population; and that is generally the case. Where the troops are stationed in the Mofussil, they would form the bulk of the European population.

10,016. (*Mr. Buchanan.*) The Indian Government would not send a chaplain, and pay for him, to a locality in India where there was a purely civil European population?—They do post chaplains to some places where there is only a civil European population.

10,017. Supposing a new community of tea planters, or whatever it might be, grew up in India, would the Government of India pay a chaplain for them?—I do not think so. It might give a grant in aid in certain cases.

10,018. There would not be any new chaplaincies of that sort established?—They might redistribute the establishment, if necessary, in consequence of a redistribution of population; but I do not think they would increase the establishment now.

10,019. (*Chairman.*) If the Government gives so much to so many chaplains of the Church of England, how does it decide what it gives to other sects; take these mentioned here—the Church of Scotland or the Church of Rome?—For the Church of Scotland the chaplains are provided only for the troops.

10,020. Only for the troops?—And for the Presidency towns and headquarters of Provincial Governments.

10,022. And for the Church of Rome?—For the Church of Rome there are no chaplains charged to this budget. The payments are of 500 rupees a month

each to the archbishops of Calcutta, Bombay, Madras, and the North Western Provinces, and one of 300 rupees a month to the Bishop of Rangoon, for ecclesiastical returns.

10,023–4. I see there is a note put to these charges—Church of Scotland and Church of Rome—that they are exclusive of payments to Roman Catholic priests and Presbyterian chaplains attached to regiments, which are treated as army expenditure. This payment of 10,000 Rx. to the Church of Scotland, I suppose, can only apply to chaplains at the Presidency towns?—Chaplains at the Presidency towns and headquarters of Provinces, chiefly.

10,025. What is the cause of the increase in the stipends of the bishops?—There has been no alteration really in their stipends; the variations are due to the absence of bishops on leave for a portion of the year.

10,026. And in the salaries of the chaplains both of the Church of England and of the Church of Scotland?—The increase is entirely due to the exchange compensation allowance in the case of the chaplains of the Church of England.

10,027. And I suppose also in the case of the Church of Scotland?—Yes.

10,028. Then there are allowances to other churches besides those of England and Scotland and Rome; what are they?—Those are allowances paid to Wesleyan ministers under certain fixed rules, according to the number of men to whom they minister. They are mainly with reference to their ministrations to the troops.

10,029. Are these the only ecclesiastical charges incurred by the Government of India?—No, there are others incurred in the Military Department for chaplains of the Church of Scotland attached to troops, and for the priests of the Church of Rome similarly attached.

10,030. But I gathered from you that the chaplains of the Church of England, costing 112,000 Rx. or 113,000 Rx. a year, include the chaplains attached to regiments?—Yes, they do.

10,031. As a rule, regiments do not carry their chaplain with them?—Not their English chaplain; they carry their Scotch or Roman Catholic chaplain with them in certain cases.

10,032. What are the rules, Sir Ralph Knox, under which chaplains are attached to regiments?

(*Sir Ralph Knox.*) They are not allotted to regiments. We pay the clergy of the district, where there is a small force. Some of the allowances paid to Church of England chaplains are allowances paid to ministers, who are paid partly from other sources.

10,033. (*Mr. Buchanan.*) Is that the reason why in the charge for chaplains of the Church of England, which you have put under this ecclesiastical vote, the army chaplains belonging to the Church of England are included in the Ecclesiastical vote, and the army chaplains, of both the Church of Scotland and the Church of Rome, are included in the Army vote?—The army chaplains of the Church of England also perform the duties of civil chaplains as well, in many cases.

10,034. I suppose the chaplains of the Church of Scotland do ecclesiastical duties in connexion with Presbyterian soldiers?—Yes, they do for those in the Presidency towns and head-quarter stations of Provinces.

10,035. Can you give us any idea how much of the total of 176,000 Rx. would fairly be chargeable to army chaplain account—two-thirds of it, or how much?—I could not say without making a detailed estimate.

10,036. (*Sir William Wedderburn.*) Have the bishops anything to do with the army at all?—All the chaplains of the Church of England are under their control.

10,037. (*Chairman.*) Of course it is evident from what you say that a large part of this budget is a military budget; it is all connected with the military expenditure?—A great part of it is.

10,038. (*Sir William Wedderburn.*) You are aware that a considerable objection exists to payment of the ministers of one religion out of taxes raised from those who profess other religions?—Yes.

10,039. Supposing that the chaplains were kept entirely to their military duties as chaplains for the troops, what amount of saving could there be effected?—I really can hardly say, the duties are so much mixed up. I mean that in every large cantonment there is such a large number of European Government servants to whom the military chaplains minister, that it would be difficult to say what proportion should be charged to the military and what proportion to the civil, and I fancy that that is the reason why the whole charge in those cases is taken to be civil.

10,040. Would there be any objection to attaching the Church of England chaplains to the troops in the same way that the Presbyterian and Roman Catholic chaplains are attached? Would not that get over the difficulty?—Well, there is not a chaplain for each British regiment, of course, or anything like it. The chaplains are appointed to the stations where a large number of regiments may be congregated.

10,041. You are aware that in Ceylon the ecclesiastical establishment has now been done away with, has it not, as a Government establishment?—I have no official information as to that.

10,042. (*Chairman.*) It is a largish force of chaplains: is it not, 147, for a comparatively small number of Europeans?—It must be remembered that the Europeans in the Mofussil (consisting mainly of Government servants) are very much scattered, and a chaplain has very often visiting charge of several districts; there are many districts in India which have no chaplains at all attached to them.

10,043. (*Sir William Wedderburn.*) As a general rule, the civil community to whom these chaplains minister are well-to-do people, who could afford to pay for their own religious ministers?—In the large centres, I suppose, they could, but not in smaller places.

10,044. They are well-to-do people on the whole?—Many of them are well-to-do.

10,045. (*Sir James Peile.*) But they are a continually shifting body of people, always changing?—Yes.

10,046. It would be very difficult to keep up the subscription of a minister's stipend from them?—It would be very difficult. It is done in some cases—in the case of those that I mentioned, who receive only a grant from Government; a certain proportion of their stipends is provided by the community.

10,047. (*Mr. Naoroji.*) In the Presidency towns, the population is not very shifting?—Yes, I should say it was shifting there too.

10,048. The European population—the civil population?—Yes; I should say the civil were too.

10,049. So far as the principle of attaching chaplains to troops alone was concerned, it would not matter whether the Presidency towns had a chaplain or not for the purposes of civilians?—Presidency towns could support their own chaplains, I suppose.

10,050. (*Sir William Wedderburn.*) Could the duties that the bishops perform, *quâ* superintendence, be performed by a chaplain-general or some such official as in the case of the British troops?—I should suppose they could.

10,051. I suppose the superintendence of the military chaplains is only a small portion of the duties of the bishops?—The Anglican chaplains are not divided into military and civil. A man who is a military chaplain one day may be a civil chaplain the next, as far as the Church of England is concerned.

10,052. (*Chairman.*) Take Calcutta; are there many salaried Church of England chaplains there?—Yes, there are several; I should think seven or eight, probably.

10,053. Well, is not Calcutta a place in which the European population could find its own chaplains?—I should say they could in the case of most of the churches.

10,054. (*Sir Ralph Knox.*) But some of those serve the military forces, do they not?—There is one chaplain in the Fort who is called the garrison chaplain and ministers to the military forces of the garrison, and the Scotch chaplain too ministers to the Presbyterian troops.

10,055. (*Mr. Buchanan.*) The Indian Government is not extending the Ecclesiastical establishment?—No; the direct appointment of chaplains has not been extended at all in recent years.

10,056. (*Mr. Mowbray.*) And there have been several bishoprics started lately which are paid by voluntary contributions in India?—Yes, as far as the State remuneration is concerned, these new Bishops are merely chaplains, and they receive chaplain's pay; anything further is provided by voluntary contributions.

Mr. S. Jacob, C.S.I.

3 June 1896.

Ecclesiastical.

10,057. (*Chairman.*) The State provides for a stipend to three bishops, I see?—Yes.

10,058. (*Sir James Peile.*) Much larger payments are made from the public treasury in India for endowments for Hindoo and Mohammedan religious purposes than for the English clergy, are there not?—I do not think there are any direct payments, are there?

10,059. Charges on land revenue?—Yes, there are remissions of land revenue; and in Bombay these are brought to account, both as revenue and charge, by a book adjustment.

10,060. (*Mr. Naoroji.*) At the same time these endowments originally existed; they have only passed over into the hands of Government, have they not?—They are merely the continuation of endowments which existed under former Governments.

10,061. (*Chairman.*) And they are charged on gross revenues, are they?—I think they are granted chiefly in the form of remissions of revenue.

Medical.

10,062. Why is the Medical Department a separate department in India?—The Government is obliged to keep up a certain number of medical officers for attending on its own servants; it provides them with medical attendance.

10,063. It is part of the bargain with a civil servant that he has medical attendance provided for him?—Yes.

10,064. What is the total charge under this head at present?—The total gross charge in 1893-94 was 979,000 Rx. Some receipts came in amounting to 75,000 Rx., and the net charge is 904,000 Rx.

10,065. Now this is a charge that seems to have increased very largely within the last 30 years?—Yes, it has increased.

10,066. Can you give us the reason for that increase?—The charges for the Medical establishment have increased from 210,000 Rx. in 1875-76 to 300,000 Rx. in 1893-94. That head includes (1) the salaries and other allowances of the officers in medical charge of the principal stations in the districts, who also supervise the subordinate medical officers in charge of hospitals and dispensaries throughout the districts, (2) the cost of superintendence of these medical officers at the head quarters of the Provincial Governments, and (3) the reserve staff of subordinate medical officers. The two latter items did not occur in 1875-76. The following is a comparison of the charges under this head in 1875-76 and 1893-94:—There was no charge for superintendence in 1875-76; now there is a charge of 39,000 Rx. The salaries and allowances of district medical officers for general medical duties have increased from 187,000 Rx. in 1875-76 to 220,000 Rx. in 1893-94; and allowances for special duties, such as charge of jails and police, have decreased from 6,000 Rx. in 1875-76 to 1,000 Rx. in 1893-94; travelling allowances have increased from 6,000 Rx. in 1875-76 to 13,000 Rx. in 1893-94; exchange compensation allowance now accounts for 12,000 Rx.; establishments are practically the same, 3,000 Rx., at each period; and contingencies have decreased from 7,000 Rx. in 1875-76 to 5,000 Rx. in 1893-94; there is also a reserve of medical subordinates now which costs 7,000 Rx.

10,067. What are the years you are comparing?—1875-76 and 1893-94; that is for the medical establishment alone.

10,068. Under whom is this Medical department? What department is it subordinate to?—That is also administered by the Home Department.

10,069. And is there any Inspector-General or head officer?—Yes, there is an officer. He is called Surgeon-General with the Government of India.

10,070. But I suppose they ask his advice?—The appointments are under his general control, or rather under the general control of the Home Department; he is the adviser of the Home Department in the exercise of its general control over the medical administration.

10,071. Does he distribute the medical men, settle where they are to be stationed, and so forth?—The actual administration is under the Provincial Governments.

10,072. Are the medical men at all employed in connection with the local forces or with native institutions?—They have the charge of hospitals and dispensaries.

10,073. And of course hospitals and dispensaries are open to the natives?—Yes.

10,074. Are their charges to any extent met from local funds, as we have already learned the charges for education are?—Yes; the increase in these charges is largely accounted for by expenditure which is charged to the local rates. For instance, the net local charges in 1875-76 amounted to 45,000 Rx., and in 1893-94 to 238,000 Rx.

10,075. Under what heads are the charges distributed?—They are distributed under the heads of medical establishment., hospitals and dispensaries, sanitation and vaccination, medical schools and colleges, lunatic asylums, special hospitals, chemical examiners, grants for medical purposes, miscellaneous and refunds.

10,076. What are the medical schools and colleges?—They are for the education of medical subordinates.

10,077. You mean hospital assistants?—Yes, and other medical subordinates.

10,078. They are not for training European doctors out there?—No. A few Europeans do attend the colleges, but the students are mainly natives.

10,079. Then, I see, that the larger part of the medical budget would not go in salaries to medical men, but in keeping up institutions?—Yes, a very large portion of the grant goes to that charge.

10,080. Would the medical establishment, the cost of which, I see, amounts to about 300,000 Rx., include and cover the salaries given to medical men stationed at the different stations?—Yes, that includes the whole of that.

10,081-2. What sort of allowances are given to medical men, do you know?—They vary, according to their standing, from about 550 Rs. to 1,250 Rs. a month.

10,083. About Rs. 500 a month is the lowest, is it?—For the medical charge of a district, it is the lowest pay of a commissioned officer. Some of the smaller districts are in the medical charge of apothecaries and uncovenanted medical officers, who received minimum pay of Rs. 350 per mensem.

10,084. What are the charges included under medical establishments?—Those are what I gave you just now, the salaries and allowances of the officers, the cost of superintendence, the reserves, the contingencies, and the travelling allowances.

10,085. These medical men are maintained exclusively for civil purposes? They have no military duties to perform, have they?—No; not those that are charged under this head.

10,086. (*Mr. Buchanan.*) Is the Military Medical Establishment totally separate?—Yes; that is charged entirely to the army.

10,087. (*Mr. Mowbray.*) But are the civil medical officers not available, in case of necessity, for the army?—Yes, there is no distinction in the service between the army and the civil surgeons, as far as the commissioned officers are concerned. All the commissioned civil surgeons come from the Indian Medical Department.

10,088. And, in case of necessity, the civil surgeons would be called upon for military service, would they not?—Yes, they would.

10,089. (*Sir Ralph Knox.*) They would be liable for military service?—Yes, they form a reserve for the army.

10,090. (*Sir James Peile.*) That is, in fact, their first duty?—It is the first duty of the Indian Medical Department.

10,091. (*Chairman.*) Would there be any possibility, in stations where there are a number of troops, of employing the military medical attendants also for civil purposes, because the number of civil servants cannot be very great, I presume?—In some cases it is possible, and that arrangement is carried out. A military doctor who is placed in charge of a civil station in a few instances receives a small additional allowance of about 100 rupees a month for the additional charge of the civil station.

10,092. Therefore that principle is admitted as far as it can be extended?—Yes.

10,093. (*Sir Ralph Knox.*) What do you mean by the military doctor?—I mean the commissioned medical officer attached to the troops.

10,094. British troops?—As a rule I think it would be to the Indian troops.

10,095. These doctors attend all the native Indian troops, do they?—No, not those doctors that are charged here; the pay of the medical officers attached to the troops is charged to the Army.

10,096. (*Chairman.*) Would there be any objection, Sir Ralph Knox, in cases where there are a small number of European civilians and, we will say, two or three regiments stationed, to the employment of the military doctor to look after the civilians?

(*Sir Ralph Knox.*) Of course he would have to be paid extra for it.

(*Chairman.*) Quite so, but I understand from Mr. Jacob that in such a case there is an extra allowance.

(*Sir Ralph Knox.*) I should think there would be no objection.

10,097. (*Chairman*). Under hospitals and dispensaries has the increase been general, or is it confined to a few provinces?—There has been an increase in almost every province. The greater part of the increase, however, has been met from local funds. The charges for each province in 1875–76 and 1893–94 have been as follows:—

Hospitals and Dispensaries.

———	1875–76.	1893–94.	Increase or Decrease.
India, General - -	2,957	6,058	3,101
Central Provinces -	10,376	8,191	– 2,185
Lower Burma - -	5,710	3,639	– 2,071
Upper Burma - -	—	5,217	5,217
Assam - -	1,195	12,061	10,866
Bengal - - -	78,295	56,208	– 22,087
North-Western Provinces and Oudh.	22,103	45,559	23,456
Punjab - - -	16,850	33,598	16,748
Madras - -	57,087	99,231	42,144
Bombay - - -	63,798	66,270	2,472
Total - -	258,371	336,032	77,661

10,098. It would seem that a large part of the increase is due, not so much to extended provision for civil servants, as to the extension of hospital accommodation for the benefit of the natives?—Yes, a very large part of the increase is for that. The total number of hospitals and dispensaries, which are not exclusively Governmental institutions, but paid for generally either by Government or by local and municipal rates, has risen from 1,028 in 1875–76 to 2,018 in 1893–94, and the number of in and out patients has risen from 5,000,000 in 1875–76 to about 17,000,000 in 1893–94.

10,099. What is the cause of the increase in sanitation and vaccination charges?—That is entirely due to the extension of vaccination among the people, and to the charges which have been incurred for improved sanitation. Sanitary Commissioners have been appointed in several provinces, and sanitary engineers in some.

10,100. And that also is a charge incurred for the benefit of the natives?—Yes.

10,101. Then in reality, it is a health department rather than a purely medical department?—Yes, it is to a large extent a health department.

10,102. (*Mr. Naoroji.*) The expenditure on educational medical establishments such as colleges, is included in the educational amount, is it not?—No, it is included under Medical.

10,103. And medical colleges are not included in the education grant of 1,400,000 Rx.?—The charges for medical schools and colleges come under the head of Medical, not under the head of Education.

10,104. Are they not included under the total of Education?—No.

10,105. The amount for medical colleges, is not that included in the educational expenditure?—No, it is included in the medical.

10,106–7. (*Chairman.*) Of what do the English charges under this head consist?—They consist almost entirely of the cost of the maintenance of lunatics at various asylums in England.

10,108. Under what circumstances are lunatics sent to England and kept there? Are they Europeans who have unfortunately gone mad in India?—Yes; Government servants. The Secretary of State is liable for the maintenance of lunatic officers, soldiers, or soldiers' widows, if belonging to the East India Company's local forces, and of orphans of subscribers to the Bengal Military Orphan Society, for whose guardianship he is responsible. So long as he had an asylum at Ealing for the purpose, other patients connected with the Indian services were occasionally admitted. In 1892 an arrangement was made with the Admiralty to receive the male patients at Yarmouth; and the female patients were removed to an asylum at Coton Hill. There is a credit very often, against the charge, of the pensions to which the lunatics would have become entitled, if they had retired.

10,109. I see nearly 2,000 Rx. were received against charges amounting to nearly 6,800 Rx. in 1893–94?—Yes.

10,110. (*Sir William Wedderburn.*) Might I ask a question about education, which I omitted? Are you aware of an educational grant that is made to the Church Missionary Society?—An educational grant?

10,111. A grant for education. I am informed that 40 years ago the Board of Control ordered that certain grants should be made to Missionary Societies in return for secular education in mission schools?—There are a number of mission schools in India which receive grants in aid from Government under the policy laid down in the Education Despatch of 1854.

10,112. But this seems to be a special grant made in this country in sterling, amounting, according to the figures that have been given to me, to 70,063*l.*, and the bills of exchange were to Bengal 13,000, North-West Provinces 13,000, Punjab and Sind 15,000, Western India 5,000, South India 15,000, Travancore 6,000?—There is no such grant from Government.

10,113. I was informed by someone, who knew about it, that this sum of 70,063*l.* was paid, as I understand, in sterling to the society, on the understanding that they were to remit a corresponding amount in rupees to India as a subvention to their secular education, and that, owing to the fall of the rupee, they are able to remit the required amount by means of a very much smaller sterling payment, and that practically they are able to make a profit of 25,000*l.* a year out of this arrangement. That is what I have been informed by someone who knows?—I have no knowledge of any such arrangement.

10,114. Could you ascertain the facts?—I think I may state at once positively that there is no such arrangement.

10,115. This was told me by a gentleman well acquainted with the Society?—I know the nature of every bill of exchange that is drawn by the Home Government upon India, and there is certainly no such bill paid by me.

10,116. (*Chairman.*) Do you mean that the sum was given to the Society, and that they remitted it?

(*Sir William Wedderburn.*) A sterling payment is made to them here?

(*Chairman.*) Drawn by the Government?

10,117. (*Sir William Wedderburn.*) This information was given to me, and I hoped to have it verified. My information is that this 70,063*l.* is paid in sterling to the Society here, on the understanding that they remit an amount in rupees to India, and that, owing to the present exchange being so much lower than the old exchange, they are able to remit this amount with a saving to themselves of 25,000*l.*, which is practically a subscription to the Church Missionary Society. That is my information?—It is not brought to account anywhere in our accounts; I do not see how it can be paid.

10,118. (*Sir Ralph Knox.*) But what I understand from Sir William Wedderburn is, that this payment was made very many years ago, on the understanding that the Society was to do certain work in India.

(*Sir William Wedderburn.*) Yes; the statement is that 40 years ago, when education was in its beginning, and the missionaries were the only people who undertook that work, the Government gave them this payment on account of the secular education in their schools.

10,119. (*Sir James Peile.*) Is it 70,000*l.* a year?

10,120. (*Sir William Wedderburn.*) 70,000*l.* a year?—No; certainly no such payment is made in England.

(*Sir Donald Stewart.*) It must be some mistake.

Mr. S. Jacob, C.S.I.

3 June 1896.

Political.

10,121. (*Sir William Wedderburn.*) It may be; I had no means of verifying this myself; the information was given to me?—I am sure there is no such payment made.

10,122. (*Sir James Peile.*) Perhaps it was a single gift of 70,000*l.*, and the Society remits the interest?

10,123. (*Chairman.*) 70,000*l.* a year seems impossible?—It could not be paid without my knowing something about it.

10,124. (*Sir William Wedderburn.*) That 70,000*l.* may be the total amount that has been paid in the 40 years?—I cannot say, of course, what may have been done many years ago, but I am sure that no such payment has been made recently.

10,125. (*Mr. Naoroji.*) No payment at all of that kind?—No.

10,126. (*Sir William Wedderburn.*) That apparently means 70,000*l.* in those 40 years then, and that 25,000*l.* is the accrued profit from the remittance; that seems to be the meaning of it. I daresay you could ascertain the facts?—I will verify it, but I am sure I can say positively that the India Office at present makes no sterling payment of any kind in the shape of a grant to the Church Missionary Society. I will ascertain if any such payment ever has been made.*

10,127. (*Chairman.*) We will turn now to the Political branch. Would you describe to us what the nature of this service is?—There is a Political Department of the Government of India, which comprises the political residents and agents and their assistants at the various native courts.

10,128. It is a kind of Foreign Office then, I suppose?—Yes.

10,129. Whom is it under—the Foreign Secretary?—It is under the Foreign Department of the Government of India.

10,130. The Secretary for Foreign Affairs to the Government of India?—Yes.

10,131. Have there been any increases in charges under this head?—Yes; there has been a very considerable increase. The charges have increased from 432,000 Rx. in 1875–76 to 966,000 Rx. in 1893–94.

10,132. What is the reason of so large an increase?—The increases have occurred as follows:—The charges for political agents, &c., 120,000 Rx.; charges on the North-Western Frontier, 115,000 Rx.; political subsidies, 228,000 Rx., and refugees and State prisoners, 72,000 Rx.; imperial service troops, 20,000 Rx.; and the rest of the charges give a small net decrease.

10,133. The charges on the North-West Frontier, I suppose, are chiefly allowances paid to tribes in connection with the hill passes, are they?—The present charges—that is to say, in 1893–94—for the North-West Frontier, are the allowances and charges for the Khyber tribes, 9,878 Rx.; Perso-Afghan frontier, Khorassan, Rx. 13,204; Jezailchi Corps and Kohat Levies, Rx. 11,759; payments for guarding hill passes, Rx. 9,271; Baluchistan (frontier Levies, &c., Rx. 55,314; Zhob Valley charges, Rx. 25,189), 80,503; making a total of Rx. 124,615.

10,134. What are those frontier levies; levies of troops or police to guard the highways?—They are a kind of military police that are employed there for purposes of administration. The increase in the political agents' charges under the Government of India is made up of 26,000 Rx. under salaries and 33,000 Rx. under establishments and contingencies. The increase in salaries is fully accounted for by the Baluchistan agency charges, which amount to over 26,000 Rx.

10,135. They are a new charge?—Entirely a new charge. The establishment of that agency also accounts for 28,000 Rx. of the other charges. There have been changes in some of the other agencies, but on the whole with very little increase of charge. Then there have been increases in some of the provinces. In the Central Provinces there is a new appointment of political agent to manage the affairs of some of the Chattisgarh feudatories. That was created in 1883–84, after some disturbances had arisen.

10,136. Therefore the increase in the political charge is due first of all to expenditure incurred by the agents who are put on the Baluchistan frontier?—Yes.

10,137. And, secondly, to the charge in the Central Provinces?—That is only a small charge. Then in Upper Burma the charge for the administration of the Shan States and the Chin Hills comes under this head, which also includes the cost of the Chinese adviser at Bhamo; the total charge being Rx. 25,000. In Assam there is an increase of 14,000 Rx. That is for the Manipur agency and the North Lushai agency, and for the political officer, Sadiya (Lakhimpur).

10,138. (*Sir Donald Stewart.*) Under what head are the Gilgit charges?—To a large extent they are paid by Kashmir, but we do pay some part of the charges. They come under the Punjab. I am just coming to them. The Punjab charges have increased by 35,000 Rx. They are for the Kashmir and Gilgit agency charges, and for certain new political agents that have been appointed:—Political agent with Ayub Khan, political officer Ladakh, political officer Khyber, native agent at Shahpur.

10,139. (*Chairman.*) Then in reality this increase is a number of small new appointments, due, no doubt, to extended political relations on the frontier; is that so?—Yes, very largely.

10,140. There is a curious difference in the expenditure under this head in one year. If you look at the year 1886–87, the charge appears to have risen in that year to 1,754,000 Rx. against an average of between 600,000 Rx., and 700,000 Rx. Do you know what the very large expenditure in that year, 1886–87, is due to?—That is a misprint in the Statistical Abstract; it should be 754,000 Rx.

10,141. What are the subsidies now paid?—The political subsidies paid in 1893–94 were—the Khan of Khelat, 10,000 Rx.; the Muskat subsidy, 8,640 Rx.; and the subsidy to the Ameer, 211,100 Rx.

10,142. It is made up chiefly of the subsidy to the Ameer?—Yes, but that is not the annual payment. That includes certain arrears. The charge in 1894–95 was only 110,800 Rx.

10,143. Therefore this charge of 230,000 Rx. is an abnormal amount?—It is an abnormal amount by about 100,000 Rx.

10,144. What would you call the normal amount?—The normal amount would be about 130,000 Rx.

10,145. That is the cause of the large difference between the subsidies of 1893–94 and 1894–95?—Yes.

10,146. What is the cause of the increase in charges for the refugees and State prisoners?—They consist chiefly of those from Kabul and Burma, and are detailed as follows:—

	1893–94.
Kabul.	Rx.
Yakub Khan	6,490
Ayub Khan	29,329
Other refugees	27,777
	63,596
Burma.	
Theebaw	3,828
Other refugees	3,467
	7,295
Other refugees and State prisoners	11,001
	81,892

10,147. What are the charges shown under special political expenditure?—They vary from year to year. They consist chiefly of charges for special missions. In 1893–94 the charges consisted of: Kurram Mission, Rx. 19,590; Cabul Mission, Rx. 15,641; Anglo-Siamese Boundary Commission, Rx. 5,809; Sikkim Mission, Rx. 4,698; Herat Mission, Rx. 3,258; Afghan Border Demarcation, Rx. 2,540; Kaington-Chiengmai Mission Rx. 1,722; other charges, Rx. 4,398.

10,148. (*Mr. Buchanan.*) You referred to the expenses of these missions to Siam and the upper parts of Siam; are all the expenses of them borne by the Indian Government?—We bore the whole cost of the Anglo-Siamese Boundary Commission.

10,149. (*Chairman.*) What charges are borne by the Government of India in respect of the Imperial service troops, which I see is a heading in 1893–94 of 20,000 Rx.?—We have an Inspector General of Imperial service troops, and eight inspecting officers, and six assistant inspecting officers.

* Enquiry was duly made at the India Office, and no trace of any such payment could be found.—S. J.

10,150. What are they employed upon—in organising?—In organising and superintending the organisation of the Imperial service troops, which are troops raised by some of the Native States with the view of assisting the Government of India.

10,151. What are the charges for Bulhar, Berbera, and Zaila?—They are charges for certain expenditure incurred for the control of certain lands near Aden which have been ceded to us. There are receipts which cover the expenditure.

10,152. They are districts on the coast of the Red Sea, I suppose?—Yes.

10,153. Were they ceded to us by Egypt?—No.

10,154. Have you any remark to make upon the heading Miscellaneous, which seems to contain somewhat varied services?—The miscellaneous charges are mostly small. There is a charge for the Mhairwarra Battalion of 15,000 Rx.,; of 1,000 Rx. for the Rajkumar College, Bundelkhund; of 1,000 Rx. for rewards for intelligence; 1,000 Rx. for rewards to native chiefs; 1,000 Rx. for demarcation of boundaries; 1,000 Rx. for secret service money; 1,000 Rx. for treaty allowance to Persian Government for Mekran telegraph line; 2,000 Rx. for contribution towards expenses of the Chiengmai Vice-Consulate, and there are charges which are not detailed amounting to 10,000 Rx.

10,155. There is one item which does not look like lavish expenditure—purchase and repair of the insignia of the Order of the Indian Empire, 3 Rx. Then we come to the charges in England. Have you any points to call attention to with regard to them?

10,156. (*Mr. Buchanan.*) May I ask about Zaila and these other places in the Red Sea? Does the Indian Government bear all the expenditure of them, and is the administration of those places opposite Aden in the hands of the Indian Government?—Yes, it is in the hands of the Indian Government.

10,157. And they bear all the expenses?—Yes.

10,158. (*Sir Donald Stewart.*) But I think they are self-supporting?—They are self-supporting. There are receipts—chiefly customs receipts in the ports—which cover the expenditure.

10,159. (*Chairman.*) I see the receipts are not given under the head of the Political Department?—They are given under the head of "Miscellaneous"; there is no political head of receipt.

10,160. When you say these districts are practically self-supporting, the total charge of the three places is 14,000 Rx.; would their receipts come close upon that?—The receipts from Berbera and Bulhar were 16,000 Rx., and from Zaila 7,000 Rx. in 1893-94.

10,161. The receipts more than covered the charge, then?—Yes.

10,162-3. Now passing on to the charges in England, perhaps you would just say what they are?—The charges in 1893-94 are 7,000*l.* for the mission to the Court of Persia; Her Majesty's establishments in China, 12,500*l.*; subsidy to the Euphrates and Tigris Steam Navigation Company, 1,000*l.*; contribution to Jeddah Consulate, 458*l.*; allowance to officer in attendance on His Highness the Gaekwar of Baroda, 220*l.*; miscellaneous, 355*l.*; stores, 425*l.*; making a total of 21,958*l.*

10,164. Would you like to offer any remarks on any of these items?—I think whatever remarks I have to make would be concerned more with the question, which I think your Lordship is reserving for the present, of the distribution of the charges between England and India.

10,165. I think I am right, am I not, in understanding that the payments for the mission to the Court of Persia and Her Majesty's establishments in China are now regulated by what is called the decision of the Foreign Office Conference?—I think so.

10,166-7. They come into the apportionment, and therefore we reserve them until we come to the question of the apportionment?—Yes.

10,168. Then there come the Scientific and Minor departments?—Yes. That head is made up of charges appertaining to several quite independent departments.

10,169. Whom are they directed by?—They are directed by various officers. The departments are very numerous indeed. They are divided into scientific departments, agricultural departments, labour and emigration, statistics and miscellaneous. The scientific departments are the Survey of India, the Botanical Survey, the Geological Survey, exploration of petroleum, coal, &c., Meteorological department, Archæological department, preservation of ancient MSS., museums, Imperial Institute, observatories, special astronomical observations, and donations to scientific societies. The agricultural departments include: Experimental cultivation (model farms and the like), cotton departments, chinchona plantations, public exhibitions and fairs, veterinary and stallion charges, botanical and other public gardens and experimental factories (that last has ceased now as a charge). Then under labour and emigration: there are emigration charges and inland labour transport charges.

10,170. Are those emigration charges connected with the emigration of natives to British colonies?—Yes, to the West Indies largely. Then there are statistical departments. The cost of the census, whenever it occurs, is charged under that head, and there are charges for the registration of railway traffic, and of river-borne traffic, and gazetteers and statistical memoirs. Then there are a few miscellaneous charges for examinations and for other miscellaneous services, which are very small.

10,171. Where is the Survey of India charged?—That is charged under Scientific.

10,172. Whom is that under? Is that under the Military Department?—No, that is under the Revenue Department.

10,173. But is not a great part of that work of the Survey department military?—No; I do not think it is military. They provide the maps, but it is chiefly——

10,174. (*Sir Donald Stewart.*) Topographical, for revenue purposes?—Yes.

10,175. (*Chairman.*) The principal of these departments is the Survey of India. There is a large decrease in this charge, I think. To what is that due?—That is due to the re-organisation of the department. It has been re-organised at a considerably reduced charge. There were three separate branches of that department before, which have all been combined into a single department.

10,176. I see here a transfer to the land revenue survey of 117,000 Rx.; and to the Forest account of 22,000 Rx.?—Yes, those are for surveys which were made specially for land revenue or forest purposes.

10,177. And paid for by those departments?—Yes.

10,178. The Meteorological department is the next largest. That department shows a large increase of charge. To what is that due?—That is due to the entire re-organisation of that department. Its work has been very largely extended. The Famine Commission, I may say, bore emphatic testimony to the past and future value of the results of the system, which was then in its infancy, but which has been very much expanded since.

10,179. And I also notice that the Geological Survey department shows a decrease?—Yes, the number of officers employed has been considerably reduced. The superior staff has been completely re-organised and the work is carried on at a smaller cost. In 1875-76 there was a Superintendent (on Rs. 2,000 a month), 17 assistants, and 3 apprentices, on varying salaries. The staff in 1893-94 consisted of 1 Director (on Rs. 1,500), and 16 officers on various salaries. Two specialists have been added from 1894-95 on Rs. 800 a month each. The salaries, which in 1875-76 amounted to 18,500 Rx., now amount to 12,000 Rx.

10,180. Is that a casual decrease?—No, that is a real decrease. The staff has been reduced, and its pay.

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

At the India Office.

TWENTY-FIRST DAY.

Wednesday, 10th June 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Mr. S. Jacob, C.S.I.

MR. STEPHEN JACOB, C.S.I., Comptroller and Auditor General of the Government of India, recalled and further examined.

10 June 1896.

Territorial and Political Pensions.

10,181-6. (*Chairman.*) I think, Mr. Jacob, the points which we have before us to-day under the head of expenditure are, first of all, the territorial and political pensions, civil furlough and absentee allowances, and superannuation allowances, stationery and printing, the heading of miscellaneous, civil buildings and roads, and the mint. In addition to them there are one or two services which I do not think we have dealt with, but which come under that head, for instance, famine relief?—Yes.

10,187. That has only come before us up to the present incidentally, I think?—Yes.

10,188. Also the construction of protective railways. The expenditure on protective railways was passed before us when we were dealing with railways?—Yes, the charges for the construction of protective railways are included in the capital charge, which has already been dealt with.

10,189-90. Also expenditure on the construction of railways charged against revenue, and expenditure on protective railways charged against famine insurance?—Yes.

10,191. Taking now the territorial and political pensions, would you explain to us the nature of the charges falling under this head?—They consist mainly of pensions and allowances granted to native chiefs and their dependents, consequent for the most part upon treaty obligations, or at least upon obligations incurred at the time of conquest of their territories. They include also some pensions granted by the Governments to which we have succeeded, and a few charitable allowances granted for political purposes.

10,192. Are they in the nature of perpetual allowances, or do they expire with the present or succeeding holders?—For the most part they are merely personal allowances to the original grantees, but a portion of them is generally continued to the successors.

10,193. Have you ever formed any idea as to what amount out of this total expenditure, which in the Budget of 1895-96 amounted to 474,000 Rx., might be looked upon as perpetual and what amount is merely an expiring charge?—I think that almost the whole of it is gradually expiring.

10,194. And therefore, if it is due in the main to the present holders, it would be a rapidly diminishing charge?—Yes, it would rapidly diminish.

10,195. In elucidation of that perhaps you would give us the comparison, as you have done in the previous instances, of the charge in 1875-76, 1884-85, and in recent years?—The total charge in 1875-76 was 812,323 Rx., in 1884-85 it was 671,349 Rx., and in 1893-94 508,443 Rx., the charges thus being reduced between 1875-76 and 1893-94 by 303,880 Rx.

10,196. And I see from the budget estimate for 1895-96 that the charge is still falling?—Yes, it falls every year.

10,197. Can you name what are the chief pensions upon which the decrease has occurred?—There has been a general reduction, but a few large pensions have fallen in, and contributed mainly to this result. The chief reduction has occurred in the following cases:—Ex-King of Oudh and family, 120,000; Nizamat family of Bengal, 98,000; Carnatic pensions in Madras, 23,000; Gond Raja in Central Provinces, 11,000. That makes up a total of 252,000 out of 304,000.

10,198. Are these the only pensions of that character, or are there any pensions charged, for instance, to the head of the collection of land revenue?—There are some assignments that are charged under the head of "Assignments and Compensations"; they are not granted on political grounds.

10,199. How do you draw the distinction between an assignment and a pension, such as those we are dealing with now?—The assignments are granted on account of revenue. If allowances are granted on account of revenue, we charge them under assignments.

10,200. That is to say, that Indian princes or magnates who had a right to certain revenues surrendered them, I suppose, to the Government in return for an allowance?—In some cases that is what has occurred, but in other cases the assignments have been made with the purpose of facilitating the collection of the British revenue. British India is so mixed up with the Native States that in some cases it has been necessary to take over the whole administration of certain branches of the revenue, and to make an assignment as a compensation to the Native States.

10,201. Therefore there is a distinct difference between those assignments, which have the appearance of being pensions and are charged in the land revenue, and these political pensions under this head of the budget?—Yes.

10,202. (*Mr. Jackson.*) But I do not understand that these assignments are included in that sum of 800,000?—No. They are not included; they come under a separate head.

10,203. They are brought to account against revenue in the class of assignments?—Yes. We classify the assignments as far as possible and show them as chargeable against the particular head of revenue to which they appertain.

10,204. In the event of an allowance being continued to a successor, is that done as a matter of form or after re-consideration?—In a few cases there are special rules fixing a definite reduction; sometimes half is given to the successor, sometimes some other proportion; and in such cases, when the pension falls below a certain sum, it may be commuted by a capital payment; but in most of the cases its continuation is the subject of special consideration.

10,205. (*Chairman.*) Has the conquest of Upper Burma involved the grant of any pensions?—To a slight extent it has; I think there are a few pensions granted to the Burma Royal family. We have besides these some expenditure in connexion with the Burma family, which I mentioned under the political charges, but the pensions themselves I think are small.

10,206. In 1893-94?—They were Rx. 13,000 in 1893-94.

10,207. And those, I suppose, would die out with the present holders—members of the ex-Royal family of Burma generally, and the chiefs and officials of the late Burmese Government?—I do not know whether they die out with the present holders, but they would almost certainly be reduced.

10,208. Of what do the payments in England consist?—In 1875-76 the charge was for the pension of H. H. Maharaja Dhuleep Sing; and in 1893-94 it was made up of Maharaja Dhuleep Sing's pension 20,915*l.*, and members of the Bengal Nizamat family, 1,035*l.*; making a total of 21,950*l.*

10,209. But since then Dhuleep Sing has died?—That charge has been considerably reduced since 1893-94 by the death of the Maharajah. His yearly allowance amounted to 22,589*l.* The allowances to his family amount to 12,880*l.*, of which 2,880*l.* have been provided by the creation of 96,000*l.* stock, under a special Act of Parliament; the widow's allowance of 2,000*l.* is also liable to reduction by the proceeds of the sale of the Elveden estate.

10,210. Therefore, if stock has been given, I suppose the charge on the budget disappears?—To that extent, 2,880*l.*

10,211. Yes, but I thought you said that stock had been given, instead of the pension, to the successor?—For a portion of it; 2,880*l.* out of 12,880*l.* has been provided for by 3 per cent. stock.

10,212. Then I see that on charges in England exchange is allowed; that means that the Maharajah receives the equivalent—such an amount of rupees has been remitted from India as would give him sovereigns in England?—Yes. His pension and those of his family have been fixed in sterling.

10,213. Therefore, in 1893-94, the charge in rupees was something like 36,000 Rx.?—Yes.

10,214. We will pass now to the furlough allowances. Would you explain to us the nature of the general rules under which furlough allowances are granted?—The general rule is that half-pay is given subject to certain maxima and minima. The allowance when drawn in England was, up to 1892-93, converted at the official rate of exchange, but from the 1st of April 1893 a rate of conversion of 1*s.* 6*d.* has been fixed. The furlough allowance is half of the salary in rupees, as a rule, and that is converted at the fixed rate of 1*s.* 6*d.*

10,215. Then there are two kinds of furlough, the ordinary leave which is given to an officer when he does not go outside India; which, however, if he wants to come home, he is allowed to accumulate, and after certain intervals of service to come home, is he not?—There are different rules for the several services as to the actual amount of leave that they may have. The furlough may be taken anywhere, either in India or in England, according to the option of the man who takes it.

10,216. (*Sir Ralph Knox.*) Is his payment reduced if he takes furlough in India?—The maximum and minimum amounts are reduced.

10,217. But it is not the same reduction as if he comes home?—He gets half-pay.

10,218. (*Chairman.*) Then can you give us the figures for the different years in the same way as you have given us the other services?—For civil furlough allowances in 1875-76, the total was Rx.254,921; in 1884-85 it was 261,306; and in 1893-94 it was 327,431.

10,219. Does that include military furlough as well as civil?—No, but it includes the furlough allowances of military officers in civil employ.

10,220-1. There is a difference between the figures you give and the figures contained in this return—"East India (home charges)"? The return gives a report of the special committee on the home charges upon the civil furlough and absentee allowances. It gives in the following table the cost of civil and absentee allowances for the year 1878-79 at 169,718; then it gives the military officers, but it also gives military officers in the Public Works Department. Would the military officers of the Public Works Department be included in the civil furlough charge of 255,000, which you mention?—I think they would come under that.

10,222. That would not bring the two sets of figures quite together, that would still leave a considerable gap. Your charge here is in 1875-76 255,000; if you added the military officers in the Public Works Department to the civil as given in this return, it would only carry it up to about 200,000: or perhaps we had better take 1884-85; you have 261,306 in 1884-85?—I think probably that the charges quoted in the Report exclude exchange. Yes. I find that is the case; the lower figure is the actual charge incurred in pounds.

10,223. Excluding exchange it is in 1884-85 198,275, according to this return?—Yes; that is the correct figure.

10,224. Perhaps you will look at that year; they do not quite come together, do they?—No, I find the furlough allowances of the Public Works officers are charged under the head of the Public Works Department.

10,225. I noticed the discrepancy in the figures and that was what made me ask the question. Have the furlough rules been reconsidered of late years at all?—Yes, the furlough rules have been considered, and the nominal value of the rupee for converting the rupees into pounds sterling has been fixed at 1*s.* 6*d.*

10,226. And was that intended as an economical rule?—It was considered necessary for administrative purposes. It is considered desirable that European officers in India should take a certain amount of furlough in England, and the amount that they could take at the low rate of exchange was very small; many officers could not afford to take furlough at that rate.

10,227. The ordinary civil servant comes under the head of Covenanted Civil Service, I suppose, does he not?—The term "Covenanted Civil Service" is not generally used now in India; it is called the Indian Civil Service.

10,228. But in this report of this committee which I have just placed in your hands they use the term Covenanted Civil Service?—Yes.

10,229. And that would be the ordinary service?—It includes a large number of the members of the ordinary Civil Service.

10,230. By the rules of the Civil Leave Code, a covenanted civil servant may after completing eight years' service be absent from India on furlough for one-fifth of his total service, up to a maximum of six years, retaining a lien on his appointment or on one of equal value, and drawing an allowance equal to half his average salary, converted at the official rate of exchange, and subject to a maximum of 1,000*l.* and a minimum limit of 500*l.* a year (or the equivalent of his last salary, whichever is the less). He may also have special leave for six months at intervals of six years, on similar allowances for the first six months only of such leave, and may have privilege leave, on full pay, for one month in each year, which may be accumulated to an amount not exceeding three months. Thus, in an extreme case, it might be possible for an officer of 35 years' service to have taken leave out of India with allowances to the following extent:—

	Years.	Months.
Furlough - - - - -	6	0
Special leave - - - - -	0	6
Privilege leave, eight times for three months, and once for two and half months - - - - -	2	2½
	8	8½

or almost one-fourth of his service. Has that ever been considered in connexion with the rules in other branches of the Imperial Civil Service where men are employed abroad?—I do not know whether it has been considered; I do not know what the rules are for men employed in the Imperial Civil Service abroad.

10,231. In the diplomatic service the ordinary leave is 60 days, which may, with the permission of the Secretary of State, be accumulated for two years. In either case it is in addition to the time required for the journey by the direct route with due expedition to and from England. During the period of 60 (or 120) days, no deduction is made from the salary, except what is required to provide for the allowances, under regulations, of the acting Chargé d'Affaires; but, if the period is exceeded, a deduction is thenceforward made of one-half of the salary. Secretaries are allowed two calendar months besides the time required for the journey home and back, and they may accumulate it for two years. You see that is considerably less allowance than that

Mr. S. Jacob, C.S.I.

10 June 1896.

Furlough and Pension.

which is granted in India?—Yes, but the leave granted in India includes all leave of every kind. I suppose there must be some provision for leave on medical certificate in the case of the diplomatic service.

10,232. Yes, but the description of the leave given here to the Covenanted Civil Service is on the face of it ordinary leave?—Yes, but that includes leave on medical certificate.

10,233. Yes. If he is compelled to take leave on medical certificate it is reckoned as furlough, but it may be granted without regard to the exigencies of the service, or to the amount of service which he has rendered altogether?—Yes, that is the only exception.

10,234. Well, I want to call your attention to the point that apparently in other services where the men are employed abroad the leave is not so much?—I should not be prepared to admit that without looking into the whole details. You must know what one set of leave rules includes and what it excludes; if the one includes leave on medical certificate and the other does not, no comparison can be made.

10,235. The leave given in the Diplomatic Service does not, I should think, include leave on medical certificate; it is not mentioned, but I should think not?—They get two months on full pay every year.

10,236. Two months on full pay every year, you may take it?—Yes.

10,237. (*Mr. Jackson.*) Exclusive of the journey, is it not?

10,238. (*Chairman.*) In either case it is in addition?—That of course makes a considerable difference.

10,239. That of course makes a considerable difference?—In fact, I should say that that was considerably more than we get in India; the two months alone is one-sixth of the service, and, if the time employed on the journey home and out were added, it would probably come on the average to not less than one-fourth of the service.

10,240. The report here says that one-fourth of the service is an extreme case?—Yes.

10,241. That would be three months?—Yes, two months for the leave alone, and then the time allowed for the journey, which in our case has to come out of the leave.

10,242-3. (*Mr. Jackson.*) And sickness?—And sickness, so that I should think that our Indian leave rules would be considerably less favourable.

10,244. (*Chairman.*) Now let me put a few other cases. A consular officer is allowed one calendar month (or 30 days) on full pay during the year, and he may accumulate it, but not beyond six months without special permission. At posts reckoned as unhealthy two months leave on full pay is granted in each year?—Well, the leave seems to be all on full pay, which is another point in favour of the diplomatic service.

10,245. It is on full pay during that time?—Yes, except in the case of privilege leave, ours is on half-pay, and, where the pay is at all high, on considerably less than half-pay, owing to the operation of the maxima.

10,246. No deduction is made in the China and Japan Consular Service from the salary of an officer absent on public duty, or for a period not exceeding three months, nor if his salary does not exceed 400*l.* a year. If more than three months' leave be taken by an officer whose salary exceeds 400*l.*, a deduction is made from his pay. That, inasmuch as it rises to three months, would appear to be rather in excess of what is allowed in India?—Yes; that is one-fourth on full pay.

10,247-8. In the Colonial Service and in the case of most Crown Colonies, including Ceylon, leave of absence on half-pay may be granted after six years' resident service in the Colony, to the extent of one year, provided that the leave does not exceed one-sixth of the officer's resident service. In the case of serious indisposition, duly certified by a medical officer, or of urgent private affairs, the nature of which must be stated to the Governor, leave may be granted before the completion of six years' resident service. If special grounds are shown, the period of one-sixth of resident service may be exceeded by not more than six months, but this additional term of six months can only be taken once in the course of an officer's service. In general, during leave of absence the officer is also permitted to receive so much of his allowance for house rent as is not wanted for the acting officer. How does that compare with your rules, do you think? That is rather a shorter time, you see, than is granted in the diplomatic service—one year in six?—Yes, that seems to be slightly less.

10,249-50. I am bringing these cases before you, not with the view of showing that they are more liberal or less liberal than your rules in India; one naturally turns for comparison to the cases in the Imperial service where men are entirely employed abroad, and I wanted to hear how the comparison struck you. I take it from your answer that you would rely upon this, first of all, that in nearly all the cases I mentioned, during the ordinary leave, full pay is granted?—Yes.

10,251-2. And that, after all, when you come to take in the time occupied in coming and going from a post, the period of two months which is fixed in the greater part of the diplomatic service is considerably extended?—Yes, and also it is quite exceptional for a man in India to take anything like the maximum amount of leave, which is admissible under the rules. I could not name any man who has done it; though there may be one or two.

10,253. (*Mr. Buchanan.*) Does a member of the Indian Civil Service get any leave on full pay?—He gets one month a year on full pay, but he can only accumulate it up to three months.

10,254. (*Sir Ralph Knox.*) Do you not look upon it as part of a man's duty in India to take leave?—It is considered advantageous for the service that he should take leave, but there is nothing to compel him to take leave as long as he can perform his duties efficiently. I knew a man who put in his 25 years' service with only one day not on full pay. He took privilege leave during that period, but no leave of any other kind.

10,255. Was he a good man all the time?—He is a High Court Judge now.

10,256. (*Chairman.*) Have you anything to say upon the reason for the decrease under this head, apart from the exchange, which we understand?—There is a decrease apart from the exchange, a very large decrease.

10,257. Is that due to any new rules which have been brought in?—I think it is largely owing to the fall of exchange. In consequence of that, so many men cannot afford to take leave on half-pay at 1*s.* 6*d.* as could when the rate was 1*s.* 10*d.* or 2*s.*

10,258. May it not in part be due to the greater quickness of transit between India and England making the time which a man may desire to be absent shorter?—I do not think that can have affected it much. It has not shortened the time in the last 25 years by more than about three weeks, I should think, going and coming.

10,259. Still the longer journey would have a tendency to shorten the time a man is absent, would it not?—I do not think so. There seems to be a tendency to take fixed periods—a year, or six months, or eight months, as a rule, and I do not think men would take less or more because the time employed in the passage has been shortened by a week or two.

10,260. Speaking for the Finance Department in India, would you say that it is satisfied with the furlough arrangements, and that it does not think that there is any room for economy to be effected there?—Speaking generally, I think that that is the case.

10,261. The question of a revision of regulations with a view to a reduction is not a matter that is prominently before the Financial Department or before the Government of India?—No, I think that, if there is a movement in any direction, it would be for an increase.

10,262. Of course, I am speaking of the view of the responsible heads of Government. Naturally, the civil servants themselves, I suppose, would be in favour of a relaxation?—No, I think that the view held by Government is that the rules are adequate, but that generally they do not give too great privileges. There are two sets of rules in India applying to the bulk of the Civil Service, and quite recently the application of the more favourable rules has been materially extended.

10,263. Of what do the payments in England consist? I suppose, practically, seeing the large sums spent there, everybody comes home on furlough?—The Europeans, as a rule, come home; but this head, I should

explain, does not show the whole civil furlough allowance charges.

10,264. Where do the charges of the civil servants who are simply on leave in India appear?—The charges in India appear under the service head to which the pay would be charged.

10,265. Do you know at all what amount that would involve, because leave pay is a kind of non-effective pay? We have here a charge on the Indian taxpayer of 327,000 Rx. Do you know at all what the total charges are?—No, I could not say. I think it would be almost impossible to take them out from the accounts, but I may say that, when the acting allowance rules were framed, they were framed with the view of minimising the extra expense to Government caused by the absence of officers on leave. A man holding an appointment temporarily in the room of an officer absent on leave does not draw ordinarily the full pay of the appointment, so that there is a saving in that direction to meet a portion of the charges for furlough.

10,266. Then what are the charges in India? They are very small, but how are they distinguished from those due to Europeans under those heads?—The only charges which come in India under this head are the allowances that cannot be taken under any service head. As, for instance, the leave to officers lent to foreign states or bodies.

10,267 But at all events we come to this conclusion, that, taking 1875–76 and comparing it with the budget of 1895–96, an interval of 20 years, during which the public service has been increasing in India, the sums payable, apart from exchange, are practically, you may say, stationary—229,000 Rx. against 218,000 Rx.?—Yes. I should say that they have in reality fallen. I think the budget is almost invariably slightly in excess of the actuals.

10,268. (*Sir William Wedderburn.*) I think you said that the Government have for administrative purposes approved of European officers taking a certain amount of leave to England?—Yes, I think so.

10,269. For their health and energy?—Yes. It generally increases their efficiency. I think that is the view that is held.

10,270. That is not the case with regard to the Indians—to natives, I suppose?—That they should take leave to England, do you mean?

10,271. I mean that the same administrative necessity is not recognised as regards native officers holding similar positions?—I think native officers in the Indian (Covenanted) Civil Service take quite as much leave as Europeans.

10,272. But, as far as Government is concerned, it would not be anxious that they should?—No, I should suppose not, but I am not sure.

10,273. And the expenses of the furlough allowance are increased by the exchange allowance?—Yes.

10,274. And both these amounts would be more or less saved by the substitution of Indian officers for European officers?—Yes, the Indian officers, as a whole, certainly take less leave than Europeans.

10,275. (*Chairman.*) The rules for Indian native civil servants are rather more restricted, are they not, than those of Europeans. In the matter of furlough, the rule appears to be as follows:—"On private affairs "leave may, as in the case of other covenanted civil "servants, be granted for six months at a time after "intervals of six years, but not in any case until six "years' service has been rendered." I understand that to be the same for the European and for the native. "Furlough not exceeding two years in all may be "taken in periods not exceeding one year at a time, "the first after ten and thereafter at intervals of at "least eight years; but if none is taken for 18 "years, two years' furlough may be granted at once"?—Yes, those are the rules for officers who have entered the Civil Service, not by passing the examination in this country in the same way as Europeans do, but simply by nomination.

10,276–7. (*Mr. Naoroji.*) For this furlough there is a certain amount to be paid on the ground of compensation for exchange, is there not?—The rate of conversion is fixed at a special rate of 1*s.* 6*d.*

10,278. And that is fixed on account of the fall in exchange?—Yes, that is so.

10,279. The Government of India is not bound legally to make any such allowance on account of exchange?—The special rate of exchange was conceded as part of the proceedings in connexion with the grant of exchange compensation allowance.

10,280. Yes, but it was not that the Government was bound legally to make any allowance for compensation?—No, certainly there was no legal obligation.

10,281. (*Chairman.*) Then we will pass on to the head of superannuations. Can you tell us shortly what the rule is as to the earning of pensions in the regular Civil Service?—In the Indian Civil Service a deduction of 4 per cent. on account of his annuity is made from the pay of every officer for the whole time that he is in India, and a pension of 1,000*l.* a year is granted after 25 years' service, including 21 years' residence in India.

10,282–3. Therefore the Indian civil servant contributes 4 per cent. upon his salary. Does that include the amount granted to him as compensation for exchange?—Yes. He pays 4 per cent. upon the whole amount.

10,284. And as against that at the end of 25 years, whatever his salary may be at the time when he retires, he gets 1,000*l.* a year?—Yes.

10,285. Has it ever been calculated what proportion that establishes between active pay and non-effective pay?—I do not know of any very recent calculation.

10,286. In the Imperial service the non-effective charge is a subject which has attracted a good deal of attention, and the progress of the non-effective allowances has been a good deal watched. Perhaps I may put it roughly in this way, that an eye is kept on the non-effective charge of a department if it much exceeds a proportion of 20 per cent. to the effective charge. You do not know of any papers which would show what would be the proportion in the Indian Civil Service?—Calculations have been made from time to time with the view of fixing the rate which should be charged for officers lent to foreign states, and with reference to such a calculation the rate which we now charge in such cases is fixed at one-fourth, to cover both leave allowances (except privilege leave) and pension.

10,287. One-fourth; that is 25 per cent.?—25 per cent. for both leave and pension.

10,288. And do you think that was established by actual observation?—Yes. I do not think, however, that that rate allows for the further fall in exchange which has taken place since the calculation was made.

10,289. At what time was that made?—That was made, I should say from memory, about 1887 or perhaps a little later.

10,290. Then I suppose the 4 per cent., which the officer contributed himself, would be deducted from that charge of 25 per cent., would it not? It would be a net charge just as the net charge on the Government of India is the sum which it has to pay after crediting itself with 4 per cent.?—Yes, 25 per cent. includes that 4 per cent.

10,291. Includes it?—Yes.

10,292–4. That is the normal charge required to earn 1,000*l.* a year payable after 25 years' service?—Yes.

10,295. What do you say is the average pay of an officer at the time he retires on 1,000*l.* a year after 25 years' service?—I do not know what would be the average pay.

10,296. Take a common case, what would you suppose?—Very few men retire under a salary of 2,250 rupees a month.

10,297. You would put that as being about the ordinary pay that a man was receiving at the time he retired?—That would be about the minimum pay at the time of retirement; the average would be considerably above that.

10,298. Yes, and 25 years, of course, is rather short service. A man, I suppose, enters the Indian Civil Service at 20?—The age has varied at different times; now he enters at 23.

10,299. And 25; that would make him retire at 48?—Yes.

10,300. Well, that, of course, involves a much heavier charge than when men retire, as they do with us, at 65?—But then men get a much higher pension here, proportionately, to their pay.

Mr. S. Jacob, C.S.I.

10 June 1896.

Furlough and Pension.

10,301. Probably when you take into consideration the deduction of the 4 per cent.; but 25 per cent. as the relative non-effective charge of the Indian system seems to me small?—1,000*l.* does not bear nearly the same proportion to the pay of an Indian civil servant retired, as 800*l.* or 1,000*l.* granted to a man in this country does to his pay on retirement.

10,302. Well, you know a man retiring after 25 years' service in this country would only get 25-60ths, he would get less than half?—Yes.

10,303. And you say that the Indian civilian gets a pension of 1,000*l.* a year upon a salary, I am only taking your opinion as roughly expressed, of something like 2,250 rupees a month?—No, I said that was the minimum salary.

10,304. The minimum?—Yes, the average, I should say, would be something over 2,500.

10,305. (*Sir William Wedderburn.*) But then the whole 1,000*l.* is not paid by the Government?—A good part is paid both by the individual and by the lapses of other civil servants who die in the service.

10,306. (*Chairman.*) Quite so; but I was trying to trace out now the relation between the effective and non-effective charges. 25 per cent. seemed to me rather low?—I think it fully covered, as I said before, the average cost at the time at which the calculation was made.

10,307. Yes. An English civil servant retiring would get about five-twelfths of his salary after 25 years' service. A pension of 1,000*l.* on a salary of, we will take, 2,500*l.*, is a little less than that?—Of course you have to take the rate of exchange into consideration.

(*Mr. Naoroji.*) Is it not 2,500 rupees per month, not 2,500*l.* per annum?

10,308. (*Chairman.*) Mr. Jacob was giving us what he thought was the average salary?—Yes; 2,500 rupees a month—3,000 Rx. per year.

10,309. On that they get 1,000*l.*?—Yes.

10,310-1. That is very low then, because 1,000*l.* in England would require 1,700 Rx. from India, would it not?—Yes, but then we pay 4 per cent. on salary all through our service. The latest calculation I can remember is that Government grants not more than 600*l.* a year, apart from the deductions that are made.

10,312. I understand that at one time the idea was that a civil servant contributed from his pay as much as would be equivalent to an annuity of 400*l.* a year; but I rather gathered from you in the conversation we had a little time ago that that had been given up?—Yes, I have said that, owing to the fall in exchange, the previous calculations do not hold good.

10,313. Four per cent. simply on the salary would not provide an annuity of 400*l.*?—Not now, I think, at the present low rate of exchange.

10,314-5. Therefore, you would have to modify, would you not, the statement that the Government does not pay more than 600*l.*?—Well, it depends upon what rate of interest you take. The service was entitled to a high rate of interest—6 per cent.—when the Government took over the fund.

10,316. I am endeavouring to find out what would be the relation of the non-effective to the effective?—The average salary of a man—you may put it roughly—when he retires would be about 3,000 Rx., in addition to which you are giving him now a certain allowance instead of exchange, are you not?—Yes, he gets an allowance in India for exchange.

10,317. What would you add for that to the 3,000 Rx.?—Of course it depends entirely upon the rate of exchange at the time.

10,318. Well, take a recent year?—It would add about 4,000 rupees, I suppose, a year.

10,319. That would be about 400 Rx.?—Yes.

10,320. And practically, I may put it that the average salary would be about 3,500 Rx., and upon that his pension over here would cost about 1,700 Rx.?—Yes, at present it would.

10,321. Therefore you see it would come to about one-half the pension, would it not?—Rather less than one-half.

10,322. Well, you said 400 Rx. It is very near?—Yes.

10,323. It would be about half the salary; the civil servant here would in 25 years' service get $\frac{25}{60}$ths of his salary, or not quite half his salary. But then there is the rather important consideration, that the civil servant here contributes nothing, while the civil servant in India contributes 4 per cent. of his pay?—Yes.

10,324. Therefore the conclusion would be that the Indian Civil Service system is more economical to the taxpayer than the English?—I should say so. Very few men retire after 25 years' service; I mean a very large number retire at a much longer service than 25 years, and their pension is not increased; they cannot get more than 1,000*l.* a year. If you take an average, you would have to take considerably more than 25 years' service.

10,325. It seems to me clear that the Indian Civil Service is most economical, excepting only that the retirement is early. When the retirement is early, the charge on the taxpayer is, of course, heavier?—Yes, but then in England if a man stays on late the pension is increased.

10,326. It is higher, but you find that the succession is so much greater where the men retire early that it makes a tremendous difference in the charge to the taxpayers. The rule of the Imperial Civil Service is compulsory retirement at 60 or 65, but in the case of India the age of retirement is very low indeed. The charge to the taxpayer is very much more therefore if a man retires compulsorily at 50 or thereabouts?—The Indian Civilian does not retire compulsorily then; he does not retire compulsorily until he has 35 years' service, and he cannot get any higher pension then, than if he retired after 25 years' service.

10,327. Do a good many of them stay on?—Yes, a good many do.

10,328. What is about the time at which men usually retire?—It depends so much on the appointment a man holds. If he holds a good appointment he stays on to 35 years, or nearly that period.

10,329. (*Sir James Peile.*) They do not retire so early now as they used to do?—No.

10,330. (*Mr. Naoroji.*) I understand that lately there has been a good deal more retirement after 25 years' service than there used to be before?—I should not have said so.

10,330*a*. If they retire after 25 years' service they get 1,000*l.* a year pension, and they only get 1,000*l.* after any longer period of service?—Yes.

10,331. (*Sir Ralph Knox.*) Is a large proportion of the Civil Service able to attain to these high rates of pay before they retire?—Any member with ordinary promotion would certainly retire at above 2,250.

10,332. That makes a great difference. The men attain to a much higher rate of pay in the Indian than in the English Civil Service.

10,333. (*Chairman.*) That would not make a great difference in the average, there being few places to which very high salaries are attached. What I wanted to get from Mr. Jacob was the ordinary salary that a man would be receiving at retirement, and I think he said he put an ordinary average about 3,000 Rx., to which, of course, must be added on the compensation allowance?—Yes.

10,334. (*Sir Ralph Knox.*) How many men in the English service, do you think, retire with a thousand a year pension?

10,335. (*Chairman.*) Very few; but here we do not contribute; they contribute for 25 years 4 per cent. on the salary they are receiving?—And for 35 years, if they stay on as long.

10,336. And that used to be reckoned as equivalent to the civil servant providing himself with 400*l.* a year, and the State providing 600*l.* This is less now, as Mr. Jacob explained to us, because it is only 4 per cent. upon his rupee salary, which is not sufficient to provide 400*l.* a year.

10,337. (*Sir Ralph Knox.*) But the net salary is still considerably in excess of what we get here.

10,338. (*Mr. Naoroji.*) The proportionate salary paid there is much higher than here.

10,339. (*Chairman.*) We are only speaking of the relation of the non-effective service to the effective?—Those rules that I have been mentioning are only the rules for a comparatively small service, for the Indian Civil Service.

10,340-1. One more question upon that point. You do not know whether any calculations have been made, beyond that which you have mentioned to us concerning officers lent to a foreign state, which would give an idea of the proportion the non-effective bears to the effective charge?—I could not lay my hand on any such calculation, but I think I might be able to make such a calculation roughly myself for the Civil Service.*

10,342. Perhaps you will just consider it, and, if you see your way to doing it without too much trouble, it would be useful?—Of course the difficulty is getting the amount of the salaries; there are returns of the salaries at certain periods; and I should take one of those periods and see what the actual amount of pensions paid was, and compare that with the salaries; it would give some rough idea of the proportion.

10,343. That would be a rough way of calculating it?—Yes.

10,344. If you find it a matter of very great trouble, you need not go into it?—Yes, I will see.

10,345. Then, passing from that, we come next to the Uncovenanted Civil Service, do we not?—There are various other grades of servants who receive special pensions.

10,346. For instance, Judges?—Judges of the High Court and certain other judicial officers, and military officers in civil employ, and chaplains; they receive pensions in sterling.

10,347. I think there has been a considerable increase in the Judges' pensions, has there not?—There has been an increase.

10,348. At the same time there has been a decrease in their active pay?—Yes, a small decrease in the pay of some of them.

10,349. I see in a table in the 10th Report of the India Office Home Charges Committee, para. 16, that a considerable reduction has been made. This is for the year 1887-88: "A considerable reduction has been made in "the amount paid for salaries to the judges of the High "Courts. At the same time the cost of the pensions "has increased, both in sterling amount and in the "number of rupees required to pay for them. The "result is that, whereas six years ago the non-effective "charge was a little more than 23 per cent. of the "effective charge, it is now nearly 37 per cent. "In view of the probability that the number and "expense of the High Courts in India will be increased "in the future, we recommend a re-consideration of "the scale of pensions offered to the judges, and "of the length of service entitling them to pen-"sion." I am quoting from the 10th Report of the Committee of 1889 on the Home Charges, paragraph 16?—There have been certain alterations in the scale of pensions for judges recently. The alterations do not affect the maximum rates of pensions, but the length of service for the maximum rates has been extended from 11½ to 14½ years, and, on the other hand, a graduated scale has been laid down for shorter terms of service. The rates of invalid pension have also been slightly reduced.

10,350. Can you tell us, in continuation of this table, the amount of the salaries of the High Court Judges, and the amount of the pensions upon which these percentages were calculated by the committee?—Yes, I could get them out. I gave the salaries of the Judges at present in the course of my examination on Law and Justice.

10,351. I think it would be interesting to see these amounts, because it is rather striking that the relation between pensions and salaries should have been in 1881-82, 23 per cent., and in 1887-88, 37 per cent.?—Yes, that was partly due to the fall in exchange, but I suppose it was partly due also to the fact that the pension list for High Courts had hardly reached its maximum in 1881-82.

10,352-3. The report says, in the 15th paragraph: "The increase may be attributed to the circumstance "that in 1881-82 the burden added to the Superannua-"tion List by the erection of the High Courts at "Calcutta, Madras, and Bombay in 1862, and in the "North-West Provinces in 1866, was not fully ex-"perienced. Many of the earlier Judges of those "courts were officers of the Civil Service, and were "men of long service; several of them died in the "service, and others retired on civil annuities, very "few remaining long enough to draw pensions under "the statutory regulations. They were succeeded by "a younger class of men, who have been recently "coming by degrees on the pension list. Even now "sufficient time has not elapsed to admit of its being "said what will be the average rate of deaths among "these pensioners, and consequently what will be the "average payment under this head. With regard, "however, to the chance of a prospective increase "of this liability in England, we observe that the "number of European Judges of the High Courts is at "present less by seven than in 1870, and by four than "in 1876." Then follows the table, of which, I think, it would be interesting if you could give us a continuation?—I will get out the figures, if possible.*

10,354. Then are there any other special classes of officers, to which you would call our attention besides the judges?—There are certain other appointments besides the High Court judges to which it is considered necessary that barristers should be appointed, and there are special rules for their pensions. The pensions vary for those appointments from 300*l.* a year to 750*l.* a year, except in the case of the Judges of the Punjab Chief Court, whose pensions vary from 400*l.* to 1,000*l.* for the same length of service.

10,355. Is a pension only granted on a minimum rate of service?—Yes.

10,356. And does it increase with the service?—Yes, the minimum pension is an invalid pension, granted after 6¾ years, of 300*l.* a year, and after ten years up to 14½ years there is a graduated scale of retiring pensions varying from 500*l.* to 750*l.* a year.

10,357. And is that the maximum reached, 750*l.*?—Yes.

10,358. Those are barristers?—Yes; and I may mention that in these cases also the length of service for the maximum pension has been recently raised from 11½ to 14½ years. Then there are the native members of the Indian Civil Service; those appointed by nomination; they have special rates of pension.

10,359. Those who are appointed under the Civil Service examination would have the same pensions as the European civil servants?—Yes. The others get pensions of Rs. 5,000 a year after 25 years' service, and Rs. 6,000 after 30 years' service.

10,360. And up to that time do they get any pension?—They may get an invalid pension before that time; those I have mentioned are retiring pensions.

10,361. The whole principle of the Indian Civil Service is a fixed rate of pension, not one like ours, rising year by year?—The ordinary rules of what used to be called the Uncovenanted Civil Service, which is, of course, by far the larger part of the service in India, prescribe a graduated scale of invalid and superannuation pensions rising year by year.

10,362. Perhaps you would give us the scale?—The scale is so many sixtieths of the average emoluments, according to the years of service.

10,363. Oh, very much like ours?—It is. The number of years' service is taken as the numerator up to 24 years' service, and then, if a man retires on invalid pension after 25 years' service, he gets half-pay; but these pensions are all subject to certain maxima, which very much diminish the scale of pension in the case of highly paid officers.

10,364. (*Sir Ralph Knox.*) There is no deduction of 4 per cent. in their case, is there?—No, no deduction at all. A retiring pension is only granted after 30 years' service. After that period of service it is a half-pay pension.

10,365. (*Mr. Buchanan.*) With 30 years' service they get a half-pay pension?—Yes, that is 30-60ths.

10,366. (*Chairman.*) And is that the maximum to which they can rise?—Yes, they cannot get more than half.

10,367. Is there any age of compulsory retirement in that case?—55 years is the age at which a man may be compelled to retire, but he is not bound to retire at 55 years in the Uncovenanted Civil Service.

10,368. At what age can he claim to retire?—He can claim to retire at 55 years, but not before, unless invalided. If he has put in 30 years' service, he can take his retiring pension before that age.

10,369-70. He can claim to go after he has put in 30 years' service?—He can claim to go after 30 years' service, or at 55 years of age, even if he has not put in 30 years of service. If he is allowed to stay on after 55 years of age, he may remain in the service till

* *See* Appendix 32.

Mr. S. Jacob, C.S.I.

10 June 1896.

Furlough and Pension.

required to resign on the ground of inefficiency; but generally extensions are granted for a year or two at a time, and, on the expiry of that period, the service is again extended if the officer is still considered efficient.

10,371. Is there any age at which he must go?—There is no absolute limit; practically the limit is 60 years.

10,372. There is a paragraph in the 10th Report of the Home Charges Committee (Parliamentary Paper, No. 327 of 1893, p. 72) dealing with the ordinary Civil Service, which, I think, will interest the Commission. "The annuity of 1,000*l.* given to Civil "Servants on retirement was originally contributed to "the extent of one-half from the fund, to which all "those in the service subscribed 4 per cent. on their "salaries, the Government contributing the other "moiety. In 1862, the Government agreed to raise "their portion to 600*l.*, and in 1871 the Secretary of "State permitted all who had rendered the requisite "service and residence to retire on a fixed pension of "1,000*l.* a year, even though their subscriptions might "not have been sufficient to purchase an annuity of "400*l.* At that time, the subscriptions of the civil "servants, which, of course, are payable in rupees, "were nearly 50 per cent. more valuable for the pur-"chase of an annuity in gold than they are at present; "and it is evident, therefore, that the fall in the value "of these subscriptions has had the effect of greatly "enhancing the cost to the Government of conceding "annuities of 1,000*l.* to all who retire after the "stipulated service. It must, however, be borne in "mind that the savings of the civil servants out of "their salaries undergo a corresponding diminution; "and, on the whole, we do not see, in the facts to "which we have referred, any ground for interfering "with the existing arrangements." Since that time, however, there has been an addition made to their salary in compensation for the fall of exchange, and you pointed out that the 4 per cent. is paid upon that increase as well as upon the original salary?—Yes.

10,373–4. Are there any other classes? For instance, take the chaplains; what rule applies to them?—Yes, there are special rates for the chaplains. But I should explain that those last rates are for all civil servants, who are not in the Indian Civil Service, except those for whom a special rate has been fixed.

10,375. (*Mr. Buchanan.*) Do those rules apply to uncovenanted civil servants?—All, except menial servants; and those rates are also limited by a maximum of Rs. 5,000 in any case, except by special orders of the Secretary of State, where the service has been specially meritorious. Chaplains get a retiring pension of 365*l.* after 20 years' residence and 23 years' service, and they get also pensions from 10 years upwards if they are retired on medical certificate; these pensions are 127*l.* 15*s.* at 10 years, 173*l.* 7*s.* 6*d.* at 13 years, and 292*l.* at 18 years.

10,376. (*Chairman.*) Are there any other servants to whom you think it desirable to call attention?—There are some special rules for civil engineers; they are allowed to retire at rather earlier periods, and they get rather higher scales of pension. After a service of not less than 10 years an invalid pension, not exceeding the following amounts:—10 years 20-60ths, and so on up to 29-60ths for 19 years, but they are limited by comparatively small maxima. The maximum pension granted for less than 20 years' service is Rs. 3,000 in any case; from 20 years' service upwards they may be awarded a retiring pension of half-pay, subject to maxima of 4,000 if the service does not exceed 25 years, and 5,000 if it does.

10,377. Have you got the Finance and Revenue accounts of 1893–94?—Yes.

10,378–9. If you look down the superannuation account, you will see "contributions for pensions and gratuities," 113,000 Rx. Would that represent receipts under the head of the 4 per cent. deducted from the Civil Service salaries?—No, that receipt is taken merely by deduction from the pay. It is not credited in the accounts anywhere. The pay is drawn at the reduced amount and charged at that amount. The figure to which you have drawn attention, represents the contributions which are paid by officers in foreign service.

10,380. If you look down the column, it gives a receipt altogether of Rx. 377,000. Are there any of those subscriptions to which you would call our attention?—A large proportion of them consists of subscriptions to the various service funds, the military funds, the medical funds, the Bengal and Madras and Bombay civil funds, and the Indian civil service family pension regulations.

10,381. Well, there is a regular Civil Service rule, as you have explained to us, under which a civil servant retiring after 25 years' service, gets a thousand a year. How does the Bengal civil fund affect him?—That is for pensions for his family.

10,382. Does it only become operative in case of his death?—Yes.

10,383. Or does it become operative on his retirement?—No, only in case of his death.

10,384. And this applies, I suppose, to the Madras civil fund and the Bombay civil fund as well?—Yes.

10,385. And to the subscriptions of native members of the Indian Civil Service?—Yes. The civil funds were, I may observe, taken over by Government under an Act of Parliament in 1882.

10,386. How are those contributions for pensions and gratuities, amounting to 113,000*l.*, made up?—Those are the contributions for pension, or for pension and leave, of officers in foreign service.

10,387. What are the receipts in England, 98,000*l.* a year?—They consist very largely of subscriptions to the funds, 59,000*l.* to the military funds of 1893–4; 24,000*l.* to the military orphan fund, 2,000*l.* to the annuity funds, and then there are some subscriptions to funds which have been established for the India Office establishments, 8,000*l.* to a widows' fund on the home establishment, and 1,000*l.* to the India Office provident fund.

10,388. How come Indian civil servants to be subscribing here to these funds after they have retired?—They have to continue their subscriptions in some cases until death. Subscriptions are also levied on leave allowances paid in England.

10,389. And then their families get the benefit?—Yes.

10,390. Then, taking the vote itself, it amounts to 3,853,000*l.* Does that cover the whole of the non-effective service of India?—Apart from military pensions.

10,391. And of that 900,000*l.* is paid in India?—Yes.

10,392. The first item is allowances, 851,000*l.* The larger part of that, I suppose, is to natives?—Yes, the greater part of that would be for natives.

10,393. In round figures, I suppose, you may say that the Europeans are represented by the sum paid in England, the natives by the sum paid in India?—Yes, generally that is the case. There are, however, a few Europeans who draw their pensions in India.

10,394. But not enough to affect the total?—No, not enough to make any great difference in the total.

10,395. Well, now, could you give us the comparison between 1875 and subsequent years?—In 1875–6 the total net charge for pensions, that is, deducting all the receipts, was 1,357,000 Rx.; in 1893–4, the charge is 3,476,000.

10,396. The budget of 1895–6 shows a considerable further increase, does it not?—Yes, 3,912,000 is the budget for 1895–6. I think that is probably excessive. It is put at about 3,800,000 in the revised estimate for 1895–6.

10,397. During that time, the net charge of the pensions payable in India has risen from 140,000 Rx. in 1875–6, to 694,000 Rx. in 1893–4, and 762,900 in the budget of 1895–6. That is a very large increase. Can you give us any explanation as to the reasons of it?—The increase in India of 554,000 between 1875–6 and 1893–4 is made up of 108,000 on account of service funds, and 446,000 for pensions and gratuities.

10,398. But that is a very large increase?—Yes. The increase in India is almost entirely due to the increase in the pension establishment in consequence of the general increase in the staff employed for civil administration in all its branches. The pension charges in India are in the main paid to natives of India. In 1875–6, owing to the short period during which some of the departments had been in existence, the pension list was comparatively small. It has been shown in the case of many departments already dealt with how large the

increase in the subordinate posts and in the establishments has been, and this has led to an increase in the pension establishment.

10,399. Have any fresh classes of officers been admitted to pension?—I do not think any fresh classes have been admitted, but the number who are entitled to pension has been very much increased.

10,400. (*Mr. Jackson.*) But that is by reason of the growth of the service?—Yes.

10,401. (*Sir Ralph Knox.*) And the service is increasing?—Yes.

10,402-3. (*Chairman.*) But this increase is, I reckon, 500 per cent. in 20 years?—That is the net charge.

10,404. But I mean in 20 years an increase in the pension charge of 500 per cent. is something enormous. You could hardly contend, could you, that the Indian Civil Service, to which these pensions are paid, has increased in anything like that proportion?—No, but if you take the gross charges there is nothing like that increase. The gross charges have increased from 800,000 to 910,000, which is only an increase of 110,000, or rather less than 14 per cent.

10,405. Yes, but then the receipts in 1875-6 were 659,000, and in 1893-4 they were 216,000?—Yes, that is owing very largely to the system which was adopted of bringing to credit the capital amounts of the funds which were taken over by Government. The Government had taken over shortly before 1875-6 the military and medical funds. They placed the capital of those funds which they took over in deposit, and brought to credit each year such portion of the capital of each particular fund as would bring its receipts and charges into equilibrium, until the whole capital was exhausted.

10,406. They ate up the capital in current expenditure?—Yes. The Government do not profess to keep any accounts of the funds that they took over. They took them over on certain conditions, and were bound to give to subscribers certain rates of benefit, and they did not consider it was worth while to keep an account after they had taken them over.

10,407. Therefore 1875-6 is hardly a fair year for comparison. Whatever opinion may be held upon the Indian Government using capital in aid of current expenditure, at all events that invalidates 1875-6 as the year for starting a comparison?—Yes, it invalidates any comparison with the net charge in that year.

10,408-9. You ought rather to take out the figures of 1884-5?—I have taken out the figures for the earliest year for which details of the English charges are given in the same form as at present—that is 1878-9.

10,410. Take 1884-5, which you have given us; the increase there, though large, is not so large as that which resulted from a comparison with 1875-6?—The increase in the net charge in India is not so large, but the increase in the gross charge is larger; the gross charge has increased from 783,000 to 911,000, and the net charge from 583,000 to 694,000.

10,411. And with a further increase in the estimate of 1895-6 to 762,000, is it not?—Yes.

10,412. Therefore you may say that between 1884-5 and 1895-6, a period of 11 years, the increase has been about 40 per cent.?—No. I doubt if 763,000 represents the true net expenditure.

10,413. You do not think it does?—I could not say so.

10,414. You think it is in excess?—I think it is probably much in excess.

10,415. For that reason you would prefer to stick to the accounts of 1893-4?—Yes.

10,416. You do not think that an unreasonable increase, considering the increase of the Civil Service?—No, and considering that the pension rules had not been in force for a very long time before 1875-6.

10,417. And therefore they had not attained their normal development?—Yes.

10,418. Now passing on to the English charge net?—The English net charge has risen from 1,096,000*l.* in 1875-76 to 1,686,000*l.* in 1893-94.

10,419. Well, that is a very large increase; how do you account for that?—I cannot compare the details of 1875-76 with those of 1893-94, but I can compare them for 1878-79 and 1893-94. The figures for 1878-9 do not differ very largely from those that I have given for 1875-76. The chief increase in pensions payable in England is due to an increase of 136,000*l.* in uncovenanted service pensions.

10,420. But the increase is considerably larger than that, is it not?—Yes, there is an increase in the fund payments.

10,421. But I am taking the net. The net in 1875-76 was 1,096,000*l.*, now it is 1,700,000*l.*?—Yes, the increase in England is made up of the following items: civil annuity funds, 221,000*l.*; civil funds, 237,000*l.*; military funds, 89,000*l.*; Indian navy fund, 8,000*l.*; making a total, after deducting an increase in medical retiring funds of 25,000*l.*, of 530,000*l.*, which, together with 60,000*l.* on pensions, civil, marine, judicial, public works, and other heads, make up the total increase of 590,000*l.*

10,422. Still 1,100,000*l.* a year rising in something like 18 years to 1,700,000*l.* a year, which is an increase of rather over .50 per cent., is a very big one?—Yes, but I do not think you can mix up the two different classes of pensions. The funds are subscribed to by the members of the services, and, at the time the funds were taken over, for various reasons, by the Government, actuarial calculations were made as to the benefits which could be given with reference to the capital which was taken over, and the subscriptions that were expected, and 530,000*l.* is the increase due entirely to those fund transactions. Then again it must be remembered that a considerable amount of the subscriptions comes in in India and not in England, so that you have to take part of the increased charge against the increase in fund subscriptions in India. Then, lastly, the annuity deduction from the Civil Service is not credited at all, it is taken by deduction from expenditure.

10,423. Evidently this account gives not at all a true view of the financial effect of the Civil Service pension system?—No. It is not confined to pensions proper, but includes pensions which are, in whole or in part, subscribed for.

10,424. Inasmuch as you have the whole charge of the pension, and no credit on the other side for the 4 per cent. deducted from the pay of the Civil Service?—Yes. This is one instance.

10,425. But ought not the account to show the sum deducted, because, drawn as it is, it gives a very unfair view as against India?—Government considered the matter, and the Secretary of State finally directed that no separate account of the annuity fund should be kept, that the deduction should be treated simply as a deduction from the salary, and that the pension should be charged in full to Government. Of course the plan of still keeping a separate account might have been adopted, but it would have been expensive, and, as Government was bound to make these payments and pensions, it did not consider that there was any real benefit to be gained by incurring expenditure for keeping up very minute accounts.

10,426. (*Mr. Jackson.*) Then does the expenditure appear so much less?

10,427. (*Chairman.*) The expenditure on pensions appears so much more?—The expenditure for salaries appears so much less.

10,428. The idea of the thing was that a civil servant provided out of his salary 400*l.* a year pension for himself. He does not provide so much now, the whole of that 400*l.* a year is left out of view, without a note to tell you of it.

10,429. (*Mr. Jackson.*) In fact it appears as less expenditure?—As less expenditure for salary under the service heads.

10,430. And therefore it is doubly unfair, because, if you compare the amount of pension with the amount of salaries so reduced, you would make it appear still more disproportionately large?—Yes, that is true.

10,431. (*Chairman.*) That is the way the Civil Service contribution was knocked on the head in England. The contribution went to the Exchequer, but it was not shown any more than here.

(*Sir Ralph Knox.*) They were stated as revenue.

(*Chairman.*) You got out of the accounts the sum paid into the Exchequer.

(*Sir Ralph Knox.*) But in the Indian accounts they do not do that.

10,432. (*Chairman.*) In India they do not bring it in at all as a receipt; but, of course, when you speak of

Mr. S. Jacob. C.S.I.

10 June 1896.

Furlough and Pensions.

the increase, it is fair to remember that, if there has been a larger number of civil servants coming on pension, there has been also a larger amount deducted from their salaries?—Yes, and this refers not only to the annuity funds, but also to the civil funds, and also to the military and medical funds.

10,433. Yes, only in their case the receipts are brought to credit, are they not, they are not deducted from the pay?—Yes, they are brought to credit as revenue.

10,434. (*Mr. Jackson.*) If it were possible to ascertain the amount of expenditure on salaries, would the growth in salary be somewhat proportionate to the growth in pension?—There is a falling off in the salaries of the Indian Civil Service, comparing 1893–94 with 1875–76.

10,435–6. In the aggregate total amount?—Yes.

10,437. (*Sir Ralph Knox.*) The salaries of the covenanted Civil Service you mean?—Yes, under the principal heads. I have not taken out the whole of the salaries of the Indian Civil Service, but the greater part of them fall under land revenue, and law and justice, and under those heads there is a considerable reduction in the salaries paid to the Indian Civil Service.

10,438. (*Mr. Mowbray.*) Is that owing to a reduction in numbers, or owing to a reduction in pay?—It is partly owing to a reduction in numbers, and partly owing to this deduction of 4 per cent.

10,439. (*Mr. Jackson.*) And to the introduction of cheaper labour?—Well, that might not affect the total charge for the Indian Civil Service; the substitution of cheaper labour would, and that has been carried into effect to a great extent. In such a case the increased charge, of course, appears under one head and the reduction under another.

10,440. (*Chairman.*) I do not quite follow the argument with regard to the increase under the funds. You showed that a very large part of this increase was due to payments on account of the funds, did you not?—Yes.

10,441–2. But I did not quite follow you as to why that increase had taken place or what the explanation of it was?—The pensions from the funds are now charged to Government, entirely in this country; the donations, which used to be paid to the funds when they were treated as separate funds managed by the service, were paid in India in Rx. And therefore there was no charge in England for the civil funds, for instance, in 1875–76.

10,443. And what does that charge amount to now?—That charge comes to 242,000*l.* The fund has been taken over, and the charge in England is a new charge since 1875–76 as far as the civil funds are concerned. Then in the case of the civil annuity fund, the charges for pensions have very largely risen, namely, from 262,000*l.* to 483,000*l.*, an increase of 221,000*l.*, owing partly to the whole of the pension being charged to Government.

10,444. I am very much puzzled by this. We gather from you that salaries have decreased, that pension regulations have not been made more liberal, and yet the charge of the pensions has increased?—Nearly half the pension was not charged at all to Government in 1875–76; it was charged to the annuity fund.

10,445. As far as England goes?—Yes.

10,446. And those annuity funds have been eaten up in current expenditure?—The capital of the funds was credited to current revenue.

10,447. (*Mr. Jackson.*) Was it used for the purposes of current revenue?—Yes.

10,448–50. (*Chairman.*) I think you said the year 1878–79 was the first year that would form a basis for a comparison?—Yes, for a detailed comparison. The total net increase, other than in the funds, is only about 60,000*l.* between that year and the present.

10,451. (*Mr. Jackson.*) And you gave us a figure of 530,000*l.* as being the amount of the increase in the service funds?—Yes.

10,452. (*Chairman.*) But why should there have been that increase between 1878–79, which I understand to be a fair year as a basis of comparison, and 1893–94 or 1895–96. There the increase is something enormous?—No, it is only 66,000*l.* in the ordinary pensions.

10,453. 530,000*l.*?—No; that was the difference in the fund pensions between 1875–76 and 1893–94. In 1878–79 I have only taken out the difference for the charges other than those for service funds.

10,454. And what does that leave the service fund charge in that year?—I did not take that out.

10,455. But would you not get it by simply deducting the other charges from the gross?—Yes; but I have not got here the gross for 1878–79; I can get them, if desired.

10,456. Has there been much increase since 1878–79?—Yes, there has been a considerable increase.

10,457. In the service funds, I mean?—Yes.

10,458. But why should there be in the service funds?—Because of the same reasons which apply in the other cases.

10,459. But in 1878–79 I thought we got to an end of the eating up of the capital?—The eating up of the capital does not affect the question of the charge in England at all. The eating up of the capital only affects the Indian charge. The capital is credited in India; the English charges are affected by the amount of the actual pensions paid now. In some cases the charge is quite new, in others the full pension is paid now, whereas only the Government share was charged to Government before; and in yet others the fund payments had not reached their maximum.

10,460. That is in 1875–76?—Yes.

10,461. (*Mr. Jackson.*) And therefore, as regards the period 1875–76, there were two operations going on; one was that you were crediting capital to revenue, and the other was that you were bearing in India charges which are now paid in England?—Yes, the charges to Government in 1875–76, as far as the Civil funds are concerned, were merely donations to the funds paid in India.

10,462. (*Chairman.*) Do you think, Mr. Jacob, you could put before us a short paper, showing these different causes which have affected the growth of the superannuation grant, so that we may understand the reasons, and if possible arrive at some conclusion as to what is the real net increase?—I do not know that it would be possible to say what was the real net increase, because the 4 per cent. deduction is not credited to Government.

10,463. (*Mr. Jackson.*) Can it be estimated?—I could try to estimate it.

10,464. (*Chairman.*) Yes, I should think that would be best; it would be very desirable if you could show us that?—And then you must show a new charge as a new charge; there is nothing to take off against it. The civil funds were not in the possession of the Government in 1875–76, so that the whole of that charge in England is a new charge.

10,465. What, of course, the Government ought to have done in sound finance was to have invested these funds that they took over, and applied the income of the fund in aid of the expenditure?—I am not prepared to say that that would have been any more sound finance than the actual course which was followed.

10,466. Do you really justify applying capital in aid of current expenditure?—The Government was bound to make certain payments, whether the assets taken over came up to the value of these payments or not. The only effect of keeping separate accounts would have been to increase the expenditure of Government. I do not know what advantage Government would have derived from finding out after 40 or 50 years that the fund did not meet a certain proportion of the charges.

10,467. But they took over certain monies, as I understand it?—Yes.

10,468. And those monies were capital monies?—Yes.

10,469. Up to that time had they been invested?—A certain amount of them had been invested with Government, and Government allowed interest upon them at rates which had been agreed upon.

10,470. Then up to that time the process had been to invest the monies, and I suppose the interest went in diminution of the charge up to that time, did it not?—The interest was the charge against Government.

10,471. If Government borrowed the money it paid the interest, but what was done with that interest?—It was paid over to the funds.

10,472. And applied in payment of the liabilities of the funds, I suppose, as far as the interest went?—Yes.

10,473. When the Government took it, instead of going on with that system and applying the annual produce of the fund in aid of the annual expenditure of the fund, they had two or three years of a very good time, spending the capital in diminution of the expenditure?—I do not see that it was a particularly good time.

10,474. Well, it reduced the expenditure, did it not?—Yes, it reduced the expenditure for the time being, but the other course would have increased the expenditure for all time, or as long as the funds remain in existence.

10,475. (*Mr. Jackson.*) But might they not have cancelled debt with the capital amount?—The debt was cancelled; but as the charges were in future to be brought to account as ordinary expenditure, it seemed proper to credit the assets to some head or other.

10,476. (*Chairman.*) But I thought you said that they applied these funds in 1875–76 in reduction of the expenditure?—In certain cases they did. In the case of the civil funds they credited the whole amount as an extraordinary receipt at once, and cancelled debt to the same amount.

10,477. (*Sir William Wedderburn.*) I think some ambiguity has arisen from the use of the words "Civil Fund," which I think covers two separate branches, namely, the annuity fund and the provident branch?—In Bombay it covered the two separate branches; in the other provinces the civil funds and the annuity funds were separate.

10,478. They were quite separate branches in Bombay too; but what you have been saying is only applicable to the annuity branch, is it not?—No, it applies also to the civil fund.

10,479. That is to say to the Widows and the Family funds?—Yes.

10,480. (*Chairman.*) I confess I cannot unravel this account at present. Would you look into it to see if you could explain it to us?—I am afraid I shall not be able to make it any clearer than the figures I have already given, but I will endeavour to draw up an explanatory memorandum showing how the increase has occurred.*

10,481. Before leaving the subject of pensions, I should like to ask you if you have obtained further details as to the increase in the military pension charges for the Indian services which you said you would try to obtain?—In question 5520 I was asked to obtain and submit to the Commission further particulars as to the increase in those charges.† The Table, which I put in, gives details of them for each year from 1875–76 to 1890–91, and for 1893–94. These details were formerly taken out year by year, but in recent years this has not been done, the labour involved being considerable; for 1893–94, they have been specially compiled for the purposes of this inquiry.

The following are the figures for 1875–76 and 1893–94.

	1875-76.		1893-94.		Increase.	
	No.	Charge.	No.	Charge.	No.	Charge.
		£		£		£
Colonels' allowances	201	210,134	501	535,668	300	325,534
Retired Pay.						
Staff corps	1,399	403,499	1,370	611,848	29	208,349
Engineers	84	29,472	180	116,548	96	87,076
Artillery	255	88,673	259	144,703	4	56,030
New regiments	72	16,718	84	32,488	12	15,770
Warrant officers	64	3,874	283	26,573	219	22,699
Medical	418	126,683	431	192,167	13	65,484
Ecclesiastical	97	27,286	151	46,433	54	19,147
Total	2,389	696,205	2,758	1,170,760	369	474,555

* *See* Appendix 34. † *See* Appendix 24.

	1875-76. Charge.	1893-94. Charge.	Increase.
	£	£	£
Capitalised value of annuities granted on retirement.	75,775	—	−75,775
Lord Clive Fund.			
Pensions	121,908	—	−121,908
Payments to representatives.	1,589	767	−822
Indian family pension fund (net).	−902	8,841	9,743
Pensions to widows and families.	—	76,087	76,087
Miscellaneous charges.	2,250	14,364	12,114
Total	1,106,959	1,806,487	699,528

The total increase in the retired pay is 475,000*l.* Then there has been a decrease in the pensions from Lord Clive's Fund of 122,000*l.*, and in the capitalized value of annuities granted on retirement of 76,000*l.*; and there has been an increase in pensions to widows and families of 76,000*l.* There were a few other small decreases and increases, but the total net increase is 700,000*l.*

10,482. (*Sir William Wedderburn.*) Giving a fixed pension of 1,000*l.* a year to the covenanted Civil Service had rather the effect of inducing their early retirement, I think; that is to say, if they went on serving, they continued their subscriptions to the fund and the annuity became less valuable, but they did not get any more from the Government?—Yes; that would certainly have a tendency to induce early retirement.

10,483. I dare say you know cases where civil servants have served so long as to have received no pension at all from Government—that is to say members of the Civil Service paid and more than paid the whole value of their annuity?—I have heard of such cases. I believe such cases have occurred, but I could not name any.

10,484. I think Mr. Samuel Mansfield was one? (*Sir Donald Stewart.*) Sir Richard Temple?

10,485. (*Sir William Wedderburn.*) The rate of pensions for Europeans of the covenanted Civil Service has been fixed to a certain extent with reference to the tropical climate and the expatriation, I presume?—I believe so.

10,486. So that, if pensions were given for similar services, they need not be so large, if they were given to natives of the country, who would not be expatriated and who would be accustomed to the climate?—The pensions given to natives do not cost Government so much (allowing for exchange) as those given to the Europeans.

10,487. So that there might be a considerable saving in this department by the larger employment of natives in the service?—The pension charge would, no doubt, diminish, if natives could be employed in substitution for Europeans to any extent.

10,488. So far as they could be employed, there would be a saving in this pension charge?—Yes, in the general Civil Service, not in the Indian Civil Service; the natives who enter the Indian Civil Service after examination in England get the same pensions as Europeans.

10,489. But that seems a little excessive, does it not, as they do not suffer from these particular inconveniences?—They have to come to England to pass the examination, and I do not see how it would be possible to make a distinction in this respect between them and Europeans.

10,490. (*Mr. Naoroji.*) In the return of East Indian salaries, there are two items in connexion with the pension about which I want a little explanation. The return is made in 1892. There is one item, "retired pay and pensions," 1,897,385*l.* paid in England, and the other item is mentioned in this way, "pensions towards which officers have contributed," and that is a separate item of 1,154,534*l.* Am I to understand that in the first item where it is simply said "retired pay and pensions," there is no contribution from the officers?—I should suppose that is the case. I have not got the return before me now. I should suppose that the first figure represents pensions which have not been subscribed to.

10,491. Then that is the explanation of these two items described in different ways?—Yes; that is probably the distinction between them.

Mr. S. Jacob, C.S.I.

10 June 1896.

Furlough and Pension.

10,492. So that they are of two distinct characters?—I should suppose so.

10,493. One includes contribution, and the other does not include any contribution?—Yes.

10,494. (*Sir Donald Stewart.*) One is civil and the other is military, that is all the difference, is it not? Military officers do not contribute anything?—A great many civilians do not either; I mean those not belonging to the Indian Civil Service.

10,495. I referred to the Covenanted Service?—Yes, the members of what used to be called the Covenanted all contribute, but the charge mentioned by Mr. Naoroji includes the charge for uncovenanted pensions as well.

10,496. (*Mr. Mowbray.*) Has there been any tendency, do you think, to earlier retirement of late in consequence of the pension in sterling being larger in proportion to the pay than it used to be, owing to the fall in the rupee?—I believe that there has been some tendency towards that, but I doubt if it has on the whole greatly affected the number of retirements, because the large fall in the value of the rupee has a tendency in the opposite direction, making men want to draw their higher salaries longer.

10,497. At any rate it is not sufficient to have caused an increase in the pension list?—No, I think a very large part of the increase in the pension list is owing to the very large number of civilians that were recruited in two or three years from 1861 to 1866 in different provinces. Those have all retired or have been entitled to retire within the period between 1875–76 and 1893–94, and a very large number of them have retired.

Stationery and Printing.

10,498. (*Chairman.*) I think the next head, Mr. Jacob, is Stationery and Printing. Could you give us some description of the arrangement under which stationery is provided and printing is done for the Government?—There are three central Stationery Offices, one at each of the presidency towns, which either purchase stationery in India or receive it when sent out from England, and distribute it to the various offices which draw their stationery from them.

10,499. Now who is the head of the Stationery Office at Calcutta. What is the title of the officer?—He is the Superintendent of Stationery and Stamps.

10,500. And has he a large office under him?—Yes, he has. The whole Stationery Office at Calcutta cost in 1893–94, 16,600 Rx. The general establishment consists of 56 clerks and examiners and 27 servants, besides a special establishment of 29 clerks and 16 servants for the "form" branch.

10,501. In the Finance and Revenue account of the Government of India for 1893–94, the Government Central press establishment is thus divided: superintending officers, 2,109 Rx.; establishment, 46,540 Rx. How does that compare with the figure which you have just given me?—I was giving you the charge of the stationery office; printing charges are quite separate.

10,502. But would the Stationery Office be included in that 47,000 which I have just been mentioning?—No; the Stationery Office in Calcutta is charged under Bengal. The whole cost of the office is shown separately, 16,600 Rx., on page 100; that was the figure I gave you.

10,503. To what department of Government would the Superintendent be responsible?—He is under the Financial Department, but not directly under the Government of India. The Calcutta Superintendent is immediately under the Government of Bengal.

10,504. And the same with the Stationery Offices at Bombay and Madras?—Yes, they are under those Governments, and are charged separately.

10,505. The total charge for 1893–94 is put down at Rx. 683,181 in the revenue accounts for 1893–94?—Yes.

10,506. Does that comprise the whole cost of stationery in India, or have departments any power of spending money upon stationery and printing?—It comprises the whole charge for printing by Government presses, and it comprises all the principal charges for stationery. In some of the smaller offices and departments officers can incur petty charges for stationery purchased in the country, which are charged among their office contingencies.

10,507. Is the printing done by contract with printing houses, or is it done by the Government itself?—Most of the Government printing is done by Government presses, but there is a contractor in Calcutta who prints Government forms; he does a considerable amount of that work—in fact, all the form work.

10,508. Is the head of the Stationery Office responsible for making contracts for the supplies of stationery and for printing work?—The head of the Stationery Office is responsible for purchases of stationery in India, but for any large amount he has to get the sanction of the superior officer—the Board of Revenue in Calcutta.

10,509. I thought you said just now it was under the Finance Department?—Yes, that is the Department of the Government of India that he is under, but he is immediately under the Board of Revenue.

10,510. And therefore any contracts that he enters into would be subject to the approval of a higher officer?—Yes, any large contracts would; he might make some small and ordinary contracts without such sanction.

10,511. The Board of Revenue would occupy the position which the Treasury occupies here? The Controller of the Stationery Office has considerable powers; but I think I am right in saying that he would be liable to the control of the Treasury?—Yes. I do not remember what the exact figure to which the Superintendent is restricted is, and I have not been able to find out here, but I know his powers of making a direct contract are limited, and he has to obtain the sanction of the Board of Revenue, and possibly of the Provincial Government, for any big contract.

10,512. And the head of the Stationery Office in Bengal, I should gather from what you say, is in no way superior to, and has no controlling power over, his corresponding officers in Madras and Bombay?—No, he has no control over them.

10,513. They are responsible in their respective Presidencies, to what higher officers?—In Madras the Superintendent is immediately subordinate to the Board of Revenue; and in Bombay he is immediately subordinate to the Provincial Government.

10,514. (*Mr. Mowbray.*) Does the Bengal office supply the Punjab and North-Western Provinces?—Yes, it is the only central office for that side of India. Bombay I think supplies, besides it own offices, part of the Central Provinces, and Madras supplies the Madras Presidency. Bengal supplies the whole of the rest of India. Its cost is very much greater than that of the Madras or Bombay offices. The Stationery Office in Madras cost Rx. 2,864, and in Bombay Rx. 2,802, against Rx. 16,600 in Bengal.

10,515. And then, I suppose, the Bengal Government gets a credit from the Governments of the Punjab and the North-Western Provinces for goods supplied to them?—The Government of India does. Though the Stationery Office is managed by the Government of Bengal, the purchase of stationery for the central stores is treated as an Imperial charge, and the Government of India gets credit for stationery supplies to all the Provincial Governments.

10,516. The accounts are treated as Imperial, although the actual office is under the Government of Bengal?—The charge for the Stationery Office itself is provincial, but the charges for stationery purchased for the central stores are Imperial.

10,517. (*Chairman.*) And the way that is brought to account is that the expense of what they call "India General" is stated at Rx. 82,000, and from that is deducted the value of stationery supplied from the central store to the several Governments, amounting to Rx. 209,000?—Yes.

10,518. Showing a net gain over the expense under that particular head of "India General," of Rx. 127,526?—Yes, there is an exactly corresponding charge to that first item of Rx. 193,238 under the various Provincial Governments.

10,519. It is rather a curious circumstance that the charge of the Stationery Office in India corresponds almost exactly with our stationery charges here. The gross charge in India in 1893–94 was Rx. 683,000. Deduct from that the receipts, which are 85,000, and the net charge practically comes to Rx. 600,000. The gross charge in the English estimates of 1895–96 is 638,000*l.*, and the receipts 110,000*l.*, leaving a net charge of 528,000*l.* But I observe that in this year, 1893–94, stationery was supplied from central stores to

the several Governments. amounting to Rx. 209,000, whereas the stores got in England, that is to say, the charges in England, were only some 45,000*l.*?—Yes; a large amount of the stationery is purchased in India.

10,520–1. Would you explain to us the system under which that is done? Are there central stationery stores in which a large amount of the stationery required is laid up, or is the purchase of stores only from time to time, just as required?—The Stationery Offices in the presidency towns are large store offices, where they store stationery to a large amount. Of course, when it is economical to order a manufacturer to send a large supply of paper direct to the Punjab or the North-Western Provinces, that is done. Though the amount is brought on the accounts of the Stationery Office, the stationery actually passes direct from the manufacturer to the office where it is required.

10,522. I see that in 1893–94 the total amount spent on the purchase of stationery in India was Rx. 294,000?—Yes. That is the correct figure for all purchases of stationery in India charged under this head. It includes the purchase of some stationery not passed through the accounts of the central stores.

10,523. That was the value of the stationery purchased in India; and if you add the amount spent on purchases of stationery in England, on printing and on bookbinding, the total amounted in that year to Rx. 345,000?—Yes.

10,524. The Indian system, as I understand it, is central depôts, to which the bulk of the stores are consigned. Of these central depôts there are three, at Calcutta, Madras, and Bombay, of which that at Calcutta is the largest and most important. Purchases of stores are made by the Governments of Bengal, Madras, and Bombay, acting as agents for the Imperial Government; and the stores, when received in the central depôts, are afterwards issued to the various Provincial Governments and Departments, which, however, have a certain discretion to buy stationery stores for themselves?—Yes; but it is only "country" stationery which may be procured otherwise than from the central stores. All European stores must be obtained from the central stores.

10,525. Then I see Rx. 209,000 stated as the amount of the issues from the central stores ("India General")?—Yes.

10,526–35. The account shows next the amount of stores which each of the Provincial Governments has received from the central stores; and the total of these amounts agrees with the amount credited to the Imperial Government on account of issues from the central stores to the Provincial Governments?—Yes.

10,536. What I want to follow is this; I see on one side that the value of stationery supplied from central stores amounted to 209,000 altogether?—Yes; that includes supplies to the Post Office and Telegraph Departments too.

10,537. Than if you take the value of stationery supplied to the several Governments, it amounts to Rx. 193,238?—Yes.

10,538. That looks as if it should comprise all the stationery issued from central stores?—It comprises all the stationery issued from the central stores to Provincial departments, not to Imperial departments.

10,539. Well, and which do you call Imperial departments?—There are various departments classed as Imperial, such as the Opium, and the Government of India secretariats, the Salt Department, the Accountant-General's Department, and so on.

10,540. What I want to see is, where are the issues that correspond to that credit of Rx. 209,000?—I have taken out the figures in this table (which I hand in) and which shows the credit and debit exactly corresponding. The credit to the Imperial Government is Rx. 193,238; the various Provincial Governments are charged for stationery supplied from central stores, which total up to the same figure; they are given in detail against each Province, but I have added them together in this table, and they just cancel the credit to India.

10,541. But in addition to that are there any other issues?—There are issues to Imperial departments.

10,542. Therefore that is not an exhaustive statement of the total charge to the Stationery Offices?—The total charge is an exhaustive statement and includes all purchases of stationery.

10,543–4. Very well, then, what would be the purchase of all stationery in India?—The purchase of all stationery for India was 294,000 in India and 45,000 in England.

10,545. That makes it clear, therefore, that the Stationery Office is a great central store which creates its stocks by purchases for which provision is made in the estimate?—Yes.

10,546. It issues out of that a large amount of stores to the different provincial departments?—Yes.

10,547. But in addition to that it has an account with what you call the Imperial departments?—Yes.

10,548. But where in this budget do the issues from the store to the Imperial Departments come to charge? You bought in that year Rx. 350,000?—Yes.

10,549–50. You only account for the issue of 200,000 Rx.?—Yes, to other than Imperial departments. For the whole of the Military departments, for instance, there is no charge made on that account of stationery issues; but the difference between the amount charged for purchase of stationery and the stationery issues either goes into stock or is supplied to Imperial departments.

10,551. If you get within this estimate the whole amount paid for the purchase of stationery, which, of course, is quite a proper charge against the estimate, ought you not to have in a note somewhere the amount realised by the stores supplied to Imperial departments?—I do not see how it would be realised. The charge is Imperial to begin with, and it would only be Imperial when it was charged to an Imperial department.

10,552–3. If you bring into this vote a very large sum for the purchase of stores, should you not show also the disposal of the stores issued to the Imperial as well as to the Provincial departments? For instance, to the Opium department?—We show the whole charge for the purchase of stores.

10,554. But you do not show anywhere the stores supplied to Imperial departments. Ought there not to be a note to that?—A note could be made. A detailed statement of the issues to each Imperial department is actually submitted to the Government of India, and is reviewed by it.

10,555. If you want to show a complete statement, ought you not to put a note that so much stores in the year have been issued to the Imperial departments?—Yes. That would be necessary to show the issues.

10,556. (*Mr. Jackson.*) In other words, to make up a balance between the amounts which you purchased and the amounts which you issued, you want the amount which has been issued to the Imperial departments in order to make a balance. One way of doing it is to deduct the amount which you have issued to the Provincial Governments, but then that only leaves an amount which, it is assumed, is debited to departments. But, under the head of "Army," for instance, is it shown in the accounts, or could the storekeepers show, say, what portion of the stores has been issued for the Military Department?—Yes, the Superintendent could say, and he does say; he submits a statement to Government showing the actual issues to each individual department, and that is reviewed by Government.

10,557. (*Chairman.*) In the Army estimates, should we find any statement of the stationery stores used by the Military Department?—No, I do not think you would.

10,558. (*Mr. Jackson.*) You really cannot say then how much of the balance of Rx. 100,000 has been used by the Military and how much by the Opium department, and how much by the other departments?—We can say, but I cannot show it from the accounts.

10,559. (*Mr. Mowbray.*) But can you show whether the whole balance has been issued to the Imperial departments, or whether any of it represents an increased stock in hand?—Of course in any given year a part of it might represent an increased store; but on the whole the running account for a series of years would give you the issues to the Imperial departments, because there would be no very large increase in the stores.

10,560. But at the same time that balance does represent, or might represent, an increase in stores?—In some years it would represent that, because, for instance, English stores might be received in the cold weather, and be issued after the close of the year.

10,561–2. (*Chairman.*) In our Civil Service estimates the stationery estimate shows the purchases and the

Mr. S. Jacob, C.S.I.

10 June 1896.

Miscellaneous.

actual receipts for sales of stationery; but at the end of the English estimate there is a statement of how this stationery is intended to be used, and you can see what the cost of printing and stationery, for instance, in the War Office, is expected to be for the year?—Yes, in the estimates we do give details of the department to which the stationery issued from central stores to Provincial Governments is supplied. I was taking the published accounts before; but in the estimates we have a detail of every department to which stores are supplied.

10,563. I should have thought that it would have made the thing more complete if there had been a note put to the accounts showing what had been supplied?—There would be no difficulty in doing that, because a statement is prepared and submitted to the Government of India every year. I am not sure whether it would be ready quite so early as this volume is published, but I think arrangements might be made to have it ready by that time.

10,564. Could you give us the charge of the stationery in 1875 and the recent years?—Yes. The total net charge in 1875–76 for stationery and printing was 426,336 Rx., and in 1893–94 598,683 Rx., showing an increase of 172,347 Rx.

10,565. That covers the whole charge?—Yes.

10,566. The charge in India has increased in rather greater proportion than the charge in England, I think, has it not?—Yes. That is owing to the substitution of stores purchased in India for stores purchased in England. The policy has been to purchase stores made in India as far as possible.

10,567. I see under "Charges in England" the charge, which was entirely for stores, was in 1875–76 209,000*l.*, and in 1893–94 it was only 51,000*l.*; that is in accordance with that policy which you have told us of, namely, that of buying goods manufactured in India wherever possible?—Yes.

10,568. (*Mr. Jackson.*) Are the stores you buy from England bought through any Government department here, or are they bought direct from the contractors?—They are bought through the Stores Department of the India Office. I think it is generally in communication with the Stationery Office here.

10,569. (*Chairman.*) Can you distinguish the charges for stationery from those for printing?—Yes. The charges for stationery were in 1875–76 243,000, and in 1893–94 350,000, an increase of 107,000; and for printing 174,000 in 1875–76, and 238,000 in 1893–94, an increase of 64,000. The India Office charges for stationery and printing also come under this head, and amount to Rx. 10,000 and Rx. 11,000, giving an increase of Rx. 1,000. This last increase is entirely due to exchange, the sterling charges having fallen from 9,000*l.* to 6,000*l.*

10,570. Do you know whether the increase of the expenditure, apart from exchange, is due to any increase in the prices of articles, or is it simply to larger stocks being required, because the public service is increasing in dimensions?—Purchases are made in India only when they can be made cheaper than in England; the prices that we pay for our stationery stores have fallen largely. In the last 20 years the increase is entirely due to the increase of establishments supplied.

10,571. And therefore, I suppose, we may expect that on the whole, as the work of the Government of India is increasing, this will be an increasing rather than a diminishing charge?—Yes, the charge does increase slightly every year.

10,572. (*Mr. Jackson.*) I take it that the reduction has been mainly in materials, not so much in printing or labour?—The reduction has been chiefly in materials.

10,573. (*Chairman.*) The printing establishment charges appear to be rather higher?—I have taken out of the account of 1893–94 the printing establishments and charges, and I find the amount for the superintending officers a little over Rx. 12,000, and for the establishmments both of the central government and the provincial governments about Rx. 172,000.

10,573*a*. Is it the case that every person employed in printing for the Government is a Government officer, and that they come under the head of establishment? Because I presume that means the total charge of salaries and wages of printing done throughout India, does it not?—There is very little printing that is done for Government otherwise than through the Government presses. Forms, as I have already said, are printed by a contractor. There are also some small items shown in the account for printing done by private presses, but they are quite insignificant. The presses also get some printing done for them at contract rates.

10,574. And therefore that 170,000 really represents the charge of an enormous printing establishment?—That is the charge for establishments in provincial Government presses, and certainly represents a large establishment. But I may say that the permanent establishment has been reduced as far as possible, and temporary hands are employed to whatever extent is possible. Also the composing is, wherever possible, paid for at piece rates.

10,575. (*Mr. Jackson.*) But it would not be possible to get all the printing done outside, would it?—Not the bulk of the printing, I think. We employ a contractor for printing Government of India forms which are seldom altered and of which very large numbers are required.

10,576. All these accounts and statistical reports, and so on?—All these are printed by the Government presses.

10,577. (*Chairman.*) I see under this head of "Stationery and Printing" there is a charge for official postage. Is it your custom in India that the departments pay their postage, or does the Post Office allow their letters to pass free?—No, the departments actually pay for the postage. There are special service stamps, which are supplied to Government officers and are used for all official communications.

10,578. I suppose they do not actually have to pay for them, do they?—The Government has to pay for the making of them.

10,579. But when I see "official postage 400," is that actually paid over to the Post Office for those stamps?—Yes, it is paid to the Treasury for the stamps; the Treasury generally supplies the service postage stamps.

10,580. And the sums paid to the Treasury form part of the Post Office receipts?—Yes, there is a credit for them to the Post Office Account.

10,581. The next head, I think, is "Miscellaneous." Can you tell us what the charges are that come under that head?—The principal charges are for petty provincial and local establishments, remittance charges, books and periodicals, charitable donations and relief of vagrancy, rewards for the destruction of wild animals, special commissions of inquiry, and rents, rates, and taxes. These are, I think, all the principal charges in India.

10,582. Why are the remittance charges put down here? Would they not more properly form part of the Finance Department charges? I presume they are charges connected with the remittance of treasure from place to place?—Yes, they are charges for the remittance of treasure.

10,583–4. There is no heading for the charge in the Finance Department?—There is no other heading, I think, under which they could conveniently come. I may observe that the remittance charges are much more than covered by the premiums that we get from the sale of bills. It is only for the last few years that that has been so. We have been trying as far as possible to extend the use of supply bills for remittance purposes, and we are able to make a little revenue out of them.

10,585–6. Can you compare the charges for 1875–76, and 1893–94 under this "Miscellaneous" head of "Miscellaneous"?—It is not possible to do this, owing to the re-cast of the accounts. I can give the principal charges for 1893–94, and for 1884–85. They are as follows:—

	1884–85.	1893–94.
	Rx.	Rx.
Petty, provincial, and local establishments.	75,466	64,833
Remittance charges - -	26,036	23,462
Books and periodicals - -	8,210	6,078
Charitable donations and relief of vagrancy.	27,995	28,533
Rewards for destruction of wild animals.	24,519	11,913
Special commissions of inquiry.	7,792	22,758
Rents, rates, and taxes -	31,428	21,673
Various, *i.e.*, various other petty items.	51,225	49,944
Total - -	252,671	229,194

10,587. Now, would you compare with those the receipts?—The receipts are:

	1884–85.	1893–94.
	Rx.	Rx.
Premiums on bills, and gain by exchange on local transactions.	21,857	40,162
Unclaimed deposits - -	72,672	56,319
Sales of land, houses, stores, durbar presents, &c.	16,481	18,121
Government audit fees -	6,333	13,170
Rents, rates, and taxes -	65,633	103,953
Fees, fines, and forfeitures -	25,616	41,495
Revenue of Berbera, Bulhar, and Zaila.	—	23,147
Sundries - - -	123,095	125,099
Total - -	331,687	421,466

10,588. You give rents, rates, and taxes, as a receipt under this head?—Those are almost entirely rents which are charged to Government officers occupying Government buildings.

10,589. Therefore the upshot of this is that this miscellaneous head in 1884–85 cost 252,000 and earned 331,000, leaving a balance of about 80,000 to the good; and in 1893–94 it cost 229,000 and earned 421,000, being something more than 190,000 to the good?—Yes, but the charges and receipts do not necessarily relate to each other. I mean, for instance, the rents, which bring in over 100,000*l.*, have no corresponding charge against them under this head.

10,590. There is a head of charge for rents, rates, and taxes?—Yes, but the charge head is almost entirely rates and taxes. There are a few rents paid for Government offices, but most of the Government offices are the property of the Government.

10,591. Is there any other remark that you would make upon that head?—No, I think not.

10,592–3. Then next we pass to the Mint. How many Mints are there in India?—There are two, one at Calcutta and one at Bombay.

10,594. Who is the head of the Mint—of these separate mints—what is his title?—There is a Mint Master both at Calcutta and Bombay.

10,595. Whom is he subordinate to?—To the Financial Department of the Government of India.

10,596. Does he report to the Financial Secretary?—As regards all questions of the amount of coinage he is immediately subordinate to the Comptroller General, but as regards the administration of the establishment and so on, he reports to the Finance Department. Even then in many cases his reports go through the Comptroller General.

10,597. And the head of the Bombay Mint, is he also subject to the Central Finance Department?—Yes.

10,598. Not to the Provincial Government?—No.

10,599–600. (*Mr. Jackson.*) Would the purchase of metal be made by one individual or one department?—At present we purchase only copper, and the Calcutta Mint coins all the copper. Silver we have not yet bought for coinage purposes.

10,601–2. (*Chairman.*) But before the closing of the Mints you bought silver, did you not?—No, we merely coined it; we did not buy it.

10,603. And the same with gold?—Yes, we coined gold too.

10,604. What was the net result of the Mint work in 1875–76 and 1893–94?—In 1875–76 there was a net receipt of 83 Rx., and in 1893–94 of 136,275 Rx. Before the mints were closed the revenue depended almost entirely upon the amount of silver brought to be coined. We charged a seignorage of 2 per cent. upon the coinage of silver.

10,605. Therefore, it did not signify to you whether silver was rising or falling?—Not as far as the Mint receipts were concerned.

10,606. What is expected to be the result now? I do not think you have given us one of the years since the closing of the Mints?—No, the actual net charge for the Mint in 1894–95 was 16,800 Rx.

10,607. But in other years you made a profit, did you not?—Yes, the change is owing to the closing of the Mints. We do not now get the seignorage on the silver; the only receipts of importance we get now are the profits on the coinage of copper.

10,608. I see in England there is a charge for the assay of Indian coins. Why do you send coins over to England to be assayed?—We are bound to do that. They are assayed by the Mint here.

10,609. (*Mr. Jackson.*) That is a check, is it?—Yes, we send a certain number of coins home every year to be assayed.

10,610. (*Chairman.*) Was the increase in the seignorage the cause of that very large gain in 1893–94 as compared with 1875–76?—There was also a gain on silver coinage credited in that year; it was practically the seignorage and a little more. That receipt occurred in connexion with the silver of certain banks which had not been taken over at the time the mints were closed, but which we took over on special terms. There was also a rather larger gain than usual on copper coinage in that year.

10,611. Is the establishment in Calcutta a large establishment?—It does not cost very much on the whole; it costs 24,000 Rx. in Calcutta.

10,612. But I suppose now that the Mint has been closed for silver, the work of the Mint has very considerably diminished, has it not?—Oh, very much diminished, especially in Bombay.

10,613. Have you reduced the establishments in consequence?—Yes, we have reduced them largely; but we cannot reduce them below a certain minimum, if the Mints are to be kept ready for working.

10,614. Can you tell us what the estimate of the establishment is now, as compared with what it was when the Mint was in full work?—The total charge in India for the two Mints in 1893–94—that was a year, though, in which the Mints were closed for part of the year—was 84,000 Rx.

10,615. The establishment?—No, the establishment alone was 54,000 Rx.

10,616. (*Mr. Jackson.*) Is that the estimate or the charge?—That was the actual charge in 1893–94.

10,617. And the estimate for 1896–97?—I cannot give the details for anything beyond 1894–95.

10,618. (*Chairman.*) But in 1894–95 the Mint was closed, was it not?—Yes, but we had not reduced to the extent that we have now. The charge was 42,000 Rx. in 1894–95 for establishments, but the total charge for the Mint in 1896–97 was estimated at 53,000 Rx.—that is the gross charge—against a gross charge of 91,000 Rx. in 1893–4.

10,619. And in the current year you know that it is considerably reduced?—Yes, the establishment was considerably reduced in 1894 and 1895.

10,620. You have not lost sight of the fact that, while the Mint remains closed, the annual working expenses ought to be made smaller?—We have not lost sight of that. I know that the establishment has been largely reduced.

10,621. (*Mr. Mowbray.*) Does that apply to Calcutta?—There have been reductions in the establishments of both Mints. The reduction has been greatest in Bombay, because Calcutta used to coin very little silver before, chiefly copper.

10,622. But there was some silver coined there?—Yes, some silver was coined in Calcutta; and there has been some reduction in Calcutta, but the reduction has been rather larger in Bombay.

10,623–4. (*Chairman.*) Do you suppose that the reduction in the Mint establishment for this year is such as would probably bring the two ends of the account together?—It will bring them very nearly together, I think if the coinage of the British dollar increases. In 1895–96 the budget estimate was for a small net profit, but we did not realise quite so much on account of the British dollar as was anticipated, and the actuals worked out to a net charge.

10,625. (*Mr. Jackson.*) But your sources of profit are very limited now practically?—There is nothing

Mr. S. Jacob, C.S.I.

10 June 1896.

Famine Relief.

practically now except the profit on the coinage of copper and of the British dollar.

10,626. (*Chairman.*) Do you not occasionally do coinage for other states?—Yes, we do. We get a small revenue from that. That is shown under "Miscellaneous" receipts of the Mint.

10,627. (*Mr. Jackson.*) It is suggested that other states do coinage for you sometimes, is it not?—Yes; but I do not think there is any ground for that suggestion.

10,628. (*Chairman.*) By the way, you, Mr. Jacob, are practically the head of the Mint, are you not?—As far as the extent of its coining operations is concerned.

10,629. Have you had any reason to suppose that there has been much extra coining of rupees at the mints of the Native States?—No, there has been very little coinage at the Native States' mints. Just when the mints were first closed there was some extra coinage in a few such mints. One or two of the States thought they could make a profit by coining, and they did increase for a time their coinage operations.

10,630. You were aware that one of the objections made to the closing of the Mints was that the Native States might possibly coin to a considerable extent?—Yes.

10,631. That fear which, if I remember right, we were told need not influence us very much in our consideration of the question, has not been realised?—No, on the whole there has been comparatively little increase in the coinage of the Native States.

10,632-3. (*Mr. Jackson.*) The Native States' coinage does circulate, does it not?—It circulates just on the borders of the Native States, but not anywhere far from them.

10,634. Would it be refused, for instance, in Calcutta?—Oh yes, we should never take it in Calcutta.

10,635. It is not legal tender outside the limits of the Native States?—No, it is not.

10,636. (*Chairman.*) I think that carries us through most of the expenditure departments, and brings us to the Famine Relief Fund. You have told us generally the arrangements under which the Famine Relief Fund is constituted. I am right in calling it "Fund," am I not?—We do not call it a fund, we call it a grant.

10,637. Was not the original idea that a certain sum was either to be laid out in reproductive works or to be set aside?—Yes, but it is always expended in the year in which the grant is made.

10,638. Was it the original intention that it should always be expended in the year?—I think so.

10,639. Perhaps you can give us a sketch of what the arrangement was or is?—I think the general policy of the Famine Relief and Insurance Grant was explained in some detail at a previous examination. The amount was at first fixed at Rx. 1,500,000, but I may observe that Sir James Westland in the last Budget Statement announced that the grant in future might be reduced to 1,000,000 instead of 1,500,000.

10,640. Has it been maintained at a million and a half?—Not always. Financial pressure during some years has compelled the Government to withhold the grant, but from 1889-90 it was restored to the extent of 1,000,000, and in 1891-92, 1892-93, and 1893-94, the whole amount of 1,500,000 was provided; 1,000,000 has been provided since then, and, according to the announcement in the Budget Statement for 1896-97, that is the amount to be provided in future.

10,641. Did it begin with 1877-78 or with 1878-79?—It began with 1881-82; there was direct expenditure for famine relief before that.

10,642. But the new arrangement took effect from 1881-82, did it?—Yes.

10,643. What amount would you say on an average has been provided since then? Has over a million been provided every year?—No, some years no charge was made under Famine Insurance.

10,644. But would a million be too high an average for the whole time, do you think?—The average is a little over a million, including the loss on the working of the Indian Midland and Bengal Nagpur Railways.

The actual charges against Famine Relief and Insurance (including that loss) have been as follows:—

	Rx.
1881-82	1,567,886
1882-83	1,495,972
1883-84	1,522,813
1884-85	1,548,357
1885-86	1,529,271
1886-87	460,832
1887-88	376,607
1888-89	508,518
1889-90	1,062,009
1890-91	1,082,350
1891-92	1,500,000
1892-93	1,500,000
1893-94	1,489,569
1894-95	1,000,000
1895-96 (Revised Estimate)	1,000,000
1896-97 (Budget Estimate)	1,000,000
Total	18,644,184
Average	1,165,261

10,645. (*Mr. Naoroji.*) You said in some years the charge was not provided?—Yes. I should have said only very small amounts were provided.

10,646. But in those years the revenue was collected that was intended to provide that charge, was it not?—No revenue was remitted during those years.

10,647. No revenue was remitted? The revenue was collected, though the provision was not made?—I do not think it can be said that any particular revenue is assigned to this.

10,648. No, but there was no less revenue collected on account of that grant being withheld?—No.

10,649. (*Sir James Peile.*) But the Famine Grant is in fact merely a surplus of revenue assigned to this purpose when there is a surplus?—Yes.

10,650. If there is no surplus you cannot assign it?—No, not without extra taxation.

10,651. (*Chairman.*) When your finances admitted it, the full sum of 1,500,000 a year was provided?—Yes.

10,652. What was done with it, supposing that in a particular year the total amount was not required for the relief of famine, or for the construction of protective works?—For a year or two the surplus was used in the actual redemption of debt, but latterly the surplus has been used merely to reduce our borrowing.

10,653. For other productive works?—Yes.

10,654. Though they might not be works immediately connected with famine relief?—Well, it is considered that, if we reduce our borrowing, it is just the same as actually redeeming debt.

10,655. Then you put it in this way: supposing you had provided in one year 1,500,000 Rx., and, for some reason or other, you were not able to pay more than a million for famine relief purposes pure and simple, you would then have 500,000 Rx.; and supposing you were borrowing for an ordinary commercial railway, you would have applied that 500,000 Rx. in reducing the borrowing required for that commercial railway?—We should have reduced the amount that we borrowed by that amount.

10,656. You look upon that as tantamount to the reduction of debt?—Yes.

10,657. (*Mr. Jackson.*) In using it so, you did not set up any fresh account for it?—We opened a head in our accounts for reduction of debt; we charged the balance of the famine grant to that head, and credited it finally to Government on our books.

10,658. (*Chairman.*) Then, from that point of view, you treated it as a fund, because you considered you had to account for the balance?—We had to account for the balance year by year; but we always used up the whole amount that was granted by Government.

10,659. And you never carried the balance forward from year to year?—No.

10,660. And what is the rule about it now? Is it a million that is now granted?—It was announced by Sir James Westland in the last budget statement that the Government considered that a million would now be sufficient.

10,661. (*Sir James Peile.*) On what ground?—On the ground that the expenditure already incurred has formed a considerable insurance against famine, and that the expenditure to be incurred for famine relief in the future is not likely to be so great as it has been in previous famines.

10,662–3. That is to say, most of the protective railways have been made?—Yes, and a large amount of money has also been spent on protective irrigation works.

10,664–5. Sir James Westland, I suppose, would argue that there has been already a very substantial outlay for the object which the Government had in view, when they established the Famine Relief Fund; that it never could have been the intention to carry such a big fund as that on for ever; and that now the time has come to reduce it?—Yes, I think that is the view.

10,666–7. (*Mr. Jackson.*) But I take it that there is also this answer. The famines occurred in certain centres of population, which, either by reason of their want of communication with other districts or of their want of irrigation works, were subject to great distress in certain seasons. Now those districts have been mainly opened up by means of railway communication, and mainly supplied with irrigation works: and, therefore, so far as that area is concerned, the works of protection have been provided?—Yes, I think that that is an equally important justification for reducing the grant.

10,668. (*Sir James Peile.*) The Famine Commission laid down a programme of protective railways in 1880?—Yes, they did.

10,669. And nearly all those railways have now been made?—Yes.

10,670. (*Chairman.*) I see at page 108 of the Finance and Revenue Accounts, a summary of capital expenditure on the construction of protective railways and irrigation works, amounting to 7,196,000 to the end of 1893–94, beginning with 1881–82?—Yes.

10,671. Would that represent the whole of the outlay on protective works under the Famine Relief system?—That represents all that has been charged to the Famine Relief Grant for the construction of protective works, both railways and irrigation. It does not include the amount taken against the Famine Relief Grant on account of the net loss on the Indian Midland and Bengal-Nagpur Railways, which are reckoned as protective works.

10,672. In those 13 years to 1893–94 that would represent the total expenditure on account of famine relief?—On the construction of protective works charged against the Famine Relief Grant.

10,673. But is there anything else paid out of the Famine Relief Fund?—There is also the amount that has been charged for the reduction of debt.

10,674. That I understand?—And then there is the direct expenditure for famine relief; that also is charged to this head.

10,675. And has that been large?—No, it has not been large in any year since 1878–79.

10,676. But that makes up the famine relief service.—Yes. But the Secretary of State has also allowed the net charge for the two protective railways (already mentioned) which have been constructed by companies, to be taken as a charge against the Famine Insurance Grant.

10,677. They will not come under that 7,196,000?—No.

10,678. Did you find money for them and pay it over to the companies?—We have lent those companies money, and they have provided a certain amount by raising capital.

10,679. (*Mr. Jackson.*) But, of course, the loan to them is kept entirely separate and distinct?—Yes. And the net charge for these railways is not actually shown against Famine Relief and Insurance; it is taken against the Railway Revenue Account; but in our Accounts the amount of the net charge for these two railways is reckoned as forming part of the total provision to be made for Famine Relief and Insurance, and the Famine Insurance grant actually charged is reduced by that amount.

10,680. (*Chairman.*) These being protective railways, were they expected to pay, or did you lend to the companies without asking them interest, or only asking them for a small interest?—The arrangements are a little complicated, but we get our interest if the earnings cover it. Their interest is the first charge.

10,681. Are these railroads completed yet?—The Indian Midland, I suppose, is completed. I do not know of any extensions to that line that are contemplated. But the Bengal-Nagpur system is not completed yet.

10,682. And therefore you do not know whether they are working to an extent to enable you to get any of your money back?—They work at a net loss at present, both of them. It was the knowledge that they probably would do so for a time, at any rate, that led the Secretary of State to allow the net loss upon them to be reckoned as charged against the Famine Insurance Grant.

10,683. (*Mr. Jackson.*) But have they ever been assured of the interest on the capital laid down?—We guaranteed that.

10,684. (*Chairman.*) I think there remains one Department, the Civil Buildings and Roads, with which we have not dealt; perhaps you would tell us the arrangements made for executing civil buildings and constructing roads?—For the most part the administration of this department is made over to local governments. Some of the charges in connexion with Imperial departments, such as the post office, telegraphs, and salt, are retained as Imperial charges, but even those works are generally carried out by the Provincial Governments, who make a charge to the Government of India for the use of their establishments.

10,685. Then as far as the larger part of that work, namely, the buildings and roads, is concerned, the central Government knows nothing at all about it?—They are not concerned with the details.

10,686. Can you compare the charges under this head in 1875–76 and 1893–94?—Yes. The gross expenditure in India was 3,241,388 in 1875–76 and 4,484,378 in 1893–94, against which there were receipts of 487,877 in 1875–76 and of 585,847 in 1893–94, and the net expenditure in India was therefore 2,753,511 Rx. in 1875–96 and 3,893,531 Rx. in 1893–94. Besides this there were net charges in England of 76,884*l.* in 1875–76 and 62,583*l.* in 1893–94.

10,687. That shows a very considerable net increase. Can you give us the reason of it?—Part of that is Imperial expenditure and part provincial. The gross Imperial expenditure in India in 1875–76 was 323,000, and in 1893–94 690,000. The greater part of that increase is accounted for by the addition of the works in Upper Burmah, the whole expenditure of which is at present retained as Imperial. The expenditure in Upper Burmah was 299,000, and the increase is 367,000, so that all but 68,000 is accounted for by Upper Burmah. Under "Provincial and Local" the expenditure varies largely with the balances of the Provincial Governments and with their general financial position. It is a head of charge, the expenditure on which can be most easily increased without incurring any large permanent liability. Consequently the Provincial Governments generally spend their surplus balances of a temporary nature on public works.

10,688. Can you make any separation between buildings and roads in the expenditure?—I have not taken out the figures; the figures for communications and for buildings are given separately in the accounts.

10,689. That expenditure on the roads is not a very heavy expenditure, is it?—The accounts do not give a total for Imperial, provincial, and local, all taken together, under the various sub-heads of Buildings, Communications, &c., but it can be taken out from the detailed accounts, if desired. I can say, however, that the expenditure on Communications furnishes the greater part of the charge under this head.

10,690. Well, would you look at the "Classified "Abstract of Expenditure from Provincial Funds on "roads and other works of communication"?—That gives the charges separately for Provincial funds.

10,691. That gives provincial funds something like 683,000 Rx.?—Yes, but there is also about 20,000 Rx. incurred in the Civil Department (*see* p. 167 of the Finance and Revenue Accounts of 1893–94), which makes the total about 704,000 Rx. for "Provincial."

10,692. And then from Imperial funds there is an expenditure of 260,000, is there not?—Yes.

10,693. Those sums make up an expenditure of very nearly 1,000,000 Rx. on roads, do they not?—From

Mr. S. Jacob, C.S.I.

10 June 1896.

Military Pensions.

Imperial and Provincial funds it is 964,000 Rx.; but there is the local expenditure, too.

10,694. The local expenditure is additional?—There is 1,123,000 from local funds.

10,695. The total, therefore, would come very nearly to 2,000,000?—Yes, just a little over 2,000,000 Rx.

10,696. On roads?—Yes.

10,696*a*. And there is nothing else except buildings, is there?—There is some expenditure on what is called "miscellaneous public improvements," but it is not very large. The total expenditure on that sub-head is 228,000 Rx. "Establishments" also cost 882,000 Rx. and "Tools and Plant," "Miscellaneous," and "Suspense," 72,000 Rx.

10,696*b*. Now, is a large proportion of the charges here local?—Yes, a very large proportion. The local charges in 1893-94 amounted to 1,677,000 out of a total of 4,484,000.

10,697. Then there is a certain number of charges in England that keep pretty constant. In 1875-76 they were 94,435*l*. and in 1893-94 88,411*l*. Could you give us any details of them?—Yes; the charges are for the Royal Indian Engineering College, 24,000*l*. in 1875-76, and the receipts 17,000*l*., leaving 7,000*l*. as the net charge in that year. In 1893-94 the charge was 29,000*l*. and the receipts 26,000*l*., leaving a net charge of 3,000*l*., and there were also some alterations and additions to buildings which brought up the total net charge to 4,500*l*. Then the rest of the charges are chiefly made up of the furlough pay of military and civil officers of the Public Works Department; that charge amounted to 56,000*l*. in 1875-76, and to 50,000*l*. in 1893-94. The stores came to 10,000*l*. in 1875-76 and 3,000*l*. in 1893-94.

10,698. How far would that sum of 2,000,000*l*. that we have roughly arrived at, represent the total expenditure on roads? How are the by-communications kept up in the provinces?—That includes the expenditure upon all roads, except municipal roads and village roads.

10,699. And municipal roads would only be those within municipal boundaries?—Yes. They are charged to municipal rates.

10,700. But that would not include the communications between village and village?—No, there is hardly any charge upon Government accounts for that unless they happen to lie on a road which is considered important enough to keep up from either Provincial or Local funds. Inter-village communications are generally mere fair-weather tracks, unbridged and unmetalled.

10,701. Then this 2,000,000*l*. is merely expenditure upon the main channels of communication between town and town?—Yes.

10,702. That is all the charge that falls on the Government in respect of roads?—Of civil roads. There are some charges under "Military Works" for military roads.

10,703. (*Sir James Peile.*) Does that include local fund roads?—Yes.

10,704. (*Chairman.*) Do you consider that the increase, which I think you have shown us is a large one, of the Imperial expenditure on civil buildings needs any explanation? I think you showed that the Imperial charge on civil buildings had very nearly doubled in the time, did you not?—Yes, but the increase was not wholly for buildings. It included some charges for communications. I stated also that nearly the whole of that increase was due to the expenditure in Upper Burmah.

10,705. And I think we gathered that, as far as the provincial expenditure goes, that is very much dependent upon provincial financial prosperity?—Yes, to a large extent.

10,706. In good years they spend a good deal of money; in bad years they economise?—Yes. There is an immense field for expenditure on public works in India, and almost any amount that is available could be spent on them.

10,707. Under what department of the State are those civil buildings and roads?—Under the Public Works Department.

10,708. The Public Works Department carry these works out, just as they carry out the irrigation works and the railway works, I suppose?—Yes, there is a separate branch for the roads and buildings.

10,709-10. And is the central office of that branch at Calcutta?—There is a Public Works Secretary to the Government of India, and his Department maintains the general control over the whole of India.

10,711. But there are branches of the Public Works Department in the several provinces?—Yes, every Provincial Government has a Public Works Secretariat.

10,712. You put in this interesting return of the increase of army pay, colonels' allowances, and retired pay, between 1875-76 and 1893-94. Under the head of colonel's allowances the increase is from 210,000*l*. to 535,000*l*., the numbers increasing from 201 to 501. Is that due to the increase of the army, or do you know what is the cause of such an increase as that?—It is entirely due to the increase in the number of officers who have become entitled to colonels' allowances between those two dates.

10,713. But is the larger number of officers becoming entitled due to a change in the regulations in their favour in the meantime?—Yes. I fancy that is the case.

10,714. (*Sir Donald Stewart.*) That is so. It is entirely in consequence of a regulation which is called the Cranborne decision, under which all officers of the Staff Corps, whatever their position, became entitled to colonels' allowances after 38 years' service. It is rising to a maximum, and it is supposed that it will reach it in 1900 or thereabout?—Yes, within the next five years.

10,715. And then it will diminish, because that regulation no longer exists. It does not apply to officers who are now entering the service.

(*Chairman.*) It only applied to the officers in the service at the time?

(*Sir Donald Stewart.*) Yes. To all who entered the Staff Corps before a fixed date.

10,716. (*Chairman.*) There is another heading upon which there has been a very large increase—the Staff Corps pensions, which rise from 403,000*l*. to 611,000*l*.?—Yes; that is due to an increase in the scale of pensions. The principal rise took place before 1881 (your lordship will see the present figure had been almost reached in that year), when special pensions were offered with a view to reduce the ultimate charge for colonels' allowances. In that year an increased scale of pensions was granted; but the charge has not increased largely since then, chiefly because the special pensions falling in have counterbalanced the new pensions granted. An increased scale of pensions for the Engineers and Artillery was also sanctioned in 1878. The number of Engineer officers also has largely increased.

10,717. Another head of increase is the Medical. 418 officers earned 126,000*l*., and now there are 431, a very small increase in number, and they earn 192,000*l*.?—Yes; the scale of medical pensions has been increased. Some difficulty was experienced at one time in recruiting for the Indian medical service, and it was found absolutely necessary to increase the pensions offered.

10,718. (*Mr. Naoroji.*) With regard to the educational institutions, in former days, when the Indians were not sufficiently educated, it was only natural that professors, and teachers, and inspectors should be Englishmen; but now, when the colleges and the universities have been turning out Indians of very great attainments, if Indians instead of Englishmen were employed in the Education Department (excepting perhaps for one or two purposes, such as English language and literature, or some such important subject in which an Englishman would be the best teacher), would not that diminish very much the expenditure of the Education Department?—Yes; but I believe that the employment of natives in the Education Department has been very largely extended.

10,719. And if it is extended further it will tend towards economical expenditure?—The employment of natives undoubtedly would diminish the expenditure, but I am not sure that I can say it would be more economical.

10,720. I mean that you have men of equal ability and knowledge among the Indians who could be employed at a lower salary?—I do not know that I could say of equal ability and knowledge.

10,721. I am taking it that the Indian Universities have done their work, and produced many men of great attainments and quite as able as any other set of men;

otherwise, the Universities are doing no work? --Undoubtedly the Indian Colleges have turned out many scholars who have proved themselves at the University examinations to be men of great attainments. And I believe several of these men have been employed, and are employed, by the Education Department.

10,722. If that employment were extended more and more, it would be more economical?—Doubtless; and I should suppose it will be more extended as greater numbers qualify themselves for such employment.

10,723. At less salaries. Certainly there is a large number of educated youths sent out from the universities from whom a sufficient number can be obtained who could be perfectly qualified to do those duties?—The Education Department is not a very favourite Department. I think that natives of India of great attainments, as a rule, prefer employment in other Departments.

10,724. Yes, but I am talking of the Education Department like all other Departments, wherever a native can be found qualified to fill a certain post will it not be economical to employ him instead of necessarily putting in the European? That is the question. It is only natural?—I should say so, where a native can be employed with due regard to efficiency.

10,725. Wherever he can be employed?—He can be engaged at a lower salary.

10,726. Yes, he can be engaged at a lower salary; two-thirds is the proportion laid down by the Secretary of State?—The difficulty is to get a sufficient number of qualified natives.

10,727. The difficulty in fact arises because they are not allowed to enter, not that there is any difficulty in getting them. The difficulty is that Government will not employ them. If the Government laid down regular rules and regulations, according to which these appointments were to be given by certain proper competition and a fair trial, then we should know whether there were qualified persons or not?—I should say that, the employment of natives being cheaper, the Provincial Governments would employ them, wherever they considered that that could be done consistently with efficiency and good administration.

10,723. Is any system adopted by which properly qualified natives can be employed as a matter of right? Is there any system adopted by which anybody may compete and get a proper place? There is no such system; there is no fair trial given?—There is no general system of competition for the higher appointments in the Education Department, either for Europeans or natives.

10,729. If this can be done, and if the Indian element can be introduced and made larger and larger, the expenditure will be more economical, being at a less salary?—Yes, as far as it is possible to do so consistently with efficiency.

10,730. And there is this advantage that it would be an economical advantage to India that so many of the Indians would be provided for, instead of persons coming in and supplying their places? There would be the double advantage; not only the actual amount of saving on the expenditure, but the actual economical effect upon the country itself. Well, the same questions will apply, I say, to the Public Works Department. From the engineering colleges engineers are prepared in large numbers, and yet India employs them very sparingly, and does not give sufficient encouragement to them to come out and do the work of their country. If a sufficient number of engineers were employed from the Indians, then, on the same ground, there would be economising of expenditure, would there not?—I do not think so at present. The Provincial Service system is being gradually extended to the Public Works Department. But, as far as I know, no large number of natives in that Department are as yet paid at a lower rate than the Europeans.

10,731. But they could be obtained if there was a regular system of employing Indians, and they were allowed to rise in the service. We know that natives of the same acquirements and knowledge can be obtained at a less salary, which would be only reasonable, and the Secretary of State insists that they should be paid at two-thirds the salary?—I do not know whether that is possible at present to any great extent in the case of the engineers.

10,732. If they are fairly employed and if a fair opening is given to them, they cannot ask as high salaries as are given to Europeans coming from a distance?—Many of those employed hitherto have received the same salaries as Europeans.

10,733. That may be because there are only very few employed, and Government cannot make a distinction; but if there is a regular system of employing the best they can get at such salaries as the natives are willing to accept, the natives will accept them with very great pleasure?—The matter has been under consideration, and the extension of the Provincial Service system to the Public Works Department has been sanctioned, but I do not think it has been brought into force so far to any great extent.

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

At the India Office.

TWENTY-SECOND DAY.

Wednesday, 17th June 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Mr. STEPHEN JACOB, C.S.I., Comptroller and Auditor General of the Government of India, recalled and further examined.

Mr. S. Jacob, C.S.I.

17 June 1896.

10,734–6. (*Chairman.*) Mr. Jacob, we are going to take up to-day the collection of revenue, beginning with the land revenue. The land revenue constitutes about 40 per cent., does it not, of the total revenue of India?—No, not so much as that at present. The land revenue in 1893–94 was 25,590,000 out of a total gross revenue of 90,565,000.

Mr. S. Jacob, C.S.I.

17 June 1896.

Land Revenue.

10,737. Perhaps the per-centage of 40, which I have seen, refers only to the tax revenue: is that so?—Possibly. Taking the principal heads of revenue it only forms 25 out of 60 millions that would be a little more than 40 per cent.

10,738. (*Mr. Jackson.*) About 25 per cent. of the whole?—Rather more than that per-centage of the whole; 25,000,000 out of 90,000,000.

10,739. I thought you said 95,000,000?—About 28 per cent.

10,740. (*Chairman.*) What is the first head under the class of direct demands upon the revenue?—The first heads are "Refunds and Drawbacks" and "Assignments and Compensations." These are, however, general heads which relate to all or several of the principal heads of revenue. They have subheads distributing them over the various heads of revenue; and the charges coming under these two heads can probably be most conveniently taken up with the charges of the particular revenue head to which they relate. The next head and by far the largest of the heads coming under the general class of "Direct Demands on the Revenue" is the head of "Land Revenue."

10,741. Why is the land revenue head so large and important?—Land revenue is the most important of all the revenue heads of the Government of India, and further the land revenue charge head comprises not only the direct charges for the collection of that revenue, but also the charges for the settlement of the revenue and the general charges of district administration in many other departments.

10,742-3. What are the subheads coming under the general head of land revenue?—There are general charges of district administration, survey and settlement, allowances to district and village officers, land records and agriculture, commission on collection of revenue, management of estates, and the Inam Commissioner in Madras.

10,744. The actual charge of collecting land revenue has increased considerably, has it not, between 1875-6 and 1893-4?—Yes; the charge falling under the head of land revenue has increased from 2,907,000 to 4,022,000.

10,745. That is an increase of over 38 per cent., is it not?—Yes.

10,746-8. Can you give us gross and net receipts of land revenue in those years?—They are as follows:—Gross receipts in 1875-6, 21,540,000, in 1893-4, 26,336,000, making an increase of 4,796,000. Charges in 1875-6, 2,906,000, and in 1893-4, 4,021,000, showing an increase of 1,115,000. The net revenue in 1875-6 was 18,634,000, and in 1893-4 it was 22,315,000, giving an increase in the net revenue of 3,681,000.

10,749. Can you tell us the per-centage of the increase in the gross first, and then of the net?—The per-centage of increase on the gross revenue is 22¼, and on the net revenue 19¾.

10,750. Therefore, the per-centage of increase, whether on the gross or on the net, is considerably less than the per-centage of increase on the charge of collection?—Yes, it is less.

10,751. The charge increased 38 per cent., the net revenue nearly 20 per cent., and the gross revenue 22 per cent.?—Yes.

10,752. And the increase is progressing, is it not, because the budget of 1895-6 shows an increase of 160,000 over 1893-4, but possibly you would speak of that with some reserve, as it is only a budget estimate?—Yes. The charge is increasing, but not at the rate shown by comparison of actuals with the budget estimate. The revised estimate for 1895-6 is only 4,087,200, and very likely the actuals may be lower even than that.

10,753. You have given us some tables which show what I may call transverse sections of this expenditure. For instance, the first table gives the progress of the charge in each province, and I see from that that the charge in Madras has risen by 50 per cent. from 641,000 to 959,000 Rx.; has the revenue itself risen in a like proportion?—No, the revenue has risen by about 20 per cent.

10,754. In Bombay, on the other hand, the charge has been stationary—663,000 in 1875-6 and 669,000 in 1893-4. Has the revenue in Bombay remained stationary?—No; it has risen by about 27 per cent.

10,755. Can you explain to us the reasons for the large increase in Madras and the stationary character of the charge in Bombay?—The charge in Madras has increased by 318,000, out of which an amount of 254,000 (443-189) occurs in local charges, and is covered by local receipts coming under another head (provincial rates). Deducting this charge, the increase in imperial and provincial charges is only 64,000, or about 10 per cent. In Bombay the charges of district administration have remained stationary, partly because a large saving has been effected in travelling allowances, which counterbalances the increase in salaries and establishments. A saving has also been effected in survey and settlement charges, which counterbalances an increase in the record and village officers' charges.

10,756. Can you give us a little more explanation about the reason of the increase in Madras? I gather from your answer that, in order to make the comparison fair, either a large portion of expenditure, now charged to land revenue, should be deducted, or else certain receipts now credited to provincial rates should be included on the revenue side; is it not so?—Yes. I think the most correct plan would be to deduct the local expenditure. That expenditure is not an expenditure for collection of revenue, but is a charge for certain village servants, to meet which a special cess has been levied which is credited under provincial rates; so that I think the more correct plan would be to take that expenditure out of the account altogether.

10,757. Why is it charged against land revenue, why not against provincial rates, to which it seems more particularly to belong?—The revenue is in the nature of a provincial rate, but the charges are in the nature of a charge for land revenue administration.

10,758. I do not quite follow the connexion. If the revenue is not land revenue, why does the expenditure in connexion with it fall upon the head of land revenue?—The expenditure is for village servants, who are a portion of the land revenue administration, but the revenue is a provincial rate—a rate levied in addition to the ordinary land revenue.

10,759. I have no doubt that the question has been well thought out; but would it not be better that both the revenue and the charge of collecting that revenue should come under the same head?—The charges shown under the land revenue head are not the charges for the collection of the provincial rates, but the charges to meet which the provincial rates were levied. As regards the provincial rates, it happens almost in every case that the charges incurred appear under another head of account; there is hardly any expenditure against provincial rates, but there is a very large revenue, which is levied for the purpose of meeting expenditure under several of the service heads—for instance, under Education and Medical, we saw that a portion of the charge was met out of the provincial rates, and similarly this land revenue charge is met out of the provincial rates. They are levied for special purposes, but the charges are taken under the head of account to which they appertain.

10,760. (*Sir James Peile.*) But in Madras did they employ additional establishments for the collection of these rates?—If there is any special charge for collection it is very small, and it would be shown under the expenditure head of provincial rates.

10,761. You showed a great increase in Madras, and said it was on account of provincial rates?—The increase in the charge is for village servants, which is met from the provincial rate. A cess was imposed to meet the cost of the village servants.

10,762. That was a new charge?—To a great extent it was a new charge. There were charges in 1875-6, but the increase is 254,000. The charge has increased from 189,000 to 443,000.

10,763. But were new people employed at that time for the first time?—I think what was really done was that Government took over establishments which were previously paid by the village community, and levied a cess to meet the charge. They were not new establishments in one sense; they were already employed and paid by the village community, but the management by the village community was bad, and the Government accordingly took over the charge and levied a cess to meet it.

10,764. (*Mr. Jackson.*) The service is still performed for the benefit of the village community?—Yes, or at any rate it is one for which the village community were responsible.

10,765-7. (*Chairman.*) But it is charged to land revenue?—Yes.

10,768. Could you point out under what head in the Finance and Revenue Accounts this increase has occurred?—In allowances to district and village officers—the last item under Madras in the accounts of 1893-4—315,488—and also under district charges of Land Records and Agriculture—the last charge under land records—153,159.

10,769–70. You consider that the proper way of accounting for this increase, is to remove it from the charge for land revenue, when we are considering what the cost of collection has been?—Yes, I should say so, when you are comparing 1875–6 with 1893–4.

10,771. That would take 254,000 off the increase, which you told us was —— ?—318,000.

10,772. I am taking the whole of the land revenue; the expenditure, you told us, had risen from 2,906,000 to 4,021,000?—I do not think it is possible to consider all the provinces taken together in that way. The system of administration is different in each province, and, if it is desired to arrive at the reasons for the increase, that can only be done by considering each province in detail.

10,773. What I mean is this: if you charge land revenue with expenditure which does not really belong to land revenue, the proper course, when we are merely considering what the increase of the charges of collection are, would be to take off from the total increase whatever sums you show us do not properly belong to collection of land revenue?—Yes.

10,774. For instance, here is an extraordinary circumstance, namely, that the outside figures show an increase of 38 per cent. in the cost of collection, while an increase of only 20 to 22 per cent. is shown in the receipts realised. But that large per-centage would be considerably diminished if you took off from the total increase—which I think you have given us as 1,115,000—254,000; it would be reduced to 861,000?—Much more than that would have to be taken off, if you were to deal with the whole of the provinces together. The whole of the increase in the local charge ought to be taken off, because that is entirely met either by local rates or local cesses of some kind or another.

10,775. Those rates or cesses would not be included in the land revenue as revenue?—No; they are included under provincial rates.

10,776. Can you give us any idea of what those figures are?—The whole of the local charges in 1875–76 were 410,000, and in 1893–94, 963,000.

10,777. Does that include the 254,000?—Yes, that includes the 254,000. It gives a total increase of 553,000 under local charges.

10,778. 553,000, which taken from 1,115,000 makes very nearly one half?—Yes.

10,779. (*Mr. Jackson.*) If you can take that figure, the increase of revenue has more than kept pace with the increased cost of collection?—Yes, that is so.

10,780. (*Chairman.*) Roughly speaking, of course, the real increase would be just one half of the apparent increase?—Yes.

10,781. The per-centage would be something like 19 in 38?—Yes, it would be something about that.

10,782. Which you might fairly state was an increase *pari passu* with the increase of revenue?—Yes, but further reduction would have to be made, if you are comparing the charges for the two years, because large charges were incurred in some provinces in 1893–4 for survey and settlement. Those charges are only incurred when a settlement is proceeding, and the revenue that comes in results much later than the charge

10,783. Yes, but, as far as that goes, that is a service which is taken simply and solely for the promotion of land revenue?—Yes, but comparing the charges for two given years you may find that in one of the years settlement charges were proceeding much more rapidly than in the other year.

10,784. But still there is much difference between the two; in one case, as a matter of convenience of account, you have charged against land revenue a number of expenses which have nothing to do with land revenue; those charges account for one-half of the increase in the charge of collection since 1875–6?—I should not say they had nothing to do with the land revenue; they are certainly connected with the land revenue administration, but they are covered by special receipts, which are levied with the object of meeting the charge.

10,785. But that points rather to the result that the proper way to deal with the matter would be to add these receipts rather than deduct the expenditure, does it not?—I should not say so, because the charge was incurred in 1875–6, although it was not brought on the Government accounts; it was met by the village community without passing through the Government accounts at all; so that you could not compare 1875–6 with 1893–4 by adding the expenditure in one year and leaving it out in the other.

10,786. But you are face to face with a very heavy increase. That heavy increase has been caused in part by tacking on new services, and it is important to see how far that very large increase is not due to a mere increase of the ordinary service in the districts since 1875–6?—That is the point I want to bring out. Similar charges have been taken over by Government, not only in Madras but in two or three other provinces. In the North-West Provinces, for instance, and in the Central Provinces the Patwari fund, which was outside the Government accounts in the earlier year, has now been brought into them, the revenue and the charges both appearing on the Government accounts.

10,787–8. But does the revenue appear under land revenue or under another head?—The Patwari rates come under provincial rates.

10,789. You see the difference I want to call your attention to is this. We are investigating the increase, and of course we are anxious to make the comparison as fair as possible. If part of that increase is due to new services which have been undertaken, and which, as you say, are, in your opinion, akin to land revenue service, and if these new services are not more than covered by a fresh rate levied and brought to account under another head, of course the per-centage of increase would remain very large. If you left these charges on the expenditure side, and brought in the rates levied against them to the income side, the increase would be very much larger than if you deducted this large sum simply from the expenditure side, leaving the income side untouched?—No, I do not think it would be larger.

10,790–1. Supposing there is an increase of 1,000,000 Rx., and one half of that increase is due to these special services, if you simply deduct the special services, you are left with only an increase of 500,000 Rx., which would diminish very much the per-centage of increase. But if, on the other hand, against that 500,000 Rx. you levied 500,000 Rx. in new rates, and added that on to the income, making it 22,500,000 Rx. instead of 22,000,000 Rx., and left 500,000 Rx. as part of the expenditure, the ratio of increase would be very much larger than if you simply deducted the 500,000 Rx. from the expenditure?—No, I do not think it would be larger.

10,792. I think it would?—Unless the charges have increased in the meantime, because you must take the corresponding charge in 1875–76.

10,793. It seems to me perfectly obvious?—I do not think it is.

10,794. You have got 22,000,000 Rx. of land revenue?—Yes.

10,795. And the increase, shown on the face of the figures, of 1,100,000 Rx. makes a per-centage of increase of 38 per cent. If you simply deduct that 500,000 Rx., as we propose to do, thus reducing the 1,100,000 Rx. to 600,000 Rx., the result is that you bring the per-centage down to something very near 19?—Yes.

10,796–8. If, on the contrary, you leave that 1,100,000 increase untouched and on the other side put in the new rates, your increase is left at 1,100,000 Rx., but it is an increase of 1,100,000 Rx. upon 22,500,000 Rx. It seems to me clear that that will leave the per-centage of increase not indeed 38, but over 30. Can we agree upon a method of statement?—No; I do not agree that that is the fair way of stating the case.

10,799. We agree that, supposing you were to do that, it makes a very great difference in the per-centage?—I do not see what the per-centage of the collection charges on the revenue has to do with a comparison of an absolute increase in the charges as between two given years.

10,800. When we began this conversation, you pointed out most rightly that a part of that increase of 1,100,000 Rx., in fact one half of it, is due to services which are new, which were not borne on the budget of the receipts in 1875–76. Then, naturally, it occurred to us that, if this caused a large part of that increase, the 1,100,000 Rx. is an excessive increase to show as an increased charge of collection. That we are agreed upon?—Yes.

10,801. And then came the question, how can you state most clearly the result? And I asked, should we add the revenue that is collected against these new services to the income? Of course, if you do that, you bring in the receipts from the cesses or rates on the income side, leaving the charge of collection as it is. You, for very sufficient reason no doubt, objected to doing that; and then came the alternative method of deducting that 500,000 Rx. from the increase of the expenditure. But, if you want to have a fair statement of the increase of expenditure, these two processes bring out very different results?—Yes.

Mr. S. Jacob, C.S.I.

17 June 1896.

Land Revenue.

10,802. What I want to get at, then, is which is the process which you think the fairest and most complete?—What I should say is that it does not matter much whether you add the expenditure in both years or whether you leave out the expenditure in both years; provided there has been no increase in the interval, the net result would be almost the same. There would be a slight increase in the initial amount which would slightly diminish the per-centage of increase, but there would be no difference in the actual amount of the increase, whether you added the charges in both years or left them out in both years.

10,803. Then your view is, as I understand it, that the correct way of stating the matter would be to add to the charges of 1875-76 the expenditure on these charges which now figure in the budget?—No; to deduct the new charges from the present charges is, I think, the correct way. They are met by revenue which is especially levied with the object of meeting them. If we could not have levied the revenue to meet the charges, we should not have incurred them.

10,804. But do you remember you stated that you thought these charges were akin to land revenue charges, that they properly belonged to them; that was the point which puzzled me. If they properly belonged to them, then ought they not to be classed under land revenue charges? If, on the contrary, they are not properly land revenue charges, are they not better put out altogether?—They are land revenue charges proper, I think; but I see no reason why we should not credit to provincial rates receipts levied to meet land revenue charges, when we credit under that same head revenue which is levied to meet educational or medical charges. No objection was taken to that when the educational and medical charges were being examined, and I do not see that there is any difference between that point and the land revenue.

10,805. (*Mr. Jackson.*) Is not this the point which Lord Welby is trying to bring out? You gave us the figure of 4,022,000 Rx. as being the expenditure?—Yes.

10,806-7. And 2,907,000 Rx. as being the revenue?—No; 2907,000 Rx. was the expenditure in 1875-76 and 4,022,000 Rx. in 1893-94. The gross revenue was 21,540,000 Rx. in 1875-76, and 26,336,000 Rx. in 1893-94.

10,808. That makes a difference of 4,000,000 Rx. to 5,000,000 Rx. in the revenue?—4,796,000 Rx.

10,809-10. But 4,022,000 Rx. is the expenditure in 1893-94 and 2,907,000 Rx. in 1875-76?—Yes.

10,811. But if you deduct the additional expenditure of 500,000 Rx. from the charge in 1893-94 that reduces 2,907,000 to 2,400,000?—It is the figure for 1893-94 that has to be reduced by 500,000 Rx.; so that 4,022,000 Rx. becomes 3,522,000 Rx.

10,812-13. And if you take 2,900,000 Rx. from that, that leaves about 600,000 as the difference?—Yes.

10,814. If you put it the other way you add only 500,000 Rx. to the total of 26,336,000 Rx., is not that so?—Yes, if you add the revenue in.

10,815. Then does it not leave the resulting difference as showing a larger per-centage of increase under that form than it does under the other?—Yes, if you add in only the revenue and expenditure to the figure of 1893-94, but if you add the revenue and expenditure to 1875-76, it not being new expenditure, the net difference will be exactly the same.

(*Chairman.*) I understand what Mr. Jacob's view is now, I think; he prefers adding to the expenditure of 1875-76.

10,816. (*Mr. Jackson.*) A charge which was not borne?—It was not borne by Government, but it was an existing charge which was borne by the village community.

10,817. (*Chairman.*) Have you got the figure?—No, I cannot give you the figure, because it was not borne on the Government accounts.

10,818. Then, if you have not got the figure, it is not possible to show it in that form, is it?—No; that is why I say that, the most correct way would be to deduct the expenditure in 1893-94, and leave it out altogether in both years in making the comparison.

10,819. If it is a land revenue charge, it is a question with me whether it ought to be deducted; but if it is a charge against these provincial rates, then it is a charge which may most fairly, in reckoning what has been the true increase of charge of collecting the land revenue, be deducted?—It seems to me that the question of the increase in 1893-94 as compared with 1875-76 must be kept separate from the question of what the proportion of the charge on the revenue in the one year is as compared with the proportion in the other.

10,820. However, I think, without labouring this point, further, we may be agreed so far. Your view would be that, in order to show fairly the progress of the cost of collection as compared with revenue, these sums, against which are set certain receipts which appear under another head of revenue, should be deducted, since they are not included in the account of 1875-76?—Yes, quite so.

10,821. And, therefore, in discussing the true increase in the cost of collection you would recommend us to take that increase at the 600,000 Rx. instead of the 1,115,000 Rx.?—Yes; on the figures I should say that; but I also should explain that the charges shown under the land revenue head are not entirely charges of collection; they include the charges of district administration, which is just as much a civil department as any of the other civil departments—law and justice, and so on.

10,822. It is a civil department, it is true; but it is a civil department which exists only for the collection of the revenue?—No, certainly not; not only for the collection of land revenue.

10,823. What does it exist for?—It exists for the purpose of the general district administration, and it includes charges for the collection of the excise and assessed taxes, and various other revenues.

10,824. But you only debit the collection of land revenue with a part of the salaries of collectors, commissioners, and deputy commissioners in 1893-94?—Yes, the rest is charged to Law and Justice, as I explained under that head.

10,825. Does the part of these salaries debited to land revenue include so much of these salaries as represents the work done by the Excise?—Yes; for instance, there is no charge for collectors' and assistant collectors' salaries made against excise or assessed taxes, or any other parts of the revenue which they administer.

10,826. At all events there is a difficulty in separating that part of these salaries belonging to the excise. You would, therefore, leave it there?—I think the correct way is to compare the whole of the charges under these heads, land revenue, stamps, provincial rates, and assessed taxes, with the whole revenue.

10,827-8. When we have finished we may very likely have a few questions to ask you on the result of grouping them together. But at present should you be content if we take the 600,000 instead of the 1,115,000 as a measure—perhaps not a complete but a sufficient measure—of the progress of the cost of collection?—Yes, I think that would give you a correct measure of the real increase of charge under this head.

10,829-30. Of course you see my object is this: I have been taking up these figures, and I am startled by this very large increase of 38 per cent. That is as it appears on the figures in the Finance and Revenue accounts. Of course in the interests of the Indian administration, and to show their case fairly, it is extremely desirable to bring out clearly that this is only a nominal increase, not a real increase, and judge the administration by the real increase. That is the point that is in my mind.

10,831. (*Mr. Buchanan.*) Is this 500,000 Rx. that you deduct distributed in the accounts of 1893-94? Is the bulk of it the Madras charge for allowances to district and village officers?—The bulk of it is the charge for allowances to district officers, but not only in Madras.

10,832. (*Chairman.*) I think you have told us about 350,000 of it arises in Madras out of 550,000; therefore 200,000 is in other provinces?—254,000 Rx. is in Madras.

10,833. Out of 554,000 Rx.?—553,000.

10,834. Very well; that leaves 300,000 in other provinces?—Yes; that occurs under the heads, district charges, land records and agriculture, and allowances to district and village officers.

10,835. But the result of what you have been saying brings out this fact, as far as we are able to ascertain it, that, after you have made what we think is a reasonable deduction, the per-centage of increase of the charge of collection is not bigger than the per-centage of increase on receipts?—Yes.

10,836. Well, now, besides that there are some striking cases of increase. Take the Central Provinces. The charge is more than double, 169,000 Rx. to 78,000 Rx. In Lower Burmah the charge is double, 220,000 Rx. to 110,000 Rx. Can you give us any explanation of these increases?—In the Central Provinces the increase is mainly due to the survey and settlement charges, which have increased by 40,000 and to the charges for land records, which have increased by 45,000, of which 6,000 is due to the agricultural and settlement department, and 33,000 to local

charges covered by local revenue under provincial rates. The increase under settlement charges is due to settlements having fallen in; in 1875–6 there was practically no expenditure (2000 only) for settlements. The increase in the local charges is due to the inclusion in the accounts of the revenue and charges of the Patwari fund. In Lower Burmah the revenue has increased in almost the same proportion as the charge, from 824,000 to 1,609,000, and here also the settlement charges have increased from 3,000 to 47,000. The increase of revenue, which is a result of the settlement operations, comes in later than the charge.

10,837. Then the larger part of those increases is increase of expenditure incurred with the view of eventually increasing the revenue?—Yes.

10,838. (*Sir James Peile.*) It is of a temporary nature?—Yes, the settlement charge in any district is of a temporary nature; the land records expenditure, however, is of a permanent nature.

10,839. (*Chairman.*) In Bengal also the increase is very large, if not quite at the rate of the Central Provinces and Burmah. It has increased from 283,000 to 472,000?—In Bengal the increased charge is largely due to survey and settlement work, the increase in which is 89,000; to Government estates charges 24,000 (the revenue of Government estates having increased from 180,000 to 367,000,); and to land records 8,000 charges. The balance occurs under district administration.

10,840. Then may I take it that in 1875–6 there was comparatively little of this survey work, which, I suppose, is undertaken with the view to establish more correctly what ought to be the land revenue quota?—In some provinces there was comparatively little, but in other provinces the expenditure was greater under survey and settlements in 1875–6. The whole increase in the provinces, other than Madras and Bombay, between 1875–6 and 1893–4 was 61,000, and there was a decrease in Madras and Bombay in the survey charges.

10,841. What I mean is that the expenditure on surveys has been a continuing one, it is in no sense a new expenditure since 1875–6?—Not the whole expenditure on surveys; but a considerable part of this expenditure has been brought under the head of land revenue, which used not to come under it. The survey charges were made provincial in 1878–9—after 1875–6—and it was only then that a considerable part of the revenue survey charges were brought under the land revenue head.

10,842–4. Where were they charged before?—They were charged under "Survey," under the major head of "Minor Departments."

10,845. In the next section you give a comparison of charges in 1875 and 1893 according to the character of the expenditure. And here I notice a new head of charge called "Land records and agriculture." There was no such item in 1875–6 or 1884–5, but in 1893–4 it amounted to 945,000. Can you explain to us the nature of this new charge?—The increase is partly due to the transfer to this head of the cost of direction of the agricultural department; but is mainly owing to the policy of employing permanent land record establishments, with the view of lessening the temporary cost formerly so heavy when a settlement was in progress. In Burmah it is partly met by a reduction of the payments for commission, and in Madras by a special cess; in the North-West Provinces, the Punjab, and the Central Provinces, the increase is attributable to a change of system (already mentioned) by which the receipts and expenditure on account of the Patwari funds were brought into the Government accounts, from which they had previously been either wholly or partially excluded.

10,846. Where had the agricultural expenditure been charged before?—It was first charged under the head of "Minor Departments," but a great part of that is new expenditure incurred since 1875–6. I think the North-Western Provinces were almost the only province which had a real agricultural department in 1875–6.

10,847–8. Could you show me under what head of expenditure the Agricultural Department would be found in the Statistical Abstract?—It comes in now under land revenue.

10,849. Yes, but where would it come in in the earliest year of that Statistical Abstract? You spoke of "Minor Departments." I want to see where we shall find it charged then, so as to see whether there is any corresponding decrease?—I do not think the minor department charges are given in the Statistical Abstract.

10,850. What I want to know is under what section of the budget it would come?—Under "Minor Departments." That is the head of the budget.

10,851. (*Mr. Jackson.*) It does not give it in such detail, does it?—No; it gives the total.

10,852. (*Chairman.*) Does it not come in the Statistical Abstract for 1893–4?—No; there it occurs under land revenue.

10,853. But under what major head would Agricultural Expenditure be included in those earlier years?—Under "Minor Departments."

10,854. But this Statistical Abstract does not make such sub-division as that; therefore it appears under some other head?—No, it does not appear.

10,855. Is it omitted entirely?—Several heads are omitted there in that statistical abstract.

10,856. It is included in the total?—Yes.

10,857. I want to know under what head it comes?—It fell under "Minor Departments," and I gave some information about it when I was being examined on that head.

10,858. There is no corresponding decrease under the head of "Minor Departments"?—That includes about 70 or 80 different departments. You could not by merely looking at the totals see the difference.

10,859. The increase shown here, 945,000, which covers land record and agriculture, is in part a transfer, and is a very big one not to cause any corresponding decrease in some other department?—I might explain that only a small part of the increase is due to the transfer of the cost of direction of the agricultural departments, and that the greater part was covered by the land record establishments which were met to a large extent by special cesses, and by the Patwari fund.

10,860. On the other hand an item headed "incorporated local funds" occurs in 1875-6, but not afterwards. Will you explain to us the nature of that charge?—Those were the local charges. At the time that statement was submitted we were not able to distribute the charges for 1875–6, but we have since distributed them, and they fall under those two heads.

10,861. Under the heads of agriculture?—"Land records and agriculture," and "allowances to district and village officers."

10,862. A large increase of 302,000 is shown on the general charge of district administration. You devote two tables to the analysis of this charge. Taking the second table first, the larger part of the increase occurs under the head of salaries, namely, 282,000, or 46 per cent., and even if a decrease under the head of establishments of nearly 40,000 Rx. be deducted, a net increase of 242,000 remains. Can you give us any explanation on this head?—In 1882–83 it was found necessary, as has already been explained under Law and Justice, to improve the pay of the subordinate executive service at an estimated cost of 50,000 Rx. Further, in many provinces the staff of deputy collectors, who are natives of India, has been increased, the cost being partially met by a reduction in the number of covenanted civil servants employed in the department. To these two causes may be attributed a large part of the increase of 174,263 Rx. that has occurred in salaries and establishments apart from Upper Burmah.

10,863. Upper Burmah is excluded?—Yes.

10,864. Has there been any notable increase in the numbers of the staff employed, or is that increase, which you have just been mentioning to us, chiefly due to the increase of pay?—There has been a very large increase in the staff employed, too. I gave the exact details under Law and Justice. These charges are mainly divided between Law and Justice and Land Revenue. As regards this head, the salaries of the Indian Civil Service have diminished, notwithstanding the inclusion of the exchange compensation allowances, by 19,000 rupees, and the salaries of deputy collectors and of tahsildars and other subordinate officers have increased by 148,000.

10,865. Does that decrease in the salaries of civil servants arise from fewer Europeans being employed and more natives, or from a reduction in the salaries of the Europeans?—It is chiefly due to a reduction in the number of English civil servants.

10,866. They are replaced by natives whenever possible?—Yes.

10,867. In all these charges we must bear in mind that Upper Burmah has been added to the empire since 1875–76, and, from the analysis under provinces, I notice that that province accounts for 82,000 Rx. Do other annexations cause any part of this increase?—Yes, there have been some other annexations; for instance, Beluchistan which accounts for about 12,000 of the increase,

Mr. S. Jacob, C.S.I.

17 June 1896.

Land Revenue.

and there have been also additional Lushai districts in Assam and Bengal which were not British territory in 1875–76.

10,868–9. Would that make a notable sum?—The Lushai districts would make about 2,000 in Bengal. They would not account for a large sum.

10,870. Then we will not dwell upon it. In Lower Burmah also the increase is very large—over 60 per cent. We are now dealing with the charges for district administration alone, but I think you pointed out to us that in Lower Burmah the land revenue has doubled?—Yes, it has very nearly doubled.

10,871. In Bengal the increase is 28 per cent. In "India general" it is 74 per cent., and in Madras it is 12 per cent. In Bombay there is an actual decrease. Are there any explanations you wish to offer upon these points?—The increase in Bengal occurs 20,000 in deputy collectors, 19,000 in their establishments, 16,000 in special establishments covered by special fees, and 21,000 for process service charges covered by process fees, which make a total of 76,000. There is a net decrease under other heads of 8,000, which gives an increase of 68,000 in Bengal. Then in "India general" the increase is entirely accounted for by Beluchistan. In Madras the total increase is 42,000 Rx., and is made up of charges for deputy collectors 10,000, office establishments 10,000, travelling allowances 6,000, and other contingencies 16,000. Exchange compensation allowance comes to 7,000, but this is more than covered by a decrease of 10,000 in the higher salaries.

10,872. Even when the allowances to district and village officers, the land records and agriculture, and unclassified local charges, are added together there is still an increase on those two heads of nearly 100 per cent.?—Yes; that I have already explained by the additions which have been made which were covered to a large extent by the additional provincial rates. They are almost entirely local charges.

10,873. One is struck by the moderation of the charge in Bombay throughout this land revenue heading in the Budget. What is the reason of that?—I have already explained that there has been a decrease in settlement and survey charges, and also the travelling allowances have been reduced in Bombay. There they have a special system of permanent travelling allowances, and a large reduction was effected in that item on the report of the Finance Committee. I do not think the amount of the charge taken by itself is particularly moderate, though the increase since 1875–76 may have been so.

10,874. You mean to say in 1875–76 you would not have said that it was a very moderate charge?—No; I mean compared with other provinces.

10,875. With reference to that, we see that in Bombay the charge has been stationary, but I think you told us that there had been a very considerable increase in the revenue?—Yes; there has been a considerable increase.

10,876. You gave us the figures before. I think you gave us the figures as 27 per cent. increase?—Yes, that was the figure.

10,877. But on the whole, if the revenue has increased 27 per cent. while the charge for collection has remained stationary, would you not say that that is a satisfactory result, especially when in the rest of India, after making all allowances, the increase of the charge for collection is so much higher?—The result is certainly satisfactory, but whether the expenditure is moderate now or not, depends entirely upon the standard in 1875–76.

10,878. I think the standard is higher in Bombay, if anything, than in the other provinces in 1875–76?—In 1875–76 and now too. There is certainly a larger proportion of covenanted civilians employed in Bombay than in most of the other provinces.

10,879. So that on the whole it is a question whether the scale in Bombay is not even now a high one instead of being a moderate one?—I do not think it is high with reference to the system. Bombay is managed entirely, or almost entirely, upon the Ryotwari system, under which the revenue has to be collected from the tenants themselves.

10,880. But could you give us the revenue in Bombay?—The revenue in Bombay now is 4,716,000.

10,881. Have you got what it was in 1875–76?—3,706,000.

10,882. Well, then, the total charge of collection in Bombay in 1893–94 is 669,000; would that seem to be a large proportion—and 663,000 in 1875–76?—The proportion has now been reduced.

10,883. The proportion has been reduced, but would you say that 663,000 in 1875–76 shows a heavy charge as compared with the whole?—I think it was considerably heavier than the average charge.

10,884. What was the total revenue in 1875–76?—21,540,000, and the total charge in India 2,902,000.

10,885. That was very nearly one-seventh?—Yes, it would be very nearly that.

10,886–9. And the Bombay charge would be rather higher, would it not?—Yes; the percentage was about 13½ for the whole of India, and about 18 for Bombay.

10,890. Therefore, the basis, as it was in 1875–76, in Bombay shows rather an expensive per-centage as compared with the rest of India. What is the charge for commission? In some provinces, I see, the collectors of revenue are paid by commission. What is the reason for the adoption of that in some provinces and not in others?—It is simply a continuation of a practice prevailing from ancient times.

10,891. Is it a good system, do you think?—I think, where it is in accordance with the customs of the country, it may be a good system; but in Assam the more generally prevailing system is to some extent superseding the collection through hereditary officials paid by commission.

10,892. There is a charge for the management of Government and encumbered estates. Can you explain to us the nature of this charge which is practically confined to Bengal and the North-West Provinces?—Government estates are estates of which the rental, temporarily or permanently, belongs to the Government. They sometimes come into the Government possession, owing to the refusal of the settlement by the proprietor. In such cases of refusal Government sometimes takes over the estate, making the proprietor an allowance, called *malikana*, and manages it directly. The charges are for the collection of revenue, outlay on improvements, and cost of settlement. In Bengal the outlay on improvements has been fixed at 12 per cent. upon the revenue from the estates.

10,893. These Government estates appear to be almost confined to Bengal and the North-West Provinces?—That is because of the system which prevails there. In Bengal the amount is largest, and there, in former times, the Government used to re-settle with another proprietor the permanently settled estates which came into their hands; but now they have adopted the policy of keeping the management of the estates in their own hands, and this system is much more profitable than the former.

10,894. (*Mr. Jackson.*) Has there been much increase of that system?—Of course Government cannot take over the management unless the estates happen to fall into their hands under some law.

10,895. But in the event of such a case as you describe, where an owner refuses to accept a settlement, you said that in that case the Government took them in hand and managed them and made the proprietors an allowance?—That is chiefly in the North-Western Provinces. The amount is not really very large there, and the charge is rather less in those Provinces now than in 1875–76; but in Bengal the charge has largely increased from 16,000 to 40,000.

10,896. In a case like that, would the whole charge of management of the estate fall upon the expenditure?—Yes.

10,897. Therefore, relatively, if that went on, that would apparently increase the cost of collection?—Yes; but I think in this case the revenue from the estates has increased almost as rapidly as the charge, if not quite—the revenue has increased from 180,000 in Bengal to 367,000; it has more than doubled.

10,898. Can you tell us why no estates fall into the hands of Government in other provinces except those two?—The systems of administration are so different in different provinces. In Bengal the management of estates can be assumed by Government under certain conditions when the revenue falls into arrears.

10,898*a*. In other provinces they cannot?—Not directly as a rule.

10,899. (*Sir James Peile.*) It will happen particularly under what we call the zemindari system?—Yes.

10,900. That is to say, where there are large landholders, say, middlemen between the Government and the cultivator?—The land law is very strict in Bengal. If the revenue is not paid in at the fixed date, the estate is at once confiscated.

10,901. (*Chairman.*) Passing now from the charges of collection, we find large amounts deducted from the gross

land revenue under the head of assignments and compensations, and refunds. What is the nature of the assignments and compensations?—The assignments and compensations consist of payments to holders of rent-free grants who are called inamdars, and the malikana, already mentioned, which is paid to excluded proprietors; pensions in lieu of resumed lands; and some small compensations—amounting to 11,000 Rx. or 12,000 Rx.—paid to Native Governments for lands made over by them.

10,902–3. You spoke of excluded proprietors; are those people who have not accepted a settlement, and whose estates the Government have therefore taken over?—Yes.

10,904. These grants have risen from 829,000 in 1875–76 to 1,056,000 in 1893–94, or 27 per cent. That is rather a large increase, is it not?—Yes, the increase is more than accounted for by the rise in Bombay; the rent-free grants in that province have risen from 475,000 in 1875–76 to 786,000 in 1893–94, and I may explain that these Bombay payments are almost entirely book adjustments. The land revenue in these cases is really alienated, but in Bombay the system is adopted of passing the revenue and the *per contra* charge for the rent-free grants through the accounts.

10,905. And not in other provinces?—No, not in other provinces.

10,906. The whole of this increase arises under the head of rent-free grants and occurs in Bombay, which shows an increase of 311,000 Rx., or more than the whole net increase over India under the head of assignments and compensations?—Yes, the principal reason of the increase is re-settlement. At a re-settlement the annual value of the land revenue assignments, or rent-free grants, is re-assessed, and is increased just as the ordinary land revenue assessment increases.

10,907. How far are those perpetual charges?—The book adjustments are absolutely perpetual charges, and they form the bulk of the payments—708,000 out of 786,000 in Bombay, and 119,000 out of 151,000 under pensions in lieu of resumed lands, also in Bombay. Some of the other grants are perpetual, but the malikana is not always so; sometimes the proprietors are excluded for a time only.

10,908. The charge for pensions in lieu of resumed lands represents a considerable sum. Will you explain this charge to us?—The Bombay charges are book adjustments, as in the case of alienated lands. The increase in this case is nominal, and arises out of the increased assessments; the increased grants on re-settlement are covered by a corresponding increase in the revenue. The reduction in the other charges for rent-free grants in that province is due to some large grants having fallen in. In the other provinces the charges under rent-free grants, &c., consist for the most part of malikana or allowances to excluded proprietors. Under the pensions in lieu of resumed lands, the reduction in the Punjab arises in what are termed maafee or rent-free tenures. The charges in Madras fell to 27,375 Rx. in 1880–81, since which they are being gradually reduced.

10,909. I suppose the refunds are mere repayments of revenue levied but not due, and therefore refunded to the person from whom they were levied?—Yes.

10,910. The increase under this head, you say, is due to an accident, and, therefore, does not call for remark?—It is a decrease.

10,911. That is to say, in 1875–76 there was an accidental increase?—There was a large erroneous credit which had to be refunded.

10,912. Is surplus revenue ever applied to buy up these assignments, compensations, and pensions, so far as they constitute a permanent charge on the land revenue?—Only when they become very small in amount. Sometimes owing to sub-division the amount becomes very small, and in those cases the grant may be resumed by a capital payment.

10,913. There is no settled policy of reducing these charges, so far as they are perpetual, by buying them up?—No: of course, as I pointed out before, the greater part of the charges are merely book adjustments. The alienated revenue is brought to credit on one side, and charged off against the service for which it was made on the other side.

10,914. (*Mr. Jackson.*) Is there any rule as to the number of years' purchase, or does it vary in particular cases?—There are rules laid down for each province; I have not got them at hand, but I am pretty sure that there are rules laid down varying for each province and according to the nature of the tenures.

10,915. (*Chairman.*) Except for book-keeping reasons, if revenue is only brought in on one side and paid out on the other, there is no object in admitting it?—I do not see the object in this case. The Bombay Government considers it a very important matter that these grants should be passed through the accounts, but I think that the view of the Government of India is that it is an unnecessary refinement.

10,916. I suppose the account headed "Abstract Account of Land Revenue" (at page 27 of the Finance and Revenue Accounts of 1893–94) is a gross account, is it not?—Yes.

10,917. In it various other heads of revenue besides the ordinary land revenue appear. For instance, in Bombay there is a receipt of 983,119 Rx. for assessment of alienated lands. What is the description of this receipt?—That is the revenue side of the adjustments which I have mentioned under assignments.

10,918. Adjustments that are passed through the accounts?—Yes; they are credited on one side and charged on the other.

10,919. In Lower Burmah the capitation and house tax amounting to 390,000 Rx., is reckoned as land revenue. Why is this?—That has always been a part of the land revenue system of Burmah since the time we took it over. In some cases, where we have settled the land permanently, the capitation tax has been abolished, being merged in the land revenue assessment, but there is a provision in the Burmah Land and Revenue Act that a capitation tax may be levied under certain specified conditions. In certain of the large towns it has been converted into a land tax.

10,920. Then, again, in Bengal there is a receipt of 47,850 Rx. for the improvement of Government estates. Is that a receipt of the same nature as that which you have just been describing to us?—Yes. It is really a special distribution between imperial and provincial of the revenue collected from Government estates. It is the special grant of 12 per cent. on revenue—mentioned above—made for outlay on the improvement of the estates, and credited specially as a Provincial receipt.

10,921. Is it a grant out of the land revenue for the improvement of the estates?—It is a grant out of the revenue of the estate. But it may be more accurately described as a special distribution of the revenue of the estates between Imperial and Provincial.

10,922. Then there is a large receipt throughout all the provinces described as "Fisheries and other receipts classed "as miscellaneous land revenue." What are these?—The largest amounts occur in Burmah, 617,000 Rx. in Upper Burmah, and 205,000 in Lower Burmah. There are some inland fisheries in these provinces, which belong to Government, and which are let out at rentals which are credited to land revenue; but the bulk of the revenue coming under this head is the capitation tax, which has already been explained. In the other provinces also there are miscellaneous credits, larger or smaller, of various petty items of land revenue, the largest being in the Punjab.

10,923–4. Those are, I suppose, small miscellaneous receipts which find their home under land revenue?—Yes, small miscellaneous receipts which do not come under any other subhead.

10,925–6. I will try to bring out the per-centage of cost of collection in the different provinces. Taking the land revenue as levied in the different provinces; the North-Western Provinces and Oudh show a receipt of 6,054,373Rx., against which the charges connected with collection amount to 777,660, that is nearly 13 per cent.?—Yes.

10,927. In Madras there is a receipt of 5,488,492 Rx., against which the charges connected with collection amount to 959,562 Rx., that is nearly 17½ per cent.?—Yes.

10,928. In Bombay there is a revenue of 4,715,794, against which the charges connected with collection amount to 669,073, rather more than 15 per cent.?—Yes.

10,929. In Bengal there is a revenue of 3,871,432 Rx., and the cost of collection is 472,522 Rx., rather more than 12 per cent.?—Yes.

10,930. In the Punjab there is a revenue of 2,445,535, and the cost of collection is 382,210, rather more than 15 per cent.?—Yes.

10,931. In Upper Burmah there is a revenue of 722,809, which is nearly all fishery, I understand?—No, it is not nearly all fisheries; that includes the capitation tax in Upper Burmah.

10,932. Oh, there is a capitation tax in Upper Burmah as well as in Lower Burmah?—Yes.

Mr. S. Jacob, C.S.I.

17 June 1896.

Land Revenue.

10,933. Then Upper Burmah revenue was 722,809, cost of collection 219,089, rather more than 30 per cent.?—Yes.

10,934. Lower Burmah revenue, 1,609,106 Rx., cost of collection 220,417, about 13¾ per cent. ?—Yes.

10,935. Central Provinces revenue, 692,222 Rx., cost of collection 169,291, nearly 24½ per cent. ?—Yes.

10,936. Assam, revenue 561,728 Rx., cost of collection 100,587, rather over 16 per cent. ?—It is nearly 18 per cent. there.

10,937. "India general," revenue 175,044 Rx., charges of collection 51,062, nearly 30 per cent. ?—Yes.

10,938. The heavy per-centages in Upper Burmah and "India general" are, perhaps, intelligible. The first is a new annexation, and, as we have seen in other cases, not yet settled. The latter probably includes charges of central administration. Is that the case? Would that explain those two very high per-centages, both of them 30 per cent. ?—No; I do not think there is any charge for general administration there.

10,939. It is a very high per-centage. Of course the revenue is very small?—Yes; the revenue is small, and when that is the case the cost of collection must be proportionately higher.

10,940. Then, I suppose, Burmah is still in course of settlement, is it not?—Yes.

10,941. But are you able to explain the very heavy per-centage in Madras and the Central Provinces compared with Bengal and Bombay?—I have already explained the case of Madras. That is owing to the inclusion under Provincial Rates of the local revenue levied to meet some special charges.

10,942. Yes; and the Central Provinces?—In the Central Provinces it is owing to the survey and settlement charges.

10,943. They were exceptionally high?—Yes; they were only 2,000 Rx. in 1875-6, and 42,000 in 1893-4. There were also 33,000 on account of the Patwari fund, the revenue from which is credited under Provincial Rates.

10,944. Which latter comes in in both years, I suppose?—It was not brought into the accounts in 1875-6.

10,945. The whole charge for India, I think, works out at a sum of about 15 per cent. ?—Yes, 15·3.

10,946. Is that considered a reasonable charge; or has it ever been discussed whether the charge ought to be lower?—It should be remembered, as I said before, that the charge is not only a charge for the collection of land revenue, but is also a charge for general district administration; and that in addition it includes large charges for the supervision of the collection of other heads of revenue.

10,947. Therefore, when we come to the other heads of revenue, we ought to find a low per-centage?—The per-centage of cost of collection is very low under the other principal Revenue heads.

10,948. From the Statistical Abstract, I see that in the 10 years to 1893, the per-centage would be about the same, after making allowance for land revenue due to irrigation. That per-centage, therefore, seems to be a fair average, does it not, of what the almost normal cost of collecting the revenue amounts to?—Yes, I think so, subject to the explanation I have just given.

10,949. Do you consider that the machinery of administration is more expensive in the provinces which show a heavy per-centage?—In the different provinces it is heavier or lighter according to the revenue system in force. Bengal is certainly cheap, because there, under the terms of the permanent settlement, the zemindars are bound to pay in their revenue at head-quarters, so that there is very little cost in collecting it; the value of the permanently settled estates is generally so great, that a man will very seldom run any risk of losing his estate by failure to pay the revenue on the prescribed date.

10,950. On the other hand, you have given a reason for supposing that in Bombay the system is rather an expensive one?—Yes, it is more expensive than in some of the provinces, owing to the special system of revenue administration in force there.

10,951. Is the general organisation of establishments and machinery the same in the different provinces, or does it vary with the provinces?—The general principle of the system is very much the same. There is almost always a district officer in each district who has charge of the whole revenue administration of the district, but the actual details of administration differ very much according to the land revenue system in force in the various provinces.

10,952. What is the principle of the administration? In some of the provinces there is a Board of Revenue, is there not, which supervises the whole revenue collection, land revenue, stamps, excise, and so on?—Yes.

10,953. But that is not uniform, is it? In other places there is a Commissioner, is there not?—Yes, there are Financial Commissioners, too, in some provinces, who take the place of the Board of Revenue. I think Bombay is the only province which has not anything corresponding to a Board of Revenue. It has only separate Commissioners, who control the collection of revenue in the various districts of their local divisions. There, however, there is also a special Commissioner for certain of the heads of revenue—excise and opium and salt.

10,954. Then under these Commissioners come the head officers in the different districts, I suppose, collectors and magistrates?—Yes, under the Boards of Revenue and the Commissioners.

10,955. And these collectors and magistrates are divided into grades, are they not?—Yes.

10,956. Is a first-class collector and magistrate always in a big district, and is that big district sub-divided into what I may call the collectorates of second and third class magistrates?—No; there is only one district officer in each district.

10,957. Then what is the difference of district or of responsibility of work assigned to a first-class man and to a second and third class man?—The theory is that the more experienced men are in the larger districts, but tha is not always carried out in practice. It would cause considerable administrative difficulties if it was necessary to transfer a man from one district to another for a short time, in order to give him the higher pay to which by merit and standing he was fairly entitled. The grades are, as a rule, purely personal.

10,958. Therefore we have first of all, in most cases, the Board, under which there are the provinces parcelled out into districts which have at the head of them a magistrate and collector. Under him are the officers actually engaged in the work of collection?—In some provinces there are Commissioners between the Board and the district officer; and then again in the district itself there are tahsildars, or mamlatdars as they are called in Bombay, in charge of separate sub-divisions of the district, and they do a considerable part of the collection of the revenue under the control and superintendence of the assistant collectors, and the deputy collectors sometimes.

10,959. Then each magistrate and collector for a district has a certain number of assistant collectors attached to him?—Yes, the assistant collectors are members of the Indian Civil Service; the deputy collectors are natives.

10,960. There are a certain number of native Indians in the Indian Civil Service?—Yes, there are those who have passed the examination.

10,961. Then what is the method of collection? Do the deputy collectors see for each village that the sum which is recorded as due by that village is paid, or what is the check upon the actual people who go round and collect the money?—In the Revenue department there is always an official whose special charge it is to keep up the records of the amount due from each field, or village, or estate, as the case may be, and the amount of revenue due is always checked by this officer before it is received into the Treasury. The Treasury office does not itself check the amount due, but relies upon the Revenue department to see that the amount due is properly certified.

10,962. By the Treasury you mean the Accounts Department?—I mean the Treasury office of the district; the department which actually receives the money paid in.

10,963. The district treasury receives the money on the order of the Revenue department?—On the order of the Revenue department.

10,964. Then is any independent check applied to these receipts? For instance, does an officer of the Accounts department examine the books and ascertain, either by test or otherwise, the amounts that are payable, and that those sums are paid?—No, the Accounts department does not check the receipts of land revenue with reference to the amounts due. The land revenue returns are submitted to the Commissioners and the Board of Revenue, and they check the actual recoveries against the demand.

10,965. And ascertain that the sums brought to charge are actually levied?—Yes. The Accounts department either submits returns to the Board of Revenue for the purpose of comparison with the returns which it receives from the Revenue Department, or certifies the correctness

of these departmental returns, as may be found most convenient in the case of each kind of revenue.

10,966. (*Mr. Naoroji.*) You said there was a reduction of European servants. Can you give us a detailed list of posts and their salaries occupied by Europeans in the two respective times which are now being compared?—No, I am afraid I could not do that. It would have to be specially prepared in India.

10,967. Could you prepare one for us?—No, I could not prepare it. The returns which were made some time ago in answer to Parliamentary requisitions for information as to salaries drawn by Europeans and natives occasioned an immense amount of labour.

10,968. But then, when an assumption is made that there is a reduction, one cannot check it or verify it?—You can certainly check it by the amount of charge; the charge has been reduced.

10,969. The amount of charge may be greater by the increase of Europeans, or less. That can give no idea at all of the real number of Europeans employed?—I separated the charges for the Indian civil servants, from the charge for deputy collectors who are entirely natives, and they show a decrease in the Indian civil service charges and an increase in those for deputy collectors.

10,970. But you have not only got Europeans in the strictly covenanted civil service, but you have also Europeans besides in other departments, and what we want is the number of Europeans and the cost of their salaries—of all the Europeans. Unless we have got these figures, we can make no fair comparison?—I was merely referring in my evidence to the Land Revenue department.

10,971. Yes, taking the Land Revenue department by itself as it would be applicable to all other departments, it is necessary that we should have the number of Europeans employed at the two different periods, so that we may know whether there is an increase or a decrease of the employment?—I am certain that there is a decrease in the Europeans.

10,972. There is no means of checking it?—Yes, certainly there is. The charge has diminished, and a large number of posts which were formerly reserved to Europeans have been thrown open to natives, and are actually occupied by natives.

10,973. It would be better for us to know what posts have actually been transferred in this manner to natives, and what posts have been taken away from Europeans. It would be much more satisfactory to know all these details, because the general impression is that there is every possible increase of Europeans made?—I think that impression is wrong. For the Land Revenue department, I have no doubt, I could make out a statement of the appointments which under the provincial system have been thrown open to natives of India.

10,974. What is the objection to giving us a detailed list of the posts and their salaries in the Land Revenue department of Europeans at these two different periods? I do not see any objection to that. That would be satisfactory?—The only objection is the great labour that would be involved in it.

10,975. Well, but we want information, and the labour is not a consideration?—I believe the Secretary of State refuses to have such a statement prepared.

10,976. (*Sir Ralph Knox.*) What period does the Parliamentary Return cover?—The Parliamentary Return comes up to quite a recent year.

10,977. (*Mr. Naoroji.*) The one of 1892, you mean?—Yes.

10,978. That gives only the total, and you cannot make any comparison between this 1892 and the previous year?—No.

10,979. I should be very glad if I could get a similar return for 1875-6.

10,980-1. (*Chairman.*) I was looking the other day in the India List, which contains the names and offices of the officials of India, at the Land Revenue department in the different provinces, and I observed that down to a certain point the Europeans predominated—I say predominated, because I observed a few names of native gentlemen in those high posts. But below that point as far as I could see, with very rare exceptions, all the officials are natives?—Yes; the proportion of natives is immensely higher than that of Europeans, taking them altogether.

10,982. Would not the India List for 1875-6 as compared with that for 1893-4 give a very fair idea of the relative numbers at the two dates?—It would give some idea of it. I could not vouch for its absolute accuracy, but I could make out a statement of the kind if that were desired.

10,983. (*Mr. Naoroji.*) This is the Parliamentary Return of 1892 to which you have referred, I think, in which Europeans, Eurasians, and natives are separated (*exhibiting return*)?—Yes.

10,984. And their salaries are given, beginning with 1,000 rupees and upwards; but this is for 1892. If we want a comparison with the other year with which we are making all these comparisons, we ought to have a similar return for that year; and, until that is done, we can hardly make any comparison?—There was an earlier return, I think, and the two returns would give you a pretty fair idea.

10,985. There was an earlier return in 1878, but it was never printed, it was never published.

10,986. (*Sir Ralph Knox.*) It exists?—Yes, it exists.

(*Mr. Naoroji.*) Can we not get it?

10,987. (*Chairman.*) Will you ascertain?—Yes, I will.

10,988. (*Mr. Naoroji.*) If we get this 1878 return published with this 1892 return, we can form some accurate idea of what the comparative employment of Europeans is. As to the excess of natives that is only natural. You have the whole of the inferior subordinate service to be performed by natives, and to quote the number of natives as compared with Europeans is certainly unfair. It is the higher posts only, where the Europeans are employed, that ought to be compared, to see how many Europeans are employed and how many natives or Indians. It is no use saying there is a large Indian service; there must be a large Indian service. I do not see the use of going down to clerks and all that, and saying there is a very large number of natives; but limit it to posts in which the salary is, say, 1,000*l.* If we get the return of 1878, made on Mr. Bright's requisition, printed, we can compare that with this, or abstract it to the same extent as this. It is a very large return, because it is going into every detail, as I understand it?—Yes, it goes into great detail.

10,989. But then if a small abstract like this be made, that would be enough for our purpose?—Yes, I will see if I can give that.*

10,990. (*Sir James Peile.*) You are aware of the fact, I think, that in 1880 the recruitment for the higher civil service—the European civil service—was reduced one-sixth?—Yes.

10,991. That was done in order to make room for natives in that vacant space left by the vacated one-sixth?—Yes, it was.

10,992. And since that, to carry that into effect, in conformity with the recommendations of the Public Service Commission, certain orders have been passed constituting a provincial civil service, and assigning to that service, which consists mainly of natives or practically entirely of natives, certain reserved appointments of the higher civil service?—Yes, that is so.

10,993. I suppose, with the consent of the India Office, you could get us a list of those appointments?—I think I could.

10,994. What are called the listed appointments?—I think I should be able to get that out.

10,995. Perhaps you are aware of the number of judges' appointments in the North-West which are listed; do you happen to know?—No, I cannot say at this moment. I believe I gave some evidence on that point in my examination on Law and Justice. As to the number of Europeans and natives employed now in the Judicial Department, I have put in a statement already.

10,996. (*Mr. Naoroji.*) Then with regard to the services that were set aside for the Indians in 1880, is not that increment altogether nullified by the Secretary of State having cancelled the statutory service altogether. Is not that really cancelled altogether, though the Act of 1870 still exists?—The provincial service system has taken the place of that system.

10,997. Then that is cancelled, is it not?—Appointments are not made now under the rules of 1880.

10,998. In substituting the provincial service, are not actually the number of appointments lessened than what the Indians would have got under the Act of 1870?—I do not think so.

* I have since ascertained that the return, which is very bulky, was laid on the table of the House of Commons, but has never been printed.—S. J., 11th August 1896.

Mr. S. Jacob, C.S.I.

17 June 1896.

Forests.

10,999. Well, I should like it if you could ascertain. Then, again, under the Act of 1870 these appointments were as part and parcel of the Indian Civil Service; these provincial appointments are not, and it is a lower grade of service, is it not?—They are paid about the same rate as the men were paid who were appointed under the Act of 1870.

11,000–1. Yes, but they cannot go any further; whereas by the Act of 1870 the whole civil service was open to those who were appointed under that Act. By the rules of the provincial civil service they are restricted only to a certain number of subordinate situations, and they cannot go any further?—I have not referred to the orders about the provincial civil service very lately: I should like to refresh my memory before making any statement about it, but my impression is that the pay that they receive is just as high under the provincial civil service system as that which was given to the statutory civil service.

11,002. Yes, that is true. But then the number is reduced as well as the prospects. They are limited to a certain grade only, while under the Act of 1870 they could have risen to any post like other civil servants?—I am not aware of how far that is the case.

11,003. (*Sir James Peile.*) Provided only that they were fit for such posts, I think?—Certainly.

(*Mr. Naoroji.*) Yes, of course; but then they are now deprived altogether, whether they are fit or not.

(*Sir James Peile.*) Not at all.

(*Mr. Naoroji.*) You have cancelled the whole thing.

(*Sir James Peile.*) I do not admit that for a moment.

11,004. (*Chairman.*) We will now pass on to the Forests, if you please. Will you tell us, are the forests of India all only worked for the purposes of revenue, or generally with a view to the improvement of the country?—They are worked for the improvement of the country, but they do, as a matter of fact, generally produce revenue.

11,005. I mean rather what is the main object of the administration, to produce the largest revenue obtainable, or to make the net revenue a subsidiary point to working the property with a view to the improvement of the country, to keep the forests from decay?—Some of the forests were practically being worked out before the Indian Forest Department was instituted, and I think it may be said that the main object in constituting the Department and in taking the forests over was to preserve, protect, and improve them; it has, however, been found possible to work them so as to obtain a very considerable amount of net revenue; and this point has been kept in view throughout.

11,006. Are the forests a large property, that is to say, does the State own the forests as such, or in what form has the State become the proprietor of them?—Most of the forests in India originally belonged to the Government just as the land does, and, unless they have alienated it, the property still remains with them. Certain rights have been obtained by village communities over certain forests, grazing rights, and the rights to collect firewood, and the like, but subject to these rights the property remains with the Government, unless the forests have been included in a settlement.

11,007. In fact, the property in the land is, so to speak, inherent in the Government. The agricultural land has been leased out or granted out to proprietors; in the forests, where there is no such inducement to occupy and cultivate, the land has remained in the hands of the Government?—Yes; there are, however, large forests which have been included in estates settled under the land revenue regulations, but any that have not been alienated remain the property of the Government.

11,008. Would you state to us the net revenue derived from forests in 1875–6, and 1893–4?—The net revenue was in 1875–6, 277,000 Rx.; in 1893–4, 817,000 Rx.

11,009. Can you tell us the charges also?—Yes, the gross revenue was 697,000 in 1875–6, and the charges 420,000. The gross revenue in 1893–4 was 1,723,000, and the charges 906,000.

11,010. Therefore, if the charges have increased, the revenue has increased somewhat faster?—Yes, the amount of the net revenue has increased.

11,011. Well, you see the revenue has increased from 697,000 to 1,723,000, which is something like $2\frac{1}{2}$ times as much, is it not?—Yes.

11,012. While the expenditure has not much more than doubled?—But the first item includes Upper Burmah, the revenue of which is 230,000.

11,013. The 1,723,000?—Yes, in the 1,723,000, the gross revenue.

11,014. Then, on the other hand, is not the expenditure of Upper Burmah heavy?—No, the expenditure there is 52,000 Rx.

11,015. What would be the result if you left Upper Burmah out of account? Of course the figures for 1875–6 do not include anything for Upper Burmah?—No.

11,016. Well, if we take out the gross revenue of Upper Burmah from the 1,723,000 Rx., what would be the result?—It would be 1,493,000 Rx.

11,017. And the expenditure?—854,000 Rx.

11,018. Then it would still remain true that the revenue has increased rather faster than the expenditure?—Yes, just a little faster.

11,019. Because 420,000 has rather more than doubled—very slightly more?—Yes, the revenue has advanced faster, though not very much.

11,020. But I notice that the net revenue is estimated to diminish in the Budget of 1895–96, as compared with the actual net revenue of 1893–94?—I think the Budgets are always made cautiously in respect of the net revenue from forests. There is some uncertainty about the revenue, and the expenditure is often over-estimated.

11,021. At the same time the expenses have been estimated to increase; but I suppose, as you have told us before, we must not lay too much stress upon the Budget?—No, I think not. The Revised Estimate for 1895–6 puts the gross revenue at 1,687,000 Rx., the expenditure at 941,000 Rx., and the net revenue at 746,000 Rx.. This is nearly 100,000 Rx. better than the original estimate, and it is possible that the actuals may be still better.

11,022. As far as establishment is concerned the increase is 200 per cent., and the increase in the net revenue is almost identically the same?—Yes, the establishment charges have increased from 138,000 Rx. to 413,000 Rx.

11,023. That is an increase of 275,000 Rx. on 138,000 Rx.?—Yes.

11,024. Which is very nearly 200 per cent.?—Yes, it is practically 200 per cent.

11,025. Does not that seem to you rather a large figure?—I do not think the figure is large, considering the revenue that has been obtained. The great advance that has been made in forest conservancy since 1875–76 has necessitated the employment of a larger number of officers on the Forest establishment.

11,026. I see that the salaries of the superior officers have increased almost in the same ratio?—Yes; that is very largely owing to the increase in the number of officers; there has been only a slight increase in some of the salaries; I doubt if there has been any at all, except in the lower grades.

11,027. That points rather in the direction of my first question on this branch of revenue; I asked you whether the forests were administered simply in the interests of the revenue, or whether they were administered with a view to the improvement of the country. Of course, in the latter case, one quite understands more highly paid officers being employed?—I think that the Governments now, at any rate, very seldom incur fresh expenditure, unless it is anticipated that it will be at least covered by increased revenue. The pay and position of the lower grades has certainly been improved of late years.

11,028. Well, in this case the establishment charges have increased faster than the revenue?—Yes, taking the establishment charges alone, but taking the whole of the charges the increase has been about the same.

11,029. Of course the establishment charges really represent the administration?—Yes.

11,030. It rather leaves upon one's mind that the administrative establishment, probably for very good reasons, is heavy?—That does not include only the administration; it includes also the subordinate establishments.

11,031. But it is only fair to include the administration when you are dealing with the establishment?—Yes; but they have increased in a greater ratio than the salaries.

11,032. By how much?—From 30,000 Rx. to 117,000 Rx.

11,033. That is by 86,000 Rx.?—Yes, nearly four times.

11,034–6. It is not quite 200 per cent.?—It is nearly 300 per cent.

11,037. Yes, that is true, 300. You have told us much of the increase is due to Upper Burmah?—A large proportion of the increased charge is not due to Upper Burmah; 52,000 Rx. is the total charge under "Forests" in that province.

11,038. Has the improvement been general in all the provinces?—There has been an improvement in almost all of the provinces. The Central Provinces are the only province which shows any very marked decrease. There a greatly increased subordinate staff was sanctioned in order to put the Forest department into a state of efficiency. It was expected that there would have been a corresponding development of the revenue, but as yet this has not been realised.

11,039. Are there any refunds or assignments to be taken against this head of revenue?—There are refunds, no assignments; but the refunds are very small. They were 3,000 in 1875–76, and 4,000 in 1893–94.

11,040. (*Sir James Peile.*) There is a third object with which the forests are conserved, is there not, that is for supplying fuel, and other things for the use of the people?—Yes, that is one of the objects.

11,041. And I think the revenue is somewhat handicapped, is it not, by the benefits which the people are allowed to take out of the forests in minor produce, pasture, and things of that sort. I mean if they were strictly conserved and the people were entirely excluded, the revenue might be a good deal larger?—Yes, certainly it would be.

11,042. (*Chairman.*) In asking whether the administration of the forests is being directed to the general improvement of the country, I had in mind that large expenses may be incurred in renewing forests, which would not be incurred if revenue was simply kept in view. There is a theory that the increase and preservation of forests has an influence on the rain supply, and I wanted to know whether these are the objects chiefly kept in view by the administration, as apart from simply turning the last penny they can?—The object is certainly not merely to turn the last penny they can, but I think that as a rule increased expenditure is incurred with the object of eventually, at any rate, increasing the revenue.

11,043. We will now pass to the Opium Department. Can you give us the opium revenue and charges in 1875–6 and 1893–4?—The gross opium revenue in 1875–6 was 8,471,425 Rx. and the charges were 2,219,000. In 1893–4 the gross revenue was 6,628,000 Rx., and the charges 1,877,000 Rx.

11,044. Therefore the fall in the charge almost corresponds with the fall in the revenue. Would you find that as a general rule?—No; the revenue and expenditure in any given year are not really very closely connected. The charges depend mainly on the extent of the cultivation, the nature of the crop and the price paid by Government to the cultivator; while the revenue depends chiefly on the number of chests sold and the prices ruling in the Chinese market. These factors are to a great extent independent of each other, so that the charges may rise owing to a good crop, while the revenue may fall owing to a reduction in the number of chests sold or to a fall in the price of opium in China.

11,045. There are two methods of raising the opium revenue, are there not? In Bengal the Government sells opium itself; whereas in Bombay it charges a duty. Is there not that difference between the two systems?—Yes, but in Bombay the duty is levied upon importations from Native States; there is no opium cultivated in the Bombay Presidency itself.

11,046. The Government charges a duty upon opium when it passes out from Native States to the ports?—Yes.

(*Sir James Peile.*) It is a transit duty.

11,047. (*Chairman.*) A transit duty. The revenue for 1893–4 is considerably less than the average of the previous 10 years; is it not a very small revenue?—Yes, it is considerably less; there has been a succession of bad seasons, six seasons running have been bad, the whole opium reserve has been exhausted, and we now can sell only a much smaller amount than we could a few years ago.

11,048. I call attention to the fact that the cost was reduced; but at the same time would you not look for a considerable reduction in the charge, if there is a smaller revenue raised?—In the long run there would be a reduction in the charge generally, but not necessarily in any given year. You might have a very favourable crop when you were selling a very small number of chests.

11,049. But if the crop were very small you might have a very high price, might you not?—The price does rise generally, if the number of chests sold is reduced owing to the crop being small and our stock being reduced, but the rise is not necessarily exactly proportionate to the decreased number of chests sold.

11,050. I see in the Finance accounts the largest part of the expenditure is incurred in payment to cultivators; therefore, I suppose, if you were selling the opium at a high price in consequence of a small crop, you would have to pay the cultivators a higher price too?—We do not pay the cultivators any fixed proportion of our receipts, but if there is a succession of bad crops, as there has been lately, the cultivation might show a tendency to fall off, and in that case we might have to raise the price paid to the cultivators. We did have so to raise it in 1894.

11,051. Now, taking the accounts of 1893–4, the payments to cultivators were, in the current year 485,000, and in the past year 1,194,000 Rx.—on what basis are those payments made? The cost of production of Bengal opium is given at page 31, and the payments to cultivators amount altogether to nearly 1,700,000—in fact, nearly the whole expense is payment to cultivators?—Yes.

11,052–3. Well, if the crop is short, opium becomes more valuable; I suppose, therefore, more has to be paid to the cultivator?—No, we should not pay him with reference to the market value of the opium at the time we take it over.

11,054. What would you pay him upon?—We pay him with reference to the price agreed on at the time the cultivation was commenced; and that price is fixed with reference to the amount we want to procure in order to keep up our sales.

11,055. You would say to the cultivator, if you will cultivate so many acres of land in opium, we will pay you so much?—We have a fixed price for the crude opium.

11,056. So that, whether the crop is good or bad, the man only gets the same price?—Yes, as long as the fixed price remains unaltered; that is, of course, liable to alteration by Government, before the commencement of the season; and, as I have already stated, in 1894, after six successive bad seasons, we were obliged to raise the price, or else the amount that we should have received would have fallen off very seriously, and would have necessitated a further reduction in the number of chests sold.

11,057. Was the payment to cultivators "for the past year" a further payment on account of the loss of the cultivators?—No, the distinction in the accounts between payments for the current and for the past year is merely owing to the system. We give the cultivators advances at the beginning of the season. These are payments for the current year. Then, when they bring their crop in, we pay them the balance, taking off the advances made in the previous year, so that these are really the payments for the past year. In every year there are payments of the balance due for the past year, and advances for the current year.

11,058. Are there any assignments in this branch of revenue?—Yes, there are some small assignments. In 1893–4 we paid about 5,000 rupees, chiefly to the Native States in Bombay, from whom we have taken over the Opium administration.

11,059. Has there been any increase in the establishment charges?—Yes, there has been an increase in the charges for establishments from 77,000 Rx. in 1874–5 to 88,000 Rx. in 1891–2, I am obliged to take those two years because the details in the accounts do not admit of comparison for the years usually taken, viz., 1875–6 and 1893–4.

11,060. Is there any reason for this increase?—Yes, the increase occurs entirely in the Benares agency, where the number of sub-deputies in the 17 years has risen from 9 to 16, and of assistants from 26 to 33, causing an increase of 9,120 Rx., which considerably exceeds the increase of 7,824 shown under agents' establishments.

11,061. I make the charge for establishments higher than what you do. The three items, superintendents, opium factory, and district staff amount to something like 185,000?—But the whole of that would not be establishment charges; that includes the charges for contingencies and travelling allowances falling under those heads.

11,062. (*Mr. Mowbray.*) The Opium revenue all comes to the Government of India, does it not?—Yes, it is Imperial; there is, however, a small portion that is credited under excise.

11,063. But substantially it is all Imperial?—Yes, the main portion of it is.

11,064. But it is not an Imperial Department?—It is managed by the Government of Bengal, but the charge is Imperial.

11,065. And it was suggested by a Commission in 1883 that a Department of the Government of India might be formed to deal with the whole of the opium revenue?—That has been suggested.

Mr. S. Jacob, C.S.I.

17 June 1896

Salt and Stamps.

11,066. Has your attention ever been directed to that subject?—I have never had to report upon it in any way officially.

11,067. And you could not express any opinion as to the financial results which might ensue, either in the direction of increasing the revenue, or in the direction of increasing the expense?—I do not think it likely that there would be any very great improvement in the administration. The Board of Revenue of Bengal has had the Department under its administration for a great many years, and I should say myself (without having gone into the matter at all closely), that it manages it just as well as, or better than, an officer immediately under the Government of India would.

11,068. (*Chairman.*) We will pass on to the Salt Revenue, is that a rising revenue?—Yes, the revenue does rise gradually.

11,069. I see that, taking the average from the Statistical Abstract from 1866 to 1875, it was about 5,800,000 odd Rx.; from 1882 to 1892 about 7,400,000 Rx.; and in 1893–94, 8,229,000 Rx. Can you give us the charges in 1875 and 1893?—The charge in 1875–76 was 509,000 Rx., and in 1893–94, 474,000 Rx.

11,070. Therefore, there has been a decrease in the charge?—There has been a decrease on the charges shown; but in 1875–76 the charges included certain treaty payments, which are now shown under assignments. They amounted to 70,000 Rx. in 1875–76. If they were taken off there would be a small increase of 36,000 Rx. instead of a decrease of 34,000 Rx.

11,071. And to what is that real increase due?—The increase occurs almost entirely in Bombay, but Bombay cannot be taken separately now, owing to the complete change of system which has taken place since 1875–76. The Inland Customs Line was abolished in 1879, and the great changes, that have in consequence taken place in the administration of the salt revenue in Northern India, render it impossible to give a comparison in detail of the various provinces. In Northern India the result was a large decrease in the charges owing to the abolition of the Customs Line, but the abolition of that line rendered it necessary to employ preventive establishments in Bombay as well as to increase the establishments employed for the manufacture of salt, and the result has been a total net increase.

11,072. A small net increase?—Yes.

11,073. Are the salt charges Imperial or provincial?—They are mainly Imperial. There are a few miscellaneous charges which are taken against provincial. The provincial charges in 1875–76 were only 1,000 Rx., and in 1893–94, 57,000 Rx., but the increase is owing to a change in the distribution of the charges.

11,074. The provincial charges are included in the Finance Accounts?—Yes.

11,075. Are there any charges for refunds and assignments to be taken against salt?—Yes, there are some. The assignments amounted in 1875–76 to 45,000 Rx., and in 1893–94 to 367,000 Rx. The increase is almost entirely due to the arrangements which were made with Native States between 1870 and 1878, for taking over the principal salt sources in Central India, which led to the abolition of the Customs' Line.

11,076. Under these arrangements does the Indian Government pay to the Native States a certain sum every year?—Yes, it pays to the Native States a certain sum every year; a fixed sum to several of the Native States, and also a small royalty on the salt which is extracted at the Sambhar Lake.

11,077–8. But does that arrangement allow for any increase of consumption? I mean, if the Indian Government pays a fixed sum, that, as it were, assumes that the consumption remains stationary. One would expect in such a case as that that there would have been some arrangement by which, if the consumption increased, the Native States would get some benefit from it: if it were decreasing, perhaps the contrary?—They really are made over on a fixed rental, that is what it practically comes to, subject to the payment of a royalty in one case.

11,079. How is the administration of the salt revenue organised, whom is it under?—The salt revenue in Northern India is under a Commissioner, who is immediately under the control of the Financial Department of the Government of India, but in Bombay, Madras, and Bengal the establishments are under the control of the Provincial Governments.

11,080. Has the Commissioner under him the manufacturing establishments?—Yes; he has establishments at all the principal salt sources, the Sambhar Lake and other salt sources in Rajputana, and at the Punjab salt mines too.

11,081. And the same organisation, generally, I suppose, obtains in Bengal, Madras, and Bombay?—In Bengal the revenue is almost entirely collected by means of a customs duty.

11,082–3. It is an import?—It is imported, chiefly from England.

11,084. The import from England is something like 20 per cent., is it not, of the whole consumption?—Yes, rather over 20 per cent.

11,085. Out of this charge for collection, 474,000 Rx., should I be right in gathering that the cost of the raw material is represented by, first of all, manufacture and excavation of salt under "India general," 25,000 Rx.; under Madras, "purchase and freight of salt," 22,000 Rx.; and under Bombay, "salt purchase and freight," 35,000 Rx.; making a total of 82,000 Rx. Would that be the cost of what I call the raw material?—No, that would not be the whole cost of the raw material to Government, because the establishments are engaged in the extraction of the salt, and in supervision of the work generally.

11,086–7. Clearly that is part of it; but I mean as far as the raw material goes. The establishments are used in working it up into a manufactured article?—No, the fixed establishments are employed in actually extracting it. Those charges are merely extra charges for excavation and manufacture.

11,088. You get by the sale of salt 8,228,000, and it looks as if the cost of the material which is turned into an article which realised that large sum was 123,000 Rx.?—We do not get that merely by the sale of the salt; we get that chiefly by the duty on the salt. We get only 211,000 Rx. from the sale of the salt.

11,089. You get an excise duty on the salt?—Yes, we have an excise duty and an import duty.

11,090. That excise duty has nothing to do with the material?—No, we levy that in addition to the price, whatever it may be.

11,091–2. Then, in addition to that, you have got a preventive service which costs about 83,000 Rx. altogether?—Yes.

11,093–4. And the preventive establishment and the purchase and manufacture together make 165,000 Rx. out of 474,000 Rx.?—Yes.

11,095. There have been a great many changes in recent years in the rate of duty, have there not?—Yes, there have been several changes.

11,096. Take from 1875–76; have they been on the balance reductions or increases?—On the balance, I should say, there has been a slight increase, though there have certainly been intermediate decreases.

11,097. What is the duty on import?—The present rate of duty on import is 2 rupees 8 annas per maund of 82 lbs.

11,098–9. (*Sir James Peile.*) Not on the duty on import—the excise?—It is the same, 2 rupees 8 annas per maund.

11,100. (*Mr. Naoroji.*) Is that customs duty or excise duty—2 rupees 8 annas per maund?—Both.

11,101. That is since 1887–88?—In January 1888 the general rate was fixed at 2 rupees 8 annas.

11,102. (*Chairman.*) Then we will pass on to the Stamps, if you please. Stamps have been a distinctly growing revenue, have they not?—Yes, the revenue grows very steadily.

11,103. I see from the Statistical Abstract that, taking the 10 years from 1883–84, they rose from 3,500,000 Rx. to 4,500,000 Rx. Is that due to increases of duty or is it due to increase of property and transactions?—There has been practically no large increase of duty since 1879.

11,104. Therefore, those years, 1883–84 to 1893–94, with an average of 4,200,000 Rx. a year, would represent very fairly the growth of the revenue, would they not?—Yes.

11,105. Can you say what the revenue was in 1875 and again in 1893?—The revenue in 1875–76 was 2,799,000 Rx., and in 1893–94, 4,457,000 Rx.

11,106. And what has been the increase of the charges during that time?—The charges have increased from 110,000 Rx. to 156,000 Rx.

11,107. Where does that increase arise?—Chiefly in the discount on the sale of stamps, including commission to vendors, which has risen from 45,000 Rx. in 1875–76 to 70,000 Rx. in 1893–94.

11,108. You have already given us a reason for expecting a very moderate per-centage of the cost of collection in the case of these other branches of revenue, namely that

a part of their proper charge is borne by the land revenue, but 156,000 Rx. on 4,457,000 Rx. is a very small per-centage, is it not?—Yes, very small, a little less than 3½ per cent. That includes the charges for the supply of stamps from England.

11,109. Under the heading of "India General" in the charges for collection, there is a large minus entry of 80,394 Rx. under the head of "stamps supplied from central stores charged in the accounts of other provinces by deduction from India." How is that explained?—That is the charge for the stamp paper. It is first charged against the central stores when it is received from England, and then, as it is supplied to the various provinces, a deduction from that charge is made by a charge to the province concerned.

11,110. But do the charges of collection include the stores bought from England?—64,000 Rx. of the expenditure in 1893–94 is for that charge, including exchange.

11,111. I suppose those payments in England are purely for stores, are they not?—Yes, they are entirely for stores.

11,112. Are the charges for stamps Imperial or provincial?—They are divided between Imperial and provincial in the same proportion as the revenue. That is, at present, three-fourths to provincial and one-fourth to Imperial.

11,113. Are there any refunds or assignments under this head?—There are refunds, no assignments. The refunds are not large, 37,000 Rx. in 1875–76 and 52,000 Rx. in 1893–94.

11,114. Taking now the revenue, somewhere about two thirds are received from the sale of court fee stamps?—Yes.

11,115. These are proceedings in the Courts of Justice?—Yes.

11,116–7. Anything else under that head? That is revenue which we have taken into consideration already in considering the budget of the Courts of Justice, have we not?—Yes.

11,118. Therefore that is revenue arising from purely Government proceedings, is it not? When we come to sale of commercial and other stamps, those are the stamps levied on the public?—Yes.

11,119. Can you give us at all what their increase has been? I see in 1893–94 they were 1,368,399 Rx.?—In 1875–76 the sale of commercial stamps brought in 769,421 Rx., so that there has been an increase of 598,978 Rx.

11,120. What would be included under "sale of commercial and other stamps"?—They are not all purely commercial transactions; powers of attorney and various other documents not purely commercial in their nature are charged with stamp duty.

11,121. Would that head include stamps on the transfer of land?—Yes.

11,122. Receipt stamps also?—Yes.

11,123. I suppose you have in India some form of death duties, have you not?—Yes; there are small succession duties in certain cases.

11,124. You do not levy them by means of stamps?—Yes; we do.

11,125. But that duty is not included here?—It is shown under court fee stamps. The fee is levied by the Court when the application is made for administration. There is no death duty apart from an application for probate or administration.

11,126. It is a simple duty upon taking out the letters of administration?—Yes, but it is levied in the form of a per-centage upon the value of the estates.

11,127. You have no complicated system of death duties in India?—No.

11,128. Would you be able to tell us how much of that 3,063,463 represents probate?—No; the different court fee stamps are not distinguished in the accounts.

11,129. The increase in Bengal in the charges seems to have been very heavy, from 23,000 Rx. to 63,000 Rx.?—Yes; that is only in proportion to the increase in the revenue. The revenue has increased very much in Bengal.

11,130. Is it quite correct to reckon under court fee stamps a probate stamp? As we over here generally understand court fee stamps, we mean the stamps taken in actual judicial proceedings. We should not reckon, for instance, under that head a stamp levied on the probate of a will; and when we were talking about these courts of justice we noticed, if you remember, how very nearly the receipts in the Courts of Justice, including, as it appears, probate revenue, covered the expenses, so that in reality a very small charge for Courts of Justice was laid upon the taxpayer. The reason why I asked whether you could break those sums up, and see how much goes to probate, is a doubt in my mind whether the sums levied on probate would properly be reckoned under court fee stamps?—They are levied purely for judicial proceedings; no fee is levied unless a man comes into court and takes out probate of the will or letters of administration; and the proceedings are taken in the ordinary civil courts.

11,131. Well, you may say that the procedure here is something of the same kind; an executor has to take out his probate. That, I suppose, must be done before a court?—Yes; I should think so.

11,132. We should not reckon that as part of the court fee stamps, we should reckon it separately?—I suppose it depends on whether you levy a duty independently. You levy what is really a succession duty in this country, whatever be the form in which it is levied?

11,133. Yes; but I mean the probate duty the court can levy for allowing the property to pass?—Yes.

11,134. The fees fall for payment on the persons entitled to the property?—Yes.

11,135–6. Supposing 2,000,000 Rx. out of that 3,000,000 Rx. were derived from probate, it would be a question in my mind whether you could properly set that as against the charges of the court?—The amount of the probate duty is very small indeed. The natives, as a rule, do not take out letters of administration or probate on succession.

11,137. But the wealthy people are obliged to do so?—No, they are not. Under the Hindu law the property often vests in the family; there is no succession. And, further, neither in the case of Hindus nor of Mahomedans nor of Buddhists is the taking out of any Court certificate on succession compulsory.

11,138. If they have not any occasion to take out letters of probate or administration and the amount is very small, it is not worth asking questions about?—It is very small. Natives are allowed to take out probate of a will if they choose, and in a few cases they do; but it is quite the exception.

11,139. What advantage does it give them?—It merely gives them proof of title in certain cases where the property is not vested in the family, or where disputes may have arisen.

11,140. Then I think the next branch is the Excise?—Yes. Excise.

11,141. The Excise has been almost a more elastic revenue than the Stamps, has it not? Taking 1883–84 as the basis, it has risen from 3,836,000 Rx. to 5,388,000 Rx.?—Yes. The increase has been from 2,494,000 Rx. in 1875–76 to 5,388,000 Rx. in 1893–94.

11,142. And what were the charges in those two years?—The charges were in 1875–76, 87,000 Rx., and in 1893–94, 193,000 Rx.

11,143. Have you there the per-centage that that 193,000 Rx. bears to the present revenue?—It is about 3½ per cent.—just a fraction over.

11,144. That very nearly corresponds with what we had arrived at in the case of the stamps?—Yes.

11,145. And what was it in 1875–76?—A little under 3½ per cent.

11,146. So that the per-centage has rather increased?—Yes, it has increased very slightly.

11,147. Can you tell us to what that increase is due?—The increases have occurred chiefly in three provinces, Bengal, Madras, and Bombay. The increase in Bengal is 34,000 Rx., in Madras 41,000 Rx., and in Bombay 29,000 Rx. The increased charges have been incurred almost entirely in the interests of better administration of the excise, and the largest increases in the revenue have taken place in the same provinces; in Bengal 608,000 Rx. has increased to 1,215,000 Rx.; in Madras 635,000 Rx. has increased to 1 287,000 Rx.; and in Bombay 398,000 Rx. has increased to 1,072,000 Rx.

11,148. The increase, you say, has been incurred to improve the revenue; has it been in the way of increasing the number of officers so as to prevent evasions of the Excise law?—The increase has been occasioned partly by measures adopted in the interests of good government, apart from any expectation of improved revenue. But where the charges have increased most, the revenue has increased most also. There has, however, been an increase of establishments. The superintendence has increased from 3,000 Rx. to 6,000 Rx. between 1875–76 and 1893–94; and

Mr. S. Jacob, C.S.I.

17 June 1896.

Excise.

collectors' establishments from 48,000 Rx. to 86,000 Rx.; and in Madras there has been a special system introduced, under which the Salt and Excise are managed by the same establishment, a certain proportion of the joint charges being debited to Excise. There the charge has increased from 20,000 Rx. at the time when there was a separate establishment, to 61,000 Rx. in 1893–94.

11,149. Are there any assignments or refunds chargeable against this head?—Yes, the refunds have increased considerably. They occur chiefly in Bombay. They have increased from 3.321 Rx. to 35,000 Rx., and the charge occurs almost entirely in Bombay, and appears to be only on account of revenue collected on behalf of those Native States, in which we have taken over the administration of the excise. Then assignments and compensations have also increased, and that too is especially in Bombay. and owing to the same arrangements. In some cases a fixed annual sum is paid to the Native States whose excise administration we have taken over. There was nothing paid on that account in Bombay in 1875–76, but, under the arrangements which have been since made, 37,000 Rx. was paid in 1893–94.

11,150. How are the charges distributed between Imperial and provincial?—Three-fourths of the charge are Imperial and one-fourth provincial, and the revenue is distributed in the same proportion.

11,151–3. Of the Excise revenue the larger part is for "License and Distillery Fees and Duties for the sale of Liquors and Drugs," including license fees and farmers' rents, distillery fees, and a duty called the "still-head duty," which make up between them over 3,500,000 Rx. out of the total of 5,388,000 Rx. License fees for the sale of opium and the duty on opium consumed in India, amount to about 1,000,000 Rx. In fact, the Excise revenue mainly consists of duties on the manufacture and sale of spirits and on the consumption of opium?—Yes, the duty on opium is the principal item after those on the manufacture and sale of spirits. There is also a duty on ganja which produces about 167,000 Rx.

11,154–5. Is ganja the intoxicating hemp, which they smoke?—Yes. They also drink some preparation from this drug.

11,156. I think we heard from you and Sir Henry Waterfield, at the beginning of our inquiry, an opinion that the excise duties had been increased, did we not?—Yes.

11,157. Well, inasmuch as there are only two main duties, do you suppose the increase has been very considerable?—We got information from India, and I think it has been put in.*

11,158. Yes; you do not recollect it?—No, I do not remember the exact figures.

11,159. My recollection is that the increase was notable?—There had been an increase, I know. I cannot remember just now what the exact increase was.

11,160. The excise duties are really confined, more or less, to intoxicating articles of consumption?—Yes, entirely to intoxicating articles of consumption.

Provincial Rates.

11,161. The next heading is the Provincial Rates. Will you describe to us how this heading comes to form an item of revenue?—The provincial rates are rates which are collected for special purposes, in addition to the land revenue and generally at a fixed per-centage upon the land revenue.

11,162. Are they settled by the Provincial Government, or are they settled by the Central Government, but levied by the Provincial Government and used for Provincial Government purposes?—They are very largely used for purely local purposes, but some of them are provincial rates which are used for the general purposes of the Provincial Government.

11,163. Can you describe of what they consist generally?—They consist of rates for schools and hospitals and roads, and cesses for the district post, for village service and Patwaris, and in one or two provinces there is a small rate levied on Wards' estates for the charges of the establishments which are required in connexion with their management.

11,164. But the chief part of this revenue consists of the cess on land for the expenditure on roads?—Yes.

11,165. And, in fact, nearly all these headings are cesses on land?—Yes; they are almost entirely cesses on lands.

11,166. And the charges of collecting those cesses are charged against Land Revenue?—Generally that is the case; they are collected with the land revenue in every instance almost.

11,167. Would it not be reasonable to class those receipts—for the purpose of comparing the growth of the land revenue—with the land revenue, leaving the charges of collection as they are? You think that method not so correct as deducting the charge of collecting these items?—I think the other would be the most correct method if the new charges were entirely new, but some of them were incurred before, though not brought on the accounts.

11,168. You see that 500,000 Rx. odd, which we have deducted from the cost of collecting the land revenue, for the purpose of comparison, ought to come against this head of revenue, ought it not? As it stands now, we have a receipt of 3,500,000 Rx with the rather absurd appearance of the charge against it being only 53,000 Rx.?—Of course that charge does not represent the real cost of collecting the provincial rates.

11,169. If we put in the charge under Land Revenue we get nearly 600,000 Rx.?—Yes; but that is not the cost of collecting, that is the charge to meet which the cesses are collected.

11,170–1. Is not that the charge of collecting the cesses?—No, not the charge of collecting them, it is the charge to meet which the cesses are imposed.

11,172. Did these provincial rates exist in 1875?—Yes, but the amount levied then was small as compared with the present.

11,173. Can you give us the figures?—Yes, it was 1,942,000 Rx. in 1875–6, and 3,515,000 Rx. in 1893–4.

11,174. Has there been any material increase in the charges for the collection of the provincial rates?—No, there has been a very slight increase, merely from 53,000 Rx. to 54,000 Rx.

11,175. Where do these charges mainly occur?—The charges occur mainly in Bengal.

11,176. And why are they large there?—Because in Bengal the rates are collected by a separate establishment. They were imposed by an Act of a much later date than the permanent settlement, and they are not subject to exactly the same conditions as the land revenue under the permanent settlement.

11,177. Therefore the charges will nearly represent the cost of collection in Bengal?—Yes, but of course the supervision charges come under the head of land revenue; and also included in this is a charge for the reassessment from time to time of the revenue for the purpose of local rates.

11,178. What is the nature of the charges incurred in each province?—In Lower Burma the charge is now 3,000 Rx., which is almost entirely for commission paid for the collection of the rates, and in Assam it is also commission. There it is very small, only 300 Rx. The increase in Bengal I have already mentioned. There is a joint establishment there for the collection of local and provincial cesses, and about 13,000 Rx. is due to the appointment of an establishment for valuation and revaluation, with a view to increase the revenue. In the North-Western Provinces a small establishment is maintained for the collection of the Nazul Fund (escheats and lapses). In the Punjab the allowance formerly paid to lambardars (headmen) and patwaris (village officers) for collecting the local rate was discontinued in 1889; the present charge is the patwaris' share of the commutation fees. In Bombay the charge is a commission for collecting the local cess.

11,179. I think you have said the charges under this head are solely provincial?—They are provincial or local.

11,180. The next head is the Customs. The Customs of late years have undergone a good deal of alteration, have they not?—Yes, they have undergone several alterations; from the 1st April to the 16th August of 1875 imports into India were taxed at 7½ per cent., and for the remainder of the year at 5 per cent. Liquors paid special rates; cotton piece goods paid 5, twist 3½, and iron 1 per cent., throughout the year, and there were certain other exceptions Then later on the import duties were entirely abolished except on arms, ammunition and military stores, and on liquors, and, to a very small extent, on opium and petty articles. In 1888 a duty of 6 pies per gallon was imposed on petroleum. On the 10th of March 1894 the import tariff was re-introduced, the general rate being 5 per cent., and for the last three weeks of the year 1893–94 duties were levied under it; but cotton manufactures were exempted until a further Act was passed on the 27th of December 1894, when they were subjected to a duty of 5 per cent. In February 1896 a further change was made in the cotton duties. The import and excise duties of 5 per cent. on cotton yarns were abolished, the import duty

* *See Waterfield*. 679–97, and *Bernard*, 1726–1816.

on manufactured goods was reduced from 5 per cent. to 3½ per cent., and an excise duty of the same amount (3½ per cent.) was imposed on cotton goods of all counts manufactured in Indian mills. As regards exports, a duty of 3 per cent. was, in 1875–76, levied on cotton goods, hides and skins tanned, oils, seeds, and spices; 4 per cent. on lac, 3 annas per maund on grain, and 3 rupees per maund on indigo. By the tariff of 1875 the only export duties were on indigo 3 rupees per maund, on rice 3 annas per maund, and on lac 4 per cent. In February 1880 the duties on indigo and lac were removed.

11,181. From the Statistical Abstract I gather that up to 1893–94 there were no duties on cotton goods?—There were in 1875–76.

11,182. There were in 1875–76, but between 1883–84 and 1893–94?—No, there were none.

11,183. During that period the chief article taxed was liquors, was it not?—Yes.

11,184. On other articles imported the receipts were only Rx. 392,000. The export duties bring in a considerable amount; are those export duties on anything else except rice?—No, the export duties now in force are levied only on rice, either in its husked or unhusked form.

11,185. Then there is an item called "land customs"; is that between native territories and British India?—That includes also goods passing between the foreign European settlements on the continent of India and British India. They are very slight; the revenue and the charge are very small.

11,186. The total revenue from sea customs did not exceed about 1,600,000 Rx. a year, in 1893–94?—In 1893–94 the gross customs revenue was 1,682,000. Rx.

11,187. But in the budget of 1895–96 it had gone up to 4,815,000 Rx., had it not?—Yes, it has risen very much. The Budget figure for 1896–97 is slightly lower—4,482,000 Rx.—owing to the changes made in February 1896, as just mentioned.

11,188. How much of that comes from the cotton goods?—The amount in 1895–6 was expected to be a little over 1,200,000 Rx.

11,189. Therefore, out of that increase of 3,000,000 Rx., from 1,600,000 Rx. to 4,814,000 Rx., about 1,200,000 Rx. would be due to cotton goods?—Yes. But in 1896–97 the amount comes down to about 1,000,000 Rx., owing to the changes already mentioned.

11,190. Are there any new duties on articles of export?—No.

11,191. Then can you tell us the revenue in 1875–76 and in 1893–94, and the charges at those two dates?—The revenue in 1875–76 was 2,724,000 Rx., and in 1893–94 1,682,000 Rx.; the charges were 188,000 Rx. and 144,000 Rx. respectively.

11,192. But now, if we take 1895–96, those charges have increased, have they not?—Yes; first with the imposition of the general duties, and again with the imposition of the cotton duties.

11,193. In the budget they were 210,000 Rx., were they not?—Yes, in the Budget of 1895–96.

11,194. Was that increase of staff necessarily required to levy the new duties?—That was the estimated charge; but the revised estimate for 1895–96 is 201,000 Rx.

11,195. Well that would give a little over 4 per cent., would it not, on the revenue return of 4,800,000 Rx.?—Yes, a little over 4 per cent. on the revised estimate, which is 4,900,000 Rx.

11,196. Do those charges include the whole of the customs charges, or is any part of the custom charges wrapt up in the land revenue charges?—No, they include the whole of the charges.

11,197. Superior officers and all?—Yes; in very small ports, where it is not worth while having highly paid special collectors, the collector of the district does supervise the collection of the customs revenue, but the proportion of the whole charge is very small indeed.

11,198. Not worth taking into consideration?—No.

11,199. But in this respect the account of the customs revenue differs from that of the excise and stamps, inasmuch as a portion of the collection charges of the excise and stamps must be looked for in land revenue; in the case of the customs, practically none?—Yes, that is so; the customs charges also include the charges for the collection of statistics—trade statistics.

11,200. That, I think, is the case almost everywhere, is it not?—Yes, I think so.

11,201. The Customs Department is the only one that can keep an account of the imports and exports, and therefore that can keep a statistical account?—Yes.

11,202. Are there any refunds or assignments chargeable against this head?—Yes, there are some. There is a payment under assignments and compensations, which is made to the States of Travancore and Cochin, being compensation for customs revenue surrendered by them. It amounted in 1875–76 to 17,000 Rx. and in 1893–94 to 15,000 Rx. The refunds were 3,000 Rx. in 1875–76 and 45,000 Rx. in 1893–94.

11,203. Are the charges imperial, or provincial?—They are provincial, except in Bombay.

11,204. In Bombay they are charged to Imperial?—Yes. The revenue is Imperial everywhere, except some small miscellaneous revenue from wharves and such like.

Assessed Taxes.

11,205. The next heading is "Assessed taxes." Will you tell us what taxes come under that definition?—At present the only tax is the income tax, and there is a small tax in the Central Provinces, which is really of the nature of an income tax, but has come down from previous Native Governments, and is called Pandhari.

11,206. Therefore we might almost call this head "Income tax"?—Yes; it is practically income tax.

11,207. And was that the only assessed tax in 1875–76?—There was no assessed tax generally in 1875–76.

11,208. No income tax?—No, only this small Pandhari tax in the Central Provinces.

11,209. Had the income tax been entirely repealed in 1875–76?—Yes; before 1875–76.

11,210. Was it replaced by any substitute for the time being?—No.

11,211. And what is the present income tax?—The present income tax was imposed by Act II. of 1886. The general rate is 5 pies in the rupee (equal to about 6¼*d.* in the 1*l.* or 2·6 per cent.) on salaries and pensions above 2,000 rupees a year, and on those below 2,000 rupees a year it is 4 pies in the rupee (5*d.* in the 1*l.* or about 2 per cent.). Then other sources of income pay a graduated scale up to 2,000 rupees. From 500 to 750 Rs. they pay 10 Rs.; from 750 to 1,000 Rs., 15 Rs.; from 1,000 to 1,250 Rs., 20 Rs.; from 1,250 to 1,500 Rs., 28 Rs.; from 1,500 to 1,750 Rs., 35 Rs.; from 1,750 to 2,000 Rs., 42 Rs.; above 2,000 rupees they pay 5 pies in the rupee, as in the case of salaries and pensions.

11,212. In a comparison of 1875–76 with 1893–94 practically there would be next to nothing in 1875–76?—Nothing except the Pandhari tax in the Central Provinces.

11,213. What would that amount to?—15,000 Rx.

11,214. And now in 1893–94 what would the figure be?—Now the revenue is 1,718,000 Rx., that is deducting refunds; the gross revenue is 1,739,000 Rx.

11,215. And what is the charge of collection in each year?—There was only 10 Rx. in 1875-76 and 31,000 Rx. in 1893–94.

11,216. That is a very small per-centage, is it not?—Yes; that is very largely owing to the fact that the general charges under land revenue include the general establishment which is employed in the assessment of the income tax.

11,217. Now this tax is common to the whole of India, is it not?—Yes; except Upper Burmah. There is a capitation tax in that province under land revenue, and the income tax has not been imposed in either Upper Burmah or generally in Lower Burmah. The tax is levied upon Government officers' salaries in both provinces, and upon private incomes in some of the large towns of Lower Burmah.

11,218. Where is the income tax chiefly collected; is it pretty even throughout the provinces, or is there any single province that gives the larger part of it?—The portions collected in Bombay and Bengal are the largest—442,000 Rx. in Bengal and 383,000 Rx. in Bombay in 1893–94.

11,219. Is this a permanent tax now or is it only imposed for a certain number of years?—It is permanent at present unless, and until, an Act repealing it is passed.

11,220. Are the receipts divided between Imperial and provincial revenue, or are they confined to Imperial?—They are divided half and half between Imperial and provincial.

Mr. S. Jacob, C.S.I.

17 June 1896.

Registration.

11,221. Does that include the tax on railway profits?—No; the tax on railway profits is credited entirely to Imperial.

11,222. Does the tax on railway profits fall under the income tax?—It is the income-tax on the net profits of railway companies, but it was left out of account in the arrangement between Imperial and provincial, and is credited wholly to Imperial.

Tributes.

11,223. Are there any assignments or refunds in this case?—There are refunds, but no assignments. The refunds amounted to 22,000 Rx. in 1893–94, but the amount for that year is larger than usual, about half being due to an exceptional repayment of the tax levied on the salaries of servants of two railways, residing and drawing their pay in Native States. The amount for that year is larger than usual.

11,224. Is there any exemption for small incomes?—Yes, there is an exemption for incomes below 500 rupees per annum.

11,225. Are they entirely exempt?—Yes; they are entirely exempt; and military officers and soldiers with a salary not exceeding 6,000 rupees a year are exempt.

11,226. And above the 500 rupees a year it is on a graduated scale?—Yes, for the general public it is, up to Rs. 2,000.

11,227. I mean this income-tax is on a graduated scale?—Yes, but on salaries it is levied at a fixed percentage throughout.

11,228. Is there much difficulty in getting information, on which alone your graduated rate can be charged?—Yes, and I think it is owing to the difficulty of obtaining exact information that a graduated scale is imposed for the lower incomes. We cannot exactly fix the amount of a man's income, but we can decide that it comes within certain limits.

11,229–31. I suppose the graduated scale practically applies in the case of traders?—Yes; there is no tax upon income from land; the income-tax is not applied to income from any land whatever.

11,232–33. (*Mr. Naoroji.*) The income-tax, as I understand, is six pies in the rupee?—Five pies in the rupee on incomes above 2,000 rupees.

11,234. And under 2,000 rupees to 500?—4 pies.

11,235. It is diminished?—Yes.

11,236. How much is 5 pies in the rupee?—About 6¼*d.* in the £.

11,237. (*Chairman.*) This brings us to Registration. Would you describe to us the nature of this branch of revenue; what do the receipts consist of?—The receipts consist of fees which are paid for the registration of documents. Certain instruments are compulsorily registered, and others may be optionally registered. Fees are charged for the registration, which are credited under this head.

11,238. Where is the office at which the register is kept?—There are registration offices in every district, and sub-registrars in the interior of the districts.

11,239. Is this a branch of revenue which has existed for a long time?—Yes, it has existed for some time.

11,240. I see that the receipts are not very big, 416,000 Rx.?—No, the receipts are not very large.

11,241. Can you compare 1875–76 and 1893–94?—Yes, the gross revenue in 1875–76 was 187,000 Rx. and the charge 136,000 Rx., leaving a net revenue of 51,000. In 1893–94 the revenue was 416,000 Rx. and the charge 224,000 Rx., leaving a net revenue of 192,000 Rx.

11,242. Do I gather that these fees are not imposed primarily as a source of revenue? Has the general law which sanctions them another object in view, namely, to facilitate and in many cases to make compulsory registration of documents relating to property?—Yes; it is with the object of preserving evidence of them, and to have an official record of all instruments affecting immoveable property.

11,243. And therefore one does not look upon it as a branch of revenue: one only looks to see if it covers the expenditure? — Yes; practically, however, it is made to produce a small revenue now, though the fees charged are generally very low.

11,244–45. That is to say, the expenditure is 223,000 Rx. against 416,000 Rx. revenue?—Yes.

11,246. There is one head which has not been mentioned —Tribute and contributions from Native States?—Yes; that is a head of revenue; there are no charges against that.

11,247. No charges at all against that?—No.

11,248. Who administers it and is responsible for seeing that the sums are levied?—There are various officers that are responsible. Generally political officers are primarily responsible for their levy; but the account officer also, as a rule, keeps an ultimate check upon them, and inquires, if they are not realised, what the reason is.

11,249. Are they ever added to or reduced?—Yes, they are sometimes both added to and reduced.

11,250. And by what central office are they administered, the Home or the Finance Department?—By the Foreign Department.

11,251. But I suppose there must be some machinery for the collection. Is each State bound to remit the sum at certain dates?—As a rule, they are bound to remit the sums. In certain cases we have to make opposite payments under assignments and compensations from which we deduct the tribute. For instance, where we have to make a payment under the head of assignments to a Native State for salt compensation, and it has to make a payment of tribute to us, we simply deduct the tribute in making any payment.

11,252. And it is brought to book on each side?—Yes.

11,253. It makes a considerable head of revenue—775,000 Rx.?—Yes; it is composed almost entirely of treaty payments.

11,254. And, of course, no refunds or assignments occur under them, I presume?—No.

11,255. I think there is no other head except Post Office and Telegraphs?—No.

The witness withdrew.

Adjourned till to-morrow at 11 a.m.

At the India Office.

TWENTY-THIRD DAY.

Thursday, 18th June 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. STEPHEN JACOB, C.S.I., Controller and Auditor General of the Government of India, recalled and further examined.

Mr. S. Jacob, C.S.I.

18 June 1896.

Post Office.

11,256. (*Chairman.*) Would you tell us shortly what is the organisation of the postal service in India, who is at the head of it, and under what department of Government it is?—The Imperial Post Office is under the central control of the Director-General of the Post Office, who has under him Postmasters-General or Deputy Postmasters-General in each province, and is under the direct control of the Financial Department of the Government of India.

11,257. We have already had in evidence a description of the relation between the Postal Department and the Financial Department, therefore I do not think it necessary to enter further upon that point; but I would just ask whether the Postmaster-General in each of the provinces is dependent and subordinate to the Director-General, or is he an independent officer?—He is subordinate to the Director-General.

11,258. And takes his instructions from him and not from the Provincial Government?—From the Director-General.

11,259. Taking now the postal revenue, can you give us a comparison of the postal revenue and charges in the years 1875–6 and 1893–4?—Yes; the gross revenue of the Imperial Post Office in 1875–6 was 764,000 Rx., and the gross charges 830,000 Rx., the net deficit being 66,000 Rx.; for the district post offices the revenue was 2,000 Rx. and the charges 81,000 Rx., the net deficit 79,000 Rx., making a total net deficit of 145,000 Rx.

11,260. Now, in 1893–4?—In 1893–4 the gross revenue of the Imperial Post Office was 1,554,000 Rx., the gross charges 1,436,000 Rx., and the net revenue Rx. 118,000; for the district post offices, the revenue was 8,000, the charges 122,000, and the net deficit 114,000, making a total net revenue of 4,000.

11,261. Carry that comparison forward to the budget of 1895–6 (but always with the reservation that must be made when we are dealing with a budget estimate), that works out, does it not, to a larger net revenue than in 1893–4?—Yes, and I should say that the net revenue would probably be higher even than the budget estimate in 1895–6. The revised estimate for that year works out to a net revenue of Rx. 72,000, and the actuals will very probably exceed even that.

11,262. Therefore we have evidence that the postal revenue is distinctly a progressive revenue, and that its net proceeds for the benefit of the Treasury are generally increasing?—Yes, that is the case.

11,263. Could you analyse the charges of the Post Office under their different heads, and compare these charges for 1875–6 with those for 1893–4?—Yes; the charges of the Imperial Post Office are divided under these main headings. First, Direction and Account and Audit (these two heads are separated now, but they were not in 1875–6, so that I take them together) Rx. 16,000 in 1875–6; Rx. 64,000 in 1893–4. Presidency and district offices, 385,000 in 1875–6; 817,000 in 1893–4. Conveyance of mails (including subsidies) Rx. 334,000 in 1875–6; Rx. 322,000 in 1893–4. Discount on postage stamps, Rx. 11,000 in 1875–6 and 14,000 in 1893–4. Stationery and printing and miscellaneous, Rx. 11,000 in 1875–6 and 47,000 in 1893–4. That makes a total in India in 1875–6 of Rx. 757,000 against Rx. 1,264,000 in 1893–4. Then in England there are charges for stores, and for a certain proportion of the postal charge which is paid by the Indian Post Office to the English Post Office for the conveyance of mails between India and England. That cost 65,000*l.* in 1875–6 and 104,000*l.* in 1893–4. Exchange came in the first year to 7,000*l.* and in 1893–4 to 68,000*l.*, making a total charge of 829,000 and Rx. 1,436,000.

11,263*a*. If, therefore, you were to deduct the increase in the charge for exchange beyond the rate in 1875–6, the net revenue would be considerably higher than is shown here, would it not?—Yes, it would.

11,264. And that improvement would be even more marked in the current year of 1895–6, would it not?—Yes, owing to the lower rate of exchange then.

11,265. Now, taking the "direction and account and audit," I observe that the increase in the total charge between 1875–6 and 1893–4 is very close upon 300 per cent., while the revenue itself is not much more than doubled. Can you explain what the causes of the increase are?—There have been some increases in salaries. Salaries have increased from 6,000 in 1875–6 to 14,000 in 1893–4. Office establishments, which includes both the Director-General's and the account office establishments, from 9,000 in 1875–6 to 46,000 in 1893–4, and office expenses from 1,000 in 1875–6 to 4,000 in 1893–4. The increase in the salaries is due to the increase in the revenue and charges of the department.

11,266. That is to say, there has been a much larger business to be transacted and you have had to increase the staff?—Yes, the staff has been increased.

11,267. The superintending staff?—Yes. Then the increase of the office establishments is chiefly in the Accounts Branch; and is owing largely to the new services rendered by the postal department since 1875–6, some of which, I may remark, bring in no revenue to the Department.

11,268. What are those services?—The money order work has been taken over by the Post Office since 1875–6, and the savings banks have also been taken over in the period. The work in those two departments is very large and necessitates a very large increase in the office establishment of the Account office, because the business of both Departments requires continual and careful checking. The Savings Bank business brings in, however, no revenue to the Post Office.

11,269. When you say "were taken over," were they in existence before 1875–6?—There were a money order department and a savings bank department in the district treasuries before that, but the work they did was comparatively very small. It has increased by leaps and bounds since it was taken over by the Post Office.

11,270. What is the distinction between the salaries and office establishment? Does not the office establishment consist of pay and wages?—Yes; but "salaries" are the pay of the superior officers, and "office establishment" is the heading for the pay of the clerks and menials employed under them.

Mr. S. Jacob, C.S.I.

18 June 1896.

Post Office.

11,271. In reality it would be superintendence and office establishment that are represented by the two terms?—Yes.

11,272. Can you give us the constitution of the staff as it is at present?—In 1875–6 the Account office formed part of the Director-General's office, and the staff then consisted of four officers, namely, the Director-General on Rs. 3,000, one deputy on Rs. 1,500, one assistant on Rs. 1,250, and a compiler of accounts on Rs. 1,000. Since then the Post Office work has considerably expanded, and especially that of the Accounts Branch, owing, as already mentioned, to the department having taken over from the district treasuries in 1880 and 1882 the business connected with money orders and savings banks; an account officer (called Comptroller), with pay rising to Rs. 1,400, then was accordingly appointed with a separate office, having under him a Deputy-Comptroller, on Rs. 900, for the money order branch of his office, and an Assistant Comptroller, Rs. 500 to 600, for the Savings Bank branch. The Director-General's staff was also increased by an Assistant Director-General (Rs. 800), and a Secretary to the Director-General (Rs. 450 to 600). Later on, the work having increased, a superintendent was also temporarily attached to each of the offices of the Director-General and the Comptroller. By 1893–4 the Director-General's staff had been further increased by one assistant (Rs. 700); and in the Comptroller's office a permanent assistant (Rs. 400 to 500) had been substituted for the one temporarily attached. Some alterations in pay had also been made The staff now consists of—

	Rs.	Rs.	
1 Director General -	3,000		a month
1 Deputy Director General - - -	1,500 to 1,750		,,
3 Assistants Director General -	1 at 750	,, 1,000	,,
	2 at 700		,,
2 Superintendents	200 to 500		,,
1 Comptroller	800 to 1,200		,,
1 Deputy Comptroller	700		,,
2 Assistants - -	1 at 500 to 600		,,
	1 at 400 to 500		,,

11,273. And the salaries of these gentlemen altogether would make up that sum of Rx. 13,656?—Yes, with small additions for leave allowances, &c.

11,274. You say that the business of the money orders and the savings bank department taken over from the district treasuries in 1880 and 1882, have shown a very great increase. Could you give us any figures illustrating that increase?—Yes; the following statistics show the progress made in those branches:—

Inland Money Orders.	1878–9 (last complete year in Treasuries.)	1880–1 (first complete year in Post Office.)	1884–5.	1893–4.
Number issued - -	245,468	1,604,174	3,550,257	8,754,940
Value of money orders issued.	Rx. 892,472	4,570,858	8,208,856	18,353,401
Commission realized	Rx. 10,587	53,958	110,623	229,595

Savings Bank.	1882–3 (first year in Post Office.)	1884–5.	1893–4.
Number of accounts - -	39,121	122,599	574,050
Balances of depositors -	279,680	1,344,191	8,265,732

11,275. Is the business of the money order office and the savings bank department carried on chiefly at the head office?—The checking and controlling are carried on at the head account office, but a very large number of post offices transact money order business and receive savings bank deposits.

11,276. My question was directed to this point. Here in England the central Post Office keeps the accounts of the savings bank depositors, for all the savings bank books come up to the central office, I believe; therefore the whole accounts of the savings banks are really kept at the central office. Is not that the case in India also?—Yes; the interest is annually credited by the head office, and once a year depositors' books come there to be checked.

11,277. The work in district offices is simply the receipt of the deposit, and repayment of it, if it is called for, the remittance of any of the moneys to the head office, and the necessary book-keeping that accompanies that work. The work in the district offices therefore is small?—Yes.

11,278. And one might expect to find a considerable increase of work in the central department from this growth of business, might one not?—Yes, there would be a very large growth owing especially to the savings bank and the money order work.

11,279. This very large increase in money order and savings bank work would fall chiefly upon the central department?—Yes; an effort is now being made to introduce a system of local audit of some portion of the money orders; it has only been tried in a few head offices at present, but it will, if successful, be extended as time goes on. I think it will be found to be a good experiment. The central account office has grown so very large that it was considered desirable, if possible, to decentralise the work.

11,280. How would that local audit be carried on? Who would be the auditor?—The initial audit of money transactions within their respective circles is carried out by the postmasters of certain head offices, as a preliminary to their final acceptance by the Comptroller; and there are superintendents or examiners, who test the local accounts.

11,281. The examiners would apply this test?—Yes.

11,282. How is that applied now; is there any test applied now?—Yes, the superintendents and the examiners check the various accounts at the local offices.

11,283. But they only check the accounts; they are not sent down to check on the spot?—Yes, they go to the offices and check the accounts in the offices themselves.

11,284. That is to say, the Director-General's office sends men from time to time into the different districts to check the accounts?—There are men whose duty it is to overhaul the accounts of the post-offices.

11,285. And they belong to the central office at present?—They are subordinate to the Director-General.

11,286. They are not local officers at present, except in so far as this new experiment has been tried?—They are under the local Postmasters-General.

11,287–8. My question was directed to this: you were saying that the Government were trying to decentralise to a certain extent the examination, and that for that purpose they had made a local audit in a few head offices. I want to understand whether the effect of that would be to relieve the central account office, with which we have been dealing, of this work, or whether it would relieve the headquarters of the Post Office in the province?—It would relieve the central account office. The object is not so much to actually decrease that office as to prevent its further increase; it has been increasing so rapidly in recent years.

11,289. Has this enormous increase of business arisen in consequence of a reduction of commission in the case of the money orders; and in the case of the savings banks by making the system of deposit and repayment easier, or to what do you attribute it?—No; there has been no reduction in the general rate of money orders. We charge one per cent. roughly for remittance, but the rates are fixed on a graduated scale. There has been, I think, some slight change in the particular stages at which a change is made in the rate, but the general rate has throughout this period been about one per cent. For savings banks there has been no change in the rate of interest or anything of that kind, except what has been made on general grounds, and, as a matter of fact, the rate of interest latterly has been reduced.

11,290. As a consequence of the general fall in the rate of interest?—Yes.

11,291. And the deposits have gone on increasing at this very progressive rate in spite of that reduction?—It has stopped the rate of progress slightly, but the increase still goes on. The real causes of that increase are the much larger facilities afforded by the very large number of offices which now issue money orders and receive savings bank deposits; and also the general popularity of the Post Office.

11,292. Probably that brings one to what is the real cause of this increase. While the money order business and the savings bank business was in the hands of the district treasuries, there were few localities comparatively at which money orders could be obtained or

savings bank deposits made. After the transfer and with the general extension of postal business and the opening of new offices, the facilities became so much larger and so much better known that they became popular, and the natives availed themselves very largely of them; would that be the explanation?—Yes, that is very largely the explanation; but the Post Office is in my opinion the most popular agency we employ for any work in India. People seem to trust the Post Office more than any other department.

11,293. It has the full confidence of the native population?—Yes.

11,294. (*Mr. Mowbray.*) What is the rate you pay on savings bank deposits?—On savings bank deposits now we pay $3\frac{1}{8}$ per cent. We were paying $3\frac{1}{4}$ until we reduced the general rates of interest in 1894–5 to $3\frac{1}{2}$. Since then we have reduced the savings bank rate to $3\frac{1}{4}$.

11,295. (*Chairman.*) I think you have told us that you had not any occasion to invest that part of the deposits, which you did not want to keep in cash; that practically the Government lends it to itself?—Yes. Except on the express wish, and in the name, of a depositor, for whom and on whose responsibility the investment is made and held, no part of the savings bank deposits is invested.

11,296. That is to say, the Government is responsible to the depositors, and being so, it uses such deposits itself; it may advance them for a railroad?—Yes, it uses them for any general purpose for which it might use loan money.

11,297. There is no capital account at the Post Office itself, is there?—No, there is no Post Office capital account.

11,298. Whatever works have to be done for the Post Office, such as buildings and so forth, are defrayed out of revenue?—Yes, and they are not charged to the Post Office; they are charged to the Public Works Department. In the Administrative accounts we charge them to the Post Office, but not in our Finance and Revenue accounts.

11,299. They are not included in the expenditure charged to the Post Office?—No.

11,300. Can you tell us at all what the amount is?—I see that in the administration accounts what is done is to charge the Post Office with the rent of the buildings.

11,301. What would that rent amount to?—They are charged with Rx. 39,815 in 1893–4.

11,302–3. Have you got the figures of the previous years?—In 1875–6, the rent was Rx. 18,463.

11,304. And have you an estimate for 1895–6?—No, I have not the detailed estimate for 1895–6.

11,305. But if we add on that rent to the charge of the Post Office we should hardly be able to say it is as yet self-supporting?—In 1893–4 the Imperial Post Office would be self-supporting.

11,306. Yes, but the total?—No, the total charges would not work out to a net surplus.

11,307. In fact we might put it in this way, that the Post Office would, even including that charge, be now self-supporting, if the exchange in England had remained as it was in 1875–6?—The Imperial Post Office would be self-supporting; the District Post Office is not intended to be self-supporting.

11,308. But I suppose the District Post Office is part of the Post Office expenditure, is it not? You cannot leave it outside when you are taking into consideration the result to the taxpayer of the Post Office administration?—A special cess is levied in some cases for the District Post Office. It is credited to provincial rates and the net charges in every province except Bombay and Madras are covered by the local rates that are levied.

11,309. And where are those local rates credited?—They are credited under provincial rates. In some cases it is a special cess for the district post, and in others it is a portion of the general local cess which is applicable to the expenses of the district post.

11,310–11. And do you suppose, if you brought those rates over on the revenue side as we are bringing over the rent of buildings on the other side, that the District Post Office would pay itself?—The amount which is taken as cess on account of district post in 1893–4 under provincial rates is Rx. 65,000.

11,312. Therefore, if we were to try to make the account complete we ought to bring in 65,000 Rx. as receipts?—Yes.

11,313. And in that case, even after charging the Post Office with the rent of buildings, the net revenue remaining would be larger than the Rx. 4,000, which you have mentioned?—Yes, considerably larger; but in no case is the district post chargeable to Imperial. If it is not paid by local cesses, the Provincial Government has to bear the net charge for it.

11,314. That comes as broad as it is long in the end. There is only one pocket that this charge comes out of in the end?—Yes, but the Imperial charge is only what is shown against the Imperial Post.

11,315–16. The credit that I find in the Finance accounts comes into the "Account of provincial rates "and charges for collection," under "Cess on lands for district post." Central Provinces Rx. 3,883; Bengal Rx. 43,322; North-West Provinces, Rx. 3,733; Punjab, Rx. 13,646; total, Rx. 64,584?—Yes, that is it.

11,317. It appears that under that head there is no credit in Madras and Bombay?—No; as I stated, in those two provinces no local cess is levied; the Provincial Government bears the charge there.

11,318. (*Sir James Peile.*) Are those cesses levied under legislation; I suppose they are?—Yes. The large amount in Bengal is levied under a special Act, which relates only to the district post cess; but in the other cases certain portions of the general local rate are applied to the charges of the district post.

11,319. (*Chairman.*) Are you quite satisfied with the manner in which those provincial rates are dealt with? Now taking such a case as the Post Office, do you not think on the whole that, while the District Post Office expenditure is brought into the General Post Office account and the special revenues excluded, it gives to the ordinary reader and the ordinary examiner of these accounts, not quite a true idea of what the Post Office is doing?—Well, in our accounts we follow the principle of crediting receipts, and debiting charges in the department in which they occur, not with reference to the object for which they are received or incurred.

11,320. You class these services rightly, I think, under the division of commercial services?—Yes.

11,321. But if you make up a budget of the commercial services, does not that exclusion of receipts considerably diminish the accuracy of the account?—I do not think so, because, as I said before, we do not work the district post as a commercial service. It is the Imperial Post Office that we work as a commercial service.

11,322. Why is the district post treated as a commercial service, if that is the case?—We must charge the District Post Office expenditure under the general head of "Post Office," but the receipts and charges of the Imperial Post Office are kept quite separate in our accounts.

11,323. Why not charge it against provincial rates under which you raise the money? You raise a revenue in connection with heavy charges which are incurred, but those charges and the revenue are brought to account in quite different budgets. While this particular head of revenue (Provincial rates) stands credited with this amount of revenue, there is no offset against it. If you take commercial accounts, surely it is very desirable in some shape or other, that the real result should be shown, and if the District Post revenue is not credited to the commercial account, surely the charges of the District Post, which, you say, is not worked as a commercial service, ought to be excluded and put under provincial rates, ought it not?—Not so, in my opinion. The term "Commercial Services" is, I ought to explain, not employed in our accounts; it was employed by Sir Henry Fowler in a special recast of our accounts, which was drawn up by him; and the classification of certain heads of the account as "Commercial Services," may be useful for certain purposes: but the term must not be unduly pressed against the actual classification adopted in our accounts, or against our account system. As I said just now, we follow the principle of debiting the charge in the department in which it occurs. The charge occurs in the Post Office Department; the revenue is a cess on the lands, and it is levied in the Revenue Department. The Postal

Mr. S. Jacob, C.S.I.

18 June 1896.

Post Office.

Department have not, and could not have, anything to do with the levying of that. Another system may, of course, be equally good from a different point of view; but this is the system which has been adopted in India after full deliberation; we credit the revenue in the Department in which it is levied, and charge the expenditure in the Department in which it is incurred.

11,324. The criticism which I would venture to make upon that is that the Indian Government hardly makes the best account for itself. Here you are exposed to very considerable criticism. You are showing a largely increasing expenditure; but it takes us a very long time before we can ascertain from the accounts, and we only do it with your assistance, the real merit of the Indian Administration. In this very case of the Post Office, after we have been told what we understand to be the true charges, and the true revenue, we find that the revenue which might fairly be credited to the Department is considerably larger, and therefore much more creditable to the Post Office administration than the accounts, or the statements, as any ordinary person I maintain would read them, show?—I am not sure that any ordinary person could understand any Government accounts; but I think anybody who is accustomed to dealing with accounts would be able to find out that in our Finance and Revenue Accounts we have a receipt under provincial rates which is distinctly levied for the district post.

11,325. That might be the result of a very close examination and a most excellent memory; but most of us have neither the memory nor the time to spare for that examination?—That may be so; but our accounts are drawn up on the principle I have stated, which seems to me to be an intelligible one. In our Administration Reports of each Department, which are drawn up so as to show the true financial position, we bring into the accounts on both sides the various receipts and charges which appertain to the Department, but which in the Finance and Revenue accounts are charged under other heads.

11,326. My only point in this matter is an anxiety that the Indian Administration should really show the extent to which it is successful?—That I quite understand, but at the same time it saves a great deal of time and trouble if you account for revenue and expenditure in the department in which they occur. I think it is a cheaper system than endeavouring to transfer the revenue and expenditure to the departments to which they are supposed to appertain. And further, if you begin transferring, it is a little doubtful where you are to stop; and in the end the accounts may still not be really accurate.

11,327. I am not quite so despondent as you are as to the possibility of making the general public understand the result of an account.

11,328. (*Sir James Peile.*) Would you not say also that the rates are not a commercial receipt, but a grant from the taxation fund?—Yes, certainly, they are taxation.

(*Chairman.*) Yes, my point is that the expenditure should be excluded too.

(*Sir James Peile.*) I quite see your point.

11,329. (*Mr. Buchanan.*) Supposing, under "District Post Office Collections" there was a note at the foot of the page, saying, that the great deficit, which the ordinary person sees there, is met by a provincial rate?—Yes, I think it would be advantageous to put a footnote in the accounts to show that there are receipts under another head to meet the District Post charge.

11,330. Besides the Rx. 65,000 credited under "Provincial Rates," there was also some local revenue in Madras and Bombay, was there not?—No, there is not any special local revenue. The Provincial Government assigns a certain portion of its revenue for the purpose. In the Post Office Report every year the account is worked out, bringing in all the charges and the receipts in the administration account.

11,331. (*Chairman.*) In the annual report made by the Post Office itself?—Yes.

11,332. Have you got one here?—Yes; that is the one for 1893–4.

11,333. Might I just look how you have stated it there?—That is the paragraph headed "The Financial Position of the Post Office" (*showing*).

11,334. I think, as Mr. Buchanan suggests, that the point on which we have been conversing might be met if a note were put to the account?—Yes, I do not see any objection to that; I think it would be an advantage.

11,335–6. Now, passing on to the Presidency and District offices, which, I think, is the next heading in the summary of the charges. Can you analyse those charges as you have done the others?—Yes. The salaries have increased from 52,000 in 1875–6 to 96,000 in 1893–4; the establishments from 290,000 to 589,000; travelling expenses from 12,000 to 42,000; contingent charges from 31,000 to 90,000; total from 385,000 to 717,000.

11,337. Have you any remark to make upon the increase in salaries?—The increase in salaries arises in appointments of the lowest class, as will be seen in the following table:—

	1875–6.	1893–4.
Postmaster-General Inspector-General Railway Mail Service Deputy Postmaster-General	12	15
Presidency Postmasters	3	3
Superintendents Assistant Superintendents Inspectors	165	375

The pay of the last class averaged Rx. 204 a year in 1875–6, and Rx. 185 in 1893–4, showing that the increase has taken place in the inferior appointments of the lowest class.

11,338–9. The average pay of the last class appears to have been higher in 1875–6 than it was in 1894–4?—Yes; that is why I say that the increase has taken place in the numbers of the inferior appointments of the last class.

11,340. I also notice that there were 12 of these high officers in 1875–6 and 15 in 1893–4, while in the budget 1895–6 there were only 13?—The Inspector-General of Railway Mail Service was transferred from the Director-General's office, where an assistant on lower pay was substituted. Apart from this, the increase was entirely in the lowest offices of that grade—the Deputy Postmasters-General—and some of the smaller provinces have been amalgamated recently, with the effect of reducing the number of appointments.

11,341. Then, with regard to the establishments, have you any remark to make upon the amounts paid to the officers themselves?—Yes, the amounts paid to establishments are extremely low in the Post Office Department. It is the lowest paid department in India with reference to the work done, and out of a total of Rx. 589,000 in 1893–4 only Rx. 25,000 was paid to persons who received as much as Rx. 240 a year.

11,342. According to the rates of pay in India, are those rates sufficient or would you imply that the service under present circumstances is rather starved?—The Post Office tries to work as cheaply as possible, and often employs in its smaller offices Government officials in other departments (as, for instance, the village schoolmaster), giving them a small extra allowance. That enables them to some extent to do the work cheaply, and accounts partly for the low scale of pay. At the same time the scale of pay strikes officers of other departments as being low; and, without venturing to express any opinion of my own on the point raised in the question, I may observe that the Director-General has sometimes represented that the scales of pay of certain classes of posts are too low and ought to be raised.

11,343. And therefore you would rather expect to see that class of expenditure increased?—Yes, I should say so.

11,344. The Presidency and District Offices are the division of the Post Office, I suppose, which marks really the real increase of work, is it not? It is under that heading that the distribution of letters throughout India really takes place?—Yes.

11,345. Can you give us any figures illustrative of that increase of work?—Yes; the following figures show the expansion of work:—

Articles delivered.	1875-6.	1884-5.	1893-4.
Letters and post-cards -	107,576,000	193,513,000	326,862,000
Newspapers - - -	9,423,000	17,507,000	26,364,000
Parcels and Packets -	2,469,000	5,763,000	17,042,000
Total - - -	119,468,000	216,783,000	370,268,000

That is to say, the deliveries have more than trebled between 1875–6 and 1893–4.

11,346. You have a parcel and packet post in India, have you not?—Yes; we have had it for a very long time—almost since the first institution of the Post Office in India.

11,347. Do you consider it a paying branch of your business?—Yes; I think it is supposed to pay.

11,348. That is to say, it gives a net return?—I think so. Of course it is very difficult to separate the actual receipts and charges, because the postage on parcels and packets is paid by means of stamps, while the delivery agency is the same for both parcels and letters; but it is estimated, I believe, that the parcel post pays well.

11,349. I think our experience is that it is only now considered to be just paying its way in England?—We have had a parcel post in India for 40 years.

11,350. But although you have had it so long, its great increase of popularity appears to be, more or less, of recent years?—Yes; the extension of the railways has increased the facilities for the transmission of parcels and packets; the book and pattern packet post has risen very rapidly in recent years; but the parcel post has developed very steadily on the whole.

11,351. Do you consider the method in which you ascertain the number of letters is fairly and approximately true?—It is the method which is approved by the Postal Union, and is adopted, I think, in all countries belonging to the Union. For a certain number of days in each year the actual deliveries in every office are counted.

11,352. You know that here they have recently introduced a check upon that system. They apply a check through the revenue. That is to say, they take a number of days for each post office, we will say for a week, and multiply it by 52, which of course is an imperfect method of arriving at a true result?—Yes.

11,353. Possibly at the utmost you can say it is approximately correct, but in addition to that they have recently introduced a method of checking it, as I understand it, by finding out what the average weight of a letter is; they apply that to the number of letters delivered, and they find out that the results correspond fairly to an estimate based on the actual deliveries of letters. I do not think there is a difference between them of over 5 per cent. Do you know if there is any similar check in India?—I am not aware whether there is any check of that kind in India, but the advance has been very steady on the system followed, showing that the increase has been real from year to year.

11,354. Is the Post Office used by Government for remittance of revenue to any extent?—Yes; there are special revenue money orders which are issued for the transmission of revenue by the revenue payers to the Government offices.

11,355. To what extent is that carried? What branches of revenue may be remitted in that way?—It was first introduced with regard to the land revenue, but it has been extended to several other miscellaneous Government dues.

11,356. Taking the land revenue, can you tell us in what form that is done? Are papers sent to the taxpayer which he would fill up and send into the post office with the sum due by him?—No; there is a special form of money order which has columns for the entry of the necessary particulars regarding the revenue remitted. The exact amount that is due must be entered in this, and if the proper amount is not paid, the money order is liable to be returned; the remitter has to find out what the amount due from him is by reference to the district office, if he is in any doubt; but as a rule the revenue payers know the exact amount that is due from them. The system of transmission of revenue by money orders was first introduced in Bengal, and it has been extended now to the North-Western Provinces and Oudh, Punjab, and the Central Provinces. In the North-Western Provinces and Oudh the total number of revenue money orders issued was 140,000 in 1893–4 and 150,000 in 1894–5.

11,357. And what amount of revenue was thus collected?—The amounts of revenue remitted were Rx. 306,881 and Rx. 331,387.

11,358. Is that for all India?—No, that was only in the North-Western Provinces and Oudh. In the Lower Provinces of Bengal, including Eastern Bengal and Behar, the number of orders and their amount was reduced from 189,942, value Rx. 164,042, in 1893–4, to 188,195, value Rx. 162,460, in 1894–5.

11,359. At all events, the sums so remitted, though the method may be convenient to the taxpayer, would not represent any very large per-centage of the total revenue collected?—No; it is not a very large per-centage, but it affords very great facilities to small revenue payers, who can avoid the long journey to the headquarters of the district, and the delay which necessarily occurs owing to the crowding of revenue payers at the treasury when the land revenue is due.

11,360. Well then, again, in some cases pensions are paid through the Post Office, are they not?—Yes.

11,361. You have been saying that the small tradesmen, and so forth, in the villages are used very much by the Director-General as postmasters, and so on?—Not tradesmen so much as government officers, I think.

11,362. You spoke of schoolmasters?—Yes; schoolmasters and the like.

11,363. Does this extension of Government remittances, which of course to a certain extent makes larger sums pass through the hands of those small people, lead to any increase in peculation or in fraud on the part of the small postmasters?—The proportion of the revenue money orders to the total of the money orders is very small; they have caused a very small increase in the total amount remitted. The total amount remitted in 1893-4 by money orders was Rx. 18,353,000.

11,364. But, still, all these facilities given to the mass of the population mean larger sums paid in and paid out by small postmasters, and what I want to know is whether your experience showed you that the checks upon fraud were sufficient to prevent advantage being taken to any great extent, of these extra facilities, if I may so call them?—Yes, I think the checks are very complete. Of course peculations do occur here and there, but the proportion of them is very small; and to protect itself against loss on that account, there is a guarantee fund in the Post Office, to which every Post Office official, through whose hands money passes, has to subscribe a very small amount each month, but the drain upon this fund to meet fraudulent deficiencies is so small that it accumulates at a fairly rapid rate, and it now has a considerable balance.

11,365. You mentioned, as an instance of the extension of the agency of the Post Office, the facilities given for the sale of quinine?—Yes; that, of course, is really not a postal service; but the large number of offices in the postal department make it so extremely convenient a distributing agency, that the system has been introduced of selling at post offices in India small packets of quinine, which are made up at the Government factories and distributed to the various post offices for the purpose. That measure has been found extremely successful.

11,366. It really is a branch of the postal service, I suppose?—They actually keep the quinine in stock, and sell it.

11,367. Oh, the post offices actually sell the quinine?—The post offices actually sell the quinine; they keep a certain number of packets, and renew their stock as the demand may render necessary.

11,368. Then I think the next heading is the conveyance of mails, including subsidies, which amount to a largish yearly sum. Can you analyse that heading?—Yes; there has been a decrease on the whole in that charge from 334,000 to 322,000 The details are for road and ferry charges, including establishment for postal runners, 95,000 Rx. in 1875–6 and 106,000 in 1893–4; mail cart establishment and charges, 56,000 in

Mr. S. Jacob, C.S.I.

18 June 1886.

Post Office.

1875-6 and 43,000 in 1893-4; railway charges, 10,000 in 1875-6 and 98,000 in 1893-4; steamer contract charges, subsidies, and bounty, 77,000 in 1875-6 and 65,000 in 1893-4; boat establishment and charges, 3,000 in 1875-6 and 3,000 in 1893-4; van dâk establishment and bullock train establishment, 93,000 in 1875-6 and 7,000 in 1893-4.

11,369. When you speak of the road and ferry charges, including establishment of postal runners, may we understand that the figure 106,000 in 1893-4 includes all deliveries by postal messengers?—It includes the cost of all transmissions of postal articles by postal runners between post offices.

11,370-1. That does not come under the previous head of "Presidency and district offices"?—No, that head includes the charges of actual distribution of the letters to the public.

11,372. But are the letters delivered by postal runners?—No; the postal runners are the men who carry the mails between two post offices, where there is not a line of rail or steamer or a mail cart establishment.

11,373. The post office, where the runner deposits his letters, is charged with the distribution to the public?—Yes.

11,374. But the runners are the people that carry the letters between each post office?—Yes.

11,375. Then I suppose, if that is the case, there is not a very large service between villages; for that sum of 106,000 Rx. spread over such a large country as India, if it includes all these road and ferry charges and postal runners, is not a very large sum?—A great deal of the village distribution is, of course, made directly from the head or subordinate offices. There is not a post office in each village. The charge for such distribution would be included under the head of "Presidency and district establishments."

11,376. The railway charges, as it is natural to expect, have largely increased. Are you substituting carriage by railroad very widely for carriage by other means?—Yes, to a large extent railway carriage has been substituted for other means of conveyance; but there is still such a large portion of the country which is not served by railways, that we still have to keep up a very large establishment for transmission of posts by road.

11,377. You do not find a profit as we do in going back from railroads to vans?—I think in a very few instances it may have been found desirable to employ other means of conveyance for a short distance, but these instances must be very rare. The distances to be covered are so very great in India, that where railways are available, no other means of conveyance could ordinarily compete with them.

11,378. You mention steamer contract charges, subsidies, and bounties; of what do those consist?—Those consist of payments for either coastwise postal services or inland postal services by steamer. The principal payment is to the British India Steam Navigation Company to which we paid Rx. 50,000 in 1893-4; we also paid Rx. 5,000 to the Irrawaddy Flotilla Steamer Company in Burmah, and Rx. 4,000 to the River Steam Navigation Company and the India General Steam Navigation Company in Assam, and there is a payment of Rx. 2,000 to the Euphrates and Tigris Steam Navigation Company. There were also some other petty payments in the year.

11,379. What service does the British India Steam Navigation Company render?—There are 12 different services which it performs: Bi-weekly direct communication between Calcutta and Rangoon; weekly communication between Calcutta and Rangoon *viâ* Chittagong, Akyab, Kyauk-Phyu, and Sandoway; weekly direct communication between Madras and Rangoon; weekly communication between Madras and Rangoon *viâ* the N.E. Coast ports; tri-weekly communication between Rangoon and Moulmein; weekly communication between Rangoon, Tavoy, and Mergui; bi-weekly direct communication between Bombay and Karachi; weekly communication between Bombay and Karachi *viâ* the Coast ports; weekly communication between Karachi and Basrah *viâ* the Persian Gulf ports; daily communication (Sunday excepted) between Tuticorin and Colombo; additional services between any of the ports served by the above-mentioned lines, and between Burmah and the Straits; fortnightly service from Negapatam to the Straits.

11,380. Therefore, these are the means of communication you may say throughout India, coastwise?—Yes.

11,381. Then you mention the subsidy to the Irrawaddy Flotilla Steam Company?—Yes, that performs a great many services in Burmah: A daily service between Mandalay and Myingyan to and fro each way (except on Saturdays); a daily service between Myingyan and Pokokku to and fro each way (except on Sundays); a daily service between Prome and Thayetmyo to and fro each way (except on Sundays); a bi-weekly service between Thayetmyo and Pokokku to and fro each way; a weekly service between Pokokku and Kindat to and fro each way; a weekly express service between Mandalay and Bhamo to and fro each way; a tri-weekly service between Rangoon and Bassein; a bi-weekly service between Bassein and Henzada; a bi-weekly service between Rangoon and Pyapon; a daily service between Rangoon and Kyauktan, and *vice versâ*; a weekly service between Sinbo and Myitkyina, and *vice versâ*; a weekly service between Bhamo and Sinbo, and *vice versâ*.

11,382. Next there is a largish sum for the Assam River Steam Navigation Company, what does that show?—The River Steam Navigation Company keeps up daily communication between Jatrapur and Dibrugarh on the Brahmaputra River. And the India General Steam Navigation Company keeps up daily communication between Naraingani and Silchar. (These steamers, however, only run as far as Fenchuganj from 1st November to 15th May, and as far as Karimganj during the month of October.)

11,383. These large sums I see are confined very much, are they not, to the Brahmaputra and the Irrawaddy?—Yes.

11,384. Is not river communication used in the other provinces of India. For instance, is not the Ganges used at all?—No; the East India Railway would compete with that throughout.

11,385. Then you mentioned also the Euphrates and Tigris Steam Navigation Company as having a considerable amount of subsidy. What is that for?—That is a payment which used to be made in England. It is a subsidy to the Euphrates and Tigris Steam Navigation Company on account of the mail service between Basrah and Baghdad. In 1875-6 the amount was 4,800*l*. It was reduced to 3,600*l*. from 1876-7 to 1883-4. From 1st May 1884 it was fixed for 10 years at Rx. 3,600 a year, payable in India, and from 1st May 1894 it was reduced to Rx. 2,400 a year for a further 10 years. It has, therefore, been greatly reduced since 1875-6.

11,386. I suppose there is a Persian Gulf Service that carries letters up to the Euphrates and Tigris ports, and from that there is a regular service of steamers up the river?—Yes, one of the British India lines, mentioned in my previous answer (11,379), keeps up postal communication between Karachi and Basrah; and this line carries the mails on between Basrah and Baghdad. I may mention that we have a department of our own in Persia, the Indo-European Telegraph Department.

11,387. Is that kept up in connection with the Telegraph department, or is it kept up for purely commercial purposes, because otherwise there would be no traffic along there?—I think it is kept up chiefly for commercial purposes.

11,388. This subsidy forms one of the questions upon which there has been a difference of opinion between the Home and the Indian Government, does it not?—Yes; it is one of those services.

11,389. That we have agreed to postpone as one of the apportionment charges?—Yes.

11,390. Then we come to the charge for bullock train; that I see is an item that has very largely decreased?—Yes; we used to have to send our parcels very largely by these bullock carts, but since the opening of the railways we have been able to employ them. At present the bullock train is only maintained for the Simla line, for the conveyance of parcels between Kalka and Simla.

11,391. The next heading is discount on postage stamps; would you explain that?—A discount is allowed to the postmasters and certain official vendors on the amounts they sell. The rate of discount was reduced in 1885-6, and the charge fell in 1886-7 to Rx. 10,000, from which it has been rising steadily with the increased sale of stamps. The amounts realised by the sale of postage stamps have been as follows—1875-6 Rx. 371,000; 1884-5 Rx. 519,000; 1893-4 Rx. 923,000.

11,392. That discount is of course a profit to the postmaster?—Yes.

11,393. Now take Post Office stationery and printing?—Yes, that is mainly a charge which has been transferred to the Post Office in quite recent years. In 1875-6 the Post Office merely bore the cost of any special printing that was done departmentally or at private presses, but in 1891-92, it was decided that the expense incurred for the Post Office printing at the central press and also the cost of stationery supplied from the stationery central office to the Post Office should be transferred from the major head of "Stationery and printing," to the head of "Post Office."

11,394-6. Do you know what the charge under "Stationery and printing" was in 1875-6 as compared with what is brought to charge now for the Post Office?—Stationery is put down in 1875-6, as mixed with miscellaneous, at 10,452 Rx., whereas in 1893-4 stationery and printing amounted to 44,000 Rx., and miscellaneous only to 3,000 Rx.?—Yes; we are not able to distinguish the actual charge for stationery and printing in 1875-6. In the accounts they were mixed up with these miscellaneous charges; but they must have been comparatively small then.

11,397. From 1884-85 the charge for stationery and printing has increased from 9,717 Rx. to 44,278 Rx.?—Yes.

11,398. That must mean that in 1884-5 the full charge of stationery and printing was not brought to account as against the Post Office?—As against the Post Office, no; it was only in 1891-2 that I induced the Government of India to take the stationery charges against the Post Office.

11,399. Does not that point to the desirability of also bringing to charge the rent of buildings, if you bring the stationery to charge?—A charge against the Post Office for the rent of Government buildings would be a mere book adjustment; a stationery charge is an actual charge which is incurred by Government. Any rent actually disbursed by Government for postal buildings would be charged to the Post Office.

11,400. Upon what ground did you advise that the Post Office should be charged with the cost of its stationery when the general rule throughout the Indian service is to make stationery a separate head of service, is it not?—In the case of commercial departments, which charge other departments for services rendered to them, an exception has been recognised. The plan of charging such Departments for supplies made free to other Departments was first started in connection with railways; they were charged for the stationery supplied to them for some time before 1891; it was on the analogy of that charge that I recommended that the same system should be applied to the Post Office, and the principle was subsequently extended to the Telegraphs.

11,401-2. Next we come in the general division of Post Office expenditure to charges in England. Will you analyse those charges?—Yes; the largest payment is made under arrangement with Her Majesty's Treasury, chiefly for the services performed by the Peninsular and Oriental Company in conveying the mails to India, and also for the train service across Europe to Brindisi. That was 48,000*l.* in 1875-6, and it was 61,000*l.* in 1893-94. Then the stores for India are the next largest item. They have risen from 10,000*l.* in 1875-6 to 42,000*l.* in 1893-4. Then there was the charge of 4,800*l.* for the Euphrates and Tigris Steam Navigation Company, which occurred in England in 1875-6, but now comes on the Indian accounts; and there was also in the particular year 1875-6 a small charge for an officer who was on special duty in Europe in connection with a postal conference; that was 2,000*l.*

11,403. Now, taking the payments under arrangement with the Treasury, I do not think there is any question of apportionment there; that has been agreed between the two Postmaster-Generals, and it is not necessary to reserve that as one of those subjects on which there is a question of apportionment outstanding?—I do not think any question need be raised about them. I inquired from the Director-General before I left India, whether he had any complaint to make of the arrangement, and he said he did not think there was anything to be contested in that particular arrangement.

11,404. Then perhaps you might be able to give us a slight sketch of what the arrangement is?—Yes; the charges under the contract with the Peninsular and Oriental Steam Navigation Company, for the conveyance of the eastern mails, are divided between the British and Indian Governments in certain proportions determined by an award made by Viscount Halifax in 1876. In 1879 the subsidy was reduced from 430,000*l.* to 370,000*l.*, and in 1888 to 265,000*l.* until 1898. On the United Kingdom and India joining the Postal Union, a reduction of postage was made in 1879 from 8*d.* to 6*d.* per ½ oz. for letters, the net charge falling on India being consequently increased. In 1880-1, when the Southampton route was abandoned, the rate was fixed at 5*d.* It being considered that the burden falling on India was too great, an advance at the rate of 70,000*l.* a year only was made; and after a protracted correspondence, the Treasury accepted that as the annual charge; in 1885-6 it was reduced to 68,000*l.*, allowance being made for Australian letters conveyed by the Mediterranean service, and some minor items. When the new contract was made in 1888, the advances were at first reduced to 50,000*l.*; but in 1890 it was settled that India should contribute 40,000*l.* a year throughout the contract. On the reduction of postage in 1891 to 2½*d.* per ½ oz. on letters and ½*d.* per 2 ozs. on newspapers, &c., the calculation was revised; and it was agreed that each Government should retain its own receipts, and the payment by India was fixed at 60,600*l.* namely, contribution under the contract, 40,000*l*, sea postage retained by India, 19,900*l.*, and sea postage on books, &c., 700*l.*

11,405. (*Mr. Buchanan.*) Is this a contract made with the Peninsular and Oriental Company by the Home Government, and then the charges divided between the Home Government and the Indian Government?—Yes; the contract is made by the Home Government, the Indian Government being, however, consulted as to the exact terms. A certain portion of the contract is for the mail to Australia, and a certain portion for the mail to China. Of course, we only pay our share, as far as India is concerned.

11,406. (*Chairman.*) It is a very complicated arrangement. The Indian Government and the Australian Governments, I think I am right in saying, are consulted before the contract is made; in fact an arrangement is come to between them before the contract is signed and sealed; and then the Home Government make the contract?—Yes.

11,407. (*Mr. Buchanan.*) I understood there had been a change in the payment during the currency of the contract?—Yes, at times there was. Latterly it has been 40,000*l.*, since the new contract was made.

11,408. (*Chairman.*) I think you stated the payment made in 1893-4 or in 1894-5, was 60,600*l.* You showed that that was made up by a direct contribution of 40,000*l.* under the contract—19,900*l.* sea postage, retained by India, and 700*l.* sea postage on books, &c.; that makes up the 60,600*l.*?—Yes.

11,409. I do not quite follow how the sea postage, retained by India, appears as a charge?—Before this arrangement was made, the share of the Indian postage actually levied as sea postage was paid over to England; under the present arrangement, instead of paying over the actual amount, a fixed sum, which may be taken as a kind of contract for the actual amount, is paid by India to England.

11,410. The position was this—that the Imperial Government made the contract for all the sea postage, as I understand it, and then partitioned out their shares among the other contracting Governments?—Yes.

11,411. Then afterwards, as a matter of convenience, the Indian Government retained its own sea postage, but accounted for it to the Imperial Government?—At a fixed sum, yes.

11,412. (*Mr. Buchanan.*) They pay a fixed sum per annum?—Yes, they pay 20,600*l.* per annum for sea postage.

11,413. (*Chairman.*) And that sum is actually paid over?—That sum is actually paid over; that fixed sum.

11,414. Therefore, 40,000*l.* is paid on account of the contract, and 20,600*l.* on account of sea postage?—Yes.

11,415. We need not go into the question of the subsidy to the Euphrates and Tigris Company, because that you have already explained in dealing with the charges in India. Have you any remarks to make upon the question of stores?—Yes, the stores show a very large increase. That is partly owing to the adoption in India of post cards subsequently to 1875-6, the cost

Mr. S. Jacob, C.S.I.

18 June 1896.

Post Office.

of which forms an additional charge; but it is chiefly owing to the development of the postal business generally in India. The cost of the stores supplied rose from 10,000*l.* in 1875–6 to 50,000*l.* in 1877–88, and to 48,000*l.* in 1888–9. At that time a new contract was made with Messrs. De La Rue, and in consequence the charge fell to 31,200*l.* in 1889–90; since that date it has risen gradually to 43,187*l.* in 1894–5.

11,416. The position of the supply of stores is this, is it not? The two Governments have a very large business in these stores, and, on the whole, they think it more economical to work, as it were, under one contract?—There are separate contracts for the two Governments, but I think the arrangements for them are made simultaneously and in consultation.

11,417. The work with these contracting houses is actually carried out through the Inland Revenue, is it not?—Yes, I believe so.

11,418. And it has been thought, on the whole, economical for both Governments to work in concert?—Yes.

11,419. That is the reason why the supplies are got from Messrs. De la Rue?—Yes; I think that is the chief reason.

11,420. I think that you subscribe a part of the salary of an officer at Somerset House, who looks after the interests of India in the matter?—I do not know that; I do not know of a charge for any such officer.

11,421–2. I think that is the case. An arrangement was made, which, I think, has satisfied the India Office that in making the arrangements the interests of India are fairly guarded?—I suppose the allowance to this officer would be charged to the India Office Establishment. Sir Henry Waterfield would be able to speak about that.

11,423. (*Mr. Buchanan.*) Could not these post cards be got in India? Are there no stationery manufacturers in India with whom the contract could be made?—We have considered it rather risky to have stamps manufactured in India. We do manufacture our official post-cards in India, because they are only used by officials, and we think there is not much risk in manufacturing them there. The natives are very clever imitators; some of our currency notes have been forged, and stamps would probably be more easily forged, I think.

11,424. Would they not be just as capable of forging the home-made stamps, as the Indian-made stamps?—The difference is that we should have to train engravers ourselves, who might eventually manufacture stamps on their own account.

11,425. Of course it is a big charge, with this constant charge for exchange upon it?—Yes, but I doubt if there would be any great saving in the long run, if stamps were manufactured in India.

11,426. (*Chairman.*) There is rather a contrast between the policy of the Indian Government, in other departments, with regard to the obtaining of stores, and that which appears to obtain under the Post Office. Hitherto in the course of our inquiry, we have seen that the purchase of stores in England has been a declining branch of business, owing to stores being got so much more largely in India itself. The reverse seems to be the case under the Post Office; and I suppose I may take it from you that that policy has been very fully considered, and that the Indian Government deliberately prefers to get this particular branch of stores from home?—Yes; it has been very carefully considered several times, and I may observe that it is the policy which is followed with regard to all stamps, not merely the postal stamps; all the stamps we get for the Stamp Department are obtained from England too.

11,427. Do you happen to know whether bank notes are obtained from England, or made in India?—We obtain them from England.

11,428. (*Mr. Mowbray.*) And your money orders too?—No; not the money order forms.

11,429. (*Chairman.*) There is only left the district post office. You have alluded to that two or three times in the course of your evidence, but I do not think you have given us any summary description of the objects sought by the district service?—The district post offices were originally opened to keep up communication between the heads of the districts and the police in the interior of the district. That was the original object of them. They have been extended to meet the genera requirements of the administration on keeping up the communications between the head office and the various police and revenue offices in the district, without regard to the special financial considerations which govern the Imperial Post, which, however, takes over paying lines generally as soon as they begin to pay. The district post thus acts as a pioneer for the Imperial Post Office. The development of the administration has led to a development of the district post, but the net charge is met generally from local resources.

11,430. Then how are the charges divided between the Imperial, provincial, and local accounts?—In 1875–6 there was no Imperial charge, and in 1893–4 there is a small Imperial charge of 3,000 Rx. That is for small provinces, which are directly administered by the Imperial Government. The provincial charge in 1875–6 was 38,000 Rx., and in 1893–4 it was 46,000 Rx.; the local charge in 1875–6 was 43,000 Rx., and in 1893–94 it was 73,000 Rx.

11,431. Making a total of 81,000 Rx. in 1875–6, and 122,000 Rx. in 1893–4?—Yes.

11,432. Then, under certain circumstances, does the Imperial Government undertake the charge?—It is only in the case of Ajmere and Coorg, which are under the direct administration of the Government of India and not under any Provincial Government.

11,433. That is a special arrangement?—Yes; the charges would be considered provincial in any other province.

11,434. They do not really form an exception to the general rule that these charges are left to Provincial Governments?—No.

11,435. Do I understand that there are corresponding credits under the head of provincial rates?—No; the amount from local rates is about 65,000 Rx., the rest is made up from provincial resources.

11,436. From grants made out of provincial revenues?—Yes.

11,437. What is the law as to postage in India? What is the charge per letter?—The lowest charge for a letter is half an anna, that is a little less than a halfpenny.

11,438. What weight of letter is that for?—That is for half a tola; about one-fifth of an ounce.

11,439. Then does it mount with each one-fifth of an ounce, or how does the charge progress?—No, it rises to an anna and then goes up by annas—a little less than a penny.

11,440. What weight would the anna cover?—The anna covers double the minimum weight—one tola.

11,441. That is not quite half-an-ounce?—Yes, not quite half-an-ounce, but that will take a letter 3,000 or 4,000 miles.

11,442. Then is there a favourable rate for newspapers?—Yes, there is a half anna rate for newspapers.

11,443. But that, of course, covers a much heavier weight?—Yes; it covers a weight of 10 tolas, or, say, 4 ozs. There is also a special arrangement, under which by cash prepayment newspapers not exceeding 3 tolas (a little over an ounce) in weight may be sent at a charge of a quarter of an anna.

11,444. Are parcels sent at a moderate rate?—Yes; unregistered parcels may be sent at the rate of 4 annas for every 40 tolas (1 lb.), with a minimum charge, however, of 2 annas for 20 tolas.

11,445. I see one of the largest branches of receipt is "Receipts on account of money orders," 235,000 Rx. out of a total revenue of 1,561,000 Rx. That shows the popularity of that head of service?—Yes, it is extremely popular. The natives use the money orders for remittances of all kinds, but especially for very small remittances.

11,446. Just revert for a moment to that question of the district post office; are the letters to private individuals sent by district posts?—Yes.

11,447. And with the ordinary stamps, I suppose?—I believe so.

11,448. Therefore you do not know how much in addition to the local cess is covered by the ordinary postage stamp?—No; but I should suppose the proportion would generally be very small.

11,449. But the district post office in each case was originally started simply as a Government service?—Yes.

11,450. Without any view to the public using it?—Yes, that was the original intention, and for some time it was used merely as a Government service.

11,451. And when you speak of it as "the pioneer of the Imperial service," you mean, I suppose, that if you find that it is considerably used, then it gradually develops into a regular Imperial Post Office?—Yes; as soon as a line is considered to pay, the Imperial Post Office takes it over.

11,452. (*Mr. Buchanan.*) Then that 8,000 Rx. which you gave as the income from it, I suppose, represents what is contributed by the public sending letters by it?—I am not sure. They are described in the Accounts simply as "District Postal Collections."

11,453. (*Chairman.*) That is not mentioned in the annual report?—I cannot find that it is mentioned. But I should judge that the receipts are for the most part contributions from Native States or other special funds to the District fund.

11,454. (*Mr. Mowbray.*) Do you consider that your money order department pays its way?—Yes, I should say it did. It is very seldom that we have to remit money specially on account of the money order business.

11,455. Oh, but I mean is the commission which is paid on the money order business estimated with the intention of making it a paying department?—Yes, it certainly is a paying department.

11,456. (*Chairman.*) How do you ascertain that? I have always understood over here that it was extremely difficult to ascertain the precise gain or loss on money order business, because of the difficulty of apportioning the work of the general establishment between letters and money orders and so forth?—Yes; it would be difficult to make out any accurate estimate, but estimates have been made of the extra cost of the money order system.

11,457-8. It is like the case of many of these services. The expert officers turn their attention to it for some time and make the best estimate they can, probably only an approximate estimate, but it shows, at all events, approximately whether the service is paying its way?—Yes, it would be quite impossible to make an accurate estimate, because in the small offices very often one clerk does the whole work of the office.

11,459. (*Sir James Peile.*) You have told us that the Government of India takes its own sea postage receipts and pays 20,600*l.* a year?—Yes.

11,460. Does it make a profit or a loss upon that transaction, do you know?—I cannot find any figures in the report upon that, but I have always understood that the amount was a fair amount.

11,461. The present Director-General thinks that the present arrangements are fair to India?—Yes, I saw him specially upon the subject before I left.

11,462. He has no complaint to make of any part of the arrangements?—I understood that to be the case.

11,463. (*Chairman.*) Do the Post Office charges include pensions or not?—Not in our Finance accounts; the administration account allows for them.

11,464. Can you tell us what the pension charge is?—43,721 Rx. in 1894-5.

11,465. We now turn, Mr. Jacob, to the Telegraph service. The Telegraph service is divided, I think, is it not, between the Indian telegraphs and the Indo-European telegraphs?—Yes.

11,466. They make two separate branches of the service?—Yes.

11,467. Would you give us a statement for the Telegraph Service such as you have given us before, comparing 1875-6 with 1893-4?—For the whole Department including the Indo-European?

11,468-9. Would it not be better to take the Indian service first? Perhaps you would give us first, the revenue and then the expenditure if you have them?—Yes. The Indian Telegraph Department produced a revenue in 1875-6 of Rx. 205,000, while the charges were Rx. 382,000, leaving a net deficit of Rx. 177,000, and in 1893-4 the revenue was Rx. 788,000 and the charges Rx. 743,000, giving a net revenue of Rx. 45,000.

11,470. What do you give as the deficit in 1875-6?—Rx. 177,000. That is, including both capital and revenue expenditure; also in 1893-4, the net revenue of Rx. 45,000, is after including both capital and revenue charges.

11,471-3. Therefore in the 17 years there has been an improvement of something very like Rx. 220,000?—Yes. Then in the Indo-European Telegraph the total revenue in 1875-6 was Rx. 98,000, and the charges were Rx. 87,000; giving in round numbers a net revenue of Rx. 11,000; and in 1893-4 the revenue was Rx. 171,000, and the charges Rx. 125,000, giving a net revenue of Rx. 46,000.

11,474. And there, again, there has been an increase, but nothing like that which occurred with regard to the Indian Telegraphs?—No, the increase has been Rx. 35,000. Then for the Ceylon Telegraph we incurred a net charge in 1875-6 of Rx. 6,000. At that time we were working the Ceylon Telegraphs for them; we have given them back to Ceylon, and there is no charge in 1893-94. For the Red Sea and India Telegraph we incurred a charge of Rx. 20,000 in 1875-76 and Rx. 30,000 in 1893-4, the difference in that case being entirely due to the fall of exchange, as the sterling amount paid in England is the same in each year. Then for the Zanzibar and Mauritius Telegraph we had no charge in 1875-6, but we incurred a charge of Rx. 4,000, including exchange in 1893-4.

11,475. Now perhaps you will give us what you were going to give us at first—the results of the whole system?—The results of the whole of the Telegraphs in 1875-6 were Rx. 311,000 revenue and Rx. 503,000 charge, a net deficit of Rx. 192,000; and in 1893-4 a gross revenue Rx. 959,000, charges Rx. 902,000, and a net revenue of Rx. 57,000.

11,476. And therefore at the present moment you may say that the whole Indian telegraph system (including communication with Europe) after including, in order to make the charge complete, that annuity of 18,000*l.* a year which represents the collapse 40 years ago of the Red Sea line, shows Rx. 57,000 as a net profit?—Yes.

11,477. Is there a charge included for rent of buildings, and for stationery? And what would be the additional charge on account of pensions?—Buildings are charged to Capital Account, but the charge for stationery is included in the revenue account. I have not been able to ascertain the charge for pensions.

11,478. Then I think this account has been strictly drawn upon commercial principles, that is to say, that everything has been charged to the expenditure side?—I think everything, except pensions and leave allowances paid in England, has been charged.

11,479. Now taking the Indian service, can you analyse the charges in the same way as you have done before, as between 1875-6 and 1893-4. First of all, you include in your annual expenditure capital expenditure?—Yes, the whole of the capital expenditure is included in that.

11,480. At the same time, you keep a capital and revenue account?—Yes, we keep separate accounts of capital and revenue.

11,481. Perhaps you will give us the capital account first?—The figures of the Indian Telegraph capital account show in 1875-6, a net capital charge of 115,000 Rx.; and in 1893-4 a net capital charge of 225,000 Rx. The capital charges are chiefly incurred for line construction, buildings, apparatus, and plant, and stores, and other suspense accounts. In them is included, chiefly under line construction, a portion of the general charges which are shown in detail under revenue; the rest of the line construction charges consist largely of stores issued for the works, which are met by corresponding deductions against the head of stores. The following is a statement of length of line constructed in miles:—In 1875-6, during the year, 479 miles, and to the end of the year, 16,633: 1884-5, during the year, 1,815, and to the end of the year, 25,387; in 1893-4, during the year, 1,677, and to the end of the year, 42,707. The charge for buildings is generally incurred in the Public Works Department; but it is included in the capital expenditure of the Telegraph Department for the purpose of calculating the dividend produced by the net revenue. The stores are for the most part procured in England and on arrival in India are charged to the head of "Stores"; the minus figure in India under that head is chiefly the result of stores being charged to the construction of particular lines, when

Mr. S. Jacob, C.S.I.

18 June 1896.

Telegraph.

their value is *per contra* deducted from this head. In the total charge for stores a minus entry shows that the reserve has been diminished. The total capital charge to the end of the year is as follows:—In 1875-6, 2,132,000 Rx.; in 1884-5, 3,543,000 Rx.; and in 1893-4, 5,665,000 Rx. Owing to financial pressure, the additional capital outlay in the last two years has been relatively small.

11,482. The whole of that 5,665,000 Rx. at the end of 1894, I understand has been found out of revenue?—Yes.

11,483. There is no debt outstanding as against it?—No, it has been met entirely from revenue.

11,484. Then in order to understand the position of the telegraphs as a working undertaking, we ought to add to the charges, ought we not, a fair charge for interest on the debt?—Yes.

11,485. Could you tell us what you would consider that would amount to?—I have worked it out so as to show what per-centage on capital the excess revenue gives. In 1875-76 there was a net deficit which amounted to 3 per cent.

11,486. Do you mean 3 per cent. on the capital?—3 per cent on the capital.

11,487. That would be 60,000*l*?—64,000 Rx. That works out to a deficit of 3 per cent. In 1893-94 the net revenue worked out to 4¾ per cent.

11,488. That is to say, very nearly 5 per cent. on 5,000,000*l*.; 250,000*l*.?—The actual net revenue on revenue account was 264,000*l*.

11,489. Perhaps you might work it out in another form; at what would you put the interest—3½ would you charge on that 5,665,000 Rx.?—We charge 4 per cent. on the Public Works Debt.

11,490. But at what rate would you have borrowed the money?—We certainly should not have borrowed it at less than 4 per cent. originally.

11,491. I reckon the interest on that at 226,000 Rx.?—Yes.

11,492. And we have?—264,000 Rx.

11,493. You had a surplus as between revenue and expenditure, that is to say actual expenditure, of 45,000 Rx. in that time?—Yes.

11,494. Well, is not the proper way to take that off from the interest charge which brings it down to 181,000 Rx., is not that the net working of it as a commercial undertaking?—No, you are taking the net result, including the capital charge. We are now dealing only with the result of the revenue account.

11,495-8. Very well, do you know how much of the capital charge belonged to the India Telegraph Department?—Yes; that is the amount which I gave a short time ago. The net capital charge in 1893-4 was Rx. 225,000: the capital charge to the end of that year is Rx. 5,665,000.

11,499-500. Very well, we will take 4 per cent. on that Rx. 5,665,000, which gives 226,000 Rx. as the annual interest, which if you had borrowed the money, you would be paying?—Yes.

11,501. But, on the other hand, when you come to the working, you take the actual receipts of the existing lines and deduct from them the working expenses there remains a surplus of 45,000 Rx.?—Including capital; we must exclude the capital here to show what the revenue is.

11,502. Yes, you have to take off the capital?—Yes.

11,503. Very well, how much do you take off for the capital?—The capital charge actually brought to account under this head was 219,000 Rx.

11,504. Which is added to the 45,000 Rx.?—Yes.

11,505. Well, that would really give you a surplus?—Yes. That gives a surplus over and above the 4 per cent. charge for interest.

11,506-7. Quite so?—That is really what I said before; we work out to a per-centage of 4¾ per cent. on the capital, so that we get about ¾ per cent. in addition to the 4 per cent.

11,508. But, putting it in another way, it would be 226,000 Rx. against 264,000 Rx.?—Just so; we make Rx. 38,000 over and above 4 per cent. Perhaps I ought to mention that that includes official messages—State messages which are paid for by the State.

11,509-10. I was going to ask you a question with regard to that. Both in Post Office and in Telegraphs, you include the charge of State letters and State messages?—Yes, except messages on account of the Telegraph Department itself. It does not charge itself or the Post Office for telegrams sent on departmental business. A great many post offices are telegraph offices as well.

11,511. Can you give us, *à propros* of that point, what the revenue from State messages has been?—Yes, the revenue from State messages in 1875-6 was 29,000 Rx., and from other messages 176,000 Rx., making a total of 205,000 Rx.; and the expenditure was 269,000 Rx. That gave a net deficit of 64,000 Rx., or excluding State messages of 93,000 Rx. In 1893-4 the State messages came to 115,000 Rx. and the other messages to 673,000 Rx., making a total of 788,000 Rx., and the expenditure was 524,000 Rx., so that the net revenue was 264,000 Rx., or excluding the State messages 149,000 Rx. Therefore, even excluding State messages, the revenue gave a per-centage of 2½ on the capital.

11,512. If you exclude the state messages and charge the interest, *i.e.*, 226,000 Rx., there would be a deficit, would there not?—Yes.

11,513. The deficit would be the difference between 149,000 and 226,000?—Yes. You mentioned the Post Office just now, and so perhaps I may explain that, while the Telegraph Department charges other Departments at the same rate that it charges to the public, the Post Office charges a much lower rate for the official postage than for the general postage.

11,514. You charge, I think, by weight *en masse*, instead of by individual letters?—No, we charge for individual letters, but the rate charged for official letters is much lower than that charged for private letters.

11,515. Why do you do that?—The Post Office, I understand, professes to charge for official postage only the actual cost.

11,516. How do you find out what the actual cost is?—That, of cousre, is estimated by the Post Office, but it comes to about one-tenth of the rate charged to the general public.

11,517. I always understood that the actual cost of a letter was one of the most difficult questions to solve?—Yes; I do not suppose it is an accurate calculation.

11,518. Is not the English way a better way? According to the English way the mass of letters received from each department is, I believe, simply weighed *en masse*. As no letters come up exactly to the limit allowed, the result is that you make a charge very much less than would have been charged if each letter had been sent as an individual letter. You weigh a thousand letters together. If that thousand letters had been weighed separately they would have cost of course one thousand pence; but if they are weighed altogether, the weight would only probably net seven hundred pence?—The Post Office would not object to that system, of course, for the Indian Post Office charge would be proportionately much lower than that.

11,519. At all events, whether we take the total net revenue including State messages, or whether we take the revenue excluding State messages, the increase has been very considerable?—Yes.

11,520. Would you give us an analysis of the expenditure on revenue account in the two years?—The general charges are as follows:—

	1875-6.	1893-4.
	Rx.	Rx.
Salaries:		
Direction and Divisional Supervision	60,580	56,261
Account Office	1,397	2,911
Check Office	1,082	1,571
Stores, and workshop, and electrician	3,575	4,257
Subordinate establishment:		
Direction and divisional supervision, including Sub-assistant Superintendents.	6,653	30,072
Accounts	3,765	7,033
Check Office	2,338	5,569
Stores and workshop and electrician	4,837	3,790
Foremen, &c.	—	5,068
Allowances	13,542	18,852
Exchange compensation allowance	—	5,321
Stationery and printing, *contingencies* and refunds.	8,573	16,006
Total	106,347	156,921
Deduct—Charged to capital	23,442	32,952
Charged to other departments.	1,064	47
Net general charges on Revenue Account.	81,841	123,922

Then there are charges for line maintenance:—

	1875-6.	1893-4.
	Rx.	Rx.
Establishment	10,243	32,441
Allowances	1,925	7,576
Repairs to lines	22,862	43,654
Contingencies	990	1,240
Total	36,020	84,911
Deduct—Charged to railways and Native States.	2,922	311
Net line maintenance charged to Revenue Account.	33,098	84,600

Then there are the charges for signalling:—

	1875-6.	1893-4.
	Rex.	Rex.
Establishment	106,581	202,041
Allowances	18,775	39,617
Apparatus and plant	17,408	16,188
Payment to Postal Department	—	37,966
Contingencies	9,257	12,461
Total	152,021	308,273
Deduct charged to other Departments	5,111	1,846
Net signalling charge to Revenue Account.	146,910	306,427

And, lastly, the charges in England were in 1875-6, 6,439*l.*, and in 1893-4, 5,748*l.*; and exchange in 1875-6, Rx. 707, and in 1893-4 Rx. 3,357, making a total additional charge of Rx. 7,146 and Rx. 8,483 respectively for the English charges.

11,521. Now can you total them?—The total in round numbers is 269,000 Rx. in 1875-6 and 524,000 Rx. in 1893-4.

11,522. Charged to revenue account?—Yes, charged to revenue account.

11,523. That is just about double?—Yes.

11,524-6. While the mileage has increased about 2½ times?—Yes, rather more than 2½ times, but that is as near as you can express it in round figures.

11,527. Have the numbers of employés in the department increased very much, especially in the superior branches?—No; in the superior branches the numbers have decreased. The total employed—Director General, Deputy Director General, directors of traffic, director of construction, superintendents, assistant superintendents, and the account office, check office, and stores and workshop—came to 121 in 1875-6, and 85 in 1893-4. That is owing to the substitution of a lower paid class of officers for the higher paid. The establishment, on the other hand, has increased from 432 in 1875-6 to 661 in 1893-4. They include a large class of subordinate inspecting officers.

11,528. This again shows, as we have seen in the case of other departments, that the Government has been working in the direction of reducing the numbers of the superior class, and therefore, I suppose, the Europeans?—Yes. There have been some slight increases of pay among the higher officials; the Deputy Inspector General's pay has been raised from 1,800 to 2,000 rupees a month, and the Directors of Traffic and Construction from 1,500 to 1,600, and the pay of some of the grades of Superintendents and Assistant Superintendents has been raised, though the maximum pay for Superintendents is still Rs. 1,500.

11,529. Then have you any remark to make on the line establishment?—There has been here a very large increase. The total increase is from 446 in 1875-6 to 1,276 in 1893-4, but the greater part of that increase is in the very lowest paid classes of officials, who are called line men, and coolies—men on a few rupees a month—who have increased from 302 to 1,031.

11,530-1. As far as the numbers go, that is rather in excess of the increase of mileage, is it not?—Yes, it is.

11,532. Then signalling staff?—In signalling there has been an increase of just about 100 per cent., from 1,888 in 1875-6 to 3,780 in 1893-4; that has occurred both in the telegraph masters and signallers and in the clerks.

11,533. Can you give us any figures which illustrate the progress of the telegraph service during this time?—Yes. The following figures indicate the increase in the traffic: service telegrams have increased from 89,000 to 605,000; private telegrams from 769,000 to 3,580,000; and free telegrams, that is, those sent on behalf of the Telegraph department itself, have decreased from 8,000 to 4,000. The total is an increase from 866,000 messages to 4,189,000.

11,534. The number of service messages increased very largely; is there any check kept upon the service messages that are sent free?—Ordinary service messages are not sent free.

11,535. Are they charged at a lower rate?—No, they are charged at the same rate as to the public.

11,536. Is there any check upon the officers sending the messages, because, of course, they do not pay?—The Check Office keep a check. Every telegram goes to the Check Office, and official telegrams are specially checked, and I have had instances in which a reference has been made to me as to whether a telegram sent by a subordinate was a proper telegram to be sent officially:

11,537. Therefore there is some check; they are watched?—Yes.

11,538. But, of course, the tendency of Departments is to use the telegraph very freely?—Yes, I suppose so.

11,539. And you see, while the private messages have increased between four and fivefold, official messages have increased more than sixfold?—Yes, that is so; undoubtedly the use of the telegraph for official messages has increased.

11,540. What are the allowances which appear at the heading of the account?—The allowances consist of (1) local allowances granted for residence in especially expensive districts, or for specially arduous work; and (2) travelling allowances given under fixed rules. Exchange compensation allowance is granted under the regulations laid down in 1893 for non-domiciled Europeans and Eurasians.

11,541. The stationery and printing?—The increase there is not wholly a real increase, because the cost of stationery issued from the central stores to the Telegraph department is charged to the Telegraph department only from 1892-3.

11,542. Of what are the charges in England composed?—The charges in England are mostly furlough allowances. In 1875-6 there were 4,000*l.* for furlough allowances, and in 1893-4 5,000*l.* The Director General was also on special duty in 1875-6, attending the international conference at St. Petersburg, and for that there was a charge of 2,500*l.*; in 1893-4 there was a charge of nearly 500*l.* for the pay of officers studying the working of instruments in England.

11,543. I think you have mentioned the payment to the Post Office; what does that consist of?—A very large number of Post Offices are used as telegraph offices, and a payment is made to the Post Office for the telegraph share of the cost of these offices.

11,544. That is charged in the accounts under "Payment to Post Office by the Department for combined offices," 38,000 Rx.?—Yes; that is it.

11,545. Under revenue, I suppose, you only charge repairs and rents of offices. Do you make any charge on capital for construction of offices?—It is included in that account which I gave. It is really charged to the Public Works Department, but it is brought on to this capital account by deduction from the Public Works Account.

11,546. Do you bring a charge on capital account for any buildings?—Yes; the buildings are charged to capital: some work is done in the Public Works Department, and that also is brought on the Telegraph Account.

11,547. If in the revenue account you charge a rental on these buildings, which, I understand, you do, do you not charge a rent upon buildings?—I do not think we do in the Telegraph Department; in the Post Office Department we do in the Administrative Account.

11,548. I see a very small sum for rent of offices?—Yes; that is for offices which are specially rented, and do not belong to Government.

Mr. S. Jacob, C.S.I.

18 June 1896.

Telegraph.

11,549. You charge the buildings once for all to the capital account, and they would fall into any charge you make against the Telegraph Department for interest?—Yes.

11,550. When did that payment to the Post Office commence?—I find it first in the Finance and Revenue Accounts in 1887-8; but I believe it was made before that date.

11,551. We come now to the Indo-European Telegraph Department. Can you give us a description of this service?—The present line was opened in 1864 between Karachi and Fao at the head of the Persian Gulf and continued to Baghdad, and the year after to provide against the inconvenience of interruptions an alternative line was passed through Persia by Bushire and Teheran back to Baghdad. The Indo-European Telegraph Department is concerned with the working of that line in Persia and the Persian Gulf.

11,552. Will you give us a summary of the financial arrangements under which that telegraph is worked?—By an arrangement made in 1878 the Eastern Telegraph Company, the Indo-European Telegraph Company and the Indo-European Telegraph Department pay all their receipts from Indian and trans-Indian traffic into a common fund, which is then divided in fixed proportions. The proportion taken by the Indo-European Department now is about 18 per cent. The Indo-European Telegraph Department receives from the India Telegraph Department the cost of all messages from Karachi to their destination westward; and after deducting the share due to the Department, the balance is paid to the Indo-European Telegraph Company from Teheran or to the Ottoman Government from Fao to the destination. On the outward traffic the Department receives from the Ottoman Department or the Company the cost of the message from Fao or Teheran to its destination, and keeping its own share pays the balance to the Indian Telegraph Department at Karachi. Of the Persian Gulf receipts the Department keeps the whole of its own share; but of the Teheran-Bushire receipts, it pays an annual royalty of 4,800*l.* to the Persian Government, and divides the surplus with the Indo-European Telegraph Company under an arrangement made in 1869.

11,553. What has been the net capital outlay of the Indo-European telegraph department?—The total expenditure on the line to the end of 1875-76 was 1,154,000 Rx., and to the end of 1293-4, 1,145,000 Rx.

11,554-5. And the net revenue?—The net revenue on revenue account was in 1875-76, 6,000 Rx., and in 1893-94, 44,000 Rx., showing a per-centage of about one half per-cent. in 1875-76, and 3·9, or nearly 4 per cent., in 1893-4.

11,556-7. Have you any remarks to make upon the charges in the revenue account?—I have a distribution of them here. The charges of the Revenue Account are thus distributed:—

Charges on Revenue Account.		1875-6.			1893-4.		
		Persian Gulf Section.	Persian Section.	Total.	Persian Gulf Section.	Persian Section.	Total.
In India:—

11,558. Will you describe to us shortly the transactions with regard to the Ceylon telegraph which is no longer under the Indian Government?—In 1868 it was important to the Government of India to have the control of the Ceylon telegraph system, as it was a link in the only line by which Indo-European messages could be conveyed. Accordingly the Ceylon telegraphs were worked by the Indian telegraph department from January 1st, 1869. In 1875-6 the receipts were Rx. 8,253, and the charges, Rx. 11,191, the net charge on revenue account being Rx. 2,938. The capital charge was Rx. 3,090. The following are the details:—

	Capital.	Revenue.	Total.
	Rx.	Rx.	Rx.
Superintendence, including share of direction.	429	3,596	4,025
Line maintenance	—	991	991
Signalling	—	4,325	4,325
Works and repairs	2,661	2,279	4,940
Total	3,090	11,191	14,281

The line was always worked at a loss; and in 1878, the original reason for accepting the charge having passed away, and the Ceylon Government being unable to leave the line in the hands of the Government of India, while itself bearing the expense, it was decided that the control should be re-transferred to the Ceylon Government, which was done with effect from the 30th June 1880. The total loss (including interest) was Rx. 25,946, of which the amount accruing after the 1st April 1878, namely, Rx. 5,461, together with capital outlay of Rx. 6,863, was repaid by Ceylon.

11,559. And lastly, I would ask you if you would give us a summary of the transaction under which one half the annuity for the Red Sea and Indian Telegraph Company is paid by India?—The Red Sea and Indian Telegraph Company was formed in 1858 for the purpose of establishing telegraphic communication between India and England by the Red Sea, the Treasury giving a guarantee for 50 years to make up the dividend to 4½ per cent. on the capital; and the Indian Government agreeing to bear half the expense of that guarantee. By an Act of 1861 (24 Vict. c. 4.), it was declared that the guarantee was not intended to be, and was not, conditional on the line of telegraph being in working order. By a further Act of 1862 (25 & 26 Vict. c. 39.), the line having ceased to transmit messages, the property was transferred to a new company, and the guarantee to the old company was converted into an annuity of 36,000*l.* for 46 years. It was further provided that India should pay 18,027*l.* annually to Her Majesty's Exchequer, being half the annuity and cost of management up to the 4th August 1908.

Mr. S. Jacob, C.S.I.

18 June 1896.

Telegraph.

11,560. The Zanzibar and Mauritius Cable comes under those services about which there is a question of apportionment?—Yes.

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

At the India Office.

TWENTY-FOURTH DAY.

Wednesday, 24th June 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M. P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Sir HENRY WATERFIELD, K.C.S.I., C.B., Secretary in the Financial Department, recalled and further examined.

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

11,561. (*Chairman.*) Sir Henry Waterfield, the Commission are anxious to have the benefit of your evidence on questions connected with the expenditure in England chiefly upon the offices of the Secretary of State and other charges connected with the India Office. We have now gone through the whole of the expenditure of India forming what we call the machinery branch of our inquiry. The official evidence on this branch is so far concluded that it only remains for us to get some information from you upon the home administration. Can you give us a sketch of the items which form the expenditure which you specify as general administration in England?—I will put in a statement which compares the expenditure of 1875–6 and that in 1893–4.*

11,562. Would you mind running through the chief items of that statement?—First of all, the India Office salaries were 136,859*l.* in the former year, and in the latter 133,808*l.*, a decrease of 3,051*l.*

11,563. And I see that in the Home Accounts for the year 1894–5 the expenditure is rather less than in 1893–4?—I think it is a little smaller. I took 1893–4 because when the Commission began its enquiry it was the year you had had before you, and I thought it was less confusing to keep to that year. The Audit Department was 4,410*l.* and has risen to 6,724*l.*, an increase of 2,314*l.* The Store Department, wages, rent, &c.,—that is not salaries—has risen from 25,177*l.* to 26,855*l.*, an increase of 1,678*l.* The payments to the Banks of England and Ireland for the management of debt have risen from 18,385*l.* to 44,938*l.*, an increase of 26,553*l.* The law charges have fallen from 2,348*l.* to 110*l.*, a reduction of 2,238*l.* Telegrams to India cost 3,450*l.* in the former year and in the latter 6,784*l.*, an increase of 3,334*l.* The cost of postage of despatches to and from India fell from 6,382*l.* to 1,208*l.*, a reduction of 5,174*l.* The charges for contingencies, &c. have fallen from 13,290*l.* to 13,132*l.*, a reduction of 158*l.* The total of those charges was in 1875–6, 210,301*l.*, and in 1893–4 it was 233,559*l.*, an increase of 23,258*l.* Besides that, there are under this head of general administration payments for the Government of India, which in 1875–6 were 11,659*l.*, and in 1893–4, 3,672*l.*, a reduction of 7,987*l.*

11,564. Would you tell us the nature of those payments?—Passage of the Governor-General, or of Governors, or of their staff, and some very small payments in connexion with books and diagrams which were prepared; I shall be able when you come to that to give you the detail of them if you wish. The books and newspapers for India which are not invoiced as stores fell from 2,307*l.* to 1,717*l.*, a reduction of 590*l.*; and the cost of currency notes, &c. rose from 8,778*l.* to 26,864*l.*, an increase of 18,086*l.* Thus the total charges paid at this office under the head of general administration were increased from 233,045*l.* to 265,812*l.*, an increase of 32,767*l.*

11,565. Would you take the latest accounts and point out to us, in comparison with 1893–4, in what items they either affirm or modify the conclusion which one would form from the figures which you have given us for 1893–4?—I think there is very little real difference. The salaries are slightly reduced, and so is the cost of the Audit Department and of the Store Department. Under the charge of management of debt there was a large increase.

11,566. It is the item of the increase of the debt charge that I wanted to bring out?—Quite so. That was more than 16,000*l.* in excess of the cost in 1893–4. In the other charges there is very little to notice, excepting that the payments for the Government of India were much smaller; they fell from 3,672*l.* to 1,587*l.*

* This statement was handed in too late to be inserted in the volume of Appendices, Vol. II.

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

11,567. There is rather a remarkable fall in the charge for telegrams to India?—Yes, the telegrams to India in 1893–4 were 6,784*l.*, and in 1894–5, 4,702*l.*

11,568. Therefore one may say that, taking the two years 1893–4 and 1894–5 together, the tendency is to a slight decrease in most of the charges, but a rather remarkable increase upon the payments made to the Banks of England and Ireland, of which we shall learn from you the causes later?—Yes, it was an exceptional payment for that year.

11,569. We will take your figures for 1875–6 and 1893–4, and I will ask you whether you have any remarks to make upon that increase of 23,258*l.* which appears under the heading of general administration?—The increase is fully accounted for under that one head of management of debt. The increase under that head was 26,553*l.*, so that otherwise there was a reduction of 3,295*l.*

11,570. Leaving that point for the present, do the salaries show an increase?—No, there has been a reduction of 3,051*l.*

11,571. (*Sir Ralph Knox.*) That is in the India Office salaries?—The India Office salaries.

11,572–3. (*Chairman.*) Can you give an abstract of the charges for salaries?—I will compare the same years, 1875–6 with 1893–4. The salaries of the Secretary of State and members of Council were in the former year 27,942*l.* for 19 persons, and in 1893–4 they were 24,746*l.* for 17 persons, a reduction of two persons and 3,196*l.* In the Correspondence Department there was a reduction from 63 persons to 51, and in payments from 37,203*l.* to 32,884*l.*, a reduction of 12 persons and 4,319*l.* In the Funds Department there was a reduction from 14 persons to 7, and in salaries from 3,360*l.* to 2,470*l.*, a reduction of 7 persons and 890*l.* In the Accountant-General's Department there was an increase of one person from 46 to 47, and an increase of 382*l.*, from 14,427*l.* to 14,809*l.* In the Stores Department there was an increase of one person, from 92 to 93, and an increase of 1,778*l.*, from 24,855*l.* to 26,633*l.* In the Registry and Record Department there was an increase from 45 persons to 59, and from 9,423*l.* to 10,909*l.*, an increase of 14 persons and 1,486*l.* In the miscellaneous officers there was an increase from 15 persons to 29, and from 10,408*l.* to 12,271*l.*, an increase of 14 persons and 1,863*l.* In the office keepers and messengers there was a reduction of one from 62 to 61, and a reduction of 738*l.*, from 6,778*l.* to 6,040*l.* The housekeeper, housemaids, &c. were the same number, 32, and the payments were 16*l.* less, from 1,347*l.* to 1,331*l.* The artisans and labourers employed at the India Office rose from 16 to 20, and from 1,116*l.* to 1,715*l.*, an increase of 4 persons and 599*l.* On the whole there was an increase from 404 persons to 416, or 12 persons, but a reduction in salaries from 136,859*l.* to 133,808*l.*, or less by 3,051*l.*

11,574. Taking the first item, namely, the Secretary of State and members of Council, has there been any alteration within these 17 years of the number of members of Council?—Yes; in the years which I have compared there was a reduction of two, but there has altogether been a greater reduction than that. By the Act 52 and 53 Vict. chap. 65, power was given to the Secretary of State on vacancies occurring to reduce the number of members of Council from 15 to 10. In 1889 the Secretary of State recorded that he refrained from making two such appointments. In 1893 a third was similarly absorbed; in 1895 a fourth vacancy occurred, but no declaration has been made of an intention not to fill it.

11,575 What is the salary of members of Council?—1,200*l.*

11,576. And has there been any change made in recent years in regard to pension to members of Council?—The members of Council are not now entitled to any pension. The only exception to that is that the Secretary of State has legally the power to nominate three members who shall be exempt from the disabilities of the Act of 1869, which debar members of Council from pension. They must be appointed for professional or peculiar qualifications, and, as matter of fact, there are none now holding such appointments.

11,577. Under the original Act of 1858 the members of Council were entitled to pension at the end of their services?—Yes, they were entitled to pension.

11578. But that has been abrogated by a later Act?—Yes.

11,579. (*Sir Ralph Knox.*) Was the salary the same at that time?—It was.

11,580. (*Chairman.*) The members of Council hold office for 10 years?—They hold office for 10 years. The Secretary of State has the power to re-appoint for five years

11,581. But that re-appointment is no formal matter, is it? It must be based upon special grounds, must it not?—Yes.

11,582. And those grounds must be communicated to Parliament?—Yes.

11,583. Have any such re-appointments been made?—Yes, there have. There is one member of Council now who was re-appointed. I think I must qualify what I said just now about no member of Council being entitled to pension, with reference to one existing member, who is entitled to pension by virtue of a post which he held before he was appointed a member of Council; under the 12th clause of the Superannuation Act, an officer who is holding a pensionable office, if transferred to a non-pensionable office, is allowed to count that service for pension, so that in this manner there is one member who has been for several years serving for pension although he is a member of Council.

11,584. Was he an Imperial officer?—He was an Imperial officer. He was in the India Office, and was holding a permanent appointment in the India Office at the time of his transfer to the Council. And another member has recently been appointed under similar circumstances.

11,585. Is the Superannuation Act, that you mention, a special Act of your own, or the General Superannuation Act?—The general Act.

11,586. But that does not apply to the India Office unless the Secretary of State chooses?—Yes, by the 18th section of the Government of India Act, those appointed to the India Office since 1858 come under the terms of the general Superannuation Act.

11,587–8. That is to say, the Secretary of State in dealing with his officers in the India Office is bound by the Civil Service Superannuation Acts?—That is so.

11,589. (*Sir Ralph Knox.*) Was this member's India Office salary the same as his Council salary?—It was the same.

11,590. (*Chairman.*) You were mentioning just now that under an Act passed in 1876 power is given to the Secretary of State to appoint not more than three persons at one time, having professional or other peculiar qualifications. You were telling us that this power has been exercised a certain number of times. Is it a power that is exercised with great caution and rarely, or is it a power of appointment which the Secretary of State constantly exercises?—It is exercised with very great caution and rarity. I think there have been only four such appointments since 1858 and they have all lapsed; at the present moment there is no one appointed under the Act of 1896.

11,591. I observe that, in their sixth report, paragraph 8, the Special Committee on Home charges expressed an opinion that it should be made impossible so to use that power as to prolong the service of a member who may be already in the Council, and that the appointments should be reduced to two. Has that recommendation been adopted?—I think no positive record was made by the Secretary of State of the adoption of it, but in practice it is certainly.

11,592. You mention since 1858. I read that clause in the Committee's report as if the power had been originally given in 1876?—Yes, it is so. I was only mentioning the whole time that the Council has existed. The power was given in 1876.

11,593. Then the same Committee submitted that an Act of Parliament should be passed, enacting that the Secretary of State, by leaving alternative vacancies unfilled, should reduce the number of members of Council to 12, and to enable him similarly to reduce it further to any number not less than 10, if it were found desirable, in his opinion, to do so. Has any such Act been passed?—Yes; the Act to which I referred just now is not exactly in the terms of the Committee's report. It is a short Act. I may read it perhaps. "The Secretary of State may, if and whenever "he thinks fit, and provided that the total number of "the Council be not thereby reduced below ten, record "his intention to abstain from filling any vacancy in "the Council of India, and such vacancy shall thence-"forward remain unfilled."

11,594. Besides the members of Council are there any officers included in this class of Secretary of State and members of Council, &c.?—The clerk of the Council is now also Assistant Under Secretary of State with an increase of 200*l.* in his salary.

11,595. (*Sir Andrew Scoble.*) What is the present number of members of Council?—There are 11 at present, but, as I was mentioning just now, there may be a 12th appointed if the Secretary of State thinks fit.

11,596. Has any practical inconvenience resulted from the reduction of the number of members of Council?—I do not think I can say that the Secretary of State has found any inconvenience. Occasionally during the holidays there is some little difficulty in getting committees, but the Secretary of State, I think, is satisfied with the working of it. I have no reason to state that the number has been reduced to an extent which is inconvenient in business.

11,597. I suppose the work of members of Council has been considerably increased in consequence of the reduction of their numbers, has it not?—I think so. They have to serve on more committees now.

11,598. (*Mr. Jackson.*) Has the number of members of Committees been altered at all?—No. The number of a Committee is not fixed. It varies from three, to four, or five, or even more as the Secretary of State thinks fit; especially if a special committee is called, it may have more members; as a rule there are about four on each committee, sometimes five.

11,599. (*Chairman.*) Is there a number of standing committees?—Yes.

11,600. And, I suppose, in addition to those, there are occasional committees?—Occasionally special committees.

11,601. What is the number of standing committees?—I think there are eight or nine.

11,602. Therefore the same members will have to serve on several committees?—Yes.

11,603. Do these committees meet weekly?—Always once a week, sometimes oftener.

11,604. What length of time is the holiday during which you were saying there was sometimes difficulty in getting members of the Council to form committees?—It is usual for a list to be made under an agreement with the members of Council for August, September, and October, during which it is so arranged that there shall always be enough to make a quorum in the Council and to carry on the business.

11,605. But those three months are considered, as far as the members of the Council are concerned, the time of vacation?—Yes; of course it is open to them to take their vacation at any other time that is not inconvenient; but as a rule the holiday is taken during those three months.

11,606–7. (*Sir Ralph Knox.*) Have you a list of the standing committees?—I will read them to you. Finance, Revenue and Statistics, Political, Public Works, Military, Judicial and Public, and Stores. There is also a Library Committee, and, as I said, occasionally there are other committees appointed for special purposes. These eight are the regular committees.

11,608. (*Chairman.*) The next heading in your return is Correspondence Department. That, I suppose, is what in ordinary offices is the clerical department—the secretarial department?—Yes.

11,609. I see in that department there is a reduction from 63 to 51. Will you tell us how that has occurred?—It has occurred, mainly, by reduction in the higher posts. The number of assistant and senior clerks was reduced from 28 to 18; and, in place of 27 junior clerks, copyists, and writers, there were in 1893–94, 25 junior clerks, including clerks specially attached and a supplemental clerk. The post of Russian Interpreter has been abolished, and that of technical assistant to the special assistant and visitor to the India Museum created. Against this reduction, however, must be set part of the increase in the Registry Department, and in the miscellaneous officers, the duty of some of whom used to be performed in the Correspondence Department. The number of senior clerks has been further reduced by two since 1893-4, and one more is yet to be absorbed on a vacancy occurring.

11,610. Therefore the normal establishment at that rate would be 48 instead of 51, would it not?—The normal establishment is to be six secretaries, seven assistants, eight seniors, ten junior clerks, and 17 second class clerks, making 48 in all.

11,611. That, I suppose, is the result generally of that reform, which has been for some time going on in the Civil Service, which has had for its object the reduction of the higher class of officer and the introduction of a somewhat lower class of officer to carry on the routine work?—That is so.

11,612. The India Office *mutatis mutandis* has followed, in the main, the recommendations of what we call in the Civil Service the Ridley Commission?—Yes.

11,613. We shall come to the question of pensions later, but, as bearing upon this reduction, does your pension list show a very large increase in consequence of these reductions?—No, not in consequence of the reductions which you are speaking of now. There was a very considerable increase in consequence of reductions effected after 1858, not in all cases immediately after, partly then and partly at a later time, when it was necessary to reduce the double establishment, which had grown up from the amalgamation of the East India Company's and the India Board's officers.

11,614. That we shall come to afterwards?—Yes.

11,615. I only wanted to put in the question here whether or not in carrying out these reductions the Secretary of State has found it necessary to largely increase the compensation allowances which are usually given upon compulsory retirement?—No. I think that he has endeavoured to introduce the system of the second class clerks, as vacancies have occurred, but that he has not caused officers of a higher class to retire in order to introduce them.

11,616. Has he adopted the practice common in the Civil Service, where a reduction of establishment is taking place, of requiring a man to retire when he gets to the age of 60?—At the age of 65, and, if necessary, at the age of 60.

11,617. Has he actually availed himself of one method of reduction, namely, that of requiring men when they reach 60 to retire?—It has been introduced, but it is not put in force in many cases.

11,618. You have in the India Office, have you not, the 65 years rule?—Yes, it has been applied to this office.

11,619. And has the Secretary of State the power, if he wishes it particularly, of keeping on an officer for two or three years longer, or possibly to the maximum age of 70?—He has the power of retaining an officer for such a time as may be necessary for public reasons, subject to recording his reasons for so retaining him, and communicating them to Parliament. I do not think that any limit of the age of 70 has been laid down as a maximum. I am not sure that there has been any instance of an officer being kept on so long as that.

11,620. I think I am right in saying that in the Imperial Civil Service the age of 70 is put as a maximum?—Yes, my doubt was whether the Secretary of State would exercise the power of keeping anyone till 70—certainly not longer. But I find that in two cases officers have been retained till their 70th birthday.

11,621. In the interval between 1875-6 and 1893–4, and still more notably in 1894–5, when I think you said two other officers were reduced, the fall in the charge for salaries has been very considerable?—Yes.

11,622. You may say it has been a reduction of 4,000*l.* or 5,000*l.* on 37,000*l.*?—Yes.

11,623. What would that be, 12 or 13 per cent., would it not?—About 11½ per cent.

11,624. And I suppose that the Secretary of State would consider that he has now arrived at the normal establishment, and that he does not contemplate any further reductions?—The Secretary of State has fixed in each department a normal establishment. It has not quite in all cases been arrived at yet.

11,625. (*Sir Ralph Knox.*) I should just like to ask this. Your number of what we should call higher division and lower division clerks in this department is 31 and 17?—Yes.

11,626. Is that intended to be maintained?—I must explain to you that the work of the lower division in the Correspondence Department is mainly carried on by the Registry and Record Department, which is a separate branch. All the copying and registering is done by that branch, and again the examination of the accounts is done in the Accountant General's Department. The

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

second class clerks in the Correspondence Department are only for such of the clerical work and the examination of accounts and papers as cannot be done conveniently in the Registry and Record or the Accounts Department.

11,627. How many men are there generally in the room, or sub-division as we may call it?—Two, three, or four, as the case may be. We have no large rooms in the Correspondence Department.

11,628–9. They are all small rooms, and they are all necessarily higher division clerks in them?—No, not necessarily all higher division clerks—to take my own, the Financial Department—I have in one room four second class clerks, in another two, in another two.

11,630. But how many higher division clerks have you, as a maximum, in a room?—Generally speaking, there is one, or there may sometimes be two in each room; they are small rooms as a rule.

11,631. Not more than one or two?—No, not as a rule.

11,632. As regards the age for retirement, do you find the service of a majority of your men between 60 and 65 very valuable?—I should say that it would be; but we have had very few men as yet, since the rule has been brought in, whose case it has been necessary to consider. As a matter of fact, there are very few of these second class men who are of the age of 60.

11,633–4. But of the first class men?—Yes, I should say that their services, if they are worth anything, are very valuable at that age.

11,635. If they are worth anything. But you think that in the majority of cases they would be very valuable?—In the majority, certainly.

11,636. (*Chairman.*) How many divisions have you in the India Office in which these 48 men are employed?—The six correspondence departments are the Finance, Revenue and Statistics, Military, Public Works, Judicial and Public, and Political.

11,637. That would mean, excluding Under Secretaries. Under Secretaries are included with the Secretary of State, I suppose?—Yes.

11,638. For instance, you yourself come under the heading of Secretary of State, and members of Council, &c.?—No. I am Secretary of a department.

11,639. It is only Sir Arthur Godley and Sir Horace Walpole that come under this class?—And the Parliamentary Under-Secretary, Lord Onslow.

11,640. Oh yes, of course, the Parliamentary Under Secretary. Those are the only persons included in the heading Secretary of State, &c.?—The 17 persons are the Secretary of State, 11 members of Council, two Under-Secretaries, and an Assistant Under Secretary of State; and in 1893–4 there were two more members of Council. There would now be only 15 under that category.

11,641-2. If the work of the Correspondence Department is divided into six heads, that would give to each about eight men of all classes, including the chief, to each department?—As an average, but the branches are very different in strength. Some of them are much larger than others.

11,643. You were saying just now that for the portion of the work which in an ordinary office is done by lower division clerks we must look under the Registry and Record Department?—Yes.

11,644. Would it therefore be a more correct way of looking at it if the whole clerical work of the department of the Registry and Record Department were taken with the Correspondence Department?—I think so. I mentioned, when speaking of the reduction in the Correspondence Department, that it was partly due to a transfer of work to the Registry and Record Department.

11,645–6. Well, if you put these two together, I find in 1875–6 there were 108 men employed in the two, Departments and in 1893–4, 110. Did the 108 men cost 46,626*l.*?—Yes, that is so.

11,647. And the 110 cost 43,793*l.*?—Yes.

11,648. Therefore, though the numbers have been the same, the tendency has been towards a reduction of the charge?—Yes.

11,649. As a matter of organisation and with reference to what Sir Ralph Knox said, are you in favour of a big room in which a number of clerks can be employed, or would you prefer what the architect has evidently arranged for here, namely, a number of small rooms?—It depends very much on the work. For work of mere copying or indexing, I think a number of men in a large room, with one superintendent, is a useful organisation, but for the work that we do in the Correspondence Department, I think two or three men are as many as work well in one room.

11,650. You would include in the cases in which you prefer large rooms, I suppose, the Accounts Branch, would you not, where a number of clerks are employed keeping books?—A great part of the Accounts Branch is necessarily in one or two large rooms. That, I think, is essential from the nature of the work.

11,651–2. But supposing you could have the arrangement of the rooms yourself, I gather that it would not be your view to throw several rooms into one in your six departments?—No, not as regards those six Correspondence departments.

11,653. Well, the next department is the Funds Department, will you tell us what is the nature of the work done in that department?—Largely book-keeping; but there is a small amount of correspondence with the Government of India, and also a good deal perhaps with officers. A great deal of the work consists of personal intercourse; persons come in constantly.

11,654. Then in reality it rather classes itself with the Accountant-General's Department?—It is more like the work under the Accountant-General.

11,655–6. These are the family funds, which the Government has taken over now entirely?—Yes, which the Government has taken over.

11,657. Had it taken them over in 1875–6 to the same extent as it has done now?—No; not to the same extent. The Military Funds were taken over before that date, and the Medical Funds. The Civil Funds have come since 1875–6.

11,658. But, if a larger number of funds have been taken over, it is certainly satisfactory to see that the work is apparently done by a smaller number of officers and at less charge?—Yes, but there is a special reason for that apparently large reduction from 14 persons to 7. In 1875-6 the consulting committee, which had been maintained when the funds were first taken over by the Government, and consisted of five members, still took part in the management of the funds, but it was discontinued in 1880. Since that date there has been no such committee, and the work has been done under the Director of Funds alone.

11,659. The Director of Funds is the chief officer of the department?—Yes.

11,660–1. And is this the normal strength of the department now, seven clerks?—The normal strength is to be four second class clerks, and one senior.

11,662. That would make five clerks altogether?—Five clerks altogether.

11,663. What is the number of funds that are administered by this department?—There are the three Military Funds, the Bengal Military Orphan Society, the three Medical Funds, the three Civil Funds, and there is also the new fund, both the military and civil branch of the Indian Service Family Pension Fund, which forms a very large part of the work that now has to be conducted.

11,664. And that is a new fund?—That is a new fund started since the old funds were abolished.

11,665–6. Would you look at page 67 of the Home Charges Report which gives the net total of non-effective payments in England since 1877–8?—Yes.

11,667. On the receipt side you will see Indian funds in 1877–8, 88,602*l.*, in 1887–8, 93,058*l.*, would that express the total income with which this department deals?—Not entirely. The subscriptions of the members of the old funds are dying out. The subscriptions of the officers who have come on to the new fund, the Indian Service Family Pensions which you will find mentioned just below, and which were very little in 1877–8, are increasing. The first figure which you read is only that of the old funds, and it has already been somewhat reduced. It was 83,000*l.* in 1894–5; but it does not seem to have varied very much as yet.

11,668. Therefore you may say that the income of the funds which are administered by this branch amount to between 80,000*l.* and 90,000*l.* a year?—That is not quite a correct way of looking at it, because these are only the receipts in this country. By far the larger part

of the receipts from salaries is taken in India, and the accounts that are sent home have to be taken into consideration. The figure you mention represents the actual receipt in the Accountant General's Department on account of the funds.

11,669. This Funds Department will have to make inquiries and answer questions on matters connected with the receipts in India as well as the receipts here?—Certainly.

11,670. (*Sir Ralph Knox.*) To which of the standing committees are questions regarding funds referred?—To the Finance Committee.

11,671. (*Chairman.*) Then the Funds Department comes to a certain extent under your control?—No, not under my control, unless in connection with a large question which would affect the finances generally. If it is a matter dealing with details it is passed by the Finance Committee, the Director of Funds being the adviser.

11,672. Have any great changes taken place in the Department of the Accountant-General?—The Accountant-General's Department was in 1875–6 presided over by the Financial Secretary. The work was conducted under him by an accountant, two assistants, 22 first-class clerks, and 20 second-class clerks, writers, &c., with a keeper of records. In 1893–94 there were an accountant-general, a deputy accountant-general, 14 first-class clerks, 30 second-class clerks, and a keeper of records; altogether an increase of one (excluding the financial secretary). The normal clerical strength is four senior clerks, nine junior clerks, and 31 second-class clerks.

11,673. That is a further reduction on the number in 1893–4?—Yes, on the number given in 1893–4.

11,674. You say in 1875–6 the Financial Secretary was also the Accountant-General. When the Accountant was made Accountant-General, did that relieve the Financial Secretary of any amount of work?—Yes.

11,675. Is not the Accounts Department under your control?—No, it is not under my control. The work of the two departments is, of course, very intimately connected, and constant references pass from one to the other; but the Accountant-General is an officer independent of the Financial Secretary.

11,676. And, in case of a difficult question arising, a reference does not necessarily lie to you?—Yes, I think I may say it always would be referred to me in such a case.

11,677. Of course, I suppose any difficult questions go to the Finance Committee, do they not?—Yes.

11,678. And if they go to the Finance Committee, they would necessarily come to you?—I should necessarily see them then. In practice I should generally be consulted before it came to that stage.

11,679. The position is that the Accountant-General in the ordinary dispatch of business is independent, and carries on that business without the necessity of consulting you?—That is so.

11,680. But when difficult questions arise, practically such questions would necessarily come to you?—Yes.

11,681. (*Sir Ralph Knox.*) But would he come to you in the exercise of his discretion?—He would refer to me if he thought fit and wished for my advice. If he failed to do so and sent his papers to the Under Secretary of State, probably the Under-Secretary of State would call upon me for a report first, and, failing both of these, when it came to the Finance Committee, I should see it as the adviser of the Committee.

11,682. Is there any limit to his functions? Are there certain questions that he must refer, that he cannot deal with himself?—He can only act under orders which have been approved by the Secretary of State in Council, and, if a question arises which has not been decided by that authority, he must put it forward for the decision of a higher authority.

11,683. (*Chairman.*) We come next to the Store Department. How is that department organised?—The Director-General, with a staff for the purchase of the stores, engagement of freight, and general correspondence, has rooms in the India Office; while the superintendent, with the staff for examining and taking charge of and shipping the stores, is located in the depôt in Belvidere Road.

11,684. What changes have been made in the staff in this office?—The Director-General with an assistant (now termed deputy Director-General) used to have 17 first-class and 13 second-class clerks and writers. There were in 1893–4 9 first-class and 13 second-class clerks, &c., and one boy copyist; and the post of inspecting engineer for machinery and stores for State railways had been abolished. The post of Surveyor of Shipping, whose salary was formerly included in the miscellaneous expenses, must, however, be now added. The future normal clerical strength is to be 3 senior, 5 junior, and 13 second-class clerks.

11,685. Are those all located in the India Office?—Those that I have been speaking of are located in the India Office.

11,686. I think I am right in understanding that your division in the India Office between first and second class clerks corresponds with the division of the ordinary Civil Service into clerks in the higher division and clerks in the second division?—That is so.

11,687. (*Sir Ralph Knox.*) And do these numbers include your Director General of Stores?—The normal strength of the Store Department, the future strength, is the Director-General, a Deputy Director-General, three senior clerks, five junior clerks, and 13 second-class clerks.

11,688. (*Chairman.*) That will make a total of 23?—Yes.

11,689. And that is about the number at present, is it not, with the Director and Deputy Director-General?—It is 25 at present, I think, besides the Surveyor of Shipping.

11,690. Therefore there will be a slight reduction?—There is a slight reduction yet to be effected.

11,691. What alterations have taken place in the Belvidere Road establishment?—The Superintendent and assistant used to have under them two first class clerks, six second class clerks, four writers, three sub-inspectors, a receiver of wharf stores and his assistant, 15 examiners and 12 assistants, a chemist for analysis of beer, a shipping foreman, an inspector of scientific instruments and his clerk, an examiner of surgical instruments, and a medical attendant on the labourers, making a total strength of 52; there were in 1893–4, 14 second class clerks and supplemental clerks, two boy copyists, 10 supervisors, 14 examiners and 13 assistants, a custodian of patterns, an engineer, a shipping foreman, an inspector of scientific instruments, an examiner of surgical instruments, an examiner of medical stores, and a medical attendant on the labourers, making, with the two higher officers, a total strength of 62. So that, altogether, taking the two branches of the Department, there was an increase of three in number. The supervisors have since been reduced to nine.

11,692. And is that the normal staff?—Yes, I think the number now is the normal strength; four supervisors first grade, and five second grade.

11,693. (*Sir Ralph Knox.*) Your stores include clothing, do they not?—The clothing of the European troops is mainly obtained from Pimlico. The clothing for the native troops, where it is not locally supplied, has to be obtained by the Director-General, and the shipping of the clothing from Pimlico is undertaken at Belvidere Road.

11,694. But so far as the India Office is concerned, that part of the work which refers to clothing is dealt with by an officer of the Stores Department?—Yes, that is dealt with by the Stores Department.

11,695. (*Chairman.*) The report on Home Charges, at page 7, contains the following passage: "We have "understood that the policy of the Indian Government "is to reduce the purchase of stores in England when-"ever the Indian Government can satisfy themselves "that those stores can be purchased without loss to the "taxpayer in India"?—Yes, provided they are of local manufacture and locally supplied.

11,696. In paragraph 4, the committee call special attention to the fact that the purchase in India of European stores is apt to lead, under the present system, to waste and extravagance (*see* Report of Indian Finance Committee, Vol. II., p. 281), and that no real economy is effected by buying in India European goods, which would otherwise have to be procured through the Stores Department in England, inasmuch as the merchant who sells European goods to Government in India, besides taking his profit, must necessarily protect himself by the price which he charges against all possible charges incidental to the voyage to India, and against all risk of loss by exchange. And I wish to ask you upon that, whether, when the Indian Government lays

Sir H. Waterfield K.C.S.I., C.B.

24 June 1896.

Home Administration.

down the policy of buying, when they can properly or advantageously do so, in India, they bear in mind that European goods are bought in India at a disadvantage ?—That is so, yes.

11,697. There are at the end of the eighth report of the Committee some very interesting tables, on page 58, of payments made in each of the ten years from 1878–9 to 1887–8 inclusive, for the purchase of stores for India under the direction of the Director-General of Stores. First of all, the first division of those stores works up to a total in 1878–9 of 993,838*l.*, and in 1887–8, 1,005,527*l.* ?—Yes, it is a slight increase.

11,698. There have been a certain number of changes in the amounts so spent, though the totals are very nearly identical ?—Yes.

11,699–700. Now take the army clothing for European troops, that has increased considerably, but that, of course, is a natural consequence of the increase of force ?—Yes.

11,701. On the other hand, there is a considerable charge for clothing for the native troops. I was under the impression that we had heard from witnesses, who have been before us, that the clothing of native troops is obtained in India ?—It is obtained in India as largely as possible, but I believe there are many articles which are necessarily obtained here. My list is not sufficient for me to answer the question. It only says that clothing and necessaries were obtained. I am afraid I shall have to refer to the Director-General of Stores upon that point.

11,702. Then there is a very considerable increase in Special Defence works—that is, I presume, in consequence of the military policy ?—It was for the special frontier works and harbour defences which arose out of that policy. That has practically come to an end, as far as the supply of stores from this country is concerned. I think you will see that that large increase was in ordnance and miscellaneous stores.

11,703. Ordnance and miscellaneous stores : 236,925*l.* in 1878–9 and 294,713*l.* in 1887–8. It is a considerable increase, but that also was in consequence of the development of miiltary policy, was it not ?—It was a great deal due to the re-armament of the troops and the improvement of the guns.

11,704. (*Mr. Buchanan.*) It varies in a very extraordinary way ; I see in 1883–4 it was only 153,395*l.*, then 129,371*l.*, and then it jumped up to 401,863 ?—Yes, and I think you will find in later years it has been even higher—it was very heavy indeed for a few years.

11,705–6. (*Chairman.*) But the general upshot is that the increase is an increase in those stores which, one readily understands, are only obtainable in England, namely new arms, new guns, the clothing of an increased number of European troops, special defence and Indian telegraph stores ?—Yes. Perhaps it would be of interest to the Commission if I handed in a précis of the correspondence on the local supply of stores, which was prepared in case you wished to inquire into the subject. It bears out what you have been stating as to the policy of the Secretary of State and of the Government of India (*paper handed in*).*

11,707. Then come railway stores, which bring the total amount of stores up from 1,704,719*l.* in 1878–9 to 2,077,770*l.* in 1887–8 ?—Yes.

11,708. May we take that as representing in sterling the total amount of stores for the provision and inspection of which the Store Department was constituted ?—Yes, it includes the stores obtained from the manufacturing departments of the English Government.

11,709. Then, in addition to those, there are some minor stores and the freight on railway stores which are carried to a separate total. Freight on railway stores is a charge in India, I suppose, is it not ?—No, the first table gives the cost of the stores and the freight.

11,710. It is payment made for the purpose of stores ?—You will see that the first division of the second table (page 59) is the same as that on page 58 with the addition of clothing, arms, and accoutrements taken to India by troops. The other figures of 1,704,719*l.* and 98,380*l.* in 1878–9, and 2,077,770*l.* and 193,480*l.* in 1887–8 are repeated.

11,711. Yes, but I observe that in these sums of 1,704,000*l.* and 2,077,000*l.*, the freight on railway stores is not included, but stated separately ?—On page 59 it is added, and also the value of the clothing, arms, and accoutrements, which are actually taken to India by the troops, and not sent out by the Store department.

* *See* Appendix 35.

11,712. Therefore the total charge for stores is that which we see at the top of page 59 ?—Yes ; 1,864,256*l.* in 1878–9 and 2,327,978*l.* in 1887–8.

11,713. There is another small item at the end, "other stores," which I do not see included in page 59 ?—It is included—in "Freight on the above"—in Table No. 2 on page 59.

11,714. Then on page 59 there is worked out the charge of the Store Department, and the rate per cent. on cost and freight of stores purchased ?—Yes.

11,715. That includes not only your Store Department here, I suppose, but anything you pay to the inspection departments of the Imperial offices, does it not ?—The payments that we should make to the War Office are included in the cost of the stores themselves. This also includes the payments we make to Somerset House for the stamps. You will see there is a minor heading, "Stamp Branch."

11,716. The rate per cent. on the cost and freight of stores purchased is ·17 in 1878–9 ; then ·15 in 1879–80 ; and so on up to ·14 in the last year 1887–8. Is that an exhaustive statement of per-centage, or, if you worked it out accurately, ought you to include payments made for inspection to Imperial offices ?—I think that that is explained in the report itself. The statement was made out to show as far as possible what the actual cost was. You will see the explanation in paragraph 13, on page 56, where it is pointed out that "the total cost of "the stores includes the value of those supplied through "the War Office, Admiralty, Inland Revenue, and "Stationery Office, on which special rates are paid for "inspection and other charges. If the payments for "inspection of all kinds be deducted, and the remainder "of the charges be distributed over the whole of the "stores, both those obtained directly by the Stores "Department, and also those obtained through other "public offices, but entailing much correspondence "and clerical labour in this office, the cost, excluding "inspection, was 45,874*l.* or 1·971 per cent. Adding "this to the per-centages for inspection given above, "we obtain the following figures as the cost of supply "for certain articles :—

	Per cent.
"Railway Materials -	1·330 + 1·971 = 3·301
"Cloth - - -	·958 + 1·971 = 2·929
"Stationery - -	·527 + 1·971 = 2·498"

— that is practically 2½ per cent.

11,717. Then in paragraph 12, it is said : "this is "equal to a charge of 3·15 per cent. on the prices "now paid, and would be considerably less if the "same quantity of articles were being supplied at the "prices prevailing 10 years ago." How does that charge of 3·15 per cent. tally with the rate per cent. on cost and freight of stores purchased, on page 59 ?—The rate there given is 3·01 on the cost and freight of stores purchased in 1887–8. The average rate for the 10 years is 2·92, practically it may be taken as 3 per cent.

11,718. Then this 3·01 and ·14 put together come to 3·15 ?—Yes, the rate of 3·15 including the charge for interest on capital and for depreciation.

11,719–20. Therefore we may say that, putting apart the charge for inspection paid to other offices, you get 3·15 in this last year 1887–8. If you included the sum paid for inspection to other offices, what would be the result ?—I think the Committee found difficulty in saying what was paid for inspection, because so much of it was included in the cost of the stores. They therefore, for purposes of comparison, excluded all charges for inspection, and then compared the charges.

11,721. But do you think a charge of 3·15 per cent. is an exhaustive statement of the charge upon the stores that have actually passed under the inspection of your officers as apart from those inspected by the Imperial officers ?—I think it is the rate per cent. which the cost of the Store Department in all ways bears to the cost of the stores with which they deal.

11,722. But, when we are taking the total of 1887–8 on page 59, namely 2,077,770*l.*, that does not include, I understand you to say, a certain amount of inspection charges paid to the Imperial Department ?—Yes, it does.

11,723. As it appears on the face of this report, we have not got an exhaustive statement of the total charge of inspection here ?—You have the total charge, but it is rather more than the bare value of the stores ought to be. It includes the payments made for

inspection to the War Office and other departments in the value of the stores; therefore it is not quite an accurate statement to make, and that was what the Committee in their 13th paragraph wished to bring out.

11,724. Does the list of stores which are bought here pass under review from time to time to see if the general policy of buying what you can advantageously out in India can be extended?—The indents from whatever department, after examination by the Store Department, are passed by the Stores Committee, and any material variation from the policy would be seen. Besides that, the Government of India is desired annually to send home a report to show to what extent the policy of local purchase is being carried out, and also to what extent there is a variation from the policy of the Secretary of State by making undue local purchases, that is, purchases which may be more advantageously obtained by indent from the Store Department.

11,725. Therefore what we understand to be the general policy is always under a careful consideration?—Yes.

11,726. In paragraph 10 of the report it says: "Excluding stamps and malt liquor, for which special "arrangements are made, the stores of all other descriptions obtained from contractors, the cost of which in "1887–88 was 635,136*l.* as shown below,* were inspected "either at the depôt or on the contractors' premises, "by the staff of the Stores Department. In one or two "cases it is possible with some approach to accuracy "to determine the cost of the inspection, as follows:—

Articles.	Cost.	Inspection.	Per-centage.
	£	£	
Cloth - -	53,227	510	·958
Stationery -	68,279	360	·527

"For the greater part, however, it is impracticable to allocate the salaries of the examiners and supervisors to special articles, and we can therefore only state the general results."

The cost of inspection there you see is very much smaller than that charge which is stated on page 59 at 3·15. I presume the reason of that difference is that that is merely the cost of the inspectors, to which you have to add, as shown in paragraph 12, a great number of other charges if you want to come to a correct estimate of the cost of inspection as a whole?—The figure in paragraph 13 is made up of two items. Take cloth, ·958 plus 1·971 which is the clerical labour in the office.

11,727. Of course, when you come to the charge to India, in consequence of variations of the rate of exchange, the number of rupees required in 1887–8 and in subsequent years in order to discharge this debt at home of 2,327,978*l.*, as against 1,864,256*l.*, is very much increased?—Very much.

11,728. On the other hand, there has been a considerable reduction in prices, has there not?—Yes, in many articles.

11,729. Have you ever turned your attention to see whether the reduction in price has at all counterbalanced the increased number of rupees you have to find in consequence of fall in exchange? We may take that year of 1878–9?—I have not seen any examination in that form exactly; but the Government of India in framing their demands for articles bases them on the prices, and, if they found that the price of an article in India in rupees was—assuming it to be of good quality—better than the price in England in sterling, when turned into rupees at the low rate of exchange, they would certainly obtain it in India.

	£
* Miscellaneous railway stores - -	56,179
All other stores obtained from contractors -	697,012
	753,191
Deduct—	£
Stamps - - - -	104,591
Malt liquor - - -	13,464
Not inspected by Store Department -	118,055
	635,136

11,730. Quite so, but what I meant to call your attention to was that it would be quite possible, if the cost of articles in England had fallen 50 per cent. in a given number of years, but it required 150 rupees to pay a sterling bill where 100 rupees sufficed at the beginning of the period, that you might find that the cost of the articles was in reality no higher to India now than it was then, might you not?—That is certainly the case.

11,731. Would you think that the fall in prices went any distance towards counterbalancing the increased charge to India by her having to pay a larger number of rupees?—In particular articles I should say there is no doubt. In steel, for instance. I should say that steel rails, even with the greater payments in consequence of exchange, are cheaper now owing to the low price than they were in former days.

11,732. To a certain extent, when one is considering the question of the effect of exchange, I suppose one would be right in giving weight to that argument, or rather, I would put it in this way, one should not reject that argument altogether?—I think that it is always borne in mind by the authorities that prices of stores are a very important element in the question of cost altogether.

11,733. When we are considering the effect on the taxpayer in India, we ought to take into consideration whether, on the other hand, prices have fallen, while we have prominently before our eyes the fact that the charge for exchange has risen?—That is so; whether India has obtained more or better articles than she could have obtained before for the same payment.

11,734. For the same number of rupees?—That, no doubt, is a question for consideration.

11,735. This is a difficult calculation to make?—I think it is one that can only be made in a general way. I do not think it is possible to work it out.

11,736. Well, the difficulty would be to know at what rate certain articles had been paid for in certain years: but I suppose you could find that out, if you were to take a couple of special transactions, one in 1877 and one 10 years later, and see for what number of rupees you had got a certain bulk of articles in the earlier year, and for what number of rupees you had got the same bulk in the second year; that would bring you pretty near?—Yes, if it is an article which has not varied very much in quality, but take such a case as steel rails. They have been so immensely improved, and the nature of the article is so different from what it used to be 20 years ago, that I doubt if you could make an accurate comparison in that article.

11,737–8. (*Mr. Jackson.*) Did you say the steel rails sent out now are not so good as 20 years ago?—No, the other way; you get a much better quality for your money now, I should suppose; that would be my view.

11,739. Does that mean you would pay a much higher price per ton, though you would get as much value for your money?—I am no expert in the matter, but my general impression is that you not only get a better but you get a cheaper article now, than you did before the fall in prices.

11,740. You must not apply it to steel rails?—I only took it as an illustration, but I do not know that I am right in that instance.

11,741–3. But there would be no difficulty in applying your observation to several articles. Take, for instance, the stores necessary over a mile of railway now; it would probably be possible to show that the cost of a mile of railway now in rupees is less than it was in the previous period, notwithstanding the fall in exchange?—Yes, I think that would be so.*

11,744. (*Sir Andrew Scoble.*) But this has to be borne in mind in reference to that calculation, has it not, that India does not get the benefit of the fall in prices to the extent that she ought, owing to the fact that there has been a simultaneous fall in the value of the rupee?—Certainly.

11,745. (*Chairman.*) In paragraph 14 the Committee compares the cost of inspection in the India Office with the cost in other Imperial departments. Perhaps you would read the charge, as stated, in other departments?

* I am informed that during the last 20 years the sterling price of rails has fallen 36, cast-iron sleepers 10, and wooden sleepers 18 per cent. Thus, a quantity of such articles which in 1876 cost 100*l.*, would, at 21*d.* the rupee, have been paid for by a remittance of Rs. 1,143. Taking exchange now at 14*d.*, the same quantity would cost, in the case of rails, 64*l.* or Rs. 1,097; of iron sleepers, 90*l.* or Rs. 1,543; and of wooden sleepers 82*l.* or Rs. 1,406.—H. W., 4th August 1896.

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

—The rates which the Committee themselves quoted were:—"War Office, for clothing (including inspection, "clerical labour, packing, and issue, but not packing "material), 3·00 per cent. War Office, Ordnance (5 per "cent., less ½ per cent.), 4·7375 per cent. Admiralty, "stores 10·00 per cent.; victualling, 2·50 per cent. "Stationery Office, publications, 5·00 per cent. Inland "Revenue, malt liquor, 2·911 per cent. Inland Revenue, "stamps, 3·706 per cent."

11,746. Are those the charges made by those Departments to outsiders, or are they the charges made as between one department and another?—They are the charges made to the India Office by these departments.

11,747. And the India Office, I think, is treated by the Imperial departments as one of the brotherhood, is it not?—The War Office, for instance, charges one rate—Sir Ralph Knox will correct me if I am wrong—for articles it supplies to the Admiralty, and another rate if it supplies them to a private person?—Yes; these are the rates charged to Government Departments.

11,748. And the India Office is reckoned a Government Department?—Yes.

11,749. (*Sir Ralph Knox.*) As regards factory stores, certainly they are?—Yes; the comparison was made to show what was the cost of the Store Department as compared with what it paid for purchases from other departments

(*Mr. Jackson.*) The India Office Stores Department receives most-favoured-nation treatment.

11,750. (*Chairman.*) If you look at paragraph 16:—"The rates for the Admiralty were determined in 1875, "on the understanding that, when work was done specifically for the Government of India or the troop-"ships, no per-centage was to be added to the cost "prices, and that corresponding rates were to be "charged in India when stores and labour were supplied to Her Majesty's ships." That means, does it not, what Mr. Jackson calls "most-favoured-nation" treatment?—Yes, it was done rather with the idea of securing reciprocal treatment.

11,751. What do you say, Sir Ralph, as to this matter?

(*Sir Ralph Knox.*) As regards the cost of articles produced in the factories, certainly the Indian Government gets a considerable advantage as against the prices which would be charged to an outside government. There is one point of contention between us, at least between us and the Treasury, which I think will have to be decided by this Commission; namely, that in making a charge against India for articles produced at the factories, we make no charge whatever on account of interest on capital. The Treasury have thought that we ought to do so, but our understanding with the Indian Government has been now for some years past that we should make no charge for capital, and in that way certainly the Indian Government is treated under the most-favoured-nation clause. The stores that we obtain under contract are charged against them at what we call "Vocabulary" prices, which are worked up from an average of the most recent contracts, plus the charge for inspection and establishment, and so on.

11,752. (*Chairman.*) I am afraid from what you say, Sir Henry, it will be somewhat difficult to compare the charge for inspection and so forth in the India Office as shown in paragraphs 13 and 14, with the charge made by other departments, because, first of all, we are not in a position to say whether the charge in other departments is exhaustive; but I think it is clear from what you say that it is very difficult to make your charge exhaustive?—I think so. The Committee of that day took great pains to ascertain whether the work of the Stores Department was being transacted on an economical footing, and these were the best calculations they could make for comparison.

11,753. May I ask whether you can tell us, on behalf of the India Office, whether the India Office wish this Commission to consider the cases of charges for inspection, and so forth, when we come to consider apportionment?—The India Office, I think I may say, would be very glad if the Commission would pronounce an opinion whether the charges made on it by other departments are reasonable, but I have no ground for thinking that the Secretary of State questions those charges or wishes to bring the subject before the Commission.

11,754. Of course, it lies with the India Office, when we come to the apportionment, to call our attention to the points which it wishes us to investigate. The Commission would have to decide afterwards whether they would take up such points, but, if this particular point were likely to come before us under "apportionment," I would not ask you more about it now?—I do not think we have considered the charges made for work done to be a question which has to be investigated from the point of view of apportionment.

11,755. At present, as far as you are aware, you are not proposing to bring these charges before us of your own initiative?—No.

11,756. Possibly you might consider that question and inform the Commission whether the India Office would wish to raise that question as an "apportionment" case?—An agreement has been recently made between the two offices, to pay 5 per cent. on the cost of stores produced by the Ordnance Factories for India

11,757. Are you satisfied with the arrangement made with the Inland Revenue under which the supply and management of stamps was transferred to the Control Department of the Inland Revenue, towards which you make a contribution?—Yes, I think that that is considered an economical arrangement. The total charge has certainly been reduced. The inspection, supervision, and supplies of stamps after they have been sanctioned, were in 1886 transferred to Somerset House, where a supervisor, one assistant, and two examiners, are paid by the India Office, in place of a superintendent, two senior assistants, and four junior assistants, in 1875–76; and at the time of transfer a temporary staff numbering 30, was also transferred, of whom six were dispensed with in 1888.

11,758. (*Mr. Jackson.*) Does that mean that the whole cost of those officers is borne by the Indian Department?—The India Office agrees to pay their salaries and wages. The Somerset House authorities regulate the actual payments, in communication with the India Office.

11,759. (*Chairman.*) And that was a matter of discussion between the two Departments, on which you finally came to agreement?—Yes.

11,760. As far as I remember, there was no great difference of opinion?—No, not at all.

11,761. (*Mr. Jackson.*) The arrangement does assume that the whole time of those officers is employed by the work of the India Office?—That is so. Originally the actual men who were engaged on the work at the Store Department were taken over; but there now only remain one supervisor, one assistant supervisor, and two examiners, who are considered as being on the India Office establishment.

11,762. But my recollection is that the India Office only pays for the salaries; it does not pay anything in the nature of establishment charges, either for rent or rates, or anything of that sort?—Those four officers have rights to pension.

11,763. (*Chairman.*) I think we threw in, did we not, upon a rough calculation, about 26 per cent. on the salary, or something of that kind, to represent the charge of pension which attaches to and is additional to the salary charge?—Not so, as regards our four permanent officers, whose pension we shall pay. Annual allowances amounting to 590*l.* are made to 18 officers of the Departments of the Controller of Stamps, and the Inspector of Stamping, Inland Revenue Department; and a further annual sum of 100*l.* is granted in consideration of such pensions as may hereafter have to be paid by the Imperial Government to these officers on account of their employment on behalf of this office, such 100*l.* being only payable so long as the 18 officers are thus employed. A further annual payment of 300*l.* is made to the Board of Inland Revenue for miscellaneous services.

11,764. (*Sir Andrew Scoble.*) And what is the total payment now?—The total payment for salaries is 800*l.* Besides that we pay 990*l.* for the various officers who are employed on our stamp work.

11,765. That makes 1,790*l.* altogether?—Yes, besides the temporary staff, which costs about 1,700*l.*, so that the total charge is nearly 3,500*l.*

11,766. And what was the previous amount paid?—I am afraid I cannot give a figure for fair comparison. The salaries which are now 800*l.* were in 1886 1,565*l.*; but the payments that we make otherwise must be taken with the liabilities that we had for pension for that establishment of which we are now relieved. I have

not the means exactly of giving the figure for comparison.

11,767. But on the whole you are satisfied that there will be a saving to the Indian Government by this arrangement?—I think so; I think it is considered to be an economical arrangement.

11,768. (*Mr. Jackson.*) The work has considerably increased though, has it not?—The work of the Department is increasing.

11,769. (*Chairman.*) If you look at paragraph 19 of the report of the Home Charges Committee, you will see:—"The payment for stamps was settled in 1886, when the "management of the supplies was transferred to the "Inland Revenue Department, with a saving of 867*l.* "in the salaries paid annually, from which must be "temporarily deducted pensions amounting to 417*l.* "We have no remarks to make on this branch of the "subject"?—Yes; those pensions were for the staff that were reduced.

11,770. With reference to what Mr. Jackson has just said, the stamps obtained cost in 1878–9 41,356*l.* and in 1887–8 54,067*l.*; but, I presume, the next heading, the Post Office, would include some charge for stamps, would it not?—No, I think not; the Post Office stamps would not be under the head of stamps.

11,771. (*Mr. Jackson.*) Of course that includes stamps and stamp paper?—Quite so.

11,772. And, of course, in that period there has been a considerable reduction in the price of paper; and, although the total payment now is not more than a few thousand pounds more than it was then, it represents a great deal more paper and material than it did in the earlier years?—Yes; the last payments for stamps were 39,000*l.* in 1893–4, and 45,000*l.* in 1894–5 and 1895–6. That is practically about the same; 41,000*l.* and 54,000*l.* were the figures for 1878–9 and 1887–8.

11,773. Yes, my point is this, that supposing paper has gone down 25 per cent., 40,000*l.* now purchases a great many more sheets of paper; and it is upon the number of sheets of paper that the amount of inspection depends?—Yes, that would be so.

11,773*a*. (*Sir Ralph Knox.*) What articles of stationery are necessarily supplied from Europe?—Printing paper is mostly supplied locally. But the indents contain large demands for writing paper and envelopes, drawing paper and materials, bookbinder's materials, steel and quill pens, copying press materials, ink, stationers' sundries, such as gum bottles, paper fasteners, &c.

11,774. (*Chairman.*) Would you now turn to the 14th Report of the Home Charges Committee, page 131. At paragraph 9 the Committee summarises their recommendations on the subject of stores. Perhaps you would give us the substance of that paragraph, and tell us whether it has been acted on?—The paragraph is:—"In our "eighth report we investigated the Stores Department, "and, reserving the clerical portion of the establishment for future consideration, expressed our opinion "that any saving to be anticipated from a reduction of "the home charges, by throwing upon the Government "of India the duty of meeting in that country the "cost of the stores supplied, would be rather apparent "than real, and would be much more than counterbalanced by the disadvantages that it would entail. "Considering it, therefore, necessary to maintain in "England an organization for the purchase, inspection, "and shipment of stores of European manufacture, we "were in favour of the existing system; we recommended that an endeavour should be made to place "on a more satisfactory financial footing the arrangement for the supply of malt liquor, unless the whole "supply could be obtained in India; we suggested the "reduction of the salary of the inspector of scientific "instruments on the occasion of a vacancy; and we "pointed out the advantage to be derived from the "Government of India drawing its supplies of stores "more largely from local sources." The specific recommendations, therefore, were that the malt liquor supply should be put on a footing under which it would be obtained in India; that has been done; it is now wholly supplied there. The reduction of the salary of the inspector of scientific instruments; I think a vacancy has not occurred. There is still an inspector, and I believe it is the same man. And the advantage to be derived from the Government of India drawing its supplies of stores more largely from local sources is explained in that paper which I have handed in, from which it will be seen that that is the policy which the Secretary of State has consistently followed.

11,775. The general result of this examination has been, I think, to show that, at all events up to the year 1887–88, the amount of stores bought in England for use in India had not diminished?—Yes.

11,776. Do you happen to know whether, in the interval that has passed since that time, they have increased or decreased?—The military stores have increased, the Ordnance stores obtained from the War Office; but there has been now again a considerable falling-off owing to the completion of the re-armament of the troops.

11,777. Is that borne in mind in the maintenance of your Store Department, because, of course, if the amount of stores falls off and you have a permanent establishment costing a certain sum, the result would be largely to increase the percentage, would it not?—I was going on to say that I do not think that the cost of the stores that are inspected by the Stores Depôt has varied very materially. I think that may be taken, one year with another, as being practically about the same as it was.

17,778. (*Mr. Jackson.*) When you say the cost, do you mean the annual expenditure?—The annual expenditure

17,779. Of course the cost has varied?—Yes; the great variation that has taken place in our stores has been in the military stores obtained from the War Office. In the other stores I do not think there has been any material change.

11,780. (*Chairman.*) The malt liquor, for instance, has all disappeared as an article sent out from here?—Yes; and there has been a reduction of the establishment in consequence; the officers specially appointed for its inspection are no longer in the office.

11,781. That is to say, the India Office are quite alive to the fact, that, if they have laid it down as their policy to obtain whatever they can advantageously in India, and they maintain a permanent Stores department over here, the result of that policy must be watched, otherwise you might get a percentage quite out of proportion in the cost of inspection at home?—Yes; I think that the Secretary of State in Council is fully alive to that. There have been several examinations of the Stores Department, and the staff has always been kept down to the minimum. It is now a little in excess of the normal strength, but I believe at this moment there is one reduction under the consideration of the Secretary of State.

11,782. (*Mr. Jackson.*) But, of course, the cost of inspection depends, not upon the number of sovereigns expended, so much as upon the number of articles purchased?—Your point is that it may not be the cost, but it is the work that has to be done.

11,783. I put it in this way, that supposing that the price of the stores has fallen 25 per cent., paying a smaller percentage upon the cost would not necessarily mean that there had been 25 per cent. reduction in the work?—Just so; but I think that the object of this Committee, from whose report the Chairman has been quoting, was rather to see whether, as judged by a percentage on the stores, the India Office mode of transacting the work was an expensive one, compared with what it would be if they bought from contractors, paying them their profit; and the view that was taken was that it was a very economical mode of working. That perhaps can only be judged on the value of the stores.

11,784-5. I notice that the term European stores is used; is it the fact that stores bought in this country do consist of any considerable proportion of European stores other than British?—No; you must only take that word "European" as in contrast to "Indian." It does not at all refer to the question of policy, as to where the stores bought in Europe shall be obtained. I believe that on that point the Secretary of State has given very specific instructions that they are to be obtained of British manufacture, if possible.

11,786. Of course there will be some purchases made abroad?—There may occasionally be some, but I think they are very rare. The word "European" has no meaning of that kind; it is simply used as opposed to "Indian."

11,787. (*Mr. Buchanan.*) In this paper (Correspondence relating to the Local Supply of Stores required by Government Departments in India), the only substantial matter apparently dealt with subsequent to this report of 1889, is that apparently the Government of India are empowered to purchase under certain conditions railway plant and material in India?—Yes, I

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

think that is the only point that can be said to affect the policy, which has occurred since 1889.

11,788. Have the Government of India made use of their opportunities and purchased much railway plant since this was issued?—They have endeavoured to do so, but I am not prepared to say to what extent it has been carried into effect; they have, however, certainly invited tenders in consequence of the despatches that are mentioned there.

11,789. You do not know whether they have actually made many purchases, and whether the system has been so far set in operation as to enable one to judge whether it is economical or not?—No, I am afraid I cannot answer that. I think I must ask you to refer to the Director General if you wish to know that.

11,790. (*Sir Ralph Knox.*) The railway stores appear to be quite half the amount of stores sent to India, are they not?—Yes, I think they are, but if you are alluding to Mr. Buchanan's point, those orders refer to a particular kind of bridge work, I think.

11,791. (*Mr. Jackson.*) Principally bridge work, I think?—Yes, I think so.

11,792. (*Sir William Wedderburn.*) Such locally supplied stores would be included in the annual return, I suppose, which is furnished by the Government of India?—Certainly they would.

11,793. The amount would be shown each year in the return?—Yes.

11,794-5. (*Chairman.*) Have you anything to add on the subject of the Registry and Record Department? We have already taken some evidence on that point, when we were considering the Correspondence Departments. But you may have some further remark to make upon it?—I may perhaps read my note.

11,796. If you please?—The Registry and Record Department has been entirely reorganised. Formerly much of the copying and registering was done in the several branches of the Correspondence Department, which is now performed by clerks in the sub-registries and by women typists. Besides the registrar and three assistants, there were in 1875-76, one extra-assistant, one geographical assistant and his clerk, a map mounter, a lithographic printer, a keeper of records, and 35 second class clerks and writers, or 45 in all. In 1893-4, there were one keeper of records, one assistant, one keeper of geographical records, 43 second class clerks, supplemental clerks, &c., and boy copyists, and nine women typists, making, with the Registrar and Superintendent of Records and his three assistants, a total of 59. There are now 37 second-class clerks, &c., and seven boy copyists, and the post of assistant keeper of records has been abolished.

11,797. And does that represent now the normal establishment, or are you contemplating any further changes?—The normal strength is to be 33 second-class clerks, which is practically the same as the present establishment.

11,798. What increase has occurred among the miscellaneous officers?—The number had risen from 15 in 1875-6, to 29 in 1893-4. The addition was caused chiefly by reckoning among them the private secretary to the Secretary of State (who, in 1875-6 was, and in 1893-4 was not, a member of the establishment), the assistant to the solicitor and the clerk to the legal adviser, the clerk to the Commissioners of Income Tax, the actuary and his computing clerk, and copyist, the work now performed by whom was formerly charged for in other departments. But besides these the conduct of the business of the Indo-European Telegraph Department in this office has added the Director-in-Chief and three clerks to the staff; and new appointments have been made of the Deputy Government Director of Indian Railway Companies, an Ordnance Consulting Officer, an officer attached to the Intelligence Department at the Horse Guards, and a paid member of the Army Sanitary Committee. On the other hand, the appointment of Solicitor, as distinct from the Legal Adviser, has been abolished. Since 1893 another clerk has been appointed in the Indo-European Telegraph Department; but the post of consulting officer for the Troop Service has been abolished, and the private secretaryship is now held by a member of the establishment.

11,799. Is that a permanent rule that the private secretary should be a member of the establishment?—No, it is in the discretion of the Secretary of State of the day.

11,800. Then we come to the messenger establishment; has the strength of the office keepers and messengers, housemaids, and artizans, been the same throughout?—There were reductions of one messenger and an assistant housekeeper, and an increase of four artizans and one housemaid. The number of messengers has been further reduced by one, and of the total seven are boy messengers.

11,801. Has the India Office adopted the course, which I understand, is being gradually adopted in other departments of the Civil Service, of giving a preference to men who have served in the army and navy?—I think not. It rests with the Secretary of State of the day to nominate. I do not think it has been laid down so.

11,802. Who are the artizans and labourers; are they merely coal porters?—Yes, and the manager of the hydraulic lift, and firemen.

11,803. Then we come to the Audit Department; what change has taken place in that department since 1875-76?—It has been re-organised; the senior inspector is now entitled assistant to the auditor, and the junior inspectorship is abolished; the four senior examiners are termed senior clerks; and in place of the eight junior examiners and two writers, there were in 1893-4 four junior clerks and nine second-class clerks. One second-class clerk has since been substituted for a junior clerk. The normal strength is to be two senior, three junior, and 13 second-class clerks.

11,804. What is the effect on the cost of the Department?—It had been increased from 4,410*l.* to 6,724*l.* But this was in a measure due to the slow promotion under the former scale, owing to which many had attained the maximum of their grade. In the re-organisation the pay of the senior and junior clerks was increased, the number being reduced, so that the money was better distributed, and a considerable saving will be effected as vacancies occur. The cost in 1896 is estimated at 6,208*l.* As far as I can judge, I think that is about the normal cost.

11,805. We have had the benefit of the evidence of the auditor, and therefore it is not necessary to enter into any question with regard to his functions, but there may be some remarks you would like to offer upon the subject of the audit arrangement?—No. I think not at all. The great difficulty that I see at present in audit arrangements is with reference to the Army charges. The auditor complains, he has mentioned it to Parliament and he has now reported it again, that he has not the means of checking the payments which are made for the Army effective charges. I have furnished him with statements which show, in my opinion, that the establishment on which we pay is practically kept up; but he would like to have exact returns to show that there was the number of men in India, and to diminish the payments we make to the War Office if they fell short by a few men. I do not think the Secretary of State wishes to take that view. I think he is prepared to pay on the normal establishment, but, no doubt, for a literally effective audit we are not in possession of the actual returns. And another point is with reference to the deferred pay. I think we shall, probably, be obliged to write to the War Office, and ask if they can give any means of enabling the auditor to have an effective audit of the deferred pay.

11,806. Of course the question of the relations between the India Office and the War Office forms a very important branch of the inquiry committed to us. Do you anticipate that, when we are dealing with those charges, you will call our attention to this defect in the system?—I think I shall be obliged probably to point out to the Commission what the auditor has said. I do not think that at present, at any rate, the Secretary of State is disposed to press the point; but the auditor, so far as his reports go, is not under the Secretary of State; and he reports that he is not satisfied with the check.

11,807. (*Mr. Jackson.*) I understood Sir Henry Waterfield to say it was not a defect in his view, but that it was a defect in the auditor's view?—Quite so.

11,808. (*Chairman.*) And I also understood him to say that the Secretary of State is in the main satisfied with the present system; he is not pressing for a change?—When the auditor reported last year it was put before the Secretary of State in Council, and he did not consider it necessary to take any further steps. The auditor has repeated his objection in his report made this year, which is now under consideration, and I think we shall probably have to communicate with the

War Office, and ascertain whether they have the means to satisfy him. One point which comes before the Secretary of State is that the auditor's demand might probably involve a considerable addition to the Audit Department.

11,809. If, when we come to deal with the apportionment of military charges, the Secretary of State chooses to put the question before us, it seems to me to come within our reference?—Yes.

11,810. Then we have a charge for Store Department wages, rent, &c., outside the salaries with which we have been dealing?—Yes.

11,811. Have you any remarks to make upon that charge? What has been the increase?—The increase on the whole is 1,678*l.* from 25,177*l.* to 26,855*l.*, but a large part of it is merely nominal.

11,812. Can you give the details of any of these charges?—The wages of artificers and labourers were in 1875–6 11,576*l.*, and in 1893–94 11,371*l.*, making a reduction of 205*l.*; the rent, rates, and taxes were in 1875–61, 1,483*l.*, and in 1893–4 1,410*l.*, showing a reduction of 73*l.*; the repairs, furniture, and fittings were in 1875–6 1,385*l.*, and in 1893–4 1,466*l.*, making an increase of 81*l.*; the new works in 1875–6 were 3,253*l.*, and in 1893–4 2,336*l.*, making a reduction of 917*l.*; in the year 1875–6 there was a considerable extension of the depôt, and in 1893–4 the hydraulic lift and electric light were introduced; the coal, gas, and house articles in 1875–6 were 981*l.*, and in 1893–4 798*l.*, giving a reduction of 183*l.*; the travelling expenses of officers of the Department in 1875–6 were 1,546*l.*, and in 1893–4 2,537*l.*, making an increase of 991*l.*; the Professional Inspectors' Commission and travelling expenses in 1875–6 were 283*l.*, and in 1893–4 1,578*l.*, making an increase of 1,295*l.*; that you will observe is a very large part of the total increase of 1,678*l.*, and, out of that 1,295*l.*, 859*l.* would, in 1875–6, have been included in the price of the stores, so that it is a mere re-arrangement of charge, and 250*l.* are for special payments made in 1893–4 for inspection and valuation. The cost of Police in 1875–6 was 1,034*l.*, and in 1893–4 1,593*l.*, making an increase of 559*l.*; the cost of advertisements in 1875–6 was 335*l.*, and in 1893–4 36*l.*, making a reduction of 299*l.*; the carriage of stores, patterns, and miscellaneous charges in 1875–6 were 1,391*l.*, and in 1893–4 1,028*l.*, making a reduction of 363*l.* The Surveyor of Shipping and the commission of freight are now charged elsewhere (I have mentioned the Surveyor of Shipping among the salaries); they form a nominal reduction of 637*l.* And the supply of stamps for India has increased from 1,273*l.* to 2,702*l.*, making an increase of 1,429*l.*

11,813. Then in reality you may almost say these charges are stationary, are they not?—They are practically about the same.

11,814. You can only say that it is that sort of variation that you find in any big establishment?—Yes; and also a good deal of it is nominal.

11,815. I will reserve the management of the debt, which is an interesting subject, till later. Taking law charges; the India Office have not of late been giving much employment to lawyers, I think?—There was a considerable reduction in the law charges owing to the fact that in 1875–6 we had a solicitor outside the office to whom an allowance of 2,000*l.* was paid for his staff. We now only pay 569*l.* on that account, which is included in the head of salaries, and the further reduction is due to the fact that the disbursements in 1875–6 were 347*l.*, and in 1893–4 only 110*l.*

11,816. And I see last year it has fallen still further to 68*l.* I think, has it not?—Yes, I think our Legal Adviser is very economical.

11,817. The next item is telegrams to India, which show a very considerable increase, as far as a comparison between 1875–6 and 1893–4 goes, but I think in the last year there has been a considerable fall?—Yes; I think the heavy charge in 1893–4 was exceptional.

11,818. Is that due to the increased use of the telegraph, or to increase in the charges for telegraphic messages?—The actual charges for transmission have been reduced, but the telegraph no doubt has been brought more into use, and the charge varies very greatly when questions of policy arise, which may require a great deal of telegraphic communication in a particular year.

11,819. Then comes the postage of despatches to and from India in which there is a very heavy fall. Have the telegrams replaced the letters?—No; I think it is due to the reduction of the charge for postage.

11,820. Then we come to contingencies; can you tell us the nature of the charges that are contained in that heading?—Rates and taxes have risen from 359*l.* in 1875–6, to 816*l.* in 1893–4; repairs, furniture, and fittings, from 3,822*l.* to 5,469*l.*; coal, gas, and house articles, from 1,526*l.* to 1,544*l.*; postage (inland postage) from 431*l.* to 1,021*l.*; telegrams (not to Indja) from 16*l.* to 40*l.*; travelling expenses from 241*l.* to 252*l.*; newspapers, Parliamentary papers, and books, have diminished from 1,411*l.* to 1,087*l.*; advertisements from 1,402*l.* to 457*l.*; stamps from 100*l.* to 93*l.*; there is a new charge of postal and money orders, 91*l.* in 1893–4; messengers' uniforms have fallen from 523*l.* to 355*l.*, which is an accidental reduction every other year; messengers' allowances for night watching is a new charge, 182*l.* in 1893–4, which must be set against the police in which the cost has been reduced from 813*l.* to 144*l.* The charge for library in 1875–6 was 1,182*l.*; it is now transferred to another head, that of scientific and minor departments. Miscellaneous charges have fallen from 1,464*l.* to 534*l.* Then there is a new charge of 1,047*l.* for cataloguing the records.

11,821. Do you know what the charge for the library is now?—The library grant is 3,000*l.* a year. It is limited to this amount which may be spent at the discretion of the Library Committee.

11,822. Is that a charge for buying and binding books and keeping them in order, or does it include the purchase of books required for the office work, Blue Books and so forth?—No; it does not include Blue Books; it is for the library as distinct from the office, but it includes large subventions for Oriental works that have been brought out.

11,823–4. Is not 3,000*l.* a year rather a large library charge?—I have had a note prepared on the subject in case the Commission might wish to see it. In 1877 the Library Committee examined the question of expenditure on literature, &c., which they found, during the seven years from 1869–70 to 1875–6, to have been as follows:—

	£
Cataloguing and purchase of MSS.	4,294
Publication of the "Rig Veda"	4,572
Purchase of coins	450
Subvention of Royal Asiatic Society (210*l.* a year)	1,470
Subscription to the Hakluyt Society (21*l.* a year)	147
Purchase of books, magazines, &c.	1,093
Grants in aid of publications, Oriental and archæological	8,481
Minor grants in aid	3,900
Patronage of books	7,045
	31,452

That is to say, the average for the seven years was about 4,500*l.* a year; and it was decided that in future the payments to cover all such expenditure, unless provided for in the Indian Estimates, should not exceed 3,500*l.* in any year. This grant was reduced to 3,000*l.* a year in 1889 on the recommendation of the Home Charges Committee.

11,825. That is what it stands at now?—That is what it stands at now as a maximum.

11,826–7. It is a subvention to literature, such as becomes a wealthy country?—It was divided in 1893–4 as follows:—

	£
Oriental Works	979
Flora Indica	172
Administrative Works	197
European works relating to India	86
Subscriptions	232
Art, miniatures of Indian Princes, repair of pictures	117
Maps, second-hand books	283
Fauna Indica	250
Cataloguing records, extra payment	47
	2,363

11,828. (*Sir Ralph Knox.*) There was nearly 1,000*l.* for Oriental works, apparently?—Yes, 979*l.* on Oriental works, besides subscriptions to societies to bring out scientific works.

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

11,829. Is that spent on translations of portions of Oriental works?—They are grants made to learned authors for editing, and in many cases translating manuscripts of Oriental works.

11,830. Are they frequently referred to in the India Office?—Yes; not in the India Office, but in the Library. The Library is used very largely. It is not maintained for the purpose of the India Office.

11,831. It is an Indian Library in this country for the use of people generally, or students?—It is the great Indian Library; perhaps the Bodleian is the only greater one.

11,832. (*Mr. Jackson.*) Where is it?—It is at the top of this Office, but it is just at this moment under reconstruction.

11,833. (*Mr. Buchanan.*) Is it open to the public?—It is open to the public.

11,834. (*Chairman.*) There is one item I should like to call your attention to, viz., rates and taxes. I see that that formed a subject of inquiry by the Home Charges Committee in their 15th Report, at page 134. Those rates and taxes are paid under arrangement between the two Governments, are they not?—Yes.

11,835. Have you anything to say upon that arrangement?—The increase of charge is due to the re-valuation of the property which took place a few years ago, and it is given in this passage to which your Lordship has referred:—"By an Act of 1864 (27 & 28 Vict. c. 51.), "the land required for the site of the India Office was "vested in Her Majesty, for the service of the Govern-"ment of India, at a total cost of 86,765*l.* 17*s.* 4*d*, on "the condition that it should continue liable to the "payment of $\frac{11}{35}$ths of all the parochial rates and taxes "to which the entirety of the land (of which it formed "a part), acquired by the Commissioners of Works for "the extension of the public offices, was liable by law. "The aggregate of the assessments on the houses "formerly standing on the complete site was 3,394*l.*, of "which $\frac{11}{35}$ths amounted to 1,066*l.* 13*s.* 7*d.*, and the "rates were paid on that assessment up to 1876, though "the legal liability had ceased at Michaelmas, 1873."

11,836. That is to say, the Government of India gave that sum for the land, subject to the condition that it should continue liable to that extent on account of rates and taxes?—Yes. "Rates were also paid on an assess-"ment of 1,759*l.* on account of the plot on the south side "of Charles Street."

11,837. Is that the plot where there is that iron building?—Yes.

11,838. Was that ever in the hands of the India Office?—Yes. "In 1877 the Inspector of the Treasury "proposed an assessment or rateable value of 12,500*l.* "for the whole block of buildings, of which 2,900*l.* was "assigned to this Office, and 600*l.* to the vacant site in "Charles Street. The vestry clerk of the parish of St. "Margaret and St. John, Westminster, was thereupon "informed that, as an act of grace, the Secretary of "State in Council would contribute towards the rates of "the parish on the increased assessment of 2,900*l.*, pro-"vided that the assessment on the vacant land was "reduced to 600*l.*, making 3,500*l.* in all. In 1880–81 the "superfluous land adjoining the India Office was sold to "the Commissioners of Works for 68,600*l.*, and the "assessment upon which rates are payable was there-"upon reduced to 2,900*l.*"

11,839. Then in reality the land upon which the India Office stands only cost you about 18,000*l.* odd?—I noticed that point as I was reading it; I am not quite sure whether we can say that that is the result.

11,840. I think the paragraph means that?—No; I see that, besides the sum mentioned by the Committee as paid for the site of the office, 82,323*l.* was paid for the approaches.

11,841. Therefore you only now stand charged with this part of the quadrangle, on which the India Office now stands?—85,766*l.* for the site of the office, and 13,724*l.* as the balance on the other ground, or altogether 100,490*l.*

11,842. But then you have got a number of other offices; for instance, those offices down in the Belvidere Road?—They are not included in this charge; but, if you look forward to the end of that report, there is a return of the rates and taxes over 10 years. I need not take the year 1878–9 because there were arrears in that year which vitiate the comparison, but all through-out the time the sum paid has been between about 700*l.* and 800*l.* I read to you among the miscellaneous charges of the Stores Department a payment of 1,483*l.*, reduced to 1,410*l.*, for rent, rates, and taxes, in which item the rent, rates, and taxes for these buildings would be included.

11,843. The taxes with which we are now dealing are merely upon the land upon which this building is built?—Yes.

11,844. Do you notice that apparently the rates paid on the plot of ground in Charles Street were upon an assessment of 1,759*l.*; but under the arrangement when you took it over, that assessment was reduced to 600*l.*?—Yes.

11,845. A considerable reduction as far as the rate-payers are concerned?—Yes, it was an agreement that we were not to have a certain total exceeded, so the assessment on the two blocks was divided, and we agreed to pay 2,900*l.* on this part of the building, leaving 600*l.* on the other; and the Board of Works, I suppose, have the advantage of that now; we have sold the ground to them, and they will only have to pay 600*l.*

18,846. That is all they have to pay on account of that ground?—Yes.

11,847. What sum was paid to the Banks of England and Ireland for the management of the Indian debt in 1875–6?—18,385*l.*

11,848. And in 1893–4?—44,938*l.*

11,849. Could you give us also the sum which was paid for the same service in 1894–5?—61,096*l.*

11,850. Has there been any change since 1875–6 in the rate of payment?—Yes. In 1860 the rate was fixed at 340*l.* per million, the dividends being then payable half-yearly. In 1885, when stock was issued with quarterly dividends, the rate on such stock was raised to 400*l.* per million. After the conversion in 1887–8, when the bulk of the stock came to bear quarterly dividends, the charge was fixed at 300*l.* per million on half-yearly and 360*l.* per million on quarterly dividend stocks. Recently, with effect from January 1st, 1896, it has been agreed to pay 360*l.* per million on the first 100 millions of India Stock, and 100*l.* per million on further stock, the payment for debt with half-yearly dividends remaining at 300*l.* per million.

11,851–2. What is the amount of stock on which these payments are made?—In 1875–6 we paid to the Bank of England on 16,755,000*l.* 5% stock; on 20,858,000*l.* 4% stock; on 1,145,000*l.* 4% transfer loan; and on 14,148,000*l.* rupee promissory notes; the total held by them being about 52,700,000*l.* Besides that, there was at the Bank of Ireland 440,000*l.* 5% stock, and 756,000*l.* 4% stock. In 1893–4, 5 and 4% stocks had been paid off, and we then made payments to the Bank of England on 61,410,000*l.* 3½% stock; 33,698,000*l.* 3% stock, besides a fresh loan of 1,300,000*l.*; 25,683,000*l.* promissory notes; and about 2,400,000*l.* debenture stocks of four railways. The total at the Bank of England was about 124,000,000*l.*, and at the Bank of Ireland there was of 3½% and 3% stock about 3,700,000*l.*

11,853. Therefore, as far as the Bank of England is concerned, you paid the higher rate on 100,000,000*l.*, and the lower rate upon 24,000,000*l.*?—Yes; those are about the figures. On 96,000,000*l.* we paid 360*l.* per million, and on 28,000,000*l.* we paid 300*l.* per million; the promissory notes bore half-yearly dividends, and therefore on these we paid 300*l.* per million.

11,854. But I thought that it has been agreed to pay 360*l.* per million on the first 100 millions of India Stock, and 100*l.* per million on further stock?—You are speaking of the arrangement which has been made from the beginning of this year.

11,855. Then should I understand it that, upon those figures, under the arrangement made for this year, you would pay 360*l.* per million on 100,000,000*l.* and 100*l.* per million on 24,000,000*l.*?—Well, the fact is that in 1893–4 the figures which I have been giving you did not exceed 100,000,000*l.*, and now the total amount of stock is about 106,000,000*l.*

11,856. I have got the debt as you stated it in 1893–4, 61,000,000*l.* at 3½ and 33,000,000*l.* at 3%?—And 1,300,000*l.* which was a new loan.

11,857. But it worked up to about 124,000,000*l.* altogether?—Yes.

11,858. And what I wanted to know was whether, under the new arrangement of 360*l.* for the first 100 millions and 100*l.* per million after that, you pay 360*l.* on 100,000,000*l.* and 100*l.* per million on the 24,000,000*l.*?

—No. You must not put into this arrangement the rupee debt and debenture stocks which have half-yearly dividends. On those we pay 300*l.* per million as before. It is on the stock which bears quarterly dividends that we now pay 360*l.* for the first 100,000,000*l.* and 100*l.* per million afterwards.

11,859. Then how came there to be so great a rise between 1893–4 and 1894–5?—The payments in 1894–5 included a special payment of 11,838*l.*, owing to the conversion of the rupee loans from 4 per cent. to 3½ per cent. It was an exceptional charge for that year in consequence of the very heavy amount of work that the Bank of England performed for us, and it brought up the charge, which otherwise would have been about 49,000*l.*, to 61,000*l.*

11,860. In the account for 1893–4, I see "discount "sinking fund for redemption of debt incurred in "excess of money raised"; is that a sinking fund that is put aside in order to reduce the eventual and permanent charge of the debt to the 100*l.* for 100*l.* of stock?—Yes; the stock having been issued at a discount, a sum is invested quarterly, sufficient to cancel the discount by the time that the stock would become redeemable at par.

11,861. And I also see there is commission on sale of India debentures; is that a payment made to the Bank —866*l.* 5*s.* in 1893–4?—No; that was a commission of $\frac{1}{16}$ per cent. paid to the official broker who sold the debentures. When such debentures are offered on public tender, the same rate of commission is paid to the brokers and agents.

11,862. Rather in the same form as was allowed by the Imperial Government when they converted their stock?—It is of the same nature.

11,863. And had the Government of India paid it on previous occasions?—It has been the practice of the India Office always to give some commission when debentures or stock are sold otherwise than by public advertisement; the commission is given in all cases to brokers and agents whose tenders are accepted; the rate varies according to the nature of the transaction.

11,864. Have you got authority under Act of Parliament for that practice, or is it held to be a matter of administrative detail within the discretion of the Secretary of State?—I think it is a matter of administrative detail; it is a charge of the year like any other charge; it is not added to the debt.

11,865. But you have to get the sanction of Parliament for the raising of a loan?—For the raising of a specific amount of debt, not for each loan.

11,866. And have you not to put into that Act the power to issue this brokerage?—I think not in any Act.

11,867. Because you are aware that in our Conversion Act a similar power for it was distinctly asked from Parliament?—Yes.

11,868. Only in that case it was a novelty; it had never been done before?—It was a new transaction for the English Government.

11,869. (*Mr. Jackson.*) That was on the question of conversion?—Yes.

11,870. And that is really only a question of price, is it not?—It is a question of price on issue. It is usual to give a commission, whether the issue is made by public advertisement or whether it is on very rare occasions made privately through the official broker.

11,871. (*Chairman.*) And that I take it has been the practice?—It has always been the habit.

11,872. The brokers are entrusted with the sale of these securities, and they charge a brokerage on the sale?—The usual practice is to issue a public advertisement; and in the case of any tender which is put in by a broker and duly authenticated by him, the Bank of England are authorised to grant a commission to the broker or agent.

11,873. That is rather a different transaction from that which was authorised by the Imperial Government on the conversion; there it was a brokerage on any amount that a broker or agent brought in for conversion?—Yes.

11,874. (*Mr. Jackson.*) But practically the sale of debentures really takes the place, as it were, of a transaction in Treasury Bills?—Yes; the brokerage is a part of the price.

11,875. It is a part of the price; tenders are invited, and, in fact, you have no fixed limit as to price; you may fix your own minimum?—Yes.

11,876. And I suppose you may accept tenders above that minimum?—Quite so.

11,877. But it is understood that a tender carries with it a brokerage to the persons tendering?—Yes. It is not the practice to advertise the brokerage; but it is well known in the City; and the Bank of England is authorised to pay the amount of the commission, which, as I say, varies according to the nature of the transaction for which the broker or agent has tendered.

11,878. In fact the brokerage brings you a larger number of offers?—Yes, and probably at a better price.

11,879. (*Chairman.*) The object of it is to facilitate the sale, just as under Mr. Goschen's Act it was to facilitate the stock tendered for conversion?—Just so.

11,880. Would you give us the details of those two sums, the 18,385*l.* in 1875–6, and the 44,938*l.* in 1893–4?—The payment of 18,385*l.* in 1875–6 consisted of 340*l.* a million on India stock amounting to 13,185*l.* and 5,200*l.* on the rupee debt at the same rate, making a total of 18,385*l.* In 1893–4, 360*l.* a million was paid on India stock, to an amount of 35,704*l.*; on railway debenture stock and rupee debt at 300*l.* a million, 8,483*l.*; on the issue of a new loan, commission to the Bank of England at 500*l.* a million, 651*l.*; and services in connexion with the repayment of the 4½ per cent. rupee loan 100*l.*; making a total of 44,938*l.*

11,881. That 500*l.* a million on the issue of a new loan was simply commission to your banker for the issue of it?—Just so; it is the regular rate that we always pay to the Bank of England when they bring out a new loan, and it includes all their charges up to the receipt of the last allotment.

11,882. And what were the payments to the Bank of England and to the Bank of Ireland respectively?—To the Bank of England in 1893–4, 43,594*l.*, and to the Bank of Ireland, 1,344*l.*

11,883. Then, as far as the Bank of England is concerned, you got better terms on the earlier debenture stock and rupee debt than in 1875–6, but worse terms on the India stock inasmuch as quarterly payments have been introduced?—Yes.

11,884. And do you consider the new arrangement more favourable to the India Office than the arrangement previously in force?—I think the new arrangement is a very favourable one for us; we did not expect the Bank of England to agree to any absolute reduction of the amount it received; but by its agreeing to take the total amount that we were then paying, and for any future additions to charge only 100*l.* a million, we considered that we made very good terms.

11,885. That is to say, looking to the future, considering the amount of works that you are undertaking in India, that you are really a borrowing power, that the debt will increase, and in proportion India stock will increase, the terms that you have now made will be exceptionally favourable?—Yes.

11,886. I think you have a more full return?—Yes; I hand in the return in detail (*return put in*).*

11,887. (*Mr. Buchanan.*) I suppose you could not say how this charge of 340*l.* per million compares with the charge made to the Home Government?—Yes. The Treasury pays to the Bank of England 325*l.* on the first 500,000,000*l.* and 100*l.* on any further amount, which according to the account I have here was 133,000,000*l.*; and they pay to the Bank of Ireland 425*l.* a million.

11,888. And you pay 340*l.* straight through?—We used to pay 340*l.*, but now it is only 300*l.* per million on debt bearing half-yearly dividends; upon India stock we are to pay 360*l.* on the first 100,000,000*l.*, and 100*l.* afterwards.

11,889–90. (*Chairman.*) I see in the report of the Committee on Home Charges, at page 134, speaking of the arrangement which was then in force, in 1889, they say, "If the rates in force before the recent arrangement had "existed in 1888–9, the amount payable would have "been 41,840*l.*, so that a saving of 3,931*l.* in that year "resulted from the revision, while the service rendered "by the Bank was much increased by the change from "half-yearly to quarterly payment of dividends." Do you know at all on that method of comparison how the present arrangement would compare with that of

* *See* Appendix 36,

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

1875–6?—We should be paying now 20*l.* a million more than we were on the first 100,000,000*l.* in consideration of the extra expenses of the quarterly dividends, and we should be paying 240*l.* a million less on all over 100,000,000*l.* On the debt now existing, we should in 1875–6 have paid 88*l.* more than we do at present. The saving under the recent arrangement will be realised in the future, as additions are made to India stock.

11,891. (*Mr. Jackson.*) This is paid on the amount of the stock, is it?—On the amount of the debt managed by the Bank of England.

11,892. No matter what the dividend may be?—It is calculated on the average amount of stock on which four quarterly dividends are paid; we pay once a year in January.

11,893. But what I meant was, whether the dividend be two per cent. or whether it be four per cent., they get no extra remuneration for the large amount of money they deal with?—No; it is the same on 3½ per cent. and on 3 per cent. stock.

11,894. (*Chairman.*) It is fixed on the capital?—It is fixed on the capital, on which the four dividends were paid.

11,895. But the capital is not the amount inscribed in the books?—The capital varies, or may vary, from quarter to quarter, and the way in which it is practically worked out is that the Bank of England make a return of the capital on which they have paid dividends in each of the four quarters, and an average is struck of these four amounts of stock.

11,896. (*Mr. Jackson.*) Do they manage the transfers of stock also?—Yes.

11,897. Is that included in the charge?—We pay nothing more for that.

11,898–9. (*Chairman.*) Would you show to me how that would work out? We will suppose that there is 50,000,000*l.* of 3½ per cent. stock, of which the yearly interest would be 1,750,000*l.*, would it not? and 50,000,000*l.* at 3 °/₀ which would be a charge of 1,500,000*l.* The charge is on the capital, that is on 100,000,000*l.*?—Yes

11,900–1. But I gathered from you that that is not the way the Bank calculates it?—Yes, I think so, only the amount on which 1,750,000*l.* was paid might become larger before the year was out, if we had raised a fresh loan. And, in order to ascertain how much stock was on their books during the year, they take the amount upon which the dividends were paid in each quarter.

11,902. (*Mr. Jackson.*) If in the last two payments of the year the quantity had been increased, they arrive at the average by putting all together?—Quite so.

11,903–4. (*Chairman.*) In the third report of this Committee on Home Charges, there is an interesting comparison of the progress of the debt. It begins with the 31st March 1879, and shows, on the one hand, that there was at that date 59,000,000*l.* odd owing, and then it gives an estimate for 1889–90 of 89,000,000*l.* odd. It then deducts any sums that have been applied in the reduction of debt, and proceeds to explain how the difference between those two sums of loans made in England—which amount to just about 30,000,000*l.*—is made up. Do you think you could give us for the years with which we have been dealing an account somewhat in that form?—I can give the exact statement with the figures altered, and brought up to the latest date. I can put it in.*

11,905. At paragraph 19 of that report the Committee deal with sinking funds. They say, "In the preceding "paragraphs we have alluded to two sinking funds, "one in connexion with the conversion of Railway "Annuities and Debenture Stocks, and the other for "the purpose of extinguishing the charge arising from a "loan being raised at a discount. The first of these "had its origin in the Act of Parliament passed in 1879, "on the occasion of the purchase of the East Indian "Railway. In order to meet the views of trustees and "other persons who might be unable or unwilling to "hold a terminable annuity, even though a sinking "fund were attached thereto, it was provided that the "Secretary of State might, by agreement, purchase any "portion of the annuity, by giving to the holder India "4 per cent. stock at the rate of 125*l.* of stock for "5*l.* 12*s.* 6*d.* of annuity; but, in order to avoid any "permanent addition to the debt after the temporary "annuity would in ordinary course have ceased, it was "directed that, in respect of the annuity so purchased "and retained by the Secretary of State, one-ninth part "should be invested in the purchase of securities, the "dividends accruing on which should be applied in a "similar manner, so as to form a sinking fund, until "the public debt of India should thereby have been "reduced to an extent equal to that by which it had "been increased on the purchase of the annuity. By "two subsequent Acts power was given to purchase "annuities and other liabilities, by the creation of stock "bearing a lower rate of interest than 4 per cent., a "sinking fund being similarly formed by the invest-"ment of the difference between the interest in respect "of the liability redeemed, and the interest on the "stock created for the redemption thereof." When we compare, as the Committee does at page 18, the debt as it stood on 31st March 1879 and as it stood in 1890, that amount of debt I presume includes this extra nominal amount of stock?—Yes; it is the nominal amount of the whole stock that is issued.

11,906. And therefore against the increase must be set the fact that a considerable portion is met by a sinking fund?—Yes, you will find on page 19, "Of the "total increase of 30,612,156*l.*, debt to the amount of "14,442,311*l.* (approximately) will be gradually cancelled "by the Sinking Funds; to be cancelled by Railway "Sinking Funds 12,834,743*l.*; Discount Sinking Fund "(last loan estimated) 1,607,568*l.*"

11,907. Would you put a paragraph similar to that into that return you have kindly promised us?—Yes.

11,908. (*Mr. Jackson.*) Have any of these debts been converted into a lower rate of interest?—None of those which the Chairman has just been mentioning nor the earlier annuities, but of the India stock the 5 per cent. and the 4 per cent. have both been converted into 3½ per cent.—the 5 per cent. was converted into 4 per cent., and the 4 per cent. was subsequently converted into 3½ per cent. stock.

11,909. Was the nominal amount of stock increased?—There was no increase in the nominal amount; it was converted at par. There were payments no doubt involved in the conversion—anticipatory payments of interest and commission—but the amount of stock was exactly the same.

11,910. I really wish to see whether, inasmuch as your payment to the Bank of England is a payment on the nominal amount of stock, by such a conversion say from a 4 per cent. to a 3 per cent., you would increase the nominal amount of stock, and therefore still be paying them 340*l.* a million on the nominal amount?—We have not increased the amount of the stock, and therefore we are still paying on the same amount.

11,911. (*Chairman.*) Then we may take it that it is a principle of the Indian Government that, where there is a difference between the amount of money received for a loan and the amount of stock inscribed, that difference is made good by a sinking fund?—Yes, unless it is charged on the revenue of the year. If the amount is not large it is charged on the revenue of the year, and the consequence is that it has only been necessary in respect of the discount incurred in three particular years to apply this system of a sinking fund.

11,912. How is that sinking fund applied, in purchase of stock?—Yes, in purchases of stock.

11,913. Have you entertained any objection to the operation of that rule, now that stocks are at a premium?—We have to consider what stock we shall buy, and on the last occasion I remember that the Accountant General took special orders as to the stock in which his purchase should be made, owing to the high price.

11,914. What length of time, according to your present method of adjusting that sinking fund, does it take to cancel the debt which it is intended to cancel?—The time is fixed by the first opportunity we have of reducing the rate; the rate of interest is guaranteed for 40, or 50, or 60 years, and the amount of the sinking fund is calculated to reduce the excess by the time that power of reduction can be put into force.

11,915. You spread the cancelling of that extra amount over about 60 years?—60 years in one case; I think it was a little over 50 years in another.

11,916. And I take it from what we have heard from Mr. Jacob, that it is the settled policy of the Indian Government, apart from this special sinking fund, not to attach a sinking fund to their loans, inasmuch as they are a borrowing power, and they have come defi-

* *See* Appendix 37.

nitely to the conclusion that, whilst they are borrowing for useful works, to lay by a sinking fund with one hand and to borrow afresh with the other is not desirable?—Yes, that is so. The amount which is borrowed for the construction of public works is in rupee debt in India; the sinking fund is applied to a loan raised in England for other purposes.

11,917. Is that a settled policy which has been thought out, or has any doubt been held as to whether a sinking fund should be attached to the loans as they are raised?—It has been considered, but I do not think it has ever formed the subject of correspondence; I do not remember that it has.

11,918. From a financial point of view there is something to be said for the sinking fund system, is there not, on this ground: that no sinking fund implies a larger sacrifice on the part of the taxpayer for the reduction of debt than in the other case?—Yes, but I believe that a sinking fund is of no use in a case where a Government has a settled policy of borrowing.

11,919-21. We will take, for example, the London County Council. By the Act under which they are empowered to issue stock, they are obliged to attach to the stock a sinking fund, which would defray the debt in 60 years by even instalments; and therefore in every fresh issue they make of a 60 years' loan there is an instalment for so many years of the remaining currency of the loan. Of course the result is that the present generation of ratepayers have to raise a certain amount more to the relief of the next generation. As they are a constantly borrowing body, if that were not done, the amount of debt would be very large, and the burden upon the future generation of taxpayers would be very heavy. Is there not something of the same kind to be said in the case of a State? You are a general borrowing power, though you are not a borrowing power to the same extent proportionately as the London County Council. Let 60 years go forward, the amount of your loans will then be very much increased, and, except for these administrative arrangements, by which fictitious additions to stock are cancelled, the debt will remain in its entirety, and that will mean a very heavy charge upon the taxpayer of that day, will it not?—That is so. But you must remember that the Indian debt of which we are now speaking is raised for the sake of works which will bring in revenue; and the increasing revenue from those works in years of surplus is devoted to the reduction of the borrowing of the next year, so that there practically is a very considerable sinking fund applied, much more than could be applied under any arrangement for a sinking fund. If the railways and canals bring in more revenue, and that revenue reduces the amount of borrowing of the next year, there is a very large sinking fund applied to the reduction of debt.

11,922. That is so; but how does the State secure that the extra amount of revenue derived from the railway, we will say, shall be applied the next year to reduce the amount borrowed?—It is not secured in the sense that it is regulated by an Act of Parliament, but it is done by the Government of India; they have less to borrow; if they want three millions in that particular year, and they have in their balance half a million of surplus revenue, they only borrow two and a half millions.

11,923. Yes, but is there not a difference there? Let me take such a case as the Chitral expedition. The Chitral expedition, for the year ending 31st March 1896, cost 1,700,000 Rx. If it had not been for that expedition there would have been a surplus of revenue; you had a surplus, I believe, that year, but it would have been 1,700,000 Rx. higher?—Yes.

11,924. It was therefore a lesser surplus which could be applied, and if the Government of India had been extravagant, there is no proof that the extra sum received from railways would have been set aside as a sinking fund?—That is so.

11,925. (*Mr. Jackson.*) In fact the surplus may be applied in one of two ways, either by spending more or by borrowing less?—Quite so. The principle of the Government of India is not to borrow anything like so much as it spends on these useful works—these revenue-producing works—and consequently, in one shape or other, it is always applying what may be called a sinking fund for the reduction of the debt. But, as I said before, I think that the formal adoption of a sinking fund is useless in a case where you are every year borrowing.

11,926. (*Chairman.*) I thought you were going to answer that this money is laid out on works which are reproductive, that therefore there is revenue arising every year from it, and, though at the end of 60 years the charge for the debt would have increased, the works, upon which that debt had been expended, would have produced a sum more than sufficient to cover the increased charge of the debt, and therefore the taxpayer would not be a sufferer?—That was what I meant to convey, speaking of it purely with regard to the revenue-producing nature of the works in India, and putting aside exchange on stores from England.

11,927. But there is some force, is there not, in the argument that, after making allowance for that increase in the revenue derived from the works, something can be said for attaching, after the manner of the London County Council, a sinking fund to the loans issued by constantly borrowing bodies?—I think that the London County Council is in a different position. It is a body controlled by Parliament; the Government of India cannot very well control itself; if it laid down that it would discharge a debt created this year by a gradual sinking fund, it has the power of borrowing a little more next year, which would quite cover that. I do not think that any real reduction could be made by means of a law which it laid down for itself, unless it could also lay down a limit as to the extent to which it was to borrow in any year.

11,928-9. When the old Metropolitan Board of Works was established there were two great works thrown upon it at once, the Thames Embankment and the Main Drainage; that was in 1859. When they began borrowing, a sinking fund was attached to their loans, and I think that now those loans have been paid off, or very nearly so. The sinking fund, which has accumulated upon those and other subsequent loans, has more than sufficed, I think, at present to pay that off, and therefore the ratepayer at the present moment, you may say, is free from the charge of those great works. But the difference, I suppose, which you would draw between the action of the old Metropolitan Board of Works or of the London County Council under the direction of Parliament and the action of the Indian Government is that in such cases, the London County Council would have no receipts to set against the increase of debt?—Yes.

11,930. Whereas India has, or expects to have, a largely increasing revenue?—Quite so. The works are only undertaken in the belief that they will bring in an increase in the revenue.

11,931. Now do you apply that rule to cases where you borrow for works not productive? For instance, if India went to war and had to borrow 10,000,000*l.*, should you in that case not attach a sinking fund to the loan?—I do not think that it would be done. I cannot say what might be thought right upon any particular case, but it has not been the practice.

11,932. You have not done so. Let me take the case of the Afghan War; you did not do it in that case?—No.

11,933. To make your financial policy thoroughly logical, you ought to make a distinction between those two general classes of loan, ought you not?—Yes, only I do not quite wish to represent that the Government of India have deliberately considered that they are providing a sinking fund for the productive loans through the revenue of the railways. All I wish to say is that I think there is that ground to be taken into consideration as a reason for not providing a sinking fund in such a case.

11,934. The Government of India are satisfied with the fact that they are getting a revenue from these works, and they have not considered it further; is there any limit laid down?—No.

11,935. But at the same time I see a great difference between the two general kinds of loan?—Undoubtedly. I think there is a very great difference in the policy of borrowing merely to meet a deficit caused by a war or a famine, and the policy of borrowing for public works which will produce revenue.

11,936. Mr. Jacob has told us that the policy of increasing the liabilities in England for public works is now discountenanced by the Government of India?—Yes.

11,937. I observe that in the report of the Home Charges Committee there is a rather strong clause, clause 35, to that effect, is there not?—Yes, that clause

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

was written shortly after the standing policy of not borrowing in England for public works had been departed from on two occasions in consequence of the report of the Select Committee of the House of Commons in 1884. The Secretary of State did consent in 1885 and 1886 to raise loans in England for railways, but it was contrary to his standing policy before that time; and this Committee thought that it was an unwise departure, and wrote this strong paragraph to represent their view that it should not be persevered in.

11,938. Exactly, and that is the distinct policy?—The plan of borrowing in England for public works constructed by the State has not been renewed since.

11,939. (*Mr. Naoroji.*) I have got a statement given to me of a comparison between some articles as supplied by the Secretary of State for India and as supplied to the Rangoon municipality, and these prices are given in these two documents. With regard to these articles there is a large per-centage of excess shown to be for the articles supplied by the Secretary of State for India. I would give you both these papers and the statement, and perhaps you will be able to tell us some time what you think of that statement with regard to the excess of charge here compared with that made to the municipality of Rangoon?—I will see whether we are able to give an explanation

11,940-1. (*Chairman.*) One or two other questions come up in reading through these reports. Would you look at section 32 of the 5th report? "In conclusion, we desire to record our opinion that the question, which was mooted in 1879, has again arisen, and should be seriously considered by your Lordship in Council, namely, whether opportunity should not be taken to relieve the Secretary of State from the responsibility involved in maintaining the College at Cooper's Hill as a Government Institution, either by transferring the establishment to some public body or private corporation, subject to a return on the capital outlay of 128,000*l.* in the form of rent, or, failing such an arrangement, by disposing of the land and buildings upon the best terms that can be obtained. These remarks will apply with special force, if it be determined to adopt the policy, recommended in recent letters from India, of materially reducing the recruitment in this country for the Public Works Department. In that case it is extremely probable that the number of students entered at Cooper's Hill will be proportionately diminished, the result of which must be a serious addition to the home charges for the cost of maintaining the College. Before coming to a decision on this point, it will, however, be necessary to consider what provision should be made for the training of the Forest students, who now receive a part of their education at Cooper's Hill." Has any action been taken upon the recommendations contained in those three paragraphs?—After the report of that Committee inquiries were made to see if it was possible that the Institution of Civil Engineers—as, I think, the body is called—would take over the College, or could make any suggestions by which it could be taken over and managed by a private body as a place of education; but it was found impracticable, nothing could be done in that direction, and subsequently the Secretary of State appointed a special committee to investigate the whole charge of the establishment, and reductions have been made; and the college is now, I believe, put upon as economical a footing as practicable, subject to the condition that the engineers, telegraph officers, and forest officers shall be educated by the Government in this country.

11,942. Has the number of students diminished on the whole, or have they increased?—I think they have increased, including the forest officers. The number of resident students has increased in consequence of an arrangement by which some young men are admitted, who do not eventually go out to India. They take their education at Cooper's Hill, without the promise of appointments from the College to the Indian Service.

11,943. That is to say, to that extent India is maintaining a general educational establishment?—To that extent. It is a small extent, but it has enabled the College to meet its liabilities rather better than it did.

11,944. In that case is the student, whom I will call the general student, charged a yearly payment that covers the charges he entails on the College?—It is a payment of 183*l.* a year for his education. The College is very nearly, but not quite, self-supporting.

11,945. (*Sir Ralph Knox.*) To what is the reduction in the number of students at Cooper's Hill due, and to what policy do you allude in stating that it was contemplated that the number should be reduced still further?—At that time the Government of India thought that their establishments were excessive in India, and that they would not require to recruit to the same extent as before.

11,946. They intended in fact to reduce the Public Works Department?—Yes.

11,947. That policy had no reference to a preference of Royal Engineers to Civil Engineers?—Not to my knowledge; I do not think that that was under consideration.

11,948-9. (*Chairman.*) I wish to call your attention to the cost of the lunatic asylum at Ealing which the Committee thought should be put an end to?—It has been abolished entirely.

11,950. I put a question some little time ago on the subject of those funds that were taken over by the Government, but the question was confined to asking whether the sum put down in one of these reports represented the real income. Now, going beyond that, could you describe the arrangement under which some 20 years ago or so the capital of these funds was taken over by the Government, the Government undertaking all liabilities in respect of them, and could you show what the financial results of that measure will be? I think there is a return here which will aid us?—Calculations have been made, but I think there is no complete return.

11,951. I am referring to page 72, paragraph 22, of the East India (Home Charges) Return?—Yes, "The liability of the Government for the various "Indian Military, Medical, and Civil Service Annuity "Funds was explained in the sixth Report of the Com"mittee of 1880. The assets of the Military Funds, "and the Bengal Military Orphan Society, amounting to "3,170,198*l.*, were transferred to the Government in "1866, on its agreeing to secure to the subscribers and "their families the benefits to which they were entitled "before that date; and the only sums now annually "entered in the accounts in respect of them are the "payments made to officers and their families, and the "receipts from subscribers who are still in the Service. "The capital of these funds was gradually appropriated "in diminution of the charge, and must by this time "have been entirely absorbed; for, according to the "latest accounts received, the only balance in hand on "the 31st March 1887 was 37,556*l.* on account of the "Bengal Military Orphan Society, which would be "sufficient for little more then one year's charges of "that institution. The excess of payments over sub"scriptions will remain as a charge on the Indian "revenues till the death of the last annuitant."

11,952. Now would you explain the matter to us; these funds amounted to 3,170,000*l.* resulting from the subscriptions of military officers and others towards the fund that was applied in aid of their families after their death, did they not?—Yes.

11,953. Were those funds solvent at the time when that money was taken over?—It was not at that time calculated whether the military funds were solvent or not, I believe; but the Government under the Act of Parliament engaged, on receiving the capital sum, to give the benefits which then existed.

11,954. But that 3,170,000*l.* represented, or should have represented, at one time at all events, something like 100,000*l.* a year; that would have been a very considerable sum towards the amounts that are paid on account of the military funds, would it not?—Yes, but it would not have been taken in that way; as a perpetuity it was not enough to meet the charge of the funds without further subscriptions.

11,955. The report says, "The excess of payments "over subscriptions will remain as a charge on the "Indian revenues till the death of the last annui"tant," but I understand that when the funds were put upon a new footing or rather handed over—the Government now takes subscriptions from officers—the benefits to the family are not done away with, are they?—No, so long as the families of the officers who were in the Service in 1861 are still living, the Secretary of State is under an obligation to pay the pensions.

11,956-7. But, with regard to anybody coming into the Service since, is that family benefit entirely done away with?—There is a new fund now, called the Indian Service Military, or Civil, Family Pension Fund, and that is actuarially on a self-supporting footing.

The position of the fund is examined quinquennially, and the payments by the officers adjusted, if necessary.

11,958. Do you know what the payments were in this particular year on account of the funds, which were represented by that 3,170,000*l.*?—At page 11 of the Home Accounts for 1893-4 you will find the charge for the whole of the funds. It includes the Civil funds which are not mentioned in that paragraph, the total is 1,443,000*l.*

11,959. We might take the Bengal Military Orphan Society; Bengal, Madras, and Bombay Military funds; Bengal, Madras, and Bombay Medical Funds?—Three Military funds and three Medical funds and the Military Orphan Society and the Civil Service Annuity Funds. It is only the three civil funds which have been added. The payments for them altogether come to 242,000*l.*, so that the charge in that year on account of the other funds was about 1,200,000*l.* There is some receipt against that, but not much; about 85,000*l.*

11,960. And that is entirely on the old funds which have been wound up?—Entirely the old funds.

11,961. Surely the old funds, if they had had to produce such a charge as that now on 3,700,000*l.*, would have been swallowed up directly?—It was not dependent upon any calculation made as to the condition of the funds; the Government was under obligation to contribute to their support, while receiving in return the income that they would derive from their capital and the subscriptions of the officers; if the Indian army had not been abolished, there would have been a very large income from the subscriptions of the officers to meet this charge which is now shown.

11,962. The case, as I understand it, was that the Indian Government had not treated this at the time as an insurance fund should be treated, and it was hopelessly insolvent?—I am not prepared to admit that, because, if there had been an army going on for the next 30 years, the subscriptions of the officers would have all come in to meet this charge.

11,963. But is it not the case that an insurance fund, whenever you wind it up, ought to be self-supporting? It would have been like many of the benefit societies one hears of in England, in which the managers, instead of laying by such a sum as will keep the fund solvent, apply the premiums paid this year in liquidation of engagements incurred long ago?—Yes.

11,964. That is to say, they are always eating up, instead of accumulating, their premiums?—Yes. It would also have been necessary to continue the Government's contribution to the funds.

11,965. There was a Government contribution?—There was a Government contribution in each case.

11,966. A large one?—According to a return given to Parliament in 1853 (No. 975), the contributions in 1850-1 in India amounted to Rx. 62,577, besides 2,500*l.* paid in England. Favourable rates of interest also were given on the balances of the funds. Altogether, the aid given to the funds by Government was at that time Rx. 222,379 in the year; and, owing to the great increase of the capital on which interest was given, it must have been largely exceeded before the transfer.

11,967. But probably the fund was guaranteed at that time. As you know, about that time no Government, so far as I know, based its calculations on actuarial advice?—The condition of some of the funds was certainly carefully calculated, because, when taking them on, the Government considered whether they should increase the pensions paid to the widows or the other benefits. In the Civil funds certainly there were calculations made; but after the abolition of the army, when it became essential to take over the funds, I am not sure that it was considered necessary to make an actuarial calculation, as the Government were obliged to meet the obligations, whether there were receipts to meet them or not.

11,968. (*Mr. Jackson.*) You took over the funds and liquidated them, I suppose?—Yes.

11,969. (*Chairman.*) You applied the capital in payment of the current expenses at the prescribed rates?—The capital was drawn upon as long as it lasted to meet the annual charge.

11,970. The Home Charges Committee endeavour to make a defence of that course in paragraph 24?—It is an explanation, I do not know that I would call it a defence, of the course adopted. The defence, if I may so call it, of the procedure adopted in the accounts, was given to the Select Committee on East Indian Finance in 1872 or 1873. A full explanation was given to them.

11,971. (*Sir Donald Stewart.*) Are you sure that no actuarial calculation was made when the Military funds were taken over?—I do not remember that there was.

11,972-3. Then how does it happen that an increase of the advantages was sanctioned to families of the officers of Bengal?—Then I must be mistaken; in that case there must have been such a calculation.

11,974. I think there was a calculation?—Yes. Sir Donald Stewart corrects me.

(*Chairman.*) Do you know whether that calculation was published?

11,975. (*Sir Donald Stewart.*) Some years before the Mutiny the benefits were reduced, and the subscriptions were increased, because upon an actuarial inquiry it was found that the fund was not in a solvent condition; but I think about the time that the funds were taken over some inquiry must have been made into it, because the Secretary of State agreed to restore the old advantages, and I rather think the subscriptions were also slightly reduced to the old rate. I am not quite sure about that?—The guarantee was given to the Military funds in 1861, without any calculation; but, when they were finally transferred in 1866, there was an acturial calculation of their position. This was also done in the case of the Medical and Civil funds; and, with one exception, it was found that the position allowed of extra benefits being given. Therefore, it may be considered that, with that exception, there is no charge on the revenues of India through the transfer of the funds to the Government.

11,976. (*Chairman.*) If you can find that calculation, will you give it us?—I will look it up and see what it is. In the 26th paragraph of the Report of the Home Charges Committee, you will see it specifically stated that the Civil funds were self-supporting.

11,977. Will you read paragraph 24?—"The system "of using up the capital of the military and medical "funds was adopted with the view of relieving the "finances in the years when the payments were heaviest; "and the charges, though, perhaps, scarcely yet at their "maximum, may be expected before long to decrease "and gradually disappear. The position of the Civil "Service Annuity Funds, which were transferred to "the Government under an Act of 1874 (37 Vict. c. 12), "was different, as the civil annuities were a permanent, "and for many years would be an increasing, charge "(owing to the concessions made to the civil servants in "1871, by which all were allowed to retire on a full "annuity of 1,000*l.* a year, after completing 25 years' "service and 21 years' residence). If, therefore, the "system adopted with the former funds had been "applied in this case, and, after the capital had been "exhausted, a class of receipts previously included had "been excluded from the accounts, a very inconvenient "disturbance would have been caused; it was, con-"sequently, decided that the capital, which amounted "to 3,051,918*l.*, should be brought to credit as an "extraordinary receipt, instead of being added to the "revenue."

11,978. Now what was the effect of bringing it to credit as an extraordinary receipt?—It was added to the surplus in that year of receipts over liabilities, not of revenue over expenditure.

11,979. Oh, exactly; it was brought in as capital into the balances?—Yes.

11,980. Therefore it was used up when convenient?—Quite so.

11,981. At all events, these millions would have produced something very material in diminution of this immense charge of 1,400,000*l.* a year?—Yes, but this charge, although it lasts for a very long time is one that will vanish; it is not a permanent liability.

11,982. But I think it will be a very large charge for a long time?—It will go on for a long time.

11,983. And I suppose in some shape these charges will go on for ever, will they not? The new payments are included in this figure?—No; the new payments are entered separately; they are shown separately as receipts and payments.

11,984. This 428,000*l.* is a matter which will porbably take 60 or 70 years to get rid of?—Very possibly.

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1886.

Home Administration.

11,985. (*Mr. Jackson.*) Does that mean three generations?—The children of those officers who were in the Service before 1861 will have the right, if they are otherwise qualified, to the benefits of the fund until the day of their death.

11,986. It will be two generations?—Yes, it will be two generations; it may last, as the Chairman said, 60 or 70 years.

11,987. (*Chairman.*) The benefits will apply to the children of a man who was in the army in 1861, and they might be born up to 1900?—Quite so; they will apply to any child of his if he has subscribed for them.

11,988. And therefore the extinction of these charges will take a very long time?—Of course, when I say any child, I mean unmarried females; the boys would go off at the age of 18; it would only be unmarried girls, who would remain so long.

11,989. (*Mr. Jackson.*) Do the girls go off when they get married too?—Yes.

11,990. (*Chairman.*) That would diminish the liability; and widows?—Widows are entitled as long as they live unmarried.

11,991. That may go on for a long time?—Yes.

11,992. It is only very recently that we ceased paying a widow whose husband was in the American Civil War, which ended in 1783, and the widow lived over a century from that date?—Yes.

(*Mr. Jackson.*) At any rate you made your payment.

11,993. (*Sir Donald Stewart.*) On the other hand, you have officers subscribing for 50 years who never get any benefit, or whose families will probably never get any benefit from these funds.

(*Chairman.*) How will that be; if the children die, you mean?

(*Sir Donald Stewart.*) They will get no benefit as long as the subscribers live, and may have become disqualified by the time of his death.

11,994–5. (*Chairman.*) We have heard from Mr. Jacob the general views of the Indian Government on the subject of superannuations; is there anything connected with them that you would like to put before us? Is the India Office completely satisfied with the system under which 1,000*l.* a year is given after 25 years' service for the Indian Civil Servants Annuities? A large amount on this account is paid among the English charges?—Under the head of the Civil Annuity funds.

11,996. Those annuities are among the non-effective charges paid here?—It is entirely non-effective charge.

11,997–8. I am asking the question to give you an opportunity of giving your views upon it. Mr. Jacob explained the working of the system very clearly to us. 1,000*l.* a year sounds *primâ facie* a largish pension after 25 years' service; but I think that we tried to work out with him a comparison between the operation of such a system as that and our Civil Service pensions, and the excess, which is rather apparent on the face of such an arrangement, melted away very much, and it was very doubtful in the end whether the system is not quite as economical as the English system, always bearing in mind one point, that it must be a heavy charge in one sense, because it means early retirement?—Yes. The proportion which the superannuation of an officer bears to his salary in India is very much less than it is in England, I think. It is on a different basis.

11,999–12,000. Mr. Jacob represented to us that he thought the salary upon which a man retired would be about 3,000 or 3,500 rupees a month, against which he gets 1,000*l.*, which is equivalent at the present moment to Rx. 1,700. This amounts to half-pay?—No; his salary would be Rx. 3,600 or Rx. 4,200 a year; and a large part of the pension is met by his own payments.

12,001. That is a payment which the English Civil Service do not make?—If you allow for the contributions, the pension from Government is not more than 500*l.* or at the outside 600*l.*

12,002. Do you not think it would be desirable to show more clearly what is the effect of your regulations in this respect? The subscriptions of the officers towards their pensions are deducted from their pay, and they do not appear in any way or in any account, which is put before us, so as to show the consequent diminution of the charge of the pension?—No; the salaries are paid net and brought into the accounts net.

12,003. Of course it is very important to show that so large a subscription is made by the officers themselves towards their own pensions; but in no account that I know of is it possible to find the amount of subscriptions, or arrive at any financial conclusion as to the operation of those subscriptions?—No account is kept of the aggregate; each officer's account is kept in order to show his position.

12,004. Do you not think that, in all these cases where Indian finance is called in question, it would be very desirable that there should be accounts showing what is the real charge to the taxpayer under the Indian system of administration? I am perfectly clear that the charge on the taxpayer in respect of an Indian pension is not anything like 1,000*l.* a year, because the man himself has contributed a considerable portion?—Quite so.

12,005. Do you not think it is desirable that there should be some account to show the real charge in such form that the student of Indian finance could find it out?—I should doubt if it would be worth the labour involved; it would be a considerable labour.

12,006. Would it be a very great labour? You know the sum to be deducted, I suppose?—In each monthly salary bill the 4 per cent. is taken off.

12,007. If you take 4 per cent, off salaries, that would represent roughly, would it not, the contribution?—Yes. In that rough way it is a very simple matter. You may take the total salaries that are paid to Covenanted Civil Servants and add the increase of 4 per cent. upon that. You would have to show an increase of salaries.

12,008. You would add the 4 per cent. on them?—Yes.

12,009. And then the 4 per cent. upon the total sum due represents their contribution?—Yes.

12,010. And if every year you took that amount, it would at all events give you an approximate view of the financial result of the Indian system, would it not?—It would increase the charge for salaries by that amount, and there would be an increase of receipts against it; it would be merely nominal.

12,011. I am not suggesting at the present moment that you should pay the whole salary and bring that portion of it into your exchequer as a receipt; that might be good finance, or it might not. I am not suggesting that; all I am suggesting is that by a note under the superannuation estimates, or in the accounts, it should be shown what sum approximately the Indian officer has paid towards this charge?—Yes.

12,012. (*Mr. Jackson.*) To the casual observer the percentage of pensions seems large compared with the amount of salaries?—I think it is not so.

12,013. I mean larger than it really is in fact?—Oh, quite so, yes.

12,014. It does not give full credit in fact?—No.

12,015. That is a point which has struck us in one or two instances in dealing with this question, namely, that the Administration does not make the best account of itself?—Yes, I see your point; I will consider what can be done.

12,016. (*Chairman.*) When a Commission takes up the question, and goes into it, it is easy to find out, especially when one has officers at hand to tell us about it; but when an ordinary person takes it up and wants to find out something about Indian finance from elaborate accounts presented, they lead him to not quite a true conclusion?—No doubt the amount which is put down as payable for Covenanted Civil Service annuities is larger than is borne by the Government; that is so.

12,017. Quite so, and that is put as a charge upon the Indian taxpayer?—Yes, but then, of course, you would have equally to increase the amount shown under salaries; if you reduce the amount of the charge for pensions, you must increase the amount of the salaries.

12,018. I am only suggesting at present that in superannuation estimates and accounts, a note should be put at the bottom of the account to state exactly what the charge on the taxpayer is?—Yes, I will see what can be done.

12,019–20. I was not raising the question as to whether it was necessary to swell both sides of the account. I have only one or two further questions to ask you. The Home Charges Committee made certain recommendations about the allowances that are made

to selected candidates for the Indian Service. I think it is in paragraph 26 of the second report. "We "agree with the Committee of 1879 in considering "that these allowances should for the future be "withdrawn, and that young men who intend to "enter the Covenanted Civil Service should, like "those who intend to enter the other branches of "the Public Service in India, provide, as a general "rule, for the expense of their education up to the "moment of their proceeding to India. But, if it "is thought desirable to continue to offer special "allowances as an inducement to the probationers to "become members of some University which has been "approved by the Secretary of State, we consider that "there is no sufficient reason why such allowances "should exceed 80*l.* a year, that being the amount "which the Universities Commission considered to be "the proper limit for Scholarships at Oxford and "Cambridge"?—The question was examined most carefully; it was not found possible to withdraw the amount altogether; it is now granted on the condition that it shall be held by a student at some approved college or university. The amount that they get is 100*l.* a year.

12,021. (*Sir James Peile.*) Is it not 100*l.*, because there is only one year?—Yes; the course of study has been reduced to one year.

12,022. (*Chairman.*) Then there were certain recommendations made with regard to allowances and outfits. Without going into the detail of them, do you happen to know whether the views of the Committee were adopted?—Yes; they were considerably reduced. Power was taken by an Act of Parliament to enable the Secretary of State to make reductions, and the scale is considerably less than it was. The allowance for a Governor-General is now 3,500*l.*, instead of 5,000*l.*; the allowances for the Governors of Madras and Bombay are 1,000*l.*; the allowance of the Commander-in-Chief is 500*l.*; of Members of Councils and Bishops, 300*l.*; these show very considerable reductions on the former allowances.

12,023. (*Mr. Naoroji.*) There are no Indians in the India Council nor in the India Office establishment, nor in any of the services here for which the India Office pays?—There are none in the India Council, and there are no pure natives of India on the India Office establishment.

12,024. The whole benefit of salary and employment remains with the British people, although money is provided by the Indian taxpayer?—Yes, if you consider that we give no benefit to the people of India by our services.

12,025. In this country the revenue raised from the people returns to the same people; that is, the British people get all the salaries and employment in England; whereas a portion of the Indian revenue does not return to the Indian taxpayer, but to a foreign people, that is, to the British, that is a mere matter of fact also?—Yes.

12,026. Is not the expenditure of the India Office for the interests of the maintenance of British rule as well as for the interests of India; in fact, the interests of both countries are concerned in the expenses of the India Office?—The interests of both countries are concerned.

12,027. When any money is spent from the British Exchequer either in this country or in India for any purpose in which both countries are interested, India is asked to contribute a share; should not in justice the same principle apply that when any money is spent from the Indian Exchequer for any purpose in which both countries are interested, Britain should also contribute its proper share?—It is a matter of opinion, of course, in any particular case, how far that may apply.

12,028. I merely ask your opinion whether it is right or not that it should be so. We are asked to contribute to certain disbursements made by the British Exchequer, because, it is said, they are for the common interest of both countries; in the same manner, if the Indian Exchequer disburses any money which is also for the common interest of both countries, should not the British Exchequer contribute, just as we are asked to contribute?—I think that the question of apportionment of charge must be considered in each case. I am not prepared to say that the payment for the India Office should necessarily be shared.

12,029. I am putting it as a general question, whether it would be just or not that the British Exchequer should contribute in the same way and on the same principle as the Indian Exchequer is asked to contribute, for any disbursements made by the British Exchequer?—The British Exchequer undoubtedly must contribute to the expenses of the Empire. I cannot say how the apportionment, in any particular case, should be arranged.

12,030. I am not giving you any particular case, I only want the principle, that both should be treated on the same principle?—As I say, I think that the expenses of the whole Empire must be apportioned in certain degrees.

12,031. Should not any expenses in which both countries are interested be apportioned?—Not necessarily. In each case it must be considered whether the particular expense is a proper one for apportionment or not.

12,032. Yes, but if the expenses are for the benefit of both countries for common purposes, just as the reference to this Commission assumes?—Yes, I am not able to assent to it in this particular case.

12,033. I am talking of expenditure for the benefit of both countries; then the contribution must come from both. In certain cases where there is a benefit for both countries India must contribute? while in other cases where the benefit is also to both countries the British should not contribute at all. That would not be just?—I think, as you were putting it to me, you asked whether a rule which applies to some particular cases should not be applied to all cases. I say that I am not prepared to assent to that.

12,034. I am not asking for any particular cases, I am asking it generally; any case in which both countries are interested then both must contribute to it; it is a simple question?—Well, I do not agree that necessarily it must be so.

13,035. With regard to the Engineering College, can you give us any idea of the amount of money disbursed from the Indian revenues up to this time for its maintenance, for its establishment, and also whether there is any chance of that money being reimbursed by the students that come in generally for other purposes or for their own purposes?—It is not likely that past expenditure will be reimbursed.

12,036. No; so all that is gone?—But, as I explained to the Chairman, efforts have been made to put it now upon a self-supporting footing, and it is very nearly accomplished. I think there is still some charge each year.

12,037. The past expenditure, therefore, is beyond recovery?—I think so.

12,038. Though it is useful to the British youths here, and has been from the very beginning?—If your question refers to the students who come in, not going to India, they do fully pay their cost, I think. I believe there is no doubt that they do. I do not think there is any charge on the revenues of India through that; it is rather the other way.

12,039. (*Sir William Wedderburn.*) I wanted to ask Sir Henry Waterfield some questions with regard to the statement he has put in as to the progress of expenditure. In that memorandum, there are given a number of tables—30 tables—and if he is able to give some supplementary information I shall be glad to have it to elucidate four of those tables. Perhaps Sir Henry Waterfield could kindly get the information by next meeting, if it is obtainable. The first has reference to Table 1, which has reference to the improvement or deterioration of the finances; and I should like to have a statement showing the additional taxation imposed since 1884–5, and the amount obtained therefrom, gross and net, in 1894–5, distinguishing the Imperial and provincial shares, in order to ascertain whether the financial condition is deteriorating or otherwise. We want to know whether new sources have been tapped, and I want the information in order to ascertain what the additional taxation has produced since 1884–5?—Yes; I am not quite sure that I understand your point about the Imperial and the provincial share; do you not mean how much is credited to the Imperial Government?

12,040. That was what I wanted, so far as it could conveniently be done?—Yes.

12,041. The second has reference to Table No. 4, the net military expenditure, to show the numbers of European and native troops in Burma before the annexation of Upper Burma and since the annexation, and as far as possible the cost of the Chitral Expedition. The Chairman referred generally to it, but I should be glad

Sir H. Waterfield, K.C.S.I., C.B.

24 June 1896.

Home Administration.

to know what the amount of that was. And there is a question with reference to strategic frontier railways, bearing on that same table, because it appears to me that it is not quite fair to debit the Government of India's commercial railway enterprise with railways built solely, or in great measure, for military purposes; and I have made a note to ask for, as far as it can be done, perhaps only roughly, the amount of the military works that can fairly be debited to the commercial enterprise of the Government of India.

(*Chairman.*) May I interrupt you? We had this question under consideration, and I think Mr. Jacob is endeavouring to give us that information.

12,042. (*Sir William Wedderburn.*) Has he promised to do that?—He spoke to me about it. I thought he was preparing such a statement.

12,043. (*Chairman.*) I asked him particularly about that?—If Sir William Wedderburn will give me that note, I will see what we can do about it.

12,044. (*Sir William Wedderburn.*) The next remark has reference to Table 6, and the cost of railways constructed by private companies; whether we could have papers showing the latest terms upon which the Government of India promotes the construction of railways by companies, and the financial results of the past construction, with the rights and responsibilities which the Government of India have with regard to these railways?—We can give the present terms, but whether we can compare the result I cannot say. I do not quite know whether you mean what are called the feeder line terms; I do not think we have any statements yet that would show the financial results of such lines.

12,045. At page 12 of my memorandum my object is shown a little more in detail?—I will look.

12,046. Namely, to show what the financial results of the past arrangements will be?—Yes.

12,047. And the last point has reference to political charges; Table No. 7; if you could let us have what was the estimate and the actual cost of the Gilgit Agency and the Upper Burmah political charges and what the estimate now is as regards the future?—You mean the estimate and the actual for a recent year.

12,048. What was the estimate and what the actual cost; I think that they rather differed?—The estimate at what time?

12,049. At the beginning of the Gilgit Agency; it is not very long ago?—The estimate made, that is all you wish?

12,050. The estimate made, and what the actual cost has been, and what the estimate is for the future?—I have never seen that, I will see what can be given.*

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

At the India Office.

TWENTY-FIFTH DAY.

Wednesday, 1st July 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Sir H. Waterfield, K.C.S.I., C.B.

1 July 1896.

Progress of Expenditure.

Sir HENRY WATERFIELD, K.C.S.I., C.B., Secretary in the Financial Department at the India Office, re-called and further examined.

12,051. (*Chairman.*) You have seen a note by Sir William Wedderburn upon your tables, have you not?—Yes.

12,052. We propose at the commencement of this sitting to give an opportunity for some discussion of your tables. Perhaps, Sir William Wedderburn, you would put some questions to the witness on the subject?

(*Sir William Wedderburn.*) I should like to put some questions to Sir Henry Waterfield; but, before doing so, with the permission of the Chairman, I should like to express my thanks to Sir Henry for the extremely obliging way in which he has assisted us in our criticism of the tables. I believe there is no difference as regards the figures; it is only a question of the application of the figures, and the conclusions to be drawn from them. I thought it would perhaps be desirable that I should explain that, before asking these questions. Then, first, with regard to Table I. in Sir Henry Waterfield's note upon the increase of expenditure.

(*Chairman.*) That is "Indian Revenue and Expenditure 1875–76 to 1895–6."

(*Sir William Wedderburn.*) Indian expenditure 1884–5 to 1894–5. This is a note dated 26th June, 1895.

(*Chairman.*) There is an amended paper, is there not? Are you taking the first, or the second paper?

12,053–4. (*Sir William Wedderburn.*) I am taking the first, because the memorandum was prepared on the first set of tables?—Yes.

12,055. And, therefore, my questions will refer to that. In the first place I would ask whether it would not be more convenient to treat the net revenue and expenditure according to the new form prepared by Sir Henry Fowler? If that form be followed, I think it will add about 8½ millions Rx. to each side, and show the annual net expenditure well over 60 millions?—That is so. The reason my tables were prepared on the old form was not from any desire to minimise the amount, but at the time I was preparing them no decision had been arrived at as to the precise shape that the new form should take. You yourself were in correspondence with Sir Henry Fowler on the subject, and, under his direction, I was communicating with Sir James Westland; and, for fear of having a third form put forward, which again might be rejected and a fourth taken, I thought it better to keep to the old form; but it has now been decided that the new form shall be

* *See* Appendix 38.

adopted in the returns to Parliament. The main difference, I may explain to the Commission, between the two is, that the collection of revenue, excluding the charges for the cultivation and manufacture of opium, is now being treated as a charge against, instead of as a deduction from, revenue.

12,056. (*Chairman.*) That puts the method of stating your account very much upon the same footing as the method in which the Imperial accounts are stated, does it not?—It was prepared with a view to adopting that form.

12,057-8. (*Sir William Wedderburn.*) Then in paragraphs two and three of my memorandum of the 10th August 1895, there is a statement of the division between Imperial and provincial expenditure; is that, generally, a correct statement of the present method of division?—That is an accurate statement, I think, of the distinction between Imperial and provincial expenditure. With the assistance of Mr. Jacob, I have explained that to the Commission at considerable length on a former occasion, and they will probably not wish me to repeat it.

12,059. With regard to paragraph four, would it not be correct that the Provincial Governments should be debited with this loss by exchange arising from increased expenditure which they control?—I do not know exactly to what expenditure you refer as that which they control. The exchange compensation, if they can be said to control it, is debited to them. The expenditure in England is not under the direct control of the Provincial Governments, except in so far as indents for stores are concerned.

12,060. I meant to ask whether, where an increase of expenditure is made by the Provincial Governments, they should not be debited with the corresponding cost of exchange on account of that expenditure, instead of that falling in a lump sum upon the Imperial?—I do not know whether you can give me an instance, but I should say that the increase of expenditure which arises under the direct control of the provincial governments occurs entirely in India, and there is no exchange applicable to that.

12,061. Would there be such a case as regards the pension and allowances of officers under their control?—The provincial governments have no power to alter the system of pensionary allowances; that is entirely under the direction of the Imperial Government, subject to the control of the Secretary of State.

12,062. But might not an additional charge, either for absentee allowances or pension, be affected by an increase sanctioned by the Provincial Government?—Your point, I think, is that, if a Provincial Government increases an establishment, there may be as resulting from that some increase to the absentee or superannuation charge. That is so, but I think it would be impossible to calculate it and debit the Provincial Government with the exchange on it, and in any case it would not be a very material amount I should suppose, as the leave and pension allowances would, in such a case, to a great extent be paid in India.

12,063. Then as regards paragraphs 5 and 6.

(*Chairman.*) There is a point there. You raise a general criticism that the Provincial Governments are directly invited to incur increasing expenditure by reason of the growing revenues at their disposal. That is a general criticism upon a principle which in other respects seemed to have had your general approval.

(*Sir William Wedderburn.*) Yes.

(*Chairman.*) I do not know whether you would wish to elicit any opinion from Sir Henry Waterfield on that point.

(*Sir William Wedderburn.*) Well, it was rather with that view that the reference was made. It is a small blot upon what is an excellent system.

12,064. (*Chairman.*) But I do not know that you have taken from Sir Henry Waterfield what his answer to such a criticism as that would be?—I think it is true in a certain sense that the Provincial Governments are invited to increase expenditure. I should prefer to say that they are invited to administer the provinces under them in an efficient manner, and that where that involves an increase of expenditure they are bound to meet it from their own resources.

12,065. (*Sir Ralph Knox.*) Is not the result generally to encourage a better collection of revenue, a more stringent and perfect collection of the revenue, rather than to make an economical administration?—It answers both purposes. A very large proportion of the collection of the revenue is under the Provincial Governments, and the provincial system induces them to collect it more efficiently; but also the civil expenditure is under them, and the provincial system induces them to manage that more economically.

12,066. That is to say, in order to spend more money upon certain objects which they think very desirable, the provincial system results in a better collection of the revenue and a strict watch over other classes of expenditure which are not so much in favour with the provincial authorities?—Yes.

12,067. That is practically the result of it?—I think so.

12,068. (*Chairman.*) Would you put it in this way, that undoubtedly, if you give a province great discretion over its own revenue, in one sense that leaves it at all events in its power to increase expenditure in a manner which some authorities might hold to be excessive? On the other hand, if you give a province a real control over its own revenue, and if it knows that it has a certain sum of money which it can apply, that is one of the best inducements to administrators to lay out that money as usefully as possible?—Yes.

12,069. (*Sir William Wedderburn.*) There is an important column in Table I. headed "Improvement or deterioration compared with previous years," the fifth column. I should like to ask a general question with regard to that, whether, in estimating the comparative financial position in 1884–5 and 1894–5, a distinct line should not be drawn between increased revenue arising from increased productiveness of taxation existing in 1884-5, and increased revenue from new taxation imposed since that date. The point is this: is not revenue from new taxation "deterioration" rather than "improvement," in that it represents the exhaustion of reserve resources?—The point which you take is one which certainly should be borne in mind; but I should like to say that, in using the word "improvement" or "deterioration," I merely referred to the financial position in the ordinary sense that, when there is a greater surplus, or a less deficit, of revenue as compared with expenditure, the financial position is improved; and that I was not in the least referring to the position of the people as affected by the increase of revenue, or assuming anything with reference to the mode in which that improvement had been attained.

12,070. So that the words "improvement" and "deterioration" are used in a distinct and limited sense?—They refer solely to the financial position, and not to the position of the people.

12,071. Can you supply to the Commission a statement showing the additional taxation imposed since 1884–5 and the amount therefrom gross and net in 1894–5 and 1895–6, distinguishing imperial and provincial shares, and can you show the details of the imperial under the heads of salt, customs, and assessed taxes?—I have prepared the following note explaining the additional taxation which has been imposed since 1884–5.

"Salt.—Duty raised in January 1888, from Rs. 2 to 2½ per maund in India generally, and from 3 annas to 1 rupee in Burma.

"Customs.—Duty of 6 pies per gallon imposed on imports of petroleum February 10, 1888; and increased to 1 anna per gallon, March 10, 1894.

"Duty on imports of spirits raised from Rs. 4 to 5 per gallon of L.P. spirit, January 14, 1887; and increased to Rs. 6, March 21, 1890.

"Import duties at 5 per cent. on most articles, and at 1 per cent. on iron and steel, imposed March 10, 1894, cotton manufactures being free.

"Duty at 5 per cent. on imports of cotton yarns and manufactures above certain counts, imposed December 27, 1894, with a countervailing excise.

"Duty reduced to 3½ per cent. on all imports of cotton goods, with excise duty at the same rate on all manufactures of such goods, yarns being freed, February 3, 1896.

"Assessed taxes.—Tax of 5 pies in the rupee on incomes of Rs. 2,000 a year, and 4 pies if less than Rs. 2,000, if derived from salaries or pensions, profits of companies, or interest on securities, with a graduated scale for other sources of income, imposed January 29, 1886."

12,072. (*Chairman.*) By other sources of income do you mean professional gains?—Professional gains are included in that graduated scale.

Sir H. Waterfield, K.C.S.I., C.B.

1 July 1896.

Progress of Expenditure.

12,073. (*Sir Andrew Scoble.*) It is other sources of income than land, is it not?—I was going to add, "Incomes derived from agriculture, and all incomes less than Rs. 500 a year, exempted. Previously existing License Tax abolished.

"Provincial rates.—Patwari cess re-imposed in the North-west Provinces (where it had been taken off in 1882) and freshly imposed in Oudh, March 29, 1889.

"Local rates show a gross increase of Rx. 750,000 from 1884–5 to 1894–5. This is partly due to increase in the land revenue and consequently a proportionate increase in the local rates; but in some few provinces it is due to enhancement of the rates.

"Excise.—The duties on opium, spirits, and fermented liquors, consumed in India, have been gradually enhanced; and the rates on spirit made after European methods have been raised to correspond with the customs duties. The enhancement on native spirits has been imposed at different times and in different ways in the several provinces; for instance, the selling price of excise opium has been considerably raised in Assam, Eastern Bengal, and Bombay, while in Madras an excise on locally consumed opium has been imposed for the first time; a tree tax instead of a license tax on vendors has been laid upon toddy trees in the greater part of Madras and Bombay.

"The excise revenue has increased from Rx. 4,011,867 in 1884-5 to Rx. 5,527,676 in 1894–5; and at least two-thirds of the increase is attributed to additional taxation on drink and improved methods of raising the revenue. On March 28, 1890, a tax of 1 anna per gallon was imposed on all beer brewed in India."

Approximate Receipts from the Additional Taxation.

—	Account, 1894-5.	Revised Estimate, 1895-6.	Budget, 1896-7.
	Rx.	Rx.	Rx.
Salt	1,806,868	1,857,000	1,841,100
Customs	2,472,315	3,523,500	3,168,000
Assessed Taxes	1,296,232	1,326,900	1,331,400
Provincial Rates	200,000	200,000	200,000
Excise; insufficient data, but say about	1,000,000	1,000,000	1,000,000
Increase of gross revenue	6,775,415	7,907,400	7,540,500
Increase in charges for collection, refunds, and compensations.	300,778	409,600	468,800
Increase of net revenue	6,474,637	7,497,800	7,071,700
Divided roughly thus			
Imperial	5,454,232	6,475,600	6,054,200
Provincial	1,020,405	1,022,200	1,017,500

12,074. (*Chairman.*) What relation does that increase bear to the total increase on the revenue between 1884–5 and 1894–5?—The increase in the net revenue from 1884–5 to 1894–5 is thus composed: Land, forests, and tributes, an increase of Rx. 4,035,924; opium, the receipts are reduced by Rx. 1,492,712 but the charges are reduced by Rx. 1,346,130, so that there is a net reduction of Rx. 146,582. The increase under taxation is Rx. 9,655,265 and under miscellaneous heads Rx. 313,986. In 1894–5 the total increase in the receipts was Rx. 13,858,593, and the net receipts from new taxation approximately Rx. 6,474,637 as I read out just now.

12,075. (*Sir Ralph Knox.*) About half?—About half; not quite half the total increase of net revenue.

12,076. (*Chairman.*) The increase in net revenue since 1884–5 is thus divided, and you then proceed to compare 1884–5 with 1894–5. You work up these to a Rx. total of 13,711,700. It is a very small difference, but in the previous answer I understood you to give the net revenue at Rx. 13,858,593?—The first figure which you gave, Rx. 13,711,700, is the increase on the revised figures for 1894–5, adopted in Sir William Wedderburn's memorandum. The Rx. 13,858,593 is the increase shown in the actual account.

12,077. (*Sir William Wedderburn.*) Can you state roughly what portion of the increase of the land revenue, that is about 3½ millions, has been obtained from extended cultivation, what portion from newly acquired territory, and what portion from enhanced rate of demand?—The only newly acquired territory of importance, I think, is Upper Burma. I can give you the amount for that. The gross receipt of land revenue from Upper Burma in 1894–5 was Rx. 798,181 and the charges were Rx. 219,502. Therefore the net land revenue from Upper Burmah in that year is Rx. 578,679. I am not able to say what the addition to the land revenue in all India is from fresh settlement. To give that, it would be necessary to make a very intricate calculation, which could only be obtained in India, if at all.

12,078. The same limitation that you spoke of as regards "improvement" and "deterioration" would apply in the case of enhancement, and the revenue arising from enhancement, that is to say, that it is only improved so far as the Government treasury is concerned, but that it represents a certain increased strain upon the people?—No, I cannot assent to that, because the increase of the land revenue which is taken by the Government, implies that a much larger share in the increased yield of the land is left in the hands of the owner or of the cultivator, or of both.

12,079. A larger amount has been withdrawn from the people?—A larger amount of land revenue has been paid by the people.

12,080. Upon the assumption that they have made larger profits?—Yes.

12,081. (*Chairman.*) When you say a much larger portion is left in the hands of the people, is that the conclusion from the principle upon which re-assessment is made—does that principle of re-assessment carry with it the instruction that only a portion and a very limited portion of the improvement as ascertained should be taken by the Government?—Yes. I am not an authority on revenue matters, but I believe there are two instructions, one that the amount paid by the people shall never exceed a certain proportion, 50 per cent. of the gross rental, and the other that in certain provinces no enhancement shall, save for special causes and under special sanction of the Government, exceed 33 per cent.

12,082. (*Sir William Wedderburn.*) Can you similarly state what portion of the increased excise, that is to say, some two millions, arises from increased consumption, and what portion from enhanced rates?—No, I cannot, and I am afraid I must say that questions of this kind should be put to the Revenue Secretary. I doubt whether he can answer it, but certainly it is not one that falls directly within my department, and I can only obtain it by asking him. It would probably be more convenient if the Commission examined him himself.

12,083. Then with regard to paragraph 7. This is a somewhat general question that I should wish to put to you. In apportioning responsibility for increased expenditure between 1884–5 and 1894–5, should not a distinct line be drawn between that portion of loss by exchange which is beyond the control of the Government, and that portion which is not beyond that control. There is, on the one hand, what I will call "automatic" increase of burden from sterling charges incurred before 1884–5, arising solely from the fall in exchange, and also from the additional rupee pay of British troops whose pay is on a sterling basis; on the other hand, there is what I will call the "voluntary" increase arising from exchange compensation allowances and from increase in home charges, the increase for exchange being part and parcel of the increased expenditure necessarily foreseen when such expenditure was incurred. Would it not be convenient to distinguish throughout between "automatic" and "voluntary" loss by exchange?—I think not; I cannot agree to that proposed division. I should object to calling the exchange compensation allowance a voluntary increase. It was an increase forced on the Government by the difficulties in which their officers were put through the fall in exchange. It is not more "voluntary" than an increase of salaries would have been, if adopted under similar circumstances; but, owing to a remark of this kind which was made in one of the papers issued by the British Committee, I think it was about 18 months ago Sir Henry Fowler desired me to look into the point. It was there stated that the increase of 1,085,317*l.* in the Budget for 1895–6 over the charge of 1888–9, in the home expenditure in seven years, was reprehensible, because under no circumstances, it was stated, should an increase of over a million pounds sterling have been incurred. At the desire of the Secretary of State I prepared a note to show how that increase of the net expenditure had been incurred, and I found it was in this way. The increase which was beyond the Secretary of State's control arose thus: reduction of receipts from interest on cash balance, 130,477*l.*; contribution for ships in the Indian seas, 42,325*l.*; manning

of defence vessels, 59,600*l.*; management of debt, 8,091*l.*; superannuation, 211,506*l.*: payments for army effective service and for furlough on passage, 150,475*l.*; payment for non-effective services in the army and for pensions, 349,450*l.*; postal service, mail contract, 23,100*l.*; Indo-European telegraph, 20,308*l.*; completion of the railways which were already in hand, 221,217*l.*; making a total increase of 1,216,549*l.*, which was automatic, that is to say, from which the Secretary of State, having the obligations which he had in 1888, could not free himself. On the other hand, there were the following items of increase which the Secretary of State might possibly have controlled; the visit of the son of the Ameer of Afghanistan to England, 30,000*l.*; the Zanzibar and Mauritius telegraph cable 10,000*l.*; and the payment for the Assam-Bengal railway in that year 59,000*l.*, making a total of 99,000*l.*, and thus bringing up the increase to 1,315,549*l.* Savings had accrued or had been effected in various ways 230,232*l.*, bringing the net increase to 1,085,317*l.* Therefore, as regards that figure, I should say that the Secretary of State could not control the increase of 1,216,549*l.*, but might have possibly controlled an increase of 99,000*l.*; and he effected reductions not necessarily through his own discretion, but they were effected, of 230,332*l.* Now I think it would be most unfair to say that the increase of exchange on this million must be put down as not "automatic" and be excluded from the automatic increase of exchange, when I have shown that the Secretary of State, so far as he had any power, effected a reduction rather than an increase.

12,084. In this I was putting the questions generally at present, and I think perhaps the meaning of the word "voluntary" has not been quite understood. I was not questioning the necessity nor even the propriety at the present moment of any particular expenditure. I was only drawing a distinction between those liabilities which the Secretary of State so to say inherited from a previous time and which he could not repudiate, and the increased expenditure whether in the form of increase of salary or the accruing loss by exchange which came within his control. However great the pressure might be upon him, or however great the difficulty might be, it is on the question of principle that I wanted to draw a line between this "automatic" or inherited liability, and what I call "voluntary" which has been incurred since with or without good reason?—Yes, in that sense, the exchange compensation allowance has no doubt been sanctioned by the Secretary of State within the last few years; but I still think that my point is valid as an objection to your excluding the exchange on the increased sterling expenditure which has arisen, except in those few items in which the Secretary of State could have exercised a control.

12,085. I do not wish to dispute any particular items. It was rather the general method of apportionment which I wished to clear up?—Yes, but, to take the single case of superannuation, the increase of the sterling payments on superannuation arises from general rules which have been in force for 30 or 40 years, and under which all the officers who have recently retired entered the service. Although it is true that the superannuation charge has increased and therefore exchange thereon has increased, it is not the fact that that has arisen from payments voluntarily incurred, in the sense in which you use the word "voluntary," within the last 10 years.

12,086. (*Chairman.*) When you speak of these charges being beyond the control of the Secretary of State, and take as an instance that of superannuation, I think it is perfectly clear that without an alteration of the law that charge is not within the control of the Secretary of State?—And even with an alteration of the law it could hardly be retrospectively applied.

12,087. Only gradually applied?—Yes.

12,088. But does the same definition apply, we will say, to the postal service, the mail contract, or the Indo-European telegraph? Of course I suppose it would have been possible in those cases that the Secretary of State in the renewal of a contract could say, "I cannot find any more money"?—I do not think that the increase arose from a renewal of the contract. I think that is an increasing charge that arose under the working of the contract. The last contract was made in 1888, and therefore I think any increase from that over the previous contract would not have come into my statement.

12,089. And the same would apply to the Indo-European Telegraph; it has increased under that head?—There is an increase under that head.

12,090. Then again, completion of railways already in hand. I think we had it in evidence before us that the Secretary of State had ceased to borrow in England for railways and that he borrowed the money in India, and therefore paid the interest in India, in rupees?—No, this is the case of companies; that rule is applicable to state railways; but these are payments made to companies for interest under contracts already entered into.

12,091. (*Sir William Wedderburn.*) But if a new appointment were made, or a salary raised so as to cause increased sterling payments for absentee allowances or pensions, that loss by exchange would have been voluntarily incurred by the government?—Yes, in every fresh appointment that is made, no doubt there is a certain amount of absentee or non-effective charge involved, and so far you may say that that is an increase that has been within the control of the Governments; but with reference to the particular case put by you the appointments which have been made within the last eight or ten years have not yet brought any addition to the superannuation list; nor can the officers who have been appointed have come on the furlough list except to a very small extent.

12,092. Should not increased expenditure in England, with the added cost of exchange such increase entails, be shown as an increase of Imperial expenditure, and not as a set off against "improvement"?—I think that is the same point that you took before as to my use of the word "improvement."

12,093. Yes, to a certain extent?—I only use the word "improvement" where there is relatively more revenue against expenditure.

12,094. I have got some further questions to ask on this subject. My object was rather to combine Indian and English expenditure, and not to show the Indian expenditure separate, and then afterwards to show the English expenditure under, so to say, a separate heading?—Well, on that point I think I should like to give the Commission a short explanation of the reason why I adopted this form in which I prepared the returns. I dare say it is not intentional, but there is an implication running through your memorandum that it was desired to minimise the expenditure by dividing it. My only object was to give the Commission, as clearly as I could, the information which I thought they would require for an examination of the increase of expenditure which undoubtedly has arisen. Certainly, in my position of financial secretary, where I am constantly trying to check expenditure, I should be very unwise to attempt to thwart your object in examining it; but I felt that, when you called on me to give explanations, it would be very inconvenient if under every heading I had to say, "You must make allowance for so much of "this being at the disposal of the Provincial Govern-"ments, or you must allow for so much of that resulting "from exchange," and that it would facilitate the inquiry of the Commission if I began by dividing the net expenditure into those four great groups; the government of India's expenditure on its own account; the Provincial Governments' expenditure; the expenditure by the Secretary of State; and the Exchange; but of course it is open to you at any time to add them together, and take the figures in the finance accounts as showing the total increase.

12,095. Of course you understand I am only trying to get out the clear general views, that I do not wish to raise any imputation upon your bona fides?—I only wish to say why I have adopted that method of dividing into those great groups the total expenditure.

12,096. It is only because the general totals come more before the public than the items from which they are framed, and therefore I was anxious that the ultimate total should as far as possible come under the notice of the Commission. That is my object?—Yes, but that is exactly my reason for so preparing the tables, that I think the public is misled by the very large totals, and they cannot judge whether the increase has been necessary or not, without taking the figures to pieces and seeing how the increase does arise.

12,097. If the above view were accepted, namely, the combining the items of Home and Indian expenditure, the increased Imperial expenditure would be £1,751,945 home charge, plus Rx. 1,459,954 exchange, plus Rx. 791,900 imperial share of exchange compensation; total Rx. 3,993,799. Would those be correct?—Yes, I think those figures may be taken as correct.

12,098. Then with regard to paragraph 8, how can a reduction of Rx. 1,499,934—this is subject to your

Sir H. Waterfield, K.C.S.I., C.B.

1 July 1896.

Famine Insurance Fund.

explanation very much, but I will just put the question as I noted it down—how can a reduction of Rx. 1,499,934 in the famine insurance grant be treated as an "improvement" in the financial position? According to the Government of India, is it not tantamount to the reduction of a surplus, or is not the suspension only a deferred liability?—No, it is not a deferred liability. It is the reduction of a surplus which is applicable to a special purpose whenever it is possible, in the particular year. In that year, as it proved, the Government of India were not able to make the usual appropriation—they had no surplus which they could appropriate to famine insurance, and therefore the amount of the charge was reduced. In that sense there was an "improvement" in the proportion of the revenue to the expenditure, and it is only in that sense, as being a reduction of expenditure by not spending the surplus on famine insurance, that I used the expression.

12,099. If the above methods be accepted—this is paragraph nine—will not the figures of Table I. show a net deterioration of Rx. 5,622,988 instead of an improvement of Rx. 1,376,946 for 1894–5?—There is a net increase of charge to the extent of Rx. 5,622,988, which had to be met partly by increased taxation and partly by reduction of the expenditure under the famine insurance grant, and in that way an "improvement" was effected to the extent of Rx. 1,376,946.

12,100. In fact, measures were taken to meet the deficit?—Quite so.

12,101. (*Chairman.*) You speak of the reduction in the famine insurance grant. Do I understand that your view is that the famine insurance grant is only practically such surplus as the other needs of Government may permit? that is to say, in your estimate at the beginning of the year, you include in your expenditure, we will say, Rx. 1,500,000 for the famine insurance grant. If, in the course of the year, either the revenue falls off, or warlike expenditure increases, you, so to speak, pull and haul upon this Rx. 1,500,000 which should go to the famine insurance grant?—Yes, in a certain sense; that is to say, the Government of India is no doubt under a distinct pledge, whenever they can, in framing the budget, to appropriate a certain amount of money, which was originally taken at Rx. 1,500,000, and which has now been recently reduced to Rx. 1,000,000, as provision against famine or for the relief of famine. That is really providing a surplus to that extent and appropriating that surplus. It is very much in the same position as the English surplus, which is devoted to the reduction of debt only. The Government of India puts the grant into its budget as part of its expenditure for the year, while in the case of the English Government it remains to be seen whether such a surplus does come out in the end.

12,102. *Quâ* an effective surplus; because I quite agree with you that it is practically a sinking fund, though applied in a different manner from ours. The English principle includes that surplus or sinking fund in the charge of the National debt, and whether the expenditure increases or the revenue falls, that is a first charge upon the revenue?—Yes.

12,103. And that is the distinction between our sinking fund and your sinking fund, because, I think, in its essence, your famine insurance fund is a sinking fund?—Yes, a large part of it is so.

12,104. You do not show it up in that way, but you leave it as a charge which will be duly honoured if the revenue and expenditure admit?—Yes; the Government of India has on frequent occasions been obliged to consider whether it should appropriate this grant to other purposes or put on fresh taxation; and it has usually decided that it would be unwise and impolitic to put on additional taxation merely in order to comply with the pledge that they will appropriate it in that year to famine insurance; but they never wilfully absorb the grant; if they can provide a surplus revenue without further taxation for this purpose, they always do so.

12,105. Of course that is open to the criticism that if the Expenditure Departments know that there is such a margin they would hardly feel bound down to the same, what I would call, rigid economy under your Indian system as they would under our English system?—Oh, I think that in no single case has the Government of India ever allowed the spending departments to encroach wilfully on the surplus which would be devoted to famine insurance; the cases in which it has been reduced have been the occurrence of a war or a great fall in exchange.

12,106. I quite understand the perfect justification of your use of the term "wilfully," because, of course, it would not be admitted; but still if people know that there is a means, we will say, for carrying out an expedition and that that expedition can be carried out without an increase of tax by drawing upon the famine insurance fund, there is not such a guarantee for economy as is afforded by the English system, is there?—I do not think so, because, if a war arose—happily you have not the question of our fall of exchange to deal with—but, if a war arose, you hardly ever would immediately begin to restrict civil or other expenditure. You have to provide for it by supplementary estimates and taxation, or by borrowing.

12,107. One has always understood that one of the great difficulties and dangers in Indian finance is the temptation to the military authorities to indulge in frontier expeditions. Of course there may always be a question whether a certain expedition might be delayed. There will always be a certain number of military officers who think it better to press it on—perfectly fairly without any regard to extravagance, that is the forward notion. They may be kept back if they know that their expedition will involve an increase of taxation, but if they know that there is a standing surplus of Rx. 1,500,000, they will not have any such incentive to economy?—I do not think it affects the position at all. The military expenditure of that kind would only be incurred under urgent pressure, and the Government of India, as a whole, must provide for it; but the Finance Department would certainly object very strongly indeed to the absorption of the famine insurance, quite as much as to the putting on of taxation, if they felt that the expedition was not absolutely necessary.

12,108. The only point to which I wish to carry my argument is that putting on fresh taxation, especially in India, is, except under very pressing circumstances, thought almost impossible?—Yes.

12,109–10. But it is not so impossible if you have this standing surplus of Rx. 1,500,000, to draw upon. I will put it to you whether you think the Viceroy himself would not hesitate, would not wish to delay one of these expeditions which cost four or five hundred thousand pounds, if he knew that he was going to increase taxation. But if he has got this Rx. 1,500,000 on which he can draw, he would sanction the expedition under these circumstances?—I think as bearing on that point you must remember that nearly all the Rx. 1,500,000 would usually have been allotted to specific railways and canals, on which expenditure cannot be checked at once, and the question which the Government of India would have to consider would be rather whether the money should be provided by borrowing or taxation. The operation of the famine insurance grant is to reduce the amount that must be borrowed, but the Government could not very well check the protective railways which they were constructing out of that grant any more than they could other railways. I was going to say that I have prepared a statement which, perhaps, may interest the Commission, showing the position of Indian finance from 1881–5 to the present time, if the famine insurance fund be considered as surplus revenue devoted to reduction of debt. I will put in the statement.* In the 13 years as shown in the accounts there was a surplus of Rx. 1,493,380. The famine insurance grant amounted to Rx. 14,057,513; or, excluding what has been spent upon actual relief, to Rx. 13,735,841. If the amount charged under the railway revenue account for the working of two protective railways be also excluded, it amounted to Rx. 9,701,907. Therefore, if the statement be revised so as to treat the famine insurance as surplus revenue, there was in the 13 years a surplus of either Rx. 15,229,221, or Rx. 11,195,287, according to the inclusion, or exclusion, of the charge for the two railways, say, about a million a year.

12,111. (*Sir Andrew Scoble.*) I was going to ask you, is it not rather a mistake to talk of the famine insurance fund as an available surplus?—Yes, it is. I have endeavoured to point that out, that it is a surplus which the Government of India aim at providing and which they appropriate to a specific purpose, but it is not in their case available for military operations during the year.

12,112. In fact it depends on what the budget estimate is. If you can frame a budget which includes the famine insurance fund, then the famine insurance fund is distributed over the object it was intended to serve?—Yes.

12,113. If the exigencies of the time do not admit of your budgeting for such a surplus, then only so much

* *See* Appendix 39.

is expended as is necessary to pay obligations already incurred under that head?—That is all that is available for the famine insurance grant.

12,114. (*Chairman.*) What was the least grant in those years of which you have just given us a summary?—In 1887-8, Rx. 376,295, excluding Rx. 402 for famine relief.

12,115. That was the expenditure?—That was the expenditure.

12,116. And what had been provided in the budget in that year?—The amount inserted in the budget for famine insurance was Rx., 94,500 under famine relief and insurance, besides Rx. 228,000 in the Railway Revenue Account, making a total of Rx. 322,500; and in the financial statement Sir Auckland Colvin said, "the deficit which would otherwise have occurred in the "revised estimate of 1886-7 and the estimates of 1887-8 "has been met by transferring to loan charges against "the famine insurance grant, the sum of Rx. 1,049,400*l.* "and Rx, 1,248,000*l.* in those two years respectively." It was the year following the annexation of Upper Burma when there were very heavy charges.

12,117. Therefore in those years a considerable sum was estimated in the budget as applicable to famine insurance, but under the financial pressure it was not applied?—No. In the year 1887-8 it was almost entirely absorbed. Only Rx. 94,500 was set aside for Famine Relief and Insurance.

12,118. Was provided?—Provided in the budget; and in the actual account they found it impossible to give more.

12,119. (*Sir Ralph Knox.*) You say that 13 millions were set aside altogether in the 13 years?—Yes, if the payment for the two railways be included; this sum added to the actual surplus as shown in the accounts made a surplus exceeding 15 millions in the 13 years.

12,120. Then what was the expenditure against that directly applicable to the famine fund purposes?—The total expenditure on famine relief down to March 1896, has only been Rx. 312,833, of which Rx. 66,191 was incurred before 1884-5, so that there was Rx. 246,672 spent in those 13 years in the actual relief of the people.

12,121. And how much has been spent on relief works and war?—Perhaps it will answer your purpose if I give you the figures from 1881-2, going back a little further. The amount spent on actual famine relief is Rx. 312,863; on the construction of protective irrigation works, Rx. 1,815,724; on the construction of protective railways, Rx. 6,555,864 in direct construction, and Rx. 3,632,435 in the payments for interest, &c., on the famine railways constructed by companies.

12,122. Then is there a balance?—Those figures together make Rx. 12,316,886 in the 15 years, and besides that Rx. 5,327,299 has been appropriated to the avoidance of debt or its reduction.

12,123. You look upon that last sum practically as an accumulation; you could borrow to that extent in the relief of famine, supposing famine were to arise?—We look on it that, excluding the famine relief, we could borrow to the extent of the whole without having put the Government into a worse position, because the irrigation works, and the railways, although the money is spent on them, are undoubtedly protecting the country against famine.

12,124. Have circumstances arisen since the establishment of this fund which would have been very likely to have caused a famine, which, however, has been mitigated at all events by the existence of the works which have been constructed—those irrigation works and railways?—In certain districts that is the case, but happily we have not been exposed to scarcity over a large part of India in the same way as arose in the years 1877-8.

12,125 (*Sir Andrew Scoble.*) But there have been cases of scarcity which might have amounted to famine if facilities had not been provided for carrying food by protective railways into the districts affected?—Yes; in certain districts that is the case.

12,126. (*Chairman.*) That is what you call a protective railway?—Yes.

12,127. Then the operation which devoted Rx.5,000,000 odd in avoidance of debt would work, I suppose, in the following manner: you charge upon the whole revenue of commercial railways, 4 or 4½ per cent., do you not?—The charge on the State railway account is 4 per cent.

12,128. I am now following the working out of the commercial undertaking as such?—Yes.

12,129. But of that sum, whatever it may be, you have not had to borrow 5½ millions; you have applied it out of revenue?—That is so.

12,130. Therefore, so far, the railroad, although it is charged with 4 per cent., has not actually to pay interest, as part of its expenses on that 5,300,000, inasmuch as the Government did not borrow it. Or perhaps it is more correct to put it this way. The Government supplied out of revenue and not out of borrowed money 5,300,000; therefore on that 5,300,000 it has no interest to pay; on the other hand, the money has been laid out on a railroad which the Government charges in its commercial account with 4 per cent.?—Yes, that is the case, if you join together the railway account and the famine insurance account; but this sum which I have mentioned as being applied to the reduction or avoidance of debt has in some cases been actually applied to the discharge of debt. It has not all been applied to the reduction of the loans which would have been incurred for the railways.

12,131. Then to that extent the same operation occurs?—The effect is the same.

12,132. The debt is reduced while at the same time in your commercial account you charge that expenditure along with other expenditure at 4 per cent.—you expect to get 4 per cent. on it?—Quite so.

12,133. And having defrayed that portion out of revenue you have not to pay interest upon it?—Yes.

12,134. (*Sir Ralph Knox.*) But regarded as a separate fund the famine fund loses the advantage of having made an investment as it were. The famine fund does not get credit for that interest that it would have received supposing it had been invested?—That would be the case if there were a famine fund, but there is no such thing. The famine insurance grant is only the application of that surplus which the government of India undertook to find for the purpose of famine insurance. There is no fund from which money can be taken, and that was the reason why I rather objected to the chairman's application to the railway account of the whole of the famine money which had been appropriated to the reduction or avoidance of debt. The two have not necessarily any connection.

12,135. (*Chairman.*) I only gave that as an instance?—Yes.

12,136. (*Sir William Wedderburn.*) I do not wish to open up the history of the famine insurance fund, but I should like to explain at present—I should say that, when I referred to the famine insurance fund as being tantamount to the reduction of a surplus, I only referred to that as the view that the Government of India take of it?—Yes.

12,137. Because we do not accept that at all; we consider that certain taxation was pledged to this. I do not wish to go into the particulars, but it is only to explain what I have said here. We consider that certain items of taxation were raised for that special purpose and were pledged for that purpose, so that I only ask this question with reference to the Government of India's mode of treating that item.

12,138. (*Mr. Buchanan.*) Apropos of that, might I ask how often during these 13 years did the Government of India budget for the full 1½ millions?—Six times.

12,139. Is it in your statement?—I will revise the statement, so as to show this. I will hand it in.

12,140. (*Sir William Wedderburn.*) Then we will go on to paragraph 10, and with reference to the last question I asked about "deterioration," on the same footing, will not the deterioration for 1895-6 be Rx. 7,559,288?—I believe that the figures are right as to the budget for that year, but it has been so completely upset that no good purpose would be obtained by using those figures any more.

12,141. Then paragraph 11. If it be reckoned that in 1895-6 there is 2 millions of "deterioration" from 1894-5, I quite accept what you say about that. Is it not the case that not more than 250,000 Rx. is due to exchange?—Yes, in the budget the rate of exchange is the same practically as the one that was adopted in the revised estimate: therefore there is very little alteration. Happily there was a very great change in the actual result.

12,142. These are all the questions with regard to Table I. I now go on to Table II.?—Perhaps at this

Sir H. Waterfield, K.C.S.I., C.B.

1 July 1896.

Progress of Expenditure.

point I might hand in the table which I have been asked to give, showing the rate of exchange.*

12,143. (*Sir Andrew Scoble.*) Can you state what the drawing rate has been during the period covered by your tables?—Yes. I have put in a table which will show that.

12,144. (*Sir William Wedderburn.*) Then with regard to Table 2, there is an analysis in my paragraphs 12 and 13 of the net increase of total expenditure. Can that analysis be generally accepted?—Yes. The figures may be accepted in the same way as before.

12,145. Then I go on to Table 3, paragraphs 14 and 15; would not this table be more instructive if it were combined? This is now the question that we have discussed before. Would not this table be more instructive if it were combined with Tables 10 to 17, so as to show the total increase or decrease whether in India or England under each heading of expenditure? For example, Table 3 shows a decrease in public works in India of over Rx. 3,000,000, but there was at the same time an increase in England of over 1,500,000*l.*?—Yes, as I said before, there is no difficulty. It is simply necessary to take the figures which are in the published accounts, but I think the Commission would not find it assist them in their inquiry to throw the two together. It is very important that you should know that the reduction has taken place in the receipts from the public works in India, and the increase has taken place in the charge for interest in England.

12,146. I quite see the value of the separate tables, but I was only referring to the advantage of combining them into certain totals?—Yes.

12,147. (*Sir Ralph Knox.*) Is it not the case in regard to several items of expenditure, that you can form really no accurate judgment of the growth without putting the two together—the home expenditure and the Indian expenditure?—You cannot form any idea of the total growth, undoubtedly, without combining them, together with the exchange, but for the cause of the growth you must look to the separate groups.

12,148. But in some cases—stores, for instance, required from England to carry out the works planned in India, which appear to vary very much from year to year—is it not very confusing to have the statement made separately?—My reason for that was that I thought that perhaps one of the points that the Commission might specially wish to take up was the supply of stores, as to which a great deal has been said in India with reference to pushing the local supply, and I thought it would be convenient to them to have a statement of the stores supplied from England given separately. There is no difficulty at any time in adding it. In fact it is, as I say, only needful to take the figures in the account, where in each head the stores are shown belonging to it.

12,149. But the accounts generally do not bring those items altogether, do they?—The stores are shown separately. There is in the Finance accounts a table, No. 3, which shows the expenditure under each head in each province, the total in India, the expenditure in England, and the exchange; and then a supplementary table, No. 4, gives the details of the expenditure in England, showing how much is on stores.

12,150. But the budget statement does not agree with that, does it?—No; in the budget there is no such statement. The budget table gives the total in India, imperial and provincial, the total in England, and the exchange, but it does not divide the expenditure in England into stores and other charges.

12,151. But the accounts do that?—The accounts divide it distinctly.

12,152. (*Sir William Wedderburn.*) Then Table 4, paragraph 16—of course, this is subject to what you mentioned about the budget estimate of 1895–6 being practically upset—but dealing with those figures, can the Rx. 3,958,852 and Rx. 5,277,469 be accepted as the total increase in net military expenditure of 1894–5 and 1895–6 budget estimate, respectively, over 1884–5?—I believe that the figures may be accepted.

12,153. Then paragraph 17. Can you supply to the Commission a statement showing the numbers of (A) European, and (B) native troops in Burma; first, before the annexation of Upper Burma, second, since the annexation?—The British troops before the annexation were 2,297, at present 4,533. The native troops were 3,072, and now 11,207. The total was 5,369, and is now 15,740. I will read a table which shows it in somewhat greater detail.

STATEMENT of TROOPS in BURMA before the ANNEXATION of UPPER BURMA, and at present.

	Before Annexation.		Present Time.	
British:—				
Artillery	1 mountain battery at 111	471	1 mountain battery at 111	401
	3 garrison batteries at 120		2 garrison batteries at 145	
Infantry	2 battalions at 913	1,826	4 battalions at 1,033	4,132
		2,297		4,533
Native:—				
Artillery	—	—	1 mountain battery	226
Sappers and miners	1 company	125	2 companies	351
Infantry	$3\frac{1}{2}$ battalions at 842	2,947	$12\frac{5}{8}$ battalions at 842	10,630
		3,072		11,207
Total		5,369		15,740

12,154. (*Sir Andrew Scoble.*) Are those native troops all regular troops, or do you include military police?—No, not military police. The native troops consist of one mountain battery, two companies of sappers and miners, $12\frac{5}{8}$ battalions of infantry reckoned at 842 for each battalion.

12,155. (*Sir Ralph Knox.*) Has any statement ever been compiled making an attempt to divide the expenditure upon the European army in India from the native army?—A statement has been given to Parliament, No. 20 of 1894, in which a calculation was quoted of the cost of a European soldier and the cost of a native soldier, but I am not able to say in what way that calculation was arrived at. It was sent in some papers received from the Government of India, and adopted in this Office.

12,156. But you have no statement dividing the whole military budget as it were between native Indian army and European army?—Yes. The Indian budget shows the European military force and the native force quite distinctly.

12,157. But does it work out the detailed expenditure of all kinds on the European and native?—No, only the pay; the total is not divided, and I do not think we have any such statement.

12,158. (*Sir William Wedderburn.*) Can an explanation be given of the large cost of Rx. 420,000 for quartering extra troops in Upper Burma, so long after the annexation, and can you inform the Commission what is the inference to be drawn from that amount?—I am afraid I can only give the information, which is in that statement, as to the amount of the extra force that is in Burma now. I do not know how to give any further explanation than that the addition of 10,000 men must necessarily cost more than the charge that was before incurred.

12,159. But does not this quartering mean exceptional or extraordinary additional cost, it may be from expensive provisions or carriage; is that what it represents?—Yes, the charge is the extra allowances which are caused by the force being in Burmah, beyond what would have been incurred if it had been, say, in Madras.

* *See* Appendix 40.

There are extra allowances, and there is extra expenditure for clothing and for quarters, which is included in that amount of Rx. 420,000.

12,160. And is there any object in maintaining that as a separate extra charge, when practically it must be a permanent one?—No, it is merely done in order to show what is the cost of the annexation of Upper Burma.

12,161. Can you state the total cost of the Chitral Expedition, and the additional estimated annual cost for military, political, public works, and administrative charges?—The expenditure on the Chitral Expedition is shown in the financial statement for 1896–7 in the following manner:—

	Rx.	
In India, 1894–5 -	67,200	
1895–6 -	1,647,500	
1896–7 -	20,000	
		1,734,700 Rx.
In England, stores - -		16,000*l.*
To which must be added Exchange		11,900 Rx.
		1,762,600 Rx.

12,162. (*Chairman.*) Is that the total cost of the expedition?—The total cost of the expedition as shown by Sir James Westland in his budget this year.

12,163. I may be only speaking from memory, but I thought that Sir Henry Brackenbury's statement of the military expenditure, which he made in March in the Legislative Council, gives rather a larger sum than that?—There is a very small amount carried over to 1896–7, Rx. 20,000 in India, and Sir James Westland mentioned that there were stores still to be brought to account which he took at 16,000*l.*

12,164. Was that in the budget of this year?—In the budget for this year.

12,165. (*Mr. Buchanan.*) Sir Henry Brackenbury's speech, of course, is in that Blue Book?—Yes.

12,166. (*Chairman.*) No doubt Sir James Westland is right, but, as you read the figures, they did not seem to tally completely with my memory of it. Do not trouble yourself with it; it is only a matter of my recollection. Perhaps Sir William Wedderburn will go on. If I can see the figures I will show them to you?—Yes.

12,167. (*Sir William Wedderburn.*) Can you give us any estimate of the total, and of the additional, annual cost of military, political, public works, and administration charges, in fact, the permanent charge upon the State in connexion with Chitral?—The future charges?

12,168. Yes?—"The increase next year caused by "the decision to occupy Chitral and its communications "is estimated at Rx. 22,000. This is a permanent in- "crease which will continue in future years, though it "may be possible to effect some reduction in the amount "of it." That is from Sir James Westland's statement, page 44.

12,169. (*Chairman.*) That represents about Rx. 23,000?—Rx. 22,000; that is the political charges. "The only "other matter which need be separately noticed is that "the political charges connected with the Chitral relief "expedition and the subsequent occupation of Chitral "and its communications have increased the political "expenditure this year by about Rx. 20,000. The in- "crease next year caused by the decision to occupy "Chitral and its communications is estimated at "Rx. 22,000. This is a permanent increase, which will "continue in future years, though it may be possible "to effect some reduction in the amount of it."

12,170. Is that Sir James Westland?—That is from Sir James Westland's statement.

12,171. (*Mr. Buchanan.*) Then there is also a permanent military charge?

12,172. (*Sir Ralph Knox.*) That includes the military expenditure?—No, that is the civil charges; what I was just reading referred only to the civil charges; but then there is the military charge.

(*Sir Ralph Knox.*) Do you know what is the increase of the military charge?

12,173. (*Chairman.*) I have got the paper of which I spoke from recollection?—Paragraph 11 says:—"The "occupation of Chitral and of its communications has "involved in 1895–6 an expenditure of Rx. 102,200, "and will involve in 1896–7 an expenditure of "Rx. 231,700;" so that in the military charges in 1896–7 there is an increase of Rx. 129,500 in connexion with the occupation of Chitral.

12,174. (*Sir Ralph Knox.*) Is that to be a continuous charge?—That is an increase of the army charge.

12,175. Has there been an increase as distinct from the expedition?—The expedition has passed away, and then there remains an increase of Rx. 129,500 in the military charges, besides Rx. 22,000 in the political in 1896–7, over the previous year.

12,176. And has there been any increase of force, an increase of strength of the Indian army in consequence of this operation?—No.

12,177. It is the additional cost of locating a small force in Chitral then, and also the expenditure on road-making for them?—Yes.

12,178. (*Chairman.*) This is what I was alluding to. Sir Henry Brackenbury in his speech says:—"The "Indian Budget estimate of 1896–7 includes three "great items of expenditure which have not appeared "in the former budget estimates." Then he goes on to give two of them, and "the third is the cost of the "occupation of Chitral and the line of communications "to it, and of the relief of troops, which has to be "carried out during the current year, and adds 23 lakhs "to the estimates," which I took to be Rx. 230,000?—Yes; Rx. 230,000.

(*Chairman.*) That was the figure in my mind when I said what you said did not tally with my recollection?—I was then referring to the arrears of the charges of the expedition, not the permanent increases.

12,179. (*Sir William Wedderburn.*) I do not think I have given you notice of the estimate?—No, I was not prepared for that.

12,180. Then perhaps you could make a memorandum of that; the military, political, public works, and administrative?—The table, which I now hand in, is, I believe, complete.*

12,181. Will you state the total cost of special military operations from 1875–6 to 1884–5, and 1885–6 to 1894–5? Am I correct in stating that the total in the first 10 years was Rx. 161,562, and in the second 10 years Rx. 4,925,877?—Yes, the figures are approximately correct. Down to 1892–3 they agree with the return given to Parliament: for 1893–4 and 1894–5 I should give the amounts as Rx. 219,700 and Rx. 380,800 (including Chitral), which would raise the second total to Rx. 5,010,227.

12,182. Can you account for this great increase? Is it attributable to a change of policy?

(*Sir Andrew Scoble.*) Are we to go into that, Mr. Chairman.

(*Chairman.*) I thought you were speaking of special operations.

(*Sir William Wedderburn.*) Yes.

(*Chairman.*) And I thought you were asking whether certain figures were correct.

(*Sir William Wedderburn.*) Yes, and I asked whether Sir Henry Waterfield can account for this great increase, and whether it is attributable to a change of policy.

(*Chairman.*) I think that is admissible. We are not discussing the policy.

(*Sir William Wedderburn.*) We are not discussing the policy.

(*Sir Andrew Scoble.*) It seems to open a very wide field of inquiry.

(*Chairman.*) I think the question may be allowed. If Sir Henry Waterfield were to say it was due to a change of policy, and that were to raise a discussion on that change of policy, I think your objection would hold. I think it is reasonable to ask whether this is due to a change of policy, or to an automatic operation.

(*Sir Andrew Scoble.*) But these special military operations must necessarily depend on questions of policy. They are all military expeditions of one sort or another, including, I believe, the Afghan war.

(*Chairman.*) I suppose you wish, Sir William, to draw attention to the fact to which, I think, your memorandum calls attention, namely, that if you put aside the Afghan and Egyptian expeditions in the earlier years, those expeditions were very small.

* *See* Appendix 41.

Sir H. Waterfield, K.C.S.I., C.B.

1 July 1896.

Progress of Expenditure.

(*Sir William Wedderburn.*) We have a good deal of evidence upon this from Sir Auckland Colvin and Sir David Barbour.

(*Chairman.*) Quite so.

(*Sir William Wedderburn.*) And I should like to have Sir Henry Waterfield's answer upon this increase. I do not wish to open up the merits of, or the necessity for, this policy, but I should like to have his answer upon that if you see no objection.

(*Chairman.*) Your point being that the expeditions in former years were very few, and that they have been very considerable in later years.

(*Sir William Wedderburn.*) Yes, and I ask whether you can account for this very great increase; and whether it is attributable to a change of policy.

(*Chairman.*) I think you must remember the position of Sir Henry Waterfield. He is a permanent official, and therefore he cannot enter upon any questions which involve political considerations.

(*Sir William Wedderburn.*) I do not wish him to give any opinion upon it.

(*Chairman.*) Would you not stop at "can you give any reasons for this increase" without entering upon change of policy, because I imagine Sir Henry would not be able to answer on that point.

(*Sir William Wedderburn.*) I do not wish to press Sir Henry to give more of an answer.

(*Chairman.*) Perhaps if you ask him if there is any reason for it, you may leave him to say what he can.

(*Sir William Wedderburn.*) I should not like to acquiesce in what I consider an unreasonable limitation of the inquiry, and if I reduce this question it might be admitting Sir Andrew Scoble's contention, which I do not admit at all.

12,183. (*Chairman.*) Put your question as far as that goes. We quite understand that Sir Henry may be able to say "I think it is a change," or "I do not." He cannot answer a question if it goes into the necessities for these expeditions. Then I think we should agree that that lies outside of our inquiry?—The Commission will observe that a very large part of the increase in the later decade arose in one single year 1885-6, Rx. 2,185,371, which was the occasion of a special force being sent up to the frontier, commonly known as the Quetta force, and there was undoubtedly a very heavy expenditure incurred in moving the troops before the railway had been constructed; that will explain nearly half of the total in the 10 years. Putting that aside, I should say that the expenditure from 1887-8 to 1894-5, which is about Rx. 2,800,000, has arisen mainly from the necessity of keeping in order the frontier tribes not only on the north-west but also on the north-east of India.

12,184. (*Sir William Wedderburn.*) I do not wish to press you for any details, Sir Henry, that is sufficient. From 1884-5 to 1895-6 there was special military expenditure of Rx. 11,633,434. How does that compare with similar expenditure in the preceding 10 years. Does the increase indicate a change of policy?—The amount which you mention includes the expenditure on the special defence works which has been incurred on the north-west frontier and on the harbours of India. It is a policy which was devised to protect India against the incursions of an enemy, and has cost a good deal of money. The construction of those works is now drawing to a close. We hope that it will be finished this year, and to that extent certainly there has been a change from the former policy, in that it has been thought desirable to protect India more efficiently.

12,185. Can you supply to the Commission a statement showing as regards strategic frontier railways, what part of the cost should fairly be debited to military expenditure, and what part to general railway enterprise? Under what headings is it now shown as regards capital cost and yearly loss?—I found, after you told me last Wednesday that you would wish to have such a statement, that the question had been put to Mr. Jacob on a former occasion, and that he was preparing it. I have not therefore got out any figures for that purpose.

12,186. Table 5, paragraph 18. On what ground is the net charge for the Indian Midland and the Bengal-Nagpur railways treated as a set-off against the suspension of the famine insurance grant? If a profit accrues, would that be added to the famine grant?—The reason for treating the Indian Midland and the Bengal-Nagpur railways as a charge on the famine insurance grant is to be found in the circumstances under which Lord Randolph Churchill gave his consent to their construction. In 1885 the Government of India proposed a very large scheme of railways, including the frontier lines and various protective lines, for which latter, however, the Government of India were unable themselves to find the money; and therefore they proposed to construct them through the agency of companies under a guarantee, charging the interest thereon against the famine insurance grant. To this, Lord Randolph Churchill replied as follows:—"Great objection has "been taken, both by former Secretaries of State and by "the Select Committee of the House of Commons "last year, to the proposal to appropriate as interest any "portion of the famine insurance grant, the declared "object of which was to keep down debt. I recognise, "however, that the circumstances of the present time "are of a special character, and could not have been "contemplated either by my predecessors or by the "parliamentary committee . . . . I, therefore, "authorise you to charge against the famine insurance "grant the amount payable during the next five years, "as interest on capital raised by companies for the "purpose of constructing any of the lines which are "mentioned by your government as being, in your "opinion, needed for the protection of the country "against famine, but which you are not at present able "to construct through State agency." Subsequently, after the lines were opened, it was agreed in 1890, that the charge against this grant should be, not the guaranteed interest, but the net loss on the railways, including that interest.

12,187. Then with regard to Table 6, paragraphs 19 and 20, under the railway revenue account an "improvement" is shown of Rx. 2,706,242, but if account be taken of the home charges with exchange, will not this improvement be changed to a loss of Rx. 1,910,241?—Yes.

12,188. With regard to paragraph 21, in order to judge of the actual results of the railway enterprises of the Government of India, must not the home charges be included in the cost, and is not the future railway policy of government liable to be influenced in the wrong direction if the accounts seem to show a profit when there has really been a loss? Does not this result affect the policy of borrowing in gold for railways?—I think it is a misapprehension to suppose that the accounts show any such result. This is simply a table which I prepared to show the result of the working of the railways in India apart from payments in England. In the accounts, the statements of total revenue and total expenditure together in India and England are shown distinctly.

12,189. Paragraph 22. As regards feeder lines of railway, do you approve of the policy of allowing a private company to raise the capital, the Government building the line, working the undertaking, and ultimately buying out the company; do you approve or not of that from a financial point of view?—I think I must not give an answer to that question. I am representing the Secretary of State, and I can hardly give an answer whether I approve or not of his policy.

12,190. How shall we ascertain the merits of this financial policy?—Will you read the question again, so that I may see if I can give an answer?

12,191. Perhaps I might substitute this question—what are the merits of the policy of allowing a private company to raise the capital, the Government building the line, working the undertaking, and ultimately buying out the company. I have shown one or two objections to it. Perhaps you would kindly mention what is to be said on the other side?—The object is to induce private individuals to join as shareholders in the railway company, and to find the money for the construction of railways in India, so that railway construction may proceed at a greater rate than it can if it be limited to the money which the Government is able to borrow for the purpose; in order to induce investors to undertake such works, some prospect of profit must be shown to them.

12,192. Whether by allowing the company to raise the capital, whether it does not raise it on less favourable terms than the Government does its own?—Government can only raise limited sums. I do not say what is the limit, but there must be some limit of the amount which they can with advantage raise on their own direct security. If the Government were to go into the market and borrow the whole of the money

which it is desired to appropriate to railway construction, the price of their stock would not remain so high as it now is, and the cost would therefore be greater. It has to be considered from time to time whether the Government can in any particular year more advantageously raise the money itself, or allow a company to raise it on certain terms at a cheaper rate.

12,193. Then the second objection is, that a large amount of money is wasted in promotion money, commission, and other preliminary expenses of floating the company?—Yes. That always has to be taken into consideration in calculating what will be the probable result of entrusting any railway to a company.

12,194. And the third objection is that a whole separate staff and establishment with directorate, &c., is brought into existence at unnecessary expense, for a line which is dependent for its existence upon the Trunk Railway, and which could be, and is, most effectively and economically worked with the original undertaking?—Yes, that undoubtedly is an objection, which the Government endeavour to meet as far as they can by entrusting the construction of the feeder lines to existing companies.

12,195. And the fourth objection is that a small and separate line, with separate interests, is planted in the middle of a great system of state railways, and must be ultimately bought out on terms less favourable to the State than those on which it originally could have been built?—I think there is a very considerable danger in that respect, which has to be watched in each particular case.

12,196. Can you supply to the Commission the documents showing the Government terms upon which railways are constructed by companies, and a statement showing the financial result of each railway so constructed, with the rights and responsibilities of Government regarding it?—I put in a note which has been written by the Secretary in the Public Works Department, to which he has attached the resolutions of the 15th September 1893, the 29th March 1895, and the 17th of April 1896, under which what we commonly term feeder lines are constructed, together with an abstract of the contracts that have been made with the companies under those terms.* As to the financial results, none of them are yet at work, and therefore we can prepare no statement showing what the result will be.

12,197. My question was directed to the past railways that the Goverment have completed?—I thought you spoke particularly of the new terms; do you mean the guaranteed companies, the old companies that are still working?

12,198. Yes; would it be possible to give the financial results of the old companies that have been taken over by Government?—Yes, but has not Mr. Jacob already given that to the Commission?

12,199. (*Chairman.*) As to the terms; my recollection is that Mr. Jacob has given us the information?—I thought so. As to the railway system generally, I think he has given you full information about the guaranteed railways.

12,200. (*Sir William Wedderburn.*) As regards other feeder lines before this new arrangement?—The term feeder is applied to lines constructed under the resolution of 1893 and subsequent resolutions.

12,201. But have there been any formed lines, even if that term was not used, have there been any branch railways of this kind constructed under similar circumstances?—Yes, I think you have already received an abstract of the contracts with the companies, and in some cases extensions have been made: but they are constructed by the same railway companies which have made the main lines, and are not those to which the term feeder railways is now applied.

12,202. Then with regard to sub-paragraph B; the Government some years ago waived their right to purchase the Great Indian Peninsula, the Bombay and Baroda, and other guaranteed lines, in return for a modification of the contracts with the companies, and I should like to ask these questions; what is the yearly loss arising from this waiver; what is the yearly gain from the modifications in the contracts; and for what price might Government have purchased in 1875, and what is the probable price when Government can next exercise their option?—As regards the yearly loss or gain to the revenues of India on account of modifications of the contracts, we can show, if necessary, the charge paid year by year since that date to these railway companies; but that is not a representation of the loss or the gain, because it is impossible to say what the Government would have received had it worked them as State railways. Fresh contracts have been made with the companies which have undertaken to work purchased lines, and it is impossible to frame a hypothetical statement of what the charge would have been if those contracts had not been made. And as regards the loss, the effect on the money market of the Government declining to exercise its option of purchasing the line in 1875, cannot possibly be stated. No one can say what would have been the value of the shares of the railway if the Government had not publicly announced that it was not going to enforce its right of purchase. Also it is impossible now to say what will be the value of the shares at which the Government will have to buy the three remaining lines when their contracts expire.

12,203. Sub-paragraph C. Why was a guarantee given to the Bengal Central Railway? and why is it classified as a State railway when it is the property of a company?—The Bengal Central Railway Company was formed under a contract dated July 26, 1881, for the construction of a line from Calcutta to Khulna, and from Ranaghat to Bongong. The Company was to raise 1,000,000*l.*, and more if necessary. The Secretary of State was to pay 4 per cent. on any sum or sums not exceeding in the whole 1,250,000*l.* till the lines were open for traffic, but not beyond June 30, 1886. Out of the net earnings the company was to receive 5 per cent., and any surplus was to be divided equally till the Secretary of State's advances were repaid, after which the company would receive the whole. Purchase might be effected in 1912 or 1932, on paying 25 per cent. bonus over the capital expenditure, the total payment being limited to a maximum of 1,812,500*l.* The company raised 500,000*l.* share capital, and debentures for 250,000*l.* were issued by the company in 1883 and 1884 at 4 per cent. In 1882 the Eastern Bengal Railway Company entered into a contract with the Bengal Central Company to work their line, and, on the purchase of the former undertaking by the Government in 1884, the management of the working was continued by the Government. The expectations of profits not having been realised, and the position of the company being such that the Government feared it would prove damaging to the prospects of railway construction in India, and perhaps even to the credit of the Government itself in the money market, a fresh arrangement was made in 1885–6, by which the government guaranteed 5½ per cent. on the share capital (not exceeding 1,000,000*l.*), and took over the debentures (on which until paid off 4 per cent. would still be payable), allowed the company one-fourth of the net receipts (out of which the excess over 3½ per cent. of interest on debentures would be payable to the Secretary of State), and acquired the right of purchasing the line in 1905, or any succeeding tenth year, by giving back the capital expenditure at par. These terms were embodied in a fresh contract dated January 5, 1887. In 1887 the company raised a further 250,000*l.* by debentures at 3¼ per cent. In 1889 the whole of the 500,000*l.* debentures were discharged by advances being made to the company by the Secretary of State, who charged 3¼ per cent on the money. The company have recently given notice to terminate the working agreement at the end of this year, and to work their line themselves. That is a statement of the position of the Bengal Central Railway Company, and I think the answer to the question is that the estimates and calculations on which the company had been formed had proved perfectly illusory; that the Government were under their contract liable to buy the company out at a heavy price afterwards; that the position was, as it was expressed, likely to be damaging to the construction of railways by the Government; and that therefore it was thought better to make a fresh arrangement which should guarantee to them what was then a moderate sterling rate of interest, and get rid of the heavy bonus that was to be paid on purchasing the company out eventually.

12,204. And it is classified as a State railway, because substantially it is now the property of Government, I suppose?—It is a matter of convenience to treat it so in the accounts, instead of treating it as an exceptional railway by itself; but as regards the contract the ownership rests with the company, and therefore a footnote is put into the notes to express that.

12,205. Then with regard to sub-paragraph D., does not the system of declaring surplus profits and paying extra dividends to shareholders on the Great Indian

* *See* Appendix 42.

Sir H. Waterfield, K.C.S.I., C.B.

1 July 1896.

Progress of Expenditure.

Peninsula Railway result in serious loss to Government, as shown in "The Economist" of the 27th July 1895, where it is pointed out that in 1894 the shareholders received 16*s.* 4*d.*, over 5 per cent., while the State suffered a loss of Rx. 887,500; would this loss have been reduced to 583,500 Rx. if the surplus profits had been declared yearly? Could the change be made under the existing contract from half-yearly to yearly?—I have not verified the figures, but I have no reason to doubt that they are accurately stated. The privilege of the company under their contract in having the dividends declared half-yearly and the surplus profits shown thereon, is a considerable advantage to them, owing to the fact that in one half-year the line frequently does not pay sufficient to cover the interest, but the Government have no power under the existing contract to alter that arrangement.

12,206. Then that has been very advantageous to the shareholders and disadvantageous to the Government. Was the Government aware of that? Do you know whether it was done with a knowledge of that effect that it would have?—I doubt whether it was foreseen. The contract was made in the time of the East India Company, and I doubt whether enough was then known about it; but a similar provision has been avoided in contracts of recent years. Now the surplus is declared on the annual profits, not the half-yearly profits.

12,207. (*Chairman.*) I understand that the Secretary of State is not responsible for this result?—No.

12,208. He really is bound down by the contract made by his predecessors the East India Company?—Quite so; by the East India Company.

12,209. (*Sir William Wedderburn.*) But was it not renewed in 1875 after it had come under the Crown, was not that provision continued then?—It was not then altered; no fresh contract was made in 1875; all that was done was that the Government waived its right to purchase under a particular clause.

12,210. But the Government could then have negotiated a correction of that provision, could they not?—They could have negotiated for it, no doubt. I do not know whether it would have been of advantage. They would, probably, have had to give the Company something else in return; it might not in the end have proved advantageous.

12,211. (*Chairman.*) What pressure could they have put upon the Company at that time?—What happened at that time was that the Government promised to the Company that it would not enforce its right of purchasing the line after the expiration of the first 25 years of the contract. In return for that the provisions regarding the surplus profits were modified, and the Government thought at the time that they were getting an advantage. I think that now we see that they did give much more than they gained in return, but at that time it was not fully foreseen what the effect would be, and it was supposed to be an equivalent for what the Company gave up.

12,212. (*Sir Ralph Knox.*) What were the peculiar circumstances which led up to this different result in different half years?—In one half year the net earnings of the line in India are frequently insufficient to cover the full amount of the guaranteed interest, but, nevertheless, the Government must pay it; in the other half year, the earnings are more than sufficient to pay the guaranteed interest, and there are surplus profits of which the company receive one half. Although there may have been a deficiency in the first half year, that deficiency is not set against their share of the surplus profits in the second half year.

12,213. (*Sir Andrew Scoble.*) Is it not the reverse? the first half is the profitable one and the second half is the unprofitable one?—Yes. I did not mean to use the words first and second with reference to the calendar year.

12,214. The difference arises from the occurrence of the monsoon, does it not?—Yes.

12,215. (*Mr. Caine.*) Which stops the moving of the produce?—Yes, that is it.

12,216. (*Sir William Wedderburn.*) Table VII., paragraph 23; is it correct to say that the total increase in the net cost of civil administration is Rx. 5,517,276, including Imperial, Rx. 1,951,078; and Provincial, Rx. 3,566,198?—Arranged in the manner in which the table is prepared in paragraph 23, I have no criticism to make on the figures. The same objections that I made before would apply here.

12,217. Paragraph 24; is it correct to say that permanent political charges have increased by Rx. 337,459 during the last ten years?—Yes, on the same principle.

12,218. Paragraph 25; can you supply to the Commission a statement showing the estimate and the actual cost from first to last of the Gilgit Agency in the past, and what it is estimated to be in the future?—I referred to the Political Secretary to know if he could give me such a calculation. His answer is:—"When the Gilgit Agency was re-established in 1889 the cost was estimated at about 40,000 rupees annually, but in 1892 the operations of the agency were very largely extended. Annexed is a table showing the annual cost in subsequent years. The expenditure in 1895–6 and 1896–7 has been presumably much the same as in 1893–4 and 1894–5. It is impossible to forecast the future cost, as already considerable reductions are being made, and the transfer of work from the Gilgit Agency to another is under discussion. It is impossible to say what were the political charges for Upper Burma as originally estimated. Several years elapsed after 1886 before the outlying feudatories of Ava were brought under the British control. Boundary Commission charges are in their nature temporary, and incapable of being foreseen. The line between political and administrative charges is also being constantly shifted. Purely political charges on the Burmese frontier must fluctuate according to the course of events in China or in the French possessions, and it is impossible to anticipate the future expenditure." To that he added a table, which I will put in, which was prepared in India, and which shows the expenditure charged to British Indian Revenues on account of the Gilgit Agency since its re-establishment in 1889, giving a total in 1889–90 of Rx. 3,673; in 1890–91, of Rx. 5,379; in 1891–92, of Rx. 6,181; in 1892–93, of Rx. 112,907; in 1893–4, of Rx. 164,370; and in 1894–5, of Rx. 400,718. And I have made an extract from the estimates which are prepared in India, in which I give such of the charges for both Gilgit and Upper Burma as are distinctly identified, but in the case of Gilgit all charges for exchange compensation allowance, establishments, and contingencies, are included under the Cashmere Residency and other agencies, and therefore I am unable to take them out (*statement and extract put in*).*

12,219. Then, with regard to Table VIII., paragraph 26, I think there has been a return supplied by the Secretary of State for India bearing upon this, but I am not sure that it gives the full information?—It was one prepared in consequence of a motion made by yourself in the House, and I think it gives exactly what you wish. It came down to 1893–94, and I have had it continued now for 1894–95 and 1895–96, and I think that that gives the information that you desire.

12,220. Does this return show the money received from railway companies?—Yes, it is divided in this way. The disbursements show the discharge of debt, the payments to Indian railway companies, and other disbursements; and on the receipt side is the mode in which provision was made for those disbursements, first, by bills of exchange and telegraphic transfers on India; secondly, from debt incurred; thirdly, by bills on London purchased in India; fourthly, from bullion remittances and gold. Then there are grants from the Imperial Government in aid of expeditions, Mediterranean, Afghanistan, Egypt, and Soudan, and the total. As regards the railway companies, the net withdrawals are shown, not the total amount, but the amount that was available towards meeting the disbursements of the Secretary of State.

12,221. Then as regards the Tables XIV., XV., and XVII., there are some remarks under paragraph 28, and I should like to ask, is not the term "Army effective charges" used in a narrower sense than it is ordinarily used by the Government of India, and is not the result to show increase of such charges as Rx. 178,527 instead of Rx. 465,298?—The tables are prepared in a somewhat different manner, and I have to express my regret if I have caused confusion to the Commission by it. The reason that I prepared them in that way was that I thought that, in investigating the payments in England, it would be desirable to show clearly how far they were incurred in cases in which the Secretary of State might exercise some control, as, for instance, purchases of stores; how far they were unavoidable, such as payments of superannuation allowances and furlough pay; and how far they might form the subject of consideration as to apportionment, such

* *See* Appendix 38.

as payments to War Office, transport, &c.; and in consequence my sub-tables regarding the charges in England are not in exactly the same form as those relating to expenditure in India; but the total is prepared in the same manner as that for the Indian expenditure.

(*Chairman.*) In what way do you mean, Sir William, that the description of army effective charges (I think you said) is narrower than in the other accounts to which you have been referring?

12,222. (*Sir William Wedderburn.*) In that paragraph some of the reasons are mentioned—paragraph 28?—In No. X. of my tables I divide the expenditure into interest and management of debt, railway revenue account, civil administration, India Office, army effective, furlough, non-effective, and stores. Sir William Wedderburn is quite correct in saying that in the ordinary use of the term "effective charges," furlough and stores should be included.

(*Chairman.*) Still that breaks up the account and puts it in a form that is very useful to us, I think.

(*Sir William Wedderburn.*) It is only to keep uniformity as regards the use of the term.

(*Chairman.*) Quite so; yes.

12,223. (*Sir William Wedderburn.*) Then as regards Table XVI., is not the reduction of Rx. 371,394 in military pensions only a matter of account?—Scarcely so. It is more than a mere matter of account. It was owing to a change of system in the mode of payment for the Indian portion of the pensions assigned to British officers and soldiers, by which a very large reduction was shown in the year 1884–5 owing to the capital payments no longer being continued, and a gradually increasing charge in subsequent years as the pensions increased.

12,224. (*Chairman.*) Yes, I think that has been explained by other witnesses?—It has.

12,225. The real fact of the matter is, if you take 1875–76 when it was Rx. 350,000, and assuming for the moment that was a normal charge in 1885–86, inasmuch as India had been forestalling her liabilities by paying in capital sums, when that came to an end she got the benefit of her thrift, if I may so call it, and as it were started afresh with a new pension system?—Yes.

12,226. Which, of course, naturally speaking, is a gradually growing one?—Gradually growing, as she was freed of all pensions which had accrued before 1885–86.

12,227. (*Sir William Wedderburn.*) As regards Tables XVIII. and XIX. and my paragraphs 29, 30, and 31, is it correct to say that the total net increase in the cost of exchange in 10 years is Rx. 11,156,204; and that out of this Rx. 8,914,350 is inherited and "automatic," I would call it, and Rx. 2,241,854 is "voluntary"?—For the reason which I gave before, I cannot accept that division of the exchange as being a fair one.

12,228. (*Chairman.*) You yourself make a difference between those charges over which the Secretary of State has no control and those over which he may have a control?—Yes.

12,229. But the difference between you and Sir William Wedderburn is that he makes a different apportionment between those charges to that which you would accept?—Yes. What he puts down as the net increase due to new expenditure, I would accept so far as it was voluntarily incurred since 1884–85; but I do not accept as such the increase due to expenditure resulting from what had occurred before 1884–85.

12,230. (*Sir William Wedderburn.*) And you mentioned one or two instances that you specially considered should not be treated in that way. Would you be inclined to make that answer a little fuller, and give a more general statement of your objections to our way of calculating?—I thought I had stated it fully; I do not think I have anything to add to what I have said.

12,231. (*Chairman.*) I think you have in answers previously in this day's evidence given the explanation of the division which you advocate?—Yes, that is what I mean.

12,232. (*Sir William Wedderburn.*) My reason for asking the additional question was that before I had only stated the general principle; and here we have actually shown the figures; as we bring them out according to our method of computation. Then paragraph 32; is the conclusion in paragraph 32 correct?—The conclusion in that paragraph is that, of the increase which has undoubtedly occurred, the part due to the automatic increase in the cost of exchange is about 5½ millions, and all the rest is attributed to other causes. I should say that the amount due to the automatic increase in the cost of exchange was very much larger. I think I calculated it at more like Rx. 11,000,000.

12,233. Could you put in a statement analysing these figures and putting them in the form that you would consider correct?—

12,234. (*Chairman.*) Is that in your table?—In a footnote I stated the increased charge of exchange. The question that is put to me is whether I could pick out from that sum the amount that is due to expenditure sanctioned since 1884–5. I am afraid it would be a very troublesome calculation indeed. I can easily tell the amount due to the increase of expenditure which has occurred since; and it can be reckoned in the way that you, Sir William, have put it, as showing the increase of exchange on the sterling amount that was in existence in 1884–5.

12,235. (*Sir William Wedderburn.*) What I rather meant was whether you would from your view of the case correct yourself?—I gave it to you as I picked it out since 1885–6. I have done it for that particular year, but do you want anything more than that?

12,236. I thought it would bring it better to an issue if you showed (these figures being not in dispute) what portions of these two total figures upon page 19 should be considered "automatic," and which portion should not?—The question would be whether I can take the expenditure for 1894–5 in sterling, and see how far the increase of that over 1884–5 is the result of measures that have been taken since.

12,237. Exactly?—I will try what I can do. The increase will be much greater, if taken from 1884–5, as it will include the charge arising from the augmentation of the European forces, and the new railways.*

12,238. Table XX., paragraph 33: A net decrease in ordinary debt is shown of Rx. 9,495,957, but should not 44,734,738*l.* increase in England be shown as Rx. 65,269,252, being the equivalent according to current rates of exchange: and should not 19,943,152*l.* transferred to the public works be shown as Rx. 28,133,680? If these corrections be made, would it not show an increase in ordinary debt of Rx. 2,848,029 instead of a decrease of Rx. 9,495,957?—I do not accept that way of treating the debt. It is a very complicated matter, and I have prepared a note which perhaps the Commission will allow me to read, but I do not know whether I shall succeed in making my point clear.

No true addition of £ and Rx. can be made without also including exchange. It is, however, sometimes necessary, for the sake of balancing the total account of Indian and English transactions, to add such sums together without including exchange; for it would obviously be fictitious and misleading to describe 2,000,000*l.* in the cash balance of the home treasury, as at one time Rx. 3,000,000, at another Rx. 3,500,000, and at another Rx. 4,000,000, because the exchange had altered. Or, instead of speaking of the sterling debt as 100,000,000*l.*, to describe it one year as Rx. 150,000,000, the next year Rx. 160,000,000, and the next Rx. 170,000,000. In order, however, to show that, when the amounts in India and in England are thus added together without exchange, the result represents neither sterling nor tens of rupees, it is the practice to omit the sign either of £ or Rx. before the figures, as is done in the last three columns of Table XX. The following is the practice adopted in the accounts:—Where specific sterling debt is issued for the purchase of a railway or for redemption of liabilities, it is treated as public works sterling debt, and a corresponding amount in sterling is included under "capital expenditure." Exchange is not added, because the transaction is simply incurring one gold liability and cancelling another, and does not involve a remittance from India.

With regard to the purchase of stores, &c., in this country for railway construction, the case is different. The money required each year should be remitted from India; and, although in practice this is not always done, it is, for the purposes of account-keeping, assumed to be so. Exchange is consequently added to this sterling expenditure to express it in rupees, and a like sum treated as public works rupee debt.

Your argument is that the raising of the gold debt set free the equivalent number of rupees, at not 2*s.* each, but the rate of exchange of the year, which otherwise would have had to be remitted to England; that the total

* *See* Appendix 43 and 44.

Sir H. Waterfield, K.C.S.I., C.B.

1 July 1896.

Progress of Expenditure.

debt should be considered as if it were all raised in rupees, and the English portion converted accordingly; and that the total would then be so largely increased, that the ordinary portion at the end of 1894–5 would exceed the amount on April 1, 1835, instead of showing a reduction.

Your method is, however, at least as much exposed to the charge of being illusory as that with which you find fault. It assumes that the Government was under an obligation to remit from India rupees in order to cancel gold liabilities, and could have effected such remittances at the existing rates of exchange. The transactions were for the most part effected, because, by borrowing in sterling stock, the Government was able in each case to cancel a heavier gold liability in the shape of an annuity, guaranteed capital stock, or debentures, or to avoid the issue of guaranteed debentures under a contract. Such transactions would not, and could not, have been effected if they had involved remittances from India. If in entering them in the accounts the exchange had to be added to the amount of sterling debt raised, it would be necessary on the other hand to show, in the transfer to the Public Works portion of the debt, a corresponding amount of exchange on the gold liabilities cancelled or avoided.

So far the final result would be the same; but the method of arriving at it would be much more cumbrous, and would involve a great deal more of assumption.

12,239. What portion of the Rx. 73,583,117 transferred to public works is productive?—That is a very difficult question to answer, owing to the amount spent on the railways and irrigation works which are still under construction, or which have only recently come into working. Taken as a whole, they do produce more than the 4 per cent., and, therefore, are productive, although in many cases there are individual works which have failed to come up to the expectation. I think Mr. Jacob has already given you evidence on that, and, I believe, he has satisfied the Commission that as a whole these works are productive.

12,240. Is it the object to limit the transfer to productive works?—No, the amount transferred includes all expenditure on works of the class of railways or irrigation works. The intention is to treat the account as if the whole expenditure on such works were either met from borrowed money, or, if partly met from revenue, as if that revenue had been applied to cancel debt and fresh debt to a corresponding amount had then been raised.

12,241. Tables XXX. and XXXI.: Does the reduction by Rx. 2,000,000 of provincial balances denote anything except deterioration of provincial finances?—It certainly does denote that the reserves of provincial governments are not so large as they were before. I do not know whether it is quite right to apply the term deterioration, because it may have been usefully spent on the province, and may have promoted the welfare of the province, but the financial position of the government is worse by that amount, no doubt.

(*Chairman.*) Are you taking the budget estimate, the figure Rx. 1,235,400, and comparing it with the balances in 1883, 1884, and 1886, which are considerably over 2,000,000?

(*Sir William Wedderburn.*) It is only compared with 1891, the 2,000,000.

(*Chairman.*) Table XXXI., I think, you were referring to, were you not?

(*Sir William Wedderburn.*) Yes.

(*Chairman.*) And then the balances are given from 1875; it runs 717,184, 324,719, 398,595, 721,182, and so on, till it comes down to the revised estimate of 1895, that is 1,647,100, and the Budget of 1896, 1,235,400: are those the figures upon which you are building your statement?

12,242. (*Sir William Wedderburn*) It was with reference to those tables, but I suppose a good part of that is not spent in the province but has been withdrawn by the Imperial Government?—No, as is shown in the last column of Table XXX., there was Rx. 405,000 withdrawn in 1894–95; but the reduction in the Budget of 1895–96 was not in any way attributable to action by the Imperial Government; it simply meant that the Provincial Governments expected to spend a very large amount of money out of the balances at their disposal for their own purposes, and it is a very common thing to find that in the Budget each Provincial Government expects to spend very largely, much more than it is eventually able to do. As a matter of fact, the large provincial and local balances, which were estimated at Rx. 2,343,354 on the 31st of March 1895, proved to be Rx. 3,381,728. The Budget provided for a very large expenditure for provincial purposes, and the Governments were not able to spend nearly so much; so that there was not nearly so great a deterioration as would appear from the Budget figures.

12,243. The only time was in 1882–83, when the contributions of the two previous years were returned; I think that is the only occasion?—And this year the Rx. 405,000 contributed in 1894–95 has been repaid.

12,244. (*Chairman.*) Do I understand rightly that the principle upon which you make up these accounts in order to bring sterling and rupees into line is this:—after you have stated the charge on a sterling basis, you leave it in England in sterling; you then state the rupee charge in conventional Rx., and you state separately the sum in Rx. required for exchange, but those two sums would have to be added together in order to convert the charge into sterling?—To turn it into tens of rupees you mean, do you not?

12,245. You turn it practically into sterling, do you not, you leave the sterling untouched?—You are speaking of expenditure in England.

12,246. I am speaking of these accounts where you have to bring in sterling and rupees?—Without exchange.

12,247. Without exchange; I want clearly to understand first of all, supposing there is 10,000,000*l.* sterling, you leave it 10,000,000?—Yes.

12,248. But supposing you have got Rx. 10,000,000, you state that Rx. 10,000,000?—Yes.

12,249. And then, under ordinary circumstances, or rather in old time, you would have added those two together and you would have arrived at 20,000,000?—20,000,000.

12,250. But at the present time in consequence of the exchange, that would give a very untrue result, so that you put nominally, do you not, that amount of exchange which would be necessary in order to convert the 10,000,000 into sterling. It might be in this case, I will put it roughly, another 7,000,000 Rx.?—No; in the case to which Sir William Wedderburn referred, and with which, therefore, I suppose, you are dealing, such a case as that of debt, we do not add any exchange at all. We first express the 10,000,000 in Rx. which is debt in India; under that we should put the 10,000,000*l.* in England, and we call the total 20,000,000, but we put no denomination against it.

12,251. Quite so?—But then we do not add exchange in such a case as that.

12,252. Oh, you do not put the exchange down underneath it?—No, not in such a case as that. The case in which the exchange is added is where there is a real transaction, such, for instance, as the purchase of stores for construction of railways, which are charged against debt. There we add to the sterling the amount of exchange to represent the sum in tens of rupees which had to be obtained to defray the actual cost, but where it is an assumed figure, as for instance, to show what are the total cash balances of the Government of India in India and the Secretary of State in England, the two are put together, if it is necessary, without any denomination.

12,253. And for that purpose the Rx. is considered equivalent to the pound sterling?—In such a calculation it is neither pounds sterling nor Rx., but if possible we avoid joining them like that. For instance, if you look at the statement of assets and liabilities in the explanatory memorandum, you will see that we give the two separately and make no addition. The assets and liabilities in India are stated in Rx. and those in England in pounds sterling, and the explanation at the end says that there is an asset in India of so much and a debt in England of so much, but it does not deduct the one from the other.

12,254. Uncovered debt in England 47,000,000*l.*, but in India there are surplus assets to the extent of Rx. 25,000,000, but I thought I had seen accounts in which the exchange is added?—No, exchange is not added in such a case as that to which you are referring. The point that Sir William Wedderburn took, and no doubt there is a good deal of force in his criticism, had reference to such a case as the debt statement in the Finance Accounts where the two are added together; the debt

in India is shown in Rx., the debt in England is shown in pounds sterling, then the total debt is added without any sign, and that no doubt is not an accurate statement, but it is the only way that can be adopted if it is necessary to make a total.

12,255. But you were mentioning just now that there were some cases, for instance, cases of purchase of stores, in which you do add in the exchange—actual transactions?—Yes, the actual transaction is represented there.

12,256. And I suppose you would add in the exchange, would you not, in the case of a loan borrowed in England, which is dealt with as if it were remitted to India, that is, that it is worth so many more rupees, the sovereign being worth 17 rupees, we will say you would in some shape or other take credit for 17 rupees?—The sovereign is applicable to the payment of 1*l.* in England, and we thereby avoid the remittance of 17 rupees from India, but we have no occasion to represent the 1*l.* as 17 rupees; all that happens is that the sterling amount for which rupees must be remitted is reduced, and against the total of, perhaps, 16,000,000 sterling, we say that we require to draw Rx. 30,000,000.

12,257. I thought in one of your answers, or in your memorandum, I had observed that you had said in a case, I think, of a loan raised here, you treated it as if it had been rupees remitted from India?—I do not think we should ever so express a debt in sterling. As I have shown you in the finance accounts, we have to add sterling and rupee debt together in that statement, but we put neither £ or Rx. before the figures, to show that it is not a real amount in either denomination.

12,258. But, perhaps, the difference about the conversion into rupees would be avoided if we had the accounts shown both as regards sterling and as regards rupees, so as to keep the two separate?—I do not think that is possible, because in theory we do not borrow directly in this country for public works. We guarantee interest on sterling capital to the companies, and allow them to issue debentures; and, if we subsequently assume those debentures ourselves when we purchase their undertakings or raise sterling debt in order to buy the works, so far it may be said that the debt has been incurred in sterling for public works; but we do not incur debt in England for public works in the same way that money is raised in India for the construction of State railways and irrigation works by the Government. I have recently had occasion to try if we could show in the accounts the amount that we have been obliged to borrow in this country for particular purposes, such as in the purchase of specific public works from companies, and we found that it was impossible to state it accurately; it would be a perfectly arbitrary account.

12,259. This account of assets and liabilities in the memorandum of the Secretary of State which you have been showing us, as an instance of the way in which you state sterling and rupees, ends with the statement that there is uncovered debt in England amounting to 47,000,000*l.*, but in India there are surplus assets to the extent of 25,000,000 Rx., stating among the assets railways constructed by the State and irrigation works 89,000,000 and 31,000,000 respectively; are those the sums which have been laid out on those railroads, or does that allow for any depreciation of works?—No, it is the recorded capital expenditure on the works.

12,260. Therefore it would not do to place too great reliance upon that balance sheet, inasmuch as, supposing railroads were made 30 or 40 years ago, you would have had to replace rails and renew buildings probably and all sorts of things; in the meantime both the original outlay and the renewals would appear among the assets?—No, the maintenance is always charged to the revenue account, and therefore the works are kept up in at least as good condition, probably in better condition than when they were first made, out of revenue, so there is no set-off to be made on that account against the capital.

12,261. You do not write off a depreciation every year, because you spend out of revenue sufficient to keep the property up into full working order?—Quite so.

12,262. In India there is a debt for obligations; what are those obligations, savings banks, and so on?—Savings banks are the largest head; there are some others on which Mr. Jacob has already given you evidence.

12,263. (*Mr. Caine.*) I would just like to ask on the question of railways, page 11 of Sir William Wedderburn's memorandum, in which he mentions the fourth disadvantage:—"A small and separate railway with "separate interests is planted in the middle of a great "system of State railways, and must ultimately be "bought out on terms less favourable to the State than "those on which it could originally have been built." I do not think you expressed any very strong opinion as to the constant and pressing danger of that disadvantage. Do you think that it is at all likely, or could you at all suggest the possibility of that happening?—I think that we have already had experience which shows that it may happen. There have been certainly many proposals made, which the Government of India has been obliged to refuse on the ground that they would materially interfere with the interests of the system of State railways in which these so-called feeder lines were to be placed; and in one or two cases where contracts have been made it has been necessary to make special provision in order to guard against any danger to the State line from the enterprise of the new company.

12,264. But there has been no instance that you can quote in which the disadvantages have been realised?—These feeder lines are entirely new, and the results yet have to be seen.

12,265. Are the Government of India well aware of it, and have they guarded against it?—Yes; a great deal of the difficulty has arisen under the rebate system, owing to the necessity on the one hand for providing the new company with a sufficient remuneration, and on the other hand of taking care that it is not simply drawing away the earnings of the State line.

12,266. Have you any experience yet of these feeders, as to how they are paying?—No, not yet.

12,267. None of them old enough yet, I suppose?—They are still in their infancy and have not yet been opened; Mr. Colvin's memorandum, which I read, states that none of them are yet at work. May I mention, before the Commission adjourns, that I was asked last time about the military funds, whether valuations had been made, and Sir Donald Stewart corrected me. He was quite right. I find in every case a valuation was made about the time that the Government were taking over any of the funds, military, medical, or civil, and in every case but one benefits were given in consequence of the result of that valuation, so that speaking roughly it may be said that we took over the funds at an equilibrium. There was one case in which there was a deficit, and the Government were unable to give any further benefits, but in all the others it may be said that the capital amount of the fund that was received by the Government, so far as actuarial calculations are valid, represents the charge as it comes on year by year.

12,268. (*Chairman.*) Quite so; therefore the only question that can arise upon it is whether the Government would be well advised in appropriating to current expenditure the capital sum which represented these liabilities?—Yes.

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

(For the 26th Day's Evidence, *see* page 474.)

At the India Office.

TWENTY-NINTH DAY.

Wednesday, 29th July 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field Marshal Sir DONALD STEWART, Bart. G.C.B., G.S.C.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Sir T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

MR. COLIN G. CAMPBELL, *Secretary*.

Dr. K. N. Bahadurji.

29 July 1896.

Medical.

Dr. K. N. BAHADURJI called in and examined.

13,409. (*Chairman.*) We are much obliged to you for coming up to-day; I am afraid we have put you to some inconvenience, but it was really the last opportunity we should have of inviting you to give us your opinion. I think you have put in a paper expressing your views on the subject?—Yes, my lord.

13,410. And I shall ask you generally, as the most convenient course, that you should take that paper and make us a statement on the subject of your views. No doubt that will give an opportunity to different members to ask questions as the examination goes on. There is nothing to which I think we could take exception in your paper as coming within that rule of the Commission, that they will not deal with individual grievances, therefore no doubt you will confine yourself to your views on the general reform of the medical service?—Quite so.

13,411. I see your first point is that you advocate an amalgamation of the two medical services in India, namely the Army Medical and the Indian Medical Service. Perhaps you will give us the reasons upon which you found that recommendation, calling our attention, no doubt, to any supporting evidence which you have in favour of it?—The amalgamation of the two services would be beneficial from a military point of view so far as the efficiency and discipline of the army are concerned, and, at the same time, result in large economies. This I urge on the *a priori* ground that the British Army being only one organisation, and the Indian Army being but a mere wing of the British Army, it hardly seems right or reasonable that there should be two medical departments for a single organisation, and it is clear that such a double administration would lead to a good deal of departmental clashing and inefficiency. It was only last year in my study of the question that I came upon a Parliamentary return respecting medical officers in India, in which I found that the whole case has been gone into very fully by competent authorities, such as Lord Strathnairn, our present Commander-in-Chief (Lord Wolseley), Sir William Muir, and the Government of India. In that return I found, from their letter dated November 1877, that the Government of India themselves admitted that this double system led to a great deal of inefficiency and extravagant expenditure.

13,412. (*Sir Donald Stewart.*) Would you mind my interrupting? You are talking of a state of things that does not any longer exist?—I am talking of a state of things that in part still exists, if you will allow me to say it. I wish to go into the history of the question a little, and show first how far the double system has been already done away with, so as to better understand how far the double system still exists. At first, in both the branches, the administrative and executive, of the two military services, there used to be a double system. In his minute Lord Wolseley has worked out how far the amalgamation could be effected, and on what grounds, and with what economy. He has dealt with the question in both its administrative and executive branches, and has pointed out that the best way to calculate the required number of medical officers for the British army, including Indian and British troops, was to do it on a fixed basis of one officer to so many men, and he came to the conclusion that, if the two services were amalgamated, there would be a reduction of something like 250 officers, leading to a saving of 20 lacs.

13,413. (*Chairman.*) I see in your paper here you say that the late Finance Commissioner quoted the figure of 17½ lacs?—Lord Wolseley's figure was 20 lacs. 17½ lacs is the figure the report of the Finance Commissioner quoted from the report of the last Army Commission, in which are pointed out, under distinctive heads, economies that could be effected by the amalgamation of the administrative, by the amalgamation of the executive, branches of the two services, as well as some other minor savings as from the abolition of Netley for the Indian Medical Service. In the administrative branch, amalgamation has taken place; in fact, it has practically worked itself out; but, in the executive branch, amalgamation has not yet taken place, and it is in the executive branch, that I quote the saving which would be effected, if the amalgamation were carried out; and that is put down in the Army Commission Report at 17½ lacs, and quoted at that figure by the Finance Commissioner. As is contended by the Government of India and Lord Wolseley, the amalgamation of the two services would be to the interest of the army, inasmuch as in times of war the existing system is reversed, and amalgamation takes place; and it would be to the advantage of the army to have the same arrangement in times of peace so as to enable medical officers to know something of both the troops, Indian as well as European. Moreover Lord Wolseley says that there are stations——

13,414. Would you allow me to interpolate at this point. There are two services, one called the Army Medical and the other called the Indian Medical?—The Army Medical and the Indian Medical.

13,415. The Army Medical is that which belonged to the European army?—To the European army.

13,416. While the Indian medical is that which attends to the Indian troops only?—To the Indian troops only.

13,417. They are not in any way connected with the civil medical branch?—The Indian Medical has a civil branch consisting of military officers lent to the Civil Department. To continue, Lord Wolseley argues that there are stations where there are both European and native troops stationed, and seeing that the native troops hardly required the aid of an European medical officer, almost all their wants being attended to practically by the native hospital assistants (who really stand on a par with our old licentiates of the Apothecaries' Society here), European medical officers for native troops in stations where there are European as well as native troops, could be well dispensed with. He points out one difficulty, namely, that, although European medical officers may not be required for the purpose of looking after the wants of native troops; they would be required for the European officers attached to the native troops. But he solves that difficulty by pointing out that the European officers of

native troops could be well attended to by the British medical officers in charge of European troops at the same stations. The amalgamation of the two services ought to be carried out in the executive branch, as it has already worked itself out in the administrative branch. As it is, all officers doing military work with European or native troops, are now under the command and the authority of the Army Medical Service. Practically, therefore, it is really one service, only some are called Indian Medical Officers, because their whole tour of service is in India, and look after the Indian troops only. As Lord Wolseley says, there is no necessity, whatever, for a double enlistment. If we had one enlistment only, the Army Medical Service would look after both the European and the Indian troops. The members doing service in India, no doubt with pay and conditions now enjoyed by those in charge of Indian troops only, would form, practically, an Indian section of a Royal Medical Service, looking after the wants of the whole British army.

13,418. Perhaps you would tell us, as shortly as you can, the manner in which this economy, which I think you prefer to put at 17½ lacs is attained?—That is the latest calculation.

13,419. Tell us generally how that is attained?—That is taken in this way. Supposing for a moment that there is a station where there are two or three native regiments; it would require under the present circumstances as many doctors as there are regiments. By the proposed change, in stations where there are native regiments as well as European regiments a certain proportion of medical officers would disappear, because the doctors belonging to the British troops could very well look after the wants of the native troops. Lord Wolseley points out in his minute, I think it is in paragraph 20 how 71 officers could be at once reduced at stations where there are more than two or three or more regiments in each station, for, as he says, and very rightly, there is hardly work enough for a man with even two or three regiments in a station. There is no reason to entertain three or four officers, or as many officers as there are regiments, in the station.

13,420. Where is Lord Wolseley's minute published?—it is published in papers respecting medical officers in India; it is a Parliamentary return.

13,421. (*Mr. Jackson.*) What is the date of it?—His minute is dated 1879.

13,422. (*Chairman.*) Do you know the date when it was laid before Parliament?—It must be 1879, I think.

(*Sir Donald Stewart.*) That is an old story.

13,423. (*Mr. Jackson.*) I wish to ask one question about this. Are we to understand that the opinion of Lord Wolseley, which has been quoted, applies, or would apply, to the existing state of things?—It would apply to the existing state of things, so far as the executive branch of the service is concerned.

13,424. But, when he expressed the opinion, a different order of things prevailed?—The administrative branch also was double; that is done away with.

13,425. (*Chairman.*) I think it is very desirable that you should, if possible, bring your statement to the present time, and show how it would affect the present time. It would make your evidence very much more effective if you could do that?—I quite agree with you. My statement does apply to the present time, in reference to the executive branch. The Army Commission show a saving in the administrative branch, but as it has been amalgamated, that particular saving I do not take into account; I simply take into account the saving in the executive branch, which was quoted, so late as 1886, by the Finance Commissioner, and I do not think that this particular saving has been effected. I have asked several Army Medical officers, as well as members of the Surgeon-General's department, as to whether any action has been taken with regard to the executive branch, and they have replied in the negative.

13,426. (*Sir Donald Stewart.*) Could you give us a statement showing the garrisons at the different stations, where these economies could be brought about by your method?—I would not undertake to do that myself, but would simply refer to the work of the Army Commission itself; they have gone into the whole question and have put down the figures for us.

13,427. (*Chairman.*) The Army Commission to which you refer is that, the report of which was laid before Parliament in 1884?—I think so; yes, that is it.

13,428. (*Sir Donald Stewart.*) But things are not now the same as they were in 1884?—I would draw your attention to page 140, where the whole thing is summed up, and the Commission say that in the administrative branch the saving would be Rs. 6,12,600; in the executive branch, Rs. 17,22,000; hospital establishments, Rs. 1,43,000; by abolition of Netley, Rs. 70,000; total, Rs. 25,47,600. In the administrative branch, which is referred to, there used to be two surgeon-generals, two deputy surgeon-generals, and a double set of other administrative officers. This double set has been done away with. The rank of brigade surgeon was introduced on the recommendation of the Army Commission. The amalgamation reform has been carried out in the administrative branch only, so far, of course, as I can understand by my own lights and from information received from some army medical officers. But the executive branch has not been touched, and this it is that is referred to in the last Finance Commissioner's Report of 1887.

13,429. (*Chairman.*) And that has never been touched?—That has not been touched. The report of the Finance Commissioner refers also to the station hospital system. Lord Wolseley is of opinion that the station hospital system would give a further reduction, just as it did for the European army, and the saving by the introduction of station hospitals is put down at 4½ lacs in the Finance Commissioner's report.

13,430. But before you go to the station hospitals, I see this report adopts the saving of 17 lacs?—17 lacs.

13,431. And you hold that there has been no change made in that respect?—Not in that respect.

13,432. And, so far as this is a report which on consideration might be worth carrying out, there remains a saving of 17½ lacs which might be made?—Quite so, and that is the opinion of the late Finance Commissioner also.

13,433. And you also tell us that the reform that might be made, is that which is shadowed forth and detailed in this report, and which works up to a total of 17 lacs for the executive medical officers?—Yes.

13,434. You were passing on to the station hospital system?—With regard to the station hospital system, there is no doubt a great deal of difference of opinion. But so far as I could read the opinions of Lord Wolseley and the Finance Commissioner's recommendations, it seems that station hospitals are, if anything, more necessary and suitable for native troops than for British troops, and Lord Wolseley goes into details on the question. Of course it has been said that the native troops always like to know their officers, and that this is one of the principal reasons why the regimental system is still adhered to. But when you come to think of the fact that the native troops are mainly attended to by the hospital assistants, and not so much by the European officers, the argument that they are always anxious to know their own officers and be intimate with them, does not hold ground. I know this is the principal reason—I read it again only last Friday in the *British Medical Journal*, and it seems that the inquiry is still proceeding in India—why the regimental system is still adhered to, and is desired to be adhered to, because with the station hospital system they would not have the same opportunity to know their own officers; the station hospital being the hospital for any regiment that may happen to be quartered in that particular station.

13,435. I understand from your paper that the station hospital system has been adopted for British troops?—For British troops.

13,436. With a pretty considerable saving?—With a pretty considerable saving.

13,437. And your proposal is that it should be extended to native troops also?—Yes, and, if I may be allowed to add, I would like the Finance Commissioner's recommendation to be carried out, namely, that it might at any rate be tried at Madras where the disposition of the army, as he says, favours the adoption of the system.

13,438. (*Sir Donald Stewart.*) In what respect is Lord Wolseley considered an authority upon such a question as the medical charge of the native regiments?—I cannot presume to give any opinion on that.

13,439. You quote him as an authority?—I quote him as an authority; and I thought at least he would know the wants of the army much better than myself, and I availed myself of such authorities as I could find.

13,440. It seems rather strange that you should go to Lord Wolseley for the consideration of a matter of this sort. Have you ever heard the opinion of officers who have served in native regiments?—I have heard of their opinions, but the only thing that they have said is that, however much it may be useful for the British troops, it is not useful for the native troops. That is scarcely an

Dr. K. N. Bahadurji.

29 July 1896.

Medical.

answer which I could accept. Lord Wolseley actually goes into the reasons why he thinks that a station hospital would be more favourable for the native troops than for European troops. I never got any explanation of the contrary opinion.

13,441. What are those reasons?—The reason is that the station hospital system would mean really the giving over of the care of native troops to the people who now actually look after them, namely, the hospital assistants, the European officers in the station being available for consultation with them in special cases.

13,442. (*Sir Andrew Scoble.*) I should like to ask you one question. Every native regiment has its doctor, has it not?—Yes.

13,443. From the Indian Medical Department?—From the Indian Medical Department.

13,444. Who is very frequently an European, sometimes a native of India?—Yes.

13,445. Every regiment has its own hospital at present, has it not?—Yes.

13,446. Am I to understand you to say that the medical officer neglects his duty—leaves the charge of the native hospital for the native sepoys to the native medical assistants?—You misunderstand me. He does not neglect his duty at all, but what is said is that there is hardly any work for him.

13,447. Because, you say, it is left to the hospital assistants?—The hospital assistant looks after the patient in the first instance, and when there is anything particular to which he would like to draw the attention of the European officer, he does so.

13,448. Does not the medical officer of the regiment attend the hospital regularly?—He does.

13,449. And looks after the cases himself, and gives his instructions to the native hospital assistants as to what they are to do in regard to particular patients?—But there is hardly——

13,450. But is that so or not?—That is the general view.

13,451. (*Sir Ralph Knox.*) But your argument is that there is not enough in one regiment for the European officer to do?—Yes.

13,452. He ought to do the work of two regiments?—Yes, of two or three.

13,453. (*Sir Donald Stewart.*) But in what respect is the duty of a medical officer in a native regiment, in regard to the treatment of his patients, different from the duty of the medical officer of a British regiment in regard to the treatment of his patients; has the latter not also apothecaries and assistants?—He has apothecaries and assistants; but, so far as I know, the British troops are generally looked after by the British officers themselves, and these apothecaries who are their assistants do a sort of dispensing and general work. Not so, the hospital assistants; the hospital assistants are given more professional work than is given to the hospital apothecaries in the British regiments.

13,454. Is it not precisely the same case in the native regiments?—Not so far as I know.

13,455. Are you talking of your own knowledge?—I am talking of my own knowledge, and what I have actually read in Lord Wolseley's minute.

13,456. (*Sir Andrew Scoble.*) But you are not in either medical service yourself, are you?—I am not in the British or the Indian medical service.

13,457. You are a private medical practitioner in Bombay?—I am a private medical practitioner in Bombay.

13,458. You do not speak from actual experience of a British or native military hospital?—I speak of actual experience in so far as I have had occasion to treat military men of the Marine battalion.

13,459. Who have gone to their own hospital?—Who may have gone to their own hospital—at least, they may have taken their round there. If you have any Indian experience you will have heard that Indian servants will go to the hospital simply because they are compelled to go. They will bring their bottle of medicine, but all the same they will go to their quack or their particular family attendant in whom they have faith; and that is exactly the prejudice and the practice of men in the native regiments. They would rather go to their hospital assistants and be advised by them than trouble the European medical officer. Why, in the general hospitals the same thing often happens, as I know from my four years' connexion with a general hospital.

13,460. (*Sir Andrew Scoble.*) The same objection would apply to the station hospital, which you want to create, as to the regimental hospital, which you now condemn?—The objection would be very much minimised because of the work being so very little for the medical officers of the native regiments; we want their number to be reduced.

13,461. No. I am speaking of the case you mentioned—of a native patient preferring to go to his own doctor—I do not call him a quack—but to his own doctor rather than to the official doctor; would not that objection apply in the case of a station hospital just as much as in the case of a regimental hospital?—The same prejudice will remain, of course.

13,462. (*Chairman.*) While you are speaking of Lord Wolseley's minute, this report, in which the 17 lacs is mentioned as a possible reduction on the executive medical officers, goes on to speak of 1½ lacs saving on the hospital establishments. This appears to be a recommendation of the Commission, and dating later than Lord Wolseley's minute, would it not be better, in view of the criticism made in the questions that Sir Donald Stewart has asked, to make that your text than Lord Wolseley's Minute?—This 4½ lacs is not the figure Lord Wolseley worked out; he has worked out no figure for a saving on station hospitals. This 4½ lacs is the figure which the Finance Commissioner quotes from the Army Medical Department. I do not know where he gets it from. In the Army Commission Report I find they did not go to the length that the Finance Commissioner would like them to go. That is why the 4½ lacs appear as 1½ lacs in their report. What the Army Commission recommended, is that they wanted only some of the superfluous hospitals and superfluous subordinate staff to be removed, and thereby effect a saving of 1½ lacs. Then with regard to the abolition of Netley. The grounds that are given in the Army Commission Report, and which I ventured to give in my summary, are grounds which would appeal to all. For if Netley is to be maintained for the purpose of giving special instruction in some professional subjects, and also to give instruction in the special subject of tropical diseases, then I maintain that the instruction in tropical diseases would be better given, and the experience thereof better acquired, by placing medical officers on their arrival in India on general duty at the civil hospitals. With regard to the special professional subjects which are taught in Netley, we all know that the medical examinations of the various boards and universities differ. There is the general course of medical curriculum which is gone through in all the colleges, but there are also extra courses given to meet the special requirements of the various boards and universities. If the competitive examinations were to include these special subjects which are taught at Netley I dare say the candidates would come prepared for them by taking up subjects at their own medical schools. In fact the special subjects of pathology and air analysis and the rest, which are taught at Netley, are really subjects that form part of the curriculum of advanced medical studies in every medical school, so that the grounds on which the continuance of the Netley course is maintained are hardly tenable.

13,463. (*Sir Donald Stewart.*) Are you aware that this very question was carefully inquired into by Her Majesty's Government here—by the War Department, the Government of India, and the Secretary of State—that all the arguments you have used were before those authorities, and that, after full consideration of the whole case, it was decided that the Netley course was to be continued?—I am aware of that, but, at the same time, I am aware of the justice and the truth of these reasons, and I believe in them myself; and that is the reason why I urge them again.

(*Mr. Caine.*) What was that the date of that inquiry, Sir Donald?

13,464. (*Sir Donald Stewart.*) Quite recently, within the last year or two; we were all against the continuance of the Netley course: I was myself, but the authorities, after considering the matter, took another view. I also think you will find that the station hospital system was introduced into the native army in India as an experiment, and was finally abandoned, because it was found to be impracticable?—I read only in the last number of the *British Medical Journal* that they have been trying it, and the only ground on which they say it is being found impracticable is that the native troops require a more intimate knowledge of their medical officers. Now, that is not in consonance

with one's experience of the prejudices, the feelings, the custom, and the practice of the native troops.

13,465. There was a difference of opinion upon it. I have served all my life with native troops, and I entirely concur from my own experience in the reasons which induced the Government of India to give up the system after really a very careful trial. Anyone who has served with native troops must know that, until a native soldier has had some considerable knowledge of his European officer, he does not put very much faith in him; but, if you can acquire his confidence, you can do anything with a native soldier?—That is perfectly correct so far as the combatant officers are concerned, but he has first to put his faith in the European system of medicine before he puts faith in, and desires closer contact with, European medical officers, as medical officers.

13,466. My opinion is that the principle applies as strongly in regard to the medical as to the combatant officers of the service?—I bow to your superior judgment.

13,467. (*Chairman.*) Then you propose to abolish Netley as far as the Indian service is concerned?—At any rate that might be done, as one of the things recommended.

13,468. In case you did that, you would have to get your medical officers from somewhere; you would go to the open medical profession?—No; the medical officers would be recruited by a military enlistment as at present. Only, instead of spending six months at Netley, they would go out to India at once, and be placed on general duty at civil hospitals in their stations for, say, six months, to give them the necessary opportunity for acquiring a knowledge of hospital diseases.

13,469. I suppose in that case you would draw the officers from the civil profession, without the Government making themselves responsible for their special training?—No; the enlistment will remain as it is at present. The only thing will be that after their competitive examination they will go out to India straight without spending six months at Netley.

13,470–1. (*Sir Andrew Scoble.*) And when they get to India they will be attached to one of the great local hospitals?—For a time.

(*Sir Donald Stewart.*) This argument has been before the authorities over and over again; it is precisely the argument that was used by myself and others. I am in agreement with that view; but it is a view that has not been adopted, and it seems to me that there is not very much use in our going into it now.

(*Mr. Caine.*) Perhaps, if we reported in favour of it, it might induce the authorities to take another view.

13,472–3. I observe that you make a total saving of 27 lacs?—I think, it ought to be 22½; that is a mistake in copying.

13,474. Now, perhaps, you would proceed with your next point?—With regard to the Civil Department, it may be looked at first from the point of view of its present constitution. By this constitution the Civil Department consists of military officers of the Indian Medical Service, who, in the terms of a Government letter, are simply lent to the Civil Department, till their services are required for war purposes. Now such a constitution of the Civil Medical Department must have a meaning in it; and that meaning is probably that it was for the purpose of providing a war reserve that the Civil Medical Department was made primarily military. But you will observe from the same papers that I mentioned to you just now, namely, the papers respecting medical officers in India, that, when that scheme was submitted to several authorities, both civil and military, for their opinion, it was most adversely commented upon. The Government of Madras and the Government of Bengal said that if the Civil Medical Service was to be purely for civil purposes and primarily for civil purposes, there was no occasion to make it primarily military. And the Madras Government went a little further and said, that "among the defects "of the system (of reserving all high grade civil appoint- "ments for members of the military service only) must "be recognised a want of stability, a want of strict identi- "fication with the interests of the natives of the country, "an exclusiveness, which renders it difficult to introduce "the natives of the country to the higher employments "of the service." And naturally so, for, if you look at the system followed in the Arts, the Law, and the Engineering Faculties, you will find that western education is provided in these colleges as in the medical schools. But to the scholars of these institutions all the highest appointments in the faculties are open. The professors of these schools are drawn direct from Oxford, Cambridge, or London or Indian graduates, and when natives are found equally competent and equally qualified, they are appointed to these places without any distinction of being members, or not, of any particular service. Now such a thing is not possible so far as the medical faculty is concerned, because according to the constitution of the Medical service every member of the profession, who desires to take any appointment whatever in the Civil Medical Department, in its higher grades, must be primarily a military man. Now to be a military man is one thing, but to be a professor, or to be a teacher, or a sanitary commissioner is quite another; for you can readily understand that the tests which are prescribed by the military regulations for an army enlistment, are not only intellectual but also physical. The physical tests are altogether absent from the qualifications required for admission to professorial or educational, or scientific appointments, and what has often happened is that a slight physical disqualification has prevented admission to the military service, and, therefore, also to the civil medical departments. Only last year, a very competent graduate of the Bombay University came over to compete for the Indian Medical Service, with a view, no doubt, to gain admission to the Civil Medical Department in India; he happend to have a fraction more myopia, that is to say, shortness of sight, than is prescribed by the army regulaions. The best surgeons in London told him and certified that his sight was as good as their own for all professional and practical purposes. But his eyes failing to come up to the standard of eyesight prescribed by the army rules, he was excluded from the competition, and having been excluded from this military competition, he is permanently disqualified from holding any post whatever in the civil medical institutions in India. The Government of Bengal urge also that "the local medical service "should be no longer primarily military, its chief function "being now civil." The Surgeon-General of Her Majesty's Forces complained that "the application of the principle "of one Military and one Civil Medical Service, acknow- "ledged by the Secretary of State, was maimed by quali- "fying conditions, whereby the proven errors of the old "were attempted to be perpetuated under a new system. "If real re-organisation is to be attempted—and that such "is needed none who are acquainted with the present "system will deny—it can be effected by no partial "measure. The division of civil from military duties "must be trenchant and distinct." These objections to this particular military constitution of the Civil Medical Department were advanced, no doubt, to protect the interests of the Civil Medical Department; but this constitution has been objected to, from military considerations also, by the War Office, for, though it has been anxious to have this amalgamation of the two military services, it could not consent to it because of this mixed constitution of the Indian Medical Service. According to army rules no officer who has done more than five years of civil work is eligible or considered qualified for any further military employment.

13,475. (*Sir Andrew Scoble.*) Is that so now?—Till only very recently it was so.

13,476. I do not think it was the case seven or eight years ago?—I do not know of British medical officers being allowed civil employ for more than five years.

13,477. I can tell you of cases of civil surgeons—military doctors—who had been in civil employ the greater part of their service, and had to rejoin the Military Medical Department?—Which service?

13,478. The Indian Medical?—Quite right; the Indian Medical has that constitution, and that is the constitution which is objected to by the War Department, because that constitution does not apply to the Army Medical Service; and there are other objections.

13,479. But are members of the Army Medical Department eligible for civil employment in India at all?—They are.

13,480. The Army Medical Department?—The Army Medical Department; they do hold civil employment, but only for a prescribed period. For instance, the doctor to the last Governor of Bombay but one was an Army Medical man.

13,481. That was personal staff; that is a very different thing?—But he was in civil employ.

13,482. On the personal staff of the Governor?—But, so far as I know, the War Office have always raised this objection, and the objection has been that the War Office would not agree to the proposal of the amalgamation under the condition suggested by the Government of

Dr. K. N. Bahadurji.

29 July 1896.

Medical.

India, for "the effect of the proposal would be to put a "stop to the continuous military training essential to the "efficiency of the service," and because, "the army "medical officer would not, in short, be the officer which "the existing organisation contemplated and whom it "is the object of the costly and elaborate system esta- "blished to provide for the army." I presume that the justice and force of the objections which the War Office raised then in regard to the efficiency and discipline of the army, remain to-day the same. The Army Medical Department in India are dissatisfied with the present system because, as you said, military officers after having done 15 or 20 years of civil duty are pitchforked, as they consider it, into military positions, for which they are not adapted. The immediate purpose of this constitution was really, as already explained, to provide a ready war reserve. Now the question is, whether that purpose has at all been effected or is likely to be effected by such a constitution. I will again quote official authorities. Surgeon-General Hadden declared that such a reserve existed only on paper and not in reality. The experience of the Chitral expedition showed that, although they had got a so-called reserve of 380 men in civil employ, the Government of India could only with difficulty take two men to send up north, and of those two men one was obtained from Poona and the other from Madras. The Civil Department is a department by itself, it cannot at a moment's notice give away its men. But, if the reserve argument were followed to its logical conclusion, it would come to this, that the colleges and hospitals and scientific and sanitary departments which were merely civil reserves, or war reserves, would have to be shut up every time the Government of India were engaged in military operations. Well, such a thing has never occurred, and it cannot occur. Then again, such a reserve is opposed to the original aims and objects, with which the civil institutions were founded; they were founded, as was said by Sir Erskine Perry, not for any governmental or executive wants, but for the cultivation of the science of medicine, for the promotion of human happiness. How, then, can the Government deliberately set to work to devise a system by which it is compelled to maintain these very institutions simply for the purpose of a war reserve? Thus the present military constitution of the Civil Medical Service, I maintain, has not discharged the objects or the purposes for which it was created, and has not only entirely failed in its principal object, namely, the provision of a war reserve, but has been altogether detrimental to the interest of the civil as well as the Military Department. Now, as to economies that can be effected in the Civil Department with increased efficiency. There are the special appointments and the department of general civil charges. The ordinary medical qualification is suitable or avails for the latter appointments, *e.g.*, a civil surgeon; but for such appointments as require special knowledge as those of the professoriat or sanitary commissioners, or analytical chemists, we cannot possibly hold a competitive examination to recruit a service to draw upon for these appointments; no professors are examined before they are appointed to their particular appointments. Taking first the general civil charges, such as civil surgeons, jail and vaccination appointments, and the subordinate appointments in civil hospitals, if we only adopt and extend the principles which the Government of India themselves have laid down for the filling of these posts, and which, I am sorry to say, and as complained by the Finance Commissioners, has not been carried out in its entirety, we would find that very large economies would result. The Government of India have laid down that amongst the civil surgeons there shall be a certain proportion of the uncovenanted service and a certain proportion of the military service, and also a few assistant surgeons. Now their pay scales are very different. The military men in these positions get 500 to 1,500, members of the uncovenanted (Civil) medical service, 300 to 750; and the civil assistant surgeons, 100 to 200. As far as their professional qualifications are concerned, the majority of them are on a par; they are graduates of universities, and the examinations of the Indian universities are not a bit inferior to those of most of the examining boards here. Most of our plucked students, some of whom would never have any prospect of passing in India—as I can tell from personal experience as an examiner—have come over here and to my surprise have returned to put up large boards saying they were L.R.C.P., L.R.C.S., &c. For an authoritative opinion on the subject I will quote the Crawford and Cunningham Committee. They mention in their report that Indian graduates have equal professional status with most of the British qualified men. Nay, more, they go on to say that some of them are better, and that therefore, if a civil medical service were established, they would give the preference to graduates of Indian Universities, be they Indian in nationality, or European, or Eurasian, rather than to the British diplomates. Now if that principle were followed and extended namely, if we were to open up and extend the uncovenanted medical service, and appoint to general civil charges members of this instead of the covenanted military service,—and it has been shown that the men have got identical qualifications, are equally capable, and have done work in these positions with the approbation of the Government, and with satisfaction to the public—we would find that, there being something like 262 such civil charges, we would get a saving of something like Rs. 9,43,000. And this method of appointment to general civil charges is a recommendation of the Crawford and Cunningham Committee.

13,483. (*Sir Ralph Knox.*) You really propose that the Civil Department should be separated altogether from the Military Department?—That is what I propose.

13,484. And you propose that the two military departments should be amalgamated?—The two military departments should be amalgamated.

13,485. (*Sir Andrew Scoble.*) If you propose that the Civil Department should be separated from the Medical Military Department, why should you not propose that it should be abolished altogether?—What is to become of it?

13,486. Are there not sufficient medical graduates in India to take medical care of all the civil population?—But what is to become of the Government civil institutions?

13,487. Reinforce them from any source, any outside source at all, either the Medical Department of the Government or from outside?—I quite agree with you; and that is exactly what I propose, viz., that the military element should be withdrawn from the Civil Department, and the Civil Department recruited for its own wants from the open profession either in India or in England. So far as the general civil charges are concerned, the Indian Universities, I maintain, will supply ample material for these appointments, but for the special appointments of professors, sanitarians, and analytical chemists, we will have to do exactly the same for a long time to come as we had to do, and are even now doing, for our arts, law, and engineering schools, namely, that we shall have to indent upon the British universities, for men competent to deal with these special subjects, at any rate till our medical education is put on the same footing and kept up to the same high level as in the Faculties of arts and law.

13,488. I should just like to ask you one question before you leave this part of the subject; you speak about special appointments, professorships in the medical colleges, sanitary commissioners, and analytical chemists to Government; have not those posts up to this time been fully competently filled by members of the Indian Medical Department?—I am very sorry to say, no.

13,489. (*Mr. Jackson.*) That is your opinion?—That is not my opinion, it is the official opinion; and, if you will permit me, I will just give you one or two quotations.

13,490. But do you mean that it is not your opinion?—It is my opinion also; but of course my individual opinion will not carry so much weight as would official opinion.

13,491. It is not only your opinion, but the opinion of others?—Yes. From the quotation I will read to you, you will see that the idea on which these appointments——

13,492. (*Sir Andrew Scoble.*) I thought you were going to give us the opinion of some authority?—That is what I am going to give you, the "Indian Medical Gazette," which is the service organ, in its issue of December 1893, says—"There are few things doing in the medical "school so much harm, or getting the Indian medical "service into greater disfavour than the assumption that "one man is equal to any professorship that may happen "to turn up at the time, suitable to the favoured indi- "vidual. The idea on which these appointments are "made, viz., that a medical man engaged in practice or a "teacher of one particular subject, can be at once trans- "ferred into a professor on a subject with which he is not "familiar, is, to say the least, preposterous."

13,493. (*Mr. Jackson.*) That is a newspaper article, is it not?—That is a newspaper article written in an organ of the Indian Medical Service.

13,494. You do not know who wrote it, I suppose?—I do not know; but I will give you the opinion of a principal of the college.

13,495. (*Sir Andrew Scoble.*) That is more important?—In 1889 the college principal wrote——

13,496. Which college principal?—Of Bombay.

13,497. Who was he?—Dr. Gray. He wrote to say that "it has often happened that, just as a professor became "expert in one subject, he was suddenly called upon to "teach another, of which comparatively he had an inferior "knowledge. This practice undoubtedly led, in too many "instances, to inefficient teaching." Now, if you permit me, I will give an instance of my own knowledge. Before 1889, the physiology teaching was of the most primitive kind. We have spent whole afternoons in personal microscopic work to examine the tissues of our body. The teaching in practical physiology in Bombay was found to be this. Some half a dozen miscroscopes, mounted with specimens, would be arranged on a table. The students passed them one by one, and the names of the tissues would be called out to them for their information. I happened to be an examiner at that time, and I found that I could scarcely pass more than nine men out of 80. It resulted in this, that the students of the college and the college professors petitioned the syndicate for a revision of the result. I was asked to make a report, and it all ended in this, that I was re-appointed examiner for three years running; and on the basis of my report a representation was made to the Government. The Government in their turn called upon the professors to explain, and the result was that the then professor of physiology was relieved of his professional duties, and another competent man appointed to his place, and a special room was converted into a laboratory within a month. That is exactly the complaint against the inefficient teaching which such a system entails. The idea on which these appointments are made is as I read from the Service Gazette, that the nearest available service man is fit for any vacant post and must have it. And what happened only some months ago? Analytical chemistry, as you all know, is a very special subject. When the chemical analyser went home, his assistant, a B.A., B.Sc., and M.D., of the Bombay University, who had done 18 years work as a chemist, applied for the acting appointment as analyst and lecturer on chemistry. The Surgeon-General said—I learnt this from the assistant, a personal friend,—"You are the proper man to do it, but I am so "sorry you are not a military man." And the place was given to the professor of pathology, who told me himself that he could no more do chemical analyses than he could fly; but he was asked to do it because it was said he had only to sign the papers. The assistant chemical analyser rather than serve under people, who on their own admission knew no analytical chemistry, resigned his appointment in sheer disgust. This is one of the evils of the system. For special appointments and also to carry out the best intentions of Government, and they started with the best intentions, and must have every desire to carry out those intentions, namely, to promote the cultivation of science and raise a scientific medical profession in the country itself, it is very necessary to obtain the services of experts, who may be Europeans or Indians, qualified in India or Europe. Such a system, I maintain, will lead to a large saving.

13,498. It would not lead to a large saving at once, I suppose, until you got the system into operation?—Undoubtedly it will be very gradual. The saving is thus obtained. Already in Lahore College there is a gentleman, a European, who graduated in Edinburgh, and who was, through the personal influence of the Lieutenant-Governor, put, as an exception, in one of these appointments, as a professor of physiology. He is one of the best professors they have got, but he is in the uncovenanted grade with a salary of Rs. 350, rising to 750 a month. He wrote to the Government of India to this effect:—"Here are my colleagues doing exactly the same work "that I do, why should they have a pay scale of 750 to "1,400 and even 1,800, and I only 350 to 750." They first wrote in answer that they were sorry they had no money. He wrote again to say, that, supposing he left the place to-morrow and they had to bring in a covenanted medical officer, they would have to pay him at the higher rate; where would they get the money from then? The answer was, that those rates of pay were reserved for military men. When people say that it will not be possible to get first rate men, I am inclined not to believe in that statement. I have asked my fellow students of University College, and other members of the London University, some of whom will be the future leading surgeons and physicians of England, "Well, would you not like to go out to India on a salary, say, of "400 to 1,000 with private practice;" and the reply is —"Certainly, if I knew for certain that I would get an "appointment." Let us consider the salaries that are paid to the Arts College professors in India; we have had men like Wordsworth and Harkness, and others of equal eminence, on a salary scale of 500 to 1,000. Only recently the services of Mr. Hankin, a scientist of European reputation, a chemist and a bacteriologist, were obtained on a salary of 800 to 1,000, whereas for the very same position which he occupies, the military officers draw 1,500 to 1,800. It is possible to obtain excellent experts on salaries paid to our Arts college professors, remembering that whilst the Arts college professors cannot amplify their emoluments from any other source, the medical professors can, because they will be allowed consulting practice. So that there would be absolutely no difficulty in obtaining good, I may say, first-rate, men at the salaries which are paid in the Educational Department. This system of appointing experts would lead to a fair saving, not only a saving, but, also to increased efficiency. And, moreover, it would be in keeping with the professions, and the aims, of Government and with the aims and objects with which these institutions were founded. The Government could have hardly realized the many evils of the present system when they were led to adopt it. It is against the principles of any civilised Government to utilise its educational department or foster medical education for the primary purpose of holding a military reserve. As Lord Wolseley says, when the Government of India received such advice they could not have gone to the proper quarter for advice. The Indian Medical Service would naturally say, "Oh, that is the "proper way for having a reserve." I will here give you one of the latest illustrations to show what sort of advice is often given, and necessarily acted upon, as the Government have to follow the advice of their paid advisers. Last year the Government of India desired to reorganise their chemical analyser's department on a scientific basis. This action was the outcome of attacks that were delivered upon the department by myself and Dr. Voelcker especially, who had come out to India at the instance of the Government of India. The then Lieutenant-Governor of the North West Provinces had imported Mr. Hankin for the department. Mr. Hankin's work has been very brilliant and very successful. The Government of India sent round a circular to the various Governments, asking their opinion whether or not the time had come, when they should effect a change in the organisation of the Chemical Analysers' Department and import experts like Mr. Hankin, or again revert to their old established usage, namely, to reserve these appointments for military officers of the army. The Government of the North West Provinces were naturally for their new departure. The Madras Government also, be it spoken to their credit, said the time had come when they ought to have specialists for these appointments. But the Government of India were advised to go back to their old system again. And on what grounds? The scientific ground that has been given is—and these are the words of the resolution I am quoting—That it seems doubtful to the Government of India if officers so recruited (that is to say, specialists like Mr. Hankin) would make as suitable lecturers in medical schools as medical officers of the army, which, in simple plain English, means that the Government of India are left in doubt whether specialists in chemistry would make as good teachers of chemistry as the mere ordinary medical practitioner, who has nothing but the ordinary class instruction and test-tube experience of the ordinary medical student. I believe strongly that if the case was properly represented to the authorities, and I have great faith in the justice, the fairness and open-mindedness of the Commission, they would not fail to see the justice and the desirability of the proposed reform. The reform is as much in the interests of the natives and the country, as of the Government. I am bound to say that, if there is any act by which the British rule has conferred the greatest blessing upon India, it is really the implanting of advanced medical science on Indian soil. The British rule, based as it is on principles of humanity and righteousness, could not have done it from any other object than the cultivation of medical science and the raising of a scientific profession in the country itself for the good of the country and its people.

13,499. (*Sir Ralph Knox.*) What are the principal duties of the Civil Department?—The principal duties of posts in the Civil Department are, like those of civil hospitals; physicians and surgeons such as pertain to posts in our civil hospitals here.

13,500. For the natives of India?—Yes, for the natives of India, but there are hospitals in which the natives of India as well as Europeans are treated.

13,501. In the general hospitals they are both treated?—In the general hospitals they are both treated, and there are special hospitals for natives as well as for Europeans in

Dr. K. N. Bahadurji.

29 July 1896.

Medical.

the large towns. The Civil Department has also to deal with jail, sanitary, and educational work.

13,502. (*Sir Donald Stewart.*) The only remark I have to make about it is the one I have made before, that all these questions of organisation have been gone into thoroughly by the Government of India, and they are engaging their attention even now?—I dare say.

(*Mr. Naoroji.*) You were in favour of them?

(*Sir Donald Stewart.*) I was in favour of some of the proposals.

The witness withdrew.

Adjcurned till Tuesday next, the 4th August, at 11 a.m.

SECTION III.

APPORTIONMENT OF EXPENDITURE IN WHICH BOTH GREAT BRITAIN AND INDIA ARE INTERESTED.

12th to 14th, 17th, 19th, and 26th to 29th (First Part) DAYS.
Q. 5705 to 7183, 8218 to 8717, 9265 to 9613, and 12,269 to 13,408.

(*See also* 30th Day (Section I.) Q. 13,641–13,681.)

At the India Office.

TWELFTH DAY.

Thursday, March 19th, 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING.)

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Major-General Sir EDWIN H. H. COLLEN, Military Secretary to the Government of India, and Mr. STEPHEN JACOB, C.S.I., Comptroller and Auditor-General to the Government of India, re-called and further examined.

Major-Gen. Sir E. H. H Collen, K.C.I.E.

19 March 1896.

5705. (*Chairman.*) Sir Edwin Collen, we understand you are prepared to lay before us the views of the Government of India on the apportionment between the Indian and Home Governments of any payments in which the two Governments have an interest?—(*Sir Edwin Collen.*) I am.

5706. Papers on the subject have been circulated to us, namely, Despatch of the Indian Government, No. 70, dated 25th March 1890, with a memorandum attached to the despatch, and Sir Henry Waterfield's memorandum. Are there any other papers on the subject to which you would direct our attention?—I do not think so, but I should like, if I may, to look over the various despatches which have been sent by the Government of India, and give a list of any I think might be printed and laid before the Commission.

5707. Or perhaps if there are any others of those papers which have been laid before us to which you would particularly direct our attention, you would mention them?—Yes.

5708. I think that would be of much service to the Commission. I will take, first, payments made on account of the effective charges of Her Majesty's forces serving in India. These payments, though based on elaborate calculations of the various services involved, result in the simple form of a charge of 7*l.* 10*s.* per man, do they not?—Yes.

5709. The Indian Government think, do they not, that that is an excessive rate?—That is their opinion.

5710. In arriving at that conclusion, does the Indian Government accept for practical purposes the principle that India should pay the whole cost of that military establishment, or does it argue that the English taxpayer ought to bear a part of the charge of defending India?—It accepts the principle that India should pay, as she does now, for the whole cost of her military establishment in India. I do not understand the second part of the question to refer to the defence of India against an European enemy; if that is meant, I venture to think that the Government of India would argue that England, being vitally interested in the maintenance of the Empire of India, should contribute towards its defence in money, because the policy which might have led to the war would have been an Imperial policy.

5711. My question did not go so far as that. I wanted to clear the ground and to understand whether, for the purposes of our present inquiry, the Indian Government and the Home Government are arguing on the same platform, namely, that the English taxpayer should not be required to pay for the force necessary to defend India in ordinary circumstances?—In ordinary circumstances, no.

5712. Therefore, so far, we are arguing on the same basis?—Yes.

5713. And the objections of the Indian Government would be based simply on the view, not that England ought to contribute towards the expense of defending India, but that in the apportionment of the charges

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

the rates, as fixed by the committees which have investigated the subject, are, in their view, excessive?—Well I might perhaps ask that the phrase "defending India" should be altered. I would rather say "maintaining the garrison of India," because the question of defending India, as I have just indicated, seems to involve a larger issue; that is to say, defending India from a foreign power, for instance.

5714. I want for the time being to eliminate the question of any great war and any very considerable expedition outside India, and I want my phrase to cover the ordinary defence of India?—Subject to the general contention of the Government of India that there is no true reciprocity, I should say that the Government of of India is always prepared to pay for the establishment of the army as maintained in India.

5715. With regard to the question of true reciprocity, we shall learn the grounds upon which India holds that opinion when we come to deal with the method of apportionment?—Yes.

5716. Therefore I need not dwell upon that point at present?—No.

5717. At all events, I think we should be agreed that, for the purpose of the present discussion, we accept the principle that India bears the whole charge of the military establishment, whether that establishment consists of Her Majesty's forces serving in India or of native troops?—Yes.

5718-9. And that implies that we must treat separately the question of forces employed on such expeditions as those to Abyssinia, Egypt, and the expeditionary force to Malta. Those are important considerations that we do not lose sight of, but which we will deal with separately?—Yes.

5720-1. We shall perhaps understand the ground of objection to the capitation rate of 7*l.* 10*s.*, if we learn first the services in respect of which the payment is made. Perhaps you would describe them to us?—No. 1. Capitation of troops embarked for India; No. 2, charges for depôts, Royal Horse Artillery, Field Artillery, Garrison Artillery, Riding Establishment, Royal Artillery, Cavalry and Infantry; No. 3, agency charges; No. 4, charges for men who have deserted, died, or who are discharged with less than one year's service; No. 5, maintenance of young officers on first appointment to regiments serving in India previous to embarkation; No. 6, cost of young officers of Royal Engineers while under instruction; No. 7, difference of pay of Royal Engineers, colonels, and lieutenant-colonels, &c.; No. 8, cost of training veterinary surgeons for India; No. 9, cost of examination of candidates for the India Medical Service; No. 10, educational establishments; No. 11, advance of pay to men embarked for India; No. 12, expenses of men waiting discharge, including travelling expenses of invalids; No. 13, share of cost of pay and allowances of staff of hospitals and discharge depôts and expenses of invalids except pay and travelling; No. 14, rebate on men returning from India; No. 15, deferred pay.

5722. Those are the 15 heads which result in this capitation rate of 7*l.* 10*s.*?—Yes.

5723. The bases on which the capitation rate should be calculated, have been long in discussion, I think?—Yes, they have.

5724. (*Sir Ralph Knox.*) The deferred pay, which is a large item, is outside the 7*l.* 10*s.*?—Yes, it is; I was reading the fifteen heads.

5725. (*Chairman.*) Could you tell us when and how the difference of opinion has arisen between the two Governments, the course which the discussion has taken, and the method in which the differences between the two Governments have from time to time been adjusted?—The differences of opinion have been of very long standing. They probably arose directly what were called King's troops were sent out to India, about the middle of the last century. It is evident that differences had occurred, as the Select Committee of the House of Commons of 1808 recommended the repeal of clause 128 of an Act of 1792, which enacted that "the "Company shall be chargeable with all recruiting "and other expenses incurred in England for regi- "ments in India," which in practice had been found so difficult to adjust, and substituted other provisions which might simplify the mode of stating the account, and consequently facilitate the treatment and early adjustment of the charges, and at the same time secure an equitable compensation for that portion of this expenditure. So that in those early days there must have been considerable difference of opinion on the subject.

5726. But, I suppose, practically, the difference of opinion which concerns us, is that which arose when the arrangement was reconsidered after the Mutiny?—That of course was the beginning of the present long discussion. The reasons for such differences of opinion were, I suppose, that the East India Company thought that the charges were excessive, as compared with the amount they paid for raising men for their own local forces. The East India Company had to bear the actual expenses of the support and maintenance of the British troops serving in India. After the assumption of the direct government of India by the Crown, a capitation rate of 10*l.* was adopted. This capitation rate was in force for nine years—from 1861-62 to 1869-70. During the Mutiny, India paid very large sums; 1,175,000*l.* in 1857-58; 2,110,669*l.* in 1858-59; 1,323,300*l.* in 1859-60; 1,379,330*l.* in 1860-61; 1,070,000*l.* in 1861-62. The strength of the depôts at the time of the mutiny, was 19,000 per depôt for all India, and even after the emergency had passed away the depôts were kept up at a very high figure.

5727. May I ask with regard to those mutiny charges, at what rate they were calculated? Were they founded on a rate per man?—No, I think not.

5728. An attempt was made to arrive at the actual cost here of those different services, and a bill sent to India for the amount?—I believe so.

5729. In what manner was the 10*l.* capitation rate arrived at? Was it the result of the recommendations of a committee or of controversy between the India Office and the War Office?—It was the result, I think, of Sir Alexander Tulloch's Committee. Sir Alexander Tulloch was the head of the Pension Department of the War Office.

5730. And he presided over a committee which arrived at the conclusion that 10*l.* per man was a proper charge?—Yes.

5731. Was the India Office represented on that committee, do you know?—Yes, I have not the exact constitution of the committee, but it must have been represented. In 1869 the War Office proposed to terminate the capitation rate, which had been arrived at by the committee which I have just mentioned, and to adjust the claims on actual charges. A committee was then appointed, presided over by Mr. Seccombe, and from 1870-71 to 1878-9 payments were made which, as far as I can judge, appear to have amounted to 9*l.* 11*s.* per man. In 1879-80 till 1889-90 it seems to have been on an average between 7*l.* and 8*l.* per man. With regard to the adjustment of the difference of opinion, I think, from the point of view of the Indian Government, the difference of opinion can hardly be said to have been adjusted, because as early as 1861 Sir Charles Wood laid it down that the capitation rate of 10*l.* which had been arrived at by Sir Alexander Tulloch's Committee was a temporary arrangement, and was not to be regarded as an admission that India could justly be called upon to pay charges which ought really to be borne by the English Exchequer; that was the declaration.

5732. Therefore, India accepted this 10*l.* per man subject to more exact calculation?—It was intended to be, as I understand, a provisional arrangement.

5733. Do you know at all on what that 10*l.* was founded? I observe you say that several years later it was proposed to abandon that method of calculation, and to substitute one based on actual charges. Was not the 10*l.* per man supposed to be based upon actual charges?—I think they were rather estimated charges. I have, no doubt, a portion of them were actual charges, and a portion of them estimated charges. Again, the Duke of Argyll, when Secretary of State for India, protested strongly to the War Office against the excessive cost of recruits for India; that was when the reports of Mr. Seccombe's Committee were under consideration, and this committee—Mr. Seccombe's Committee—in its first report brought prominently to notice the heavy charges attending the system of Indian depôts; also the India Office members protested in several of the reports against the basis of the calculation.

5734. Those India Office members being Mr. Seccombe and Colonel Jameson, were they not?—I think so. The Secretary of State for India did not accept the con-

clusion of Mr. Bouverie's Committee of 1875. I may mention in passing that in 1887 the War Office said that the basis of the effective charge against India was, and had been since 1875, calculations made by Mr. Bouverie's Committee; and the Government of India have constantly objected to the calculations which have been made by those committees. Lord Northbrook's Commission, which is really the last, investigated the matter on an arithmetical basis; but even on this basis they came to the conclusion that a very large reduction should be made in the payment to the War Office.

5735. In passing, can you explain what they meant by an arithmetical basis?—As I understand it, they did not go into the principles upon which the Government of India thought the charges should be divided; but rather they took the claims of the War Office and investigated them and in some cases reduced them—I have no doubt in some cases they enhanced them. The arguments of the Government of India were not laid before Lord Northbrook's Commission. And I may mention that subsequently, although he had when Chairman of the Commission recommended 7*l.* 10*s.*, Lord Northbrook, when he had the opportunity of seeing the whole of the arguments of the Government of India, suggested that a 5*l.* capitation rate was sufficient. That was in his speech in the House of Lords on the Home Charges.

5736. Was that much after the time when his Committee reported?—It may have been two years, I think; I am not quite sure.

5737. And at present the rate that is in force is that which was adopted by Lord Northbrook's Commission?—Yes.

5738. The rate during this time over which your sketch extends has varied considerably, has it not? It began, as you have mentioned, with 10*l.*; I think you said that after that it fell to something like 9*l.*?—Yes, between 9*l.* and 10*l.*

5739. Subsequent to that was there not a time when it was something like 6*l.* 10*s.*, and did it not end finally, on the recommendation of Lord Northbrook's Committee, at 7*l.* 10*s.*?—I remember there was a Committee, of which your Lordship, I think, was a member, which recommended 6*l.* 10*s.*

5740. I think the only share I had in the transaction was that some conferences took place at the Treasury when Sir Henry Ibbetson was Financial Secretary; they took place with him, and I think my name only comes in because I was the head of the Finance Department of the Treasury and was with him at the times that these conferences took place?—Yes, it was a conference, not a committee.

5741-2. The India Office had proposed that 6*l.* should be charged, and, I think, on the information then before us the Treasury made a suggestion at the time, but I think it was purely a temporary measure, that it should be 6*l.* 10*s.* That is my recollection, but I have not papers by which to confirm it. Therefore you do not think that India really ever paid much less than 7*l.* 10*s.*?—No.

5743. (*Sir Ralph Knox.* When that large sum of 400,000*l.* was swept off, the amount paid by India did not amount to much more than that, did it?—I do not quite remember the occasion which you speak of.

5744-5. Well, it was the adjustment which you just alluded to, in which Lord Welby took a share. You remember on the claims 200,000*l.* or 400,000*l.* was written off?

(*Chairman.*) Yes.

(*Sir Ralph Knox.*) Well, after writing that off, it left about 6*l.* or 6*l.* 10*s.*, I forget the exact amount, as the charge which was made for that specific year.

(*Chairman.*) That is to say, if the 400,000*l.*, which went over some years, had been exacted it would have raised the rate to 7*l.* 10*s.*

(*Sir Ralph Knox.*) Quite so.

(*Chairman.*) When that was written off, it left this reduced sum as the sum which was actually received?—

5746. Might I ask in what year that sum was written off?—It extended over some years, from 1870 to 1878?—(*Mr. Jacob.*) Yes, 1870 to 1878.

5747. (*Chairman.*) These conferences took place between 1877 and 1878?—(*Sir Edwin Collen.*) Yes.

5748. You have mentioned in the course of your answers the several committees. Would you tell us, if you remember, what Parliamentary Committees on finance sat during that time?—There was a Parliamentary Committee on Indian Finance during 1874—a Select Committee of the House of Commons.

5749. Yes, and is that the only one which sat during this period I speak of?—I do not recollect at this moment if there was another one.

5750. Was that the Committee which was known as Mr. Fawcett's Committee?—Yes.

5751. Then, besides that, you have mentioned to us the Committee over which Mr. Seccombe presided; did that sit for several years?—Yes.

5752. And it was on the recommendation, was it not, or with the approval, shall I say, of Mr. Fawcett's Committee, that an independent statesman was added to that Committee, in order to increase its impartiality?—Then there was a Committee known as Mr. Bouverie's Committee.

5753. Yes, it is in regard to that that I am speaking. But, as I recollect, the Parliamentary Committee said they learned with satisfaction that the Government had intended to put that departmental committee under the charge of Mr. Bouverie?—I do not remember that the Government of India ever gave that opinion.

5754. No, the Parliamentary Committee?—I beg your pardon. Yes.

5755. "Your committee have been informed in the "course of their inquiry that steps have been taken to "supply this obvious want, and that the Government "have secured the co-operation of Mr. Bouverie, a "former member of your House, as President of this "Committee." Therefore, we may take it that these were purely departmental committees, consisting of what I may call financial experts, up to about 1874, when the committee was enlarged and strengthened by being put under the presidency of a man of statesman's rank?—Yes.

5756. And did that committee under Mr. Bouverie sit year after year, do you know?—I think it sat for two or three years.

5757. But a committee to settle the basis of charge—the actual sum payable by India—sat every year, did it not?—I am not sure whether the committee sat every year.

5758. (*Sir Ralph Knox.*) When Mr. Bouverie's Committee sat for some time in order to work out a basis of calculation, it was supposed that that basis would operate over the years which were outstanding when settled, but they did not go into the details of calculation year by year. They fixed a general basis in order to work out, if possible, the idea of the Indian Government, to fix a capitation grant which, of course, would not vary, except with the number of men who were serving in India?—That was known, if I may say so, as Mr. Bouverie's Committee of 1875, but neither the Secretary of State nor the Government of India accepted the conclusions of that committee.

5759. (*Chairman.*) Then that was followed by a committee over which Lord Northbrook presided, was it not?—Yes, known as Lord Northbrook's Commission.

5760. And do you know in what year that Commission began to sit?—1879.

5761. (*Sir Donald Stewart.*) 1879-80 it began?—1879-80.

5762. (*Chairman.*) And that committee was practically a permanent committee until a comparatively short time ago, was it not?—Yes.

5763. That committee, I think, made a report as to what should be payable on the accounts of each year?—They made several reports.

5764. And what takes place at present? No committee, I think, is sitting now?—No.

5765. And the accounts are adjusted for the time being on the basis of the 7*l.* 10*s.*?—Yes.

5766. These questions at issue have, therefore, been discussed by a Parliamentary Committee in the first place, and secondly by departmental committees on which the Indian Government has been represented?—Represented by members selected by the India Office.

5767. May I take it then that the Indian Government would not make it the ground of their objection to the rate, that in fixing that rate India was not consulted, or that the recommendations of the committees on which

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

she was represented were overridden; but that these departmental committees, consisting chiefly of experts, did not accept the Indian view to an extent which would satisfy the Indian Government?—I think the Government objected to the bases on which the calculations of the committees were made as being purely arithmetical calculations.

5768. In what form would the Indian Government have wished the case to be laid before the committees?—I think they would have desired that the advantages which they contend England has from India should be considered; but I have to say that the answer would be in the affirmative, I think, to the second part of your previous question.

5769. That is to say, that these experts did not accept the Indian view to an extent which would satisfy the Indian Government?—Perhaps I should say that they hardly considered those views; in fact, I remember in one report it was distinctly stated that they looked upon their business as that of accountants, and that it was for statesmen to settle the principles on which many of the charges should be fixed.

5770. (*Sir Ralph Knox.*) That was Mr. Bouverie's report?—Mr. Bouverie's.

5771. *Chairman.*) But I think it was also Lord Northbrook's opinion, was it not, that it would require a differently constituted committee, if they were to enter upon the wide subject of indirect advantages derived by England from India, as held by the Indian Government?—Yes, I think so.

5772. Can you direct us to any papers laid before those committees which brought this question forward?—No. The Government of India were desirous that their despatch of the 25th March 1890, and memorandum attached thereto, should be placed before Lord Northbrook's Commission, but it never was placed before them.

5773. But that despatch was only written towards the close of the period of which we are speaking, and these committees had been sitting 17 or 18 years, or perhaps 20 years before that time. All that time had not the Indian Government made known to these committees the grounds on which it objected to the results at which they were arriving?—The committees were convened under the orders of the Secretary of State for India. I am not aware that the particular views held by the Government of India were placed before them with a view to consideration; they may have been furnished in some papers which they had before them.

5774. I think from what has been said the committees, at all events, did not think that they were appointed to inquire into this larger question; but I am anxious to ascertain whether you know of any papers laid before the committees, which distinctly stated the general ground upon which India demurred to the arithmetical method of calculating the capitation rate?—I am not aware that they had the opinion of the Government of India laid before them.

5775. Then I understand that the despatch of 1890, in your opinion, states distinctly the argument of the Government of India on the method in which the payment by India for effective services should be calculated?—I think it sums up generally the arguments which India has used.

5776-7. But, further than that, I should like to learn now whether these views were expressed in any previous despatch laid before the Home Government?—I think they are expressed in many despatches, extracts of which are given in Sir Henry Waterfield's memorandum.

5778. Then I think I may take it as your view that the Indian Government do not hold that the conclusions were incorrect in themselves; but that the references to the committees were too limited to secure a fair consideration of the whole question?—I think they objected to the calculations which were made; and also felt that the reference was not sufficiently wide.

5779. You think they did object to the deductions which the committee drew on the arithmetical basis?—Yes.

5780. Those objections we shall learn, when we go *seriatim* through those heads on which the capitation rate was based?—Yes.

5781. But before taking you *seriatim* through those heads of charge, I would ask whether you would wish to state in a general form the objection of the Indian Government to the present arrangements, such, for instance, as the question of the result to India of the short service system, the question of the local army, the principle of payment for reserves, the charges imposed on India by changes in the home army organisation in which she is not consulted? I do not know whether you would like to make any remarks on those points in a general form, which might be more convenient than to express them in regard to each head in detail?—I should say that, briefly, the leading objections of the Government of India to the present arrangements are that the system of recruiting is unduly expensive, the general contention being that the charges for depôts in England are based not on the most economical way in which the required numbers might be furnished for India, but on a special organisation which is a part of a purely English system. With regard to the question of the local army I do not think it has ever been raised, of late years certainly. The Commission of 1879 that sat in India said that if, as years went on, the existing arrangements were found to be too expensive, then the question might be considered, but I do not think it has come within the limits of practical discussion of late years. Of course, there have been proposals made that British regiments and batteries should have their permanent head-quarters in India; there there have been proposals that this should be a short service army for England and one of longer service—that is to say, 10 or 12 years—for India, but I do not think the question of having a purely local army has ever been put forward of late years.

5782. Therefore we may consider that the Indian Government does not put forward, or hold, the opinion that the amalgamation which took place soon after the Mutiny was a mistake, and that it comes within practical policy to retrace the steps and establish a separate army?—I do not think the Government of India would desire to establish a separate army.

5783. (*Mr. Courtney.*) But if you have a different method of recruiting and a special term of service for India, what is the difference of principle between that and a separate army?—I think there is a great difference. You might look at the matter as one in which the recruiting would be done in the most economical way for India. Of course, you might have general depôts, but still they would be administered and form part of the British Army. And, then, if you had regiments localised in India—regiments and batteries—they would belong to Her Majesty's army; they would be stationed permanently in India—that is, the officers and men would be sent out for periods of service, and the officers would interchange with the battalions at home. The government of the army, as it were, would be under the Horse Guards as at present, and all the details of the interior economy. A local army, as I understand it, would be entirely separate, under the Government of India.

5784. (*Chairman.*) As the forces in India were before the change took place in 1860 or 1861, were they not?—Yes.

5785. (*Sir Ralph Knox.*) A portion of them?—What we call the local forces.

5786. (*Mr. Courtney.*) But wherever the service now is, it is the service of the Queen; is not the essential question whether you shall have a localised force administered on different principles and recruited on different principles, such as you might have in a colony?—Personally, I should draw a great distinction between a local army quite separated from the army administered by the War Office and certain portions of the army which might be localised in India for convenience of recruiting and so forth.

5787. (*Sir Donald Stewart.*) What would be the difference? By giving the army in India a different name?—Supposing a regiment had its head-quarters permanently in India and you had a certain number of men recruited for longer service than at present, the government and administration of the army might remain exactly as it is now.

5788. Have you ever made any estimate of the financial result of such an idea?—No. I should say it would be distinctly cheaper than the present arrangement; but I am not putting it forward as a suggestion; I am merely mentioning it as a point which has been alluded to in the course of the discussion.

5789. But it is presumably on financial grounds that you would suggest the change?—I am not prepared to suggest the change myself; I merely say that it is a suggestion which has been made.

5790. (*Sir William Wedderburn.*) But do I understand that the Government of India have given up pressing this matter, not so much because they think it would not be advantageous that the Indian Government should have a voice in the administration, as because they think the existing arrangement is a *fait accompli*, and that it is hopeless to ask for a change of the system?—No. I should say the general consensus of opinion was that a purely local army would not be advisable.

5791. (*Mr. Courtney.*) The point then arises, what is meant by a purely local army? what degree of association or disassociation with the home force makes the difference between a localised branch of an army and a purely local army?—I should define the local army as one which was essentially under the Government of the country in which it was localised.

5792. (*Chairman.*) As was the case before the amalgamation?—As was the case before the amalgamation.

5793. (*Mr. Naoroji.*) Has not the Government of India objected to the short service army as disadvantageous, and recommended that a longer service would be advantageous to India?—It has made several representations on that subject.

5794. (*Sir Ralph Knox.*) A purely local army would mean giving the Government of India complete power to manipulate, as it were, the population of military age in this country according to its own will; that is to say, it would go into the market in complete competition with the Home Government for the recruits for the Imperial army?—Yes. I do not think it is practicable.

5795. But that is what it would mean, is it not?—Yes.

5796. (*Chairman.*) But when you speak of what I may call localised regiments, would not one great advantage be that the Government of India would then be able to administer those regiments in what it thinks a more economical form? For instance, as I read these papers of the Government of India, they objected to, or, at all events, called in question, various changes which have been made of late years for the benefit of the soldier, or for the more complete organisation of the army, such, for instance, as the abolition of purchase, on which India was not consulted. I should deduce from that that the Government of India think that, if they could have had localised regiments, they would not have adopted any of these expensive steps, and, therefore, we should have in India an army organised as the army was in the forties?—No. I should be inclined to think that if such a plan of localising certain regiments and batteries were carried out, it would merely lead to a somewhat longer service than we get at present of the soldier in India, which is five years and four months; and that other considerations would hardly be affected.

5797. Therefore the Government of India does not really object, as one might be led to deduce from very much of the correspondence which has passed, to the changes of organisation proceeding from the Horse Guards here; their object would simply be, if I may so call it, a device for getting longer service; and, if that longer service were obtained, all that the Indian Government seek would be obtained?—It would be a device for getting longer service.

5798. (*Sir Donald Stewart.*) And the only advantage apparently that would accrue would be that something might be saved in the transport charges between England and India?—But I think there are other advantages, besides the saving of those charges, in getting an army in India which has not so many young soldiers as at present. If we part with the men, as we do, when they have served five years and four months in India, we part from them, I think, just as they are becoming valuable to India.

5799. But have you any fault to find with the men under the present circumstances?—I think that many authorities have considered that the army in India is too young at present.

5800. I have never heard that before.

5801. (*Sir William Wedderburn.*) With reference to Sir Ralph Knox's question about the competition between India and England as regards recruiting, is it not the case that the men who recruited in the old local European corps were drawn from a different class from the ordinary recruits of the army here—that a great many of them were men who intended to make a permanent career in India?—I do not know whether it could be said that they were drawn from a different class of men, but of course many of them did intend to make India a permanent career.

5802–3. (*Sir Ralph Knox.*) The numbers so raised for the local force varied from 800 to 1,400 a year?—I do not know the exact numbers.

5804. (*Chairman.*) I am anxious to clear up this point. I think your evidence would rather lead us to the conclusion that the Government of India feel that the present system acts against them mainly upon the point that the soldiers do not serve long enough in India?—That is so.

5805. And therefore you have suggested—I did not understand you to say that it has ever been put forward as a practical proposition—but you have suggested that that objection might be met by localised regiments?—I have mentioned that it is possible that that might be a solution.

5806. But that suggestion is only thrown out as a device for getting these soldiers on longer service?—Yes.

5807–8. That does not meet the point, which appears to me patent on the face of the correspondence, that the Indian Government do in fact feel that they are exposed to considerable expense through, and in consequence of, the changes of organisation in the English army made by the Horse Guards here. Do you attach great importance to that point, and would you wish to devise measures for avoiding it? Or do you put it forward simply as an objection of which you take note, but which you think does not permit of a remedy?—The remedy, of course, which, the Government of India would say, should be applied, would be that India should be more generously treated in the matter of the charges. We cannot avoid the expenditure thrown on Indian revenues by these changes of organisation, but I think it has always been put forward as a plea on behalf of India that she should receive more liberal treatment in the matter.

5809. That is to say, that all the cost of the improvements that are made in the army with a view to making that army more efficient, should be thrown on the English taxpayer: that India should pay for an army organised as highly, say, as the army of 1840 was organised; but that she should get all the benefit of the improvements made since that time for nothing?—No, I should not say that, certainly.

5810. It comes rather near it, does it not? I am pushing what you said a little bit far in saying that she should pay nothing for them. That is only a way of pressing the argument to the logical conclusion. To whatever extent the English taxpayer is called upon to pay for these improvements, which one must suppose are real improvements, to that extent India would get the benefit of those improvements without paying for them?—With regard to the general class of improvements India has not objected to pay for them; she does not, of course, object to pay for a new rifle which she asks for; but I think she objects to paying for changes of organisation at home, which do not bring any corresponding benefit to India, such, for example, as the present organisation for supplying recruits.

5811. Of course, if you have one army, which I think you, on the whole, think a necessity, the organisation of that army must be controlled by one authority, and it must be accepted by the people who make use of that army, must it not? It is not practicable for the Indian Government to enter into partnership for the use of the army, and wish to avail itself of the benefits of that army so far as it suits its views; but, where it does not suit it, to say, "Oh, no, we do not care about that." It must submit to the laws of the partnership?—But the Government of India say that the partnership is unequal.

5812. Then that is an argument in favour of going back to a separate army, which I understand the Government of India do not desire to do?—They do not desire to do that, but—take, for example, this very question of the organisation of the depôts—supposing the War Office, for some reasons very good in themselves, desired to have improved organisation which would enhance the cost of the depôts, it would be rather hard upon India that she should be called upon to pay extra charges for those depôts, merely because they were inherent in a particular system of English organisation.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

9 March 1896.

5813. But if the improved organisation tends to make the army more efficient, India gets the benefit of that efficiency as well as England?—If that can be proved absolutely and measured in money.

5814. But still, if two people enter into partnership for the use of an establishment like an army, of course there will be differences of opinion between them on points connected with that establishment, but they must submit to the laws of the partnership, and allow that the principles of organisation which are laid down by the authority with whom the control of the organisation rests, are binding? In the case of a partnership like that, it is hardly permissible for one party to say, "I "will accept these things as far as they suit me; and "wherever they do not suit me, I desire to be free of "the charge"?—The contention of the Government of India has always been that it is an unequal partnership, and that they should not be called upon to pay a number of the charges which have been forced upon them.

5815. In what sense do they mean unequal?—They say that the Government at home have the power of dictating what changes should take place, without consideration of the revenues of India.

5816. Now we are coming to the point. The grievance of the Government of India, as I understand it, is that, when changes of organisation take place, they are not consulted?—As a general rule they are not consulted.

5817. And if they were consulted on every occasion, they might say that they thought such and such an organisation was expensive; but still they would accept it when, as the result of the discussion, the decision was come to that this change was to be adopted?—They might accept it; on the other hand, they might, of course, say that it was throwing a great burden on the revenues of India, and plead that a portion, at all events, of the charge should be remitted.

5818. It was decided here that purchase should be abolished. The Indian Government, I see in this correspondence, raised questions about it; they were not quite certain whether it benefited them; but when once the supreme authority here had decided, India accepted the decision, as she must do, so long as she keeps in this partnership for the use of the army; and the only alternative is to have her own troops, is it not?—India must accept the decision, because the Secretary of State for India rules that she must accept it: but she has contended very strongly that purchase was a purely English abuse, and that it was not right to make India pay for the pensions that followed that abolition.

5819. That would imply that officers might purchase their commissions in India without harm, whereas it would be mischievous if they were allowed to purchase them in England, does it not?—I would hardly say that:

5820. The result of the discussion appears to be this: 1. That you are anxious particularly to get a longer term of service for your men in India; 2. That India complains that she is not sufficiently consulted in the matter of these changes of organisation. You are not, however, pressing that objection at the present moment against the capitation rate?—No.

5821. (*Mr. Courtney.*) With respect to that question of purchase. Is not the Indian position rather this, that, assuming that it is the duty of India to pay a strictly proportionate share of the cost of the army, India ought not to be burdened with the expense of removing a local abuse which had grown up under strictly English sanction?—Yes.

5822. You may start from this point and say that, with respect to all future cases, the share shall be strictly proportionate; but, if you are going to clear the way of some big abuse, that expense ought not to be saddled upon India?—That is what is meant.

5823. (*Sir Ralph Knox.*) But do you really claim, on the part of India, to argue that India paid anything for the purpose of abolishing purchase? Is it not rather that she complains that, in substitution for the purchase system, it was necessary to introduce a pension system for the future?—That I mentioned: it comes to the same thing.

5824. But did India pay any of the cost of abolishing purchase as it stood?—Not the actual sums granted to the officers.

5825. Yes?—No, I suppose not.

5826. Is it not a fact that India has not paid one half-penny towards the abolition of purchase in that sense?—I should say that it is a fact that she has paid a good deal.

5827. In that limited sense of paying anything to any of the officers who are serving in the army?—No, I suppose she did not pay the initial charges, but she paid their pensions.

5828. When the pensions were instituted she paid her share of the pensions?—Yes.

5829. But no more?—I suppose not.

5830. And are you not aware that—in any of the pensions which have been paid—before India is charged for any portion of the non-effective payment, the value of any purchased commission, which an officer had before the abolition of purchase, is deducted from that charge?—I have no doubt that is the case.

5831. That being so, India will not have been charged anything on account of the abolition of purchase in the past, but is now charged simply her proportion of the share of the pensions which were to be granted to officers in the future?—That is, I understand, the case.

5832. (*Chairman.*) Then, if that is the case, there is no very substantial financial grievance, is there?—I think the substantial grievance, as brought forward by the Government of India, is that they are called upon to pay a particular system of pensions, which was created in consequence of the abolition of purchase.

5833. Is there not another way of putting it, namely, that, if there were no purchase, pensions, which are the necessary consequence of there being no purchase, must be paid?—India must pay; she pays the pensions, as I have said, consequent on that abolition of purchase.

5834. (*Sir Ralph Knox.*) But some pensions were in existence before the abolition of purchase, were they not?—Yes.

5835. Half-pay, retired full pay, and so forth; India always paid her share of those?—I understand so.

(*Chairman.*) And in the case of the Royal Engineers and the Royal Artillery, which had no purchase at all.

5836. (*Mr. Mowbray.*) Supposing you had had, at the time of the abolition of purchase, localised battalions and batteries, such as you were speaking of just now, you could not possibly have gone on with the purchase system in those local battalions and batteries when it was abolished in England, could you?—No; I think we should have had to follow the general arrangement which was made.

5837. Therefore such a system of local battalions and batteries in India would not have affected this question of purchase?—No.

5838. (*Mr. Naoroji.*) Supposing the Government of India were consulted, is it not possible that they might on certain occasions have refused to acquiesce in the arrangement, though high authority compelled it; but the Government of India should have an opportunity of declining to accept it?—They may represent to the Secretary of State that they do not think the charge should be incurred, and then it is for the Secretary of State to decide whether it shall be incurred or not.

5839-40. Then that is a decision only of higher authority, without the consent or the goodwill of the Government of India themselves, as representing India?—No.

5841. (*Chairman.*) In the old local army of India was there a system of purchase?—There was.

5842. (*Sir Ralph Knox.*) And that system of bonus which existed in the local army, and which was abolished in consequence of the abolition of purchase, was paid for by the Home Government, was it not?—Was it?

5843. (*Sir Donald Stewart.*) I think something was given to the Engineer and Artillery funds at that time by the State?—Oh, that might be.

5844. But that system of what I call "sale" was not universal; it had no official recognition; it was a private arrangement between the officers themselves

(*Sir Andrew Scoble.*) And paid, not out of the public funds, but out of the private resources of the officers themselves.

5845. (*Chairman.*) I think now, Sir Edwin, if no further general remarks occur to you, we might take seriatim those heads of charge, which contribute to make the capitation rate, and I would ask you upon

each of them whether there is any point to which you would wish to direct our attention?—Yes.

5846. I think you begin with the recruiting, do you not? The first head is the capitation of troops embarked for India, is it not?—Yes.

5847. On that point, I should like to ask you what would be the average strength of the British regiments sent to India from 1834 to 1857, and the average payments made during that period?—The average strength I think was about 24,000.

5848. (*Sir Ralph Knox.*) That is cavalry and infantry?—Yes.

5849. (*Chairman.*) And the average payments?—195,000*l.*

5850. Which makes an average of about 8*l.* per man?—Yes.

5851. Does that compare with the 7*l.* 10*s.* now charged, putting aside deferred pay?—I think so.

5852. But in the meantime the cost of all armies has largely increased, has it not?—Yes.

5853. Then how would you account for this result—that the charge per effective man should have been higher between 1834 and 1857 than it is now?—I have no means of testing the calculations that were made, but it might be assumed that the charge was too high altogether.

5854. You do not know whether that was alleged at the time?—No.

5855-6. In those times was the cost of keeping up a force in India more expensive than it is now? For instance, I take it that the death-rate in India, and the invaliding rate would be heavier prior to 1857 than they are now, would they not?—No doubt the mortality was very much higher, but then you would have to take into consideration the improvements which have been effected since then in India, at the expense of Indian revenues, in the way of barracks and water supply and sanitation.

5857. Quite so. I am only suggesting to you a reason why a lower capitation rate might be justifiable now than was justifiable then; inasmuch as mortality was formerly higher. The expense of keeping that force up to its normal strength, would be much higher in that case, would it not?—Yes.

5858. I am rather suggesting that as a possible reason why the 8*l.* may not have been a very excessive charge in those days.

5859-60. (*Sir Andrew Scoble.*) The cost of transport between England and India per man was heavier before the Mutiny than it is now?—Transport charges do not enter into that 8*l.*

5861. Not at all?—No.

5862. (*Chairman.*) You do not know the average mortality in Her Majesty's forces serving in India in those years, do you?—No. I have not got the figures at this moment.*

5863. Do you know the number of the drafts sent out in those years in order to keep up the strength of the 24,000 men?—I have not got those numbers.

5864. Can you get those numbers, because it would be rather interesting to compare the number of men that it was necessary to send out to maintain an average force of 24,000 and the numbers that are now sent out to maintain a force of three times that amount?—I will make a note of that.

5865. Are there any other remarks that you would like to make upon the capitation question?—Do I understand that you are taking the memorandum of 1890 attached to the despatch of the Government of India?

5866-7. No. In a previous answer you have given the 15 heads, the cost of which has been calculated by the committee and which result in the capitation rate of 7*l.* 10*s.* per man; and I am now going through those heads, so as to give you an opportunity of calling our attention to any points in any of those services, which would support the view of the Indian Government that the 7*l.* 10*s.* was too high a rate. You gave us, you remember, 15 heads?—Yes. That question of the capitation of troops embarked for India is dealt with in the memorandum attached to the despatch of the Government of India in 1890, in which the question is gone into at some length.

5868-9. Would you state shortly what the view of the Government of India is with regard to it?—I think the view is that the capitation on troops embarked for India is excessive, with reference to the services that are given.

5870. Is not paragraph 27 of this memorandum really the answer to my question?—Yes. I may say that since this was written we get soldiers from home with rather longer service than we used to get. The great objection that would be now raised, I think, is, that no allowance is made for the presence of these Indian depôts in England, which form part of the home establishment.

5871. I think the depôts come in the next heading, do they not?—Well, instead of saying depôts, I should say that the services of these men on the British establishment, before embarking for India, are not allowed for.

5872. But would you say that these four changes advocated in para. 27 summarize the objections which the Indian Government have?—The objections they raised at the time.

5873. And do you modify them now in any other respect than that on which you have given us your opinion?—Yes; because I think the training is now for a longer period.

5874. I think the War Office are not in entire agreement with you, and therefore it is rather important to get clearly stated the present objection which the Indian Government have to the system?—I think at present the objection is, as I have mentioned, that no allowance is made for the services of men who are in fact part of the home establishment.

5875. (*Sir Ralph Knox.*) That is to say, you do not argue that six months is a sufficient period of training; but you propose to put it at six months in order to get some general concession on account of the value of the service of the troops in England?—But I think the minimum is six months, is it not, now?

5876. There is a minimum of six months?—Yes.

5877. (*Chairman.*) Then so far the English Government have met your view; six months is fixed as the minimum?—Yes, for infantry.

5878. You contend that that should be sufficient for both branches?—It is nine months for the cavalry.

5879. Well then you also hold in the case of the men embarking for India with less than six months' training, that India should only be charged for the actual period of training?—Yes, that I also hold.

5880. Then the next proposition is that the services of these men on the British establishment before embarking for India should be allowed for?—Yes.

5881. That summarises the objections of the Indian Government to the present system?—To the calculations which were made in 1888-89.

5882. Next we come to the depôt charges. Have you any objection to advance on the part of the Government of India to the method in which those were calculated?—Those were also entered into at great length in this memorandum but, generally speaking, I think that the contention of the Government of India is that the depôts are part of a certain organization which has been adopted in England and is known as the territorial system; and that, if we could have our own depôts, which I recognize we cannot, we could do the business on a more economical basis. As the Commission know, the Warley depôt supplied men at a very low rate, something between 2*l.* and 3*l.*, 2*l.* 8*s.* 11*d.* and 3*l.* 3*s.* 9¾*d.*, respectively, per man on the establishment in India.

5883. I think, between those two figures, the Indian Government rely upon the second, do they not? The first figure, for some reason or other, is not, as I take it, a fair comparison, because it includes two years of the Mutiny. Excluding the two years of the Mutiny, the average charge per recruit was 3*l.* 3*s.* 9¾*d.*?—3*l.* 3*s.* 9¾*d.*

5884. Therefore we may take that as the real figure that the Warley establishment represented?—Yes. It would be impossible to bring the charges down to anything like that figure at the present day, even though we had general depôts: but the Indian Government maintain that the whole of the depôt organisation is on too expensive a scale for the requirements of India.

5885. (*Sir Donald Stewart.*) Surely the men turned out by the establishment at Warley and the men turned out by the depôts in England were not quite upon the same footing? My recollection of the men turned out at Warley is, that they had next to no training at all, and

* *See* Appendix 54.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

they were just clothed, taught the elements of drill, and sent out to India to be trained by the regiments and by the batteries to which they were attached?—Yes.

5886. Beginning from the commencement?—Yes.

5887. Now, under the short-service system, would you wish that the men sent out for the cavalry, the artillery, and the infantry should be men of that description and that the whole of their training should take place in India?—I think it would be a large saving to the revenues of India if it took place.

5888–9. Yes, it would; it would be a very large saving; but that is a little inconsistent with what you were arguing some time back about the shortness of the time that you retained the services of the soldiers. In fact you object to the short-service system; and, as far as I can make out, if you had your will in this way. it would take, at least, two or three years from the effective service of these men in India, of the shortness of which you have been complaining?—But after all, even under the present arrangements, we have men sent out to India who have not been sufficiently trained; we have evidence, for instance, to show that the artillerymen have not fired their ammunition, and so on. And the officers commanding cavalry regiments have reported that the men could not ride. That was another case in point.

5890. That is quite true; I know there have been certain cases of that kind, but, speaking generally, do you know how long it takes to make a cavalry soldier, and how long it takes to make a horse artillery man and driver?—Yes.

5891. You would get little effective service in India out of the men at all if they were not trained to a certain extent here?—No, but I should couple with that a longer service in India—longer than five years and four months.

5892. Quite so; that would be the result of your going back to the Warley system?—I am not saying, Sir Donald, that we could go back to it now; all I say is that the depôt organisation at home is on a more expensive basis than is necessary for the requirements of Indian recruiting.

5893. Can you show us in some detail where the extravagance comes in?—I would not use the word "extravagance" myself; I rather take my stand on the fact that the depôt organisation, under which there is a large number of depôts in the United Kingdom, is expensive compared to that which we could have, if there were two or three depôts, for instance, for training the men who are to be sent to India.

5894. I am entirely in sympathy with you, and I want to get out how savings are to be in that way effected?—I do not think we could now change the system; we cannot ask the War Office to change their system; but I think we might ask that we should not pay such a large share of the depôts.

5895. (*Mr. Courtney.*) Can you give any comparison as to the cost, supposing instead of the numerous depôts, you had one or two, with the same degree of training?—No, I am unable to give any figure; I can only state in general terms that I think it would not be so high a figure as at present.

5896. (*Chairman.*) You think you could turn out at a less expense an equally well-trained man for your purpose at the age which, I believe, is now fixed for India, if you had your own depôt here?—At a less expense; but, of course, I recognise that we cannot claim to have our own depôts; we must take the arrangements that are made. All we do claim is, that some allowance should be made for the fact that these depôts are, as we think, organised on a more expensive system.

5897–8. But, then, I think, if that is the case, you would admit that it lies with you to show that, on the present organisation of the army, those charges are extravagant. I do not understand that you want to get off a fair charge for training the men, but that you think the present charges are too high. That being the case, in order that we may fully weigh so serious an argument, we should know in what respects you think the present system expensive, and how it could be remedied?—I may mention, in the first instance, that this is a subject which has been, as I think I have said before, discussed by various committees, and the India Office members of the Committees always protested against the charges for depôts. For instance, we considered that the charge for the Artillery depôts was very much larger than it should be. Taking the Royal Horse Artillery, in 1887–88 the charge for the depôt was 35,544*l.*; that is to say, India was charged the cost of the permanent staff of the depôt batteries, plus a fixed sum for each man embarked for India. (Of course, the fixed sum was given under the head of capitation.) Now, in 1885–86, 223 men embarked for India; 1886–87, 138 men; therefore the depôt charges were about, in 1885–86, 89*l.* per man, and in 1886–87, 140*l.* per man. We said it was open to question whether this amount was not excessive. Some of the men who were sent out—I have the assurance of regimental officers—were not properly trained; and we know that the practice ammunition for recruits was not expended. Then there are a great many details in which we questioned the cost of this Royal Horse Artillery depôt. We considered, generally, that the depôts were organised on too large a scale for the duties which they had to perform.

5899. The depôts were on too large a scale, resulting in these, as you think, very heavy charges?—Yes, it was 89*l.*

5900. Do you know of any lower standard by which you could measure the excessive nature of that charge? Can you refer us to anything which would show us what you think a training such as this might fairly cost? At the present moment you have only said that the cost at Warley, which was abolished a great many years ago, was very low indeed; but that hardly affords a standard at the present time, and, I think, you have said so yourself?—No, it does not form a standard at the present time, and I have nothing to show what the amount would be, if the depôts were not organised on this expensive scale; we merely say that these charges are very high, and that we think that we ought not to have to pay in such a high proportion for the cost of the depôt as 89*l.* and 140*l.* per man for Horse Artillery.

5901. Would you suggest any method by which the necessity for this charge might be tested to the satisfaction of the Indian Government? What sort of inquiry would you propose in order to satisfy yourself as to what the charge ought to be?—I should be inclined to suggest that an inquiry might be made by independent officers, associated with those on behalf of India.

5902. And would you be content to abide by the result of that inquiry?—On the arithmetical basis; but not, of course, with regard to the general claims which the Indian Government put forward on the ground of the reserve force which the army of India affords.

5903. We are at present confining ourselves to the case of the Artillery, in which the charges are very high; and, I suppose, you apply something of the same objection, in probably a lesser degree, to the other branches of the service, do you not?—Yes, generally.

5904. And we are confining ourselves, as regards this question to inquiry into actual facts?—Yes. Then take the case of the Field Artillery depôts; there was charged in 1885–86 for each Artillery recruit in training 93*l.*, and in 1886–87, 106*l.* We thought that the Field Artillery depôts were organised on a scale which was scarcely warranted; and we said that if the four depôts for which India pays, which are stationed at separate places, were collected together, one set of staff officers would be sufficient, and the cost of three sets would be saved, or nearly so.

5905–6. Then you think economy might be effected by amalgamation?—I think economy might be effected by change in the particular arrangements of depôts.

5907. Now take the Infantry: do you raise similar objections, though the scale is lower?—Well, there again, of course, we consider that the charges should be reduced on the ground that the officers and men form part of the military establishment at home.

5908. I wish to separate that general question from what I may call your detailed criticism of the actual charges for men sent out?—We do not contend that the calculations of the actual charges, according to the present system of the depôts, are incorrect; all we say is that they are kept up on too large a scale, on a system of organisation which is unnecessary for the requirements of India.

5909. And the Indian Government would be satisfied if the scale of these charges were revised by, we will say, a Commission sufficiently independent?—We do not object to the actual calculations of the cost of the

depôts; no doubt they are perfectly correct mathematically; but I think the suggested Committee of officers would hardly go into the questions, which we put forward, as to the men in the depôts forming an integral part of the home army.

5910. Certainly not; but I was calling your attention to the fact that a considerable part of your criticism has been on such charges as 89*l.* and 140*l.* per man, as being on too large a scale; and you have suggested yourself that economy might be effected by an amalgamation of depôts and other means. Those are the points upon which I want to know what kind of enquiry would satisfy the Indian Government as to the proper amount of such a charge: in making that inquiry the inquiring officers would not go into the larger question as to whether these men are available for the home service or not; I merely referred to an inquiry to arrive at the fact of a fair charge for the training of these men?—But then they would have to take the charge, as it would have to be estimated for on a different organisation. All we say is that under the present organisation, although the accounts may be right enough—we do not question them—yet the system under which these depôts are organised is needlessly expensive for India; and I can hardly see how any committee of officers could go into a question of that sort.

5911. You think they would not be able to advise the Indian Government as to whether these charges were excessive? I want to come to something that would promise a conclusion. The great difficulty between England and India is that, on the one side, you have the War Office who arrive at a conclusion that these charges are necessary; on the other side you have the Indian Government who say that they are not necessary. There is no means of arriving at a decision between those two parties—each is equally satisfied upon the point; and what I was asking is whether you or the Indian Government had any idea as to the method by which this difference of opinion could be tested and a fairly independent opinion given? I do not see any other way than by means of a committee, in which you could get at the question. I do not know, of course, what the War Office would say, but I understand the War Office throughout have argued that these charges which you have objected to, varying from 39*l.* to 140*l.* for the Artillery, are necessary; you say they are not?—We say that they are not necessary, because the organisation is on too expensive a scale for our requirements; but I do not quite see how a committee of officers is to determine exactly what sum we ought to pay for recruits. I suppose an estimate might be made of the cost of the recruits if supplied from two or three depôts, instead of from a large depôt; I think that would be a different thing.

5912. You see the difficulty I am in is that you make a certain criticism; I anticipate the War Office will not accept this criticism; who is to be the determining power? With goodwill on the part of the Commission or the Government, there should be some method of bringing the two parties together; but you do not see your way to suggesting a method?—I think the only method would be by endeavouring to arrive at the cost of recruits, if supplied from a single large depôt maintained on an economical scale, instead of from a large number of depôts.

5913. And how would you arrive at that; how would you test that?—It would be a matter of great difficulty, but I suppose it might be done.

5914. When I asked you about a Commission, I was only thinking that the Indian Government very naturally would have a desire to have an independent opinion, and I wanted to know if you see how you could get an independent opinion on this matter which the Indian Government would accept.

5915. (*Sir Donald Stewart.*) Does not your argument suggest that a more economical establishment would produce the same results as regards men?—Yes.

5916. Would you suggest that if, instead of having 10 or 11 small depôts scattered about, you had one or two large ones, you could reduce the number of staff?—Yes.

5917. That would be the only way, would it not, in which economies could be effected?—I think so.

5918. Is there any other way?—No, I think that it would be a reduction in the number of officers employed and their staff, and in other expenses.

5919. The rank of the officers? In having depôts worked by officers of junior rank?—That, of course, would be an important element.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896

5920. But that is the only way that occurs to you in which an economy might be effected in carrying out this scheme?—Yes.

5921. (*Chairman.*) You say in this memorandum that the depôt charges should be reduced by not less than 100,000*l.* Well that is a very big sum to be economised unless you see your way very clearly to the method by which the economy can be carried out?—Yes; the only method is the one I have indicated, that of having some authority to estimate, to go into the question thoroughly, and see what reductions could be made, or what drawback India might get, assuming that the present system of organisation cannot be altered.

5922. But, at all events, people like ourselves are rather puzzled by seeing such sums as 100,000*l.* put down as a possible economy without any grounds upon which they are based, except the general statement that the charges are extravagant?—No exact calculation could be made.

5923. The next head is the agency charges. Is there any point there to which you could call attention?—Well, the only point was that the Government of India hardly saw why they should pay these regimental agents.

5924. (*Sir Ralph Knox.*) That is hardly a practical question, because there is no such thing as a paid military agent now?—No, they have been abolished now.

5925. (*Chairman.*) Then we come to charges for men who had deserted, died, or were discharged with less than one year's service. On that, I see, the memorandum says: "It is submitted that the Government of "India may ask that India should be relieved of these "charges altogether." Perhaps you would state the ground upon which that demand is based?—We have no means of knowing whether the loss might have been prevented. And it is stated that in the days of the old Warley depôt there were practically no desertions. Then, again, if we were asked to supply a body of troops for the service of the Government at home, we should not charge them for men they never received, if it happened that a certain number of desertions took place before the force embarked. We should not charge both for the number who embarked and also for the men who deserted.

5926. That is in reality a request that the capitation charge should be reduced by that amount?—Yes.

5927. And in this respect you consider that the charge is excessive?—Yes.

5928. (*Sir Ralph Knox.*) Excessive because you think that you ought not to bear any charge for waste arising from desertion or any such causes giving rise to the disappearance of men, when they may have been enlisted for Indian service?—No, we pay so much on the men who embark.

5929. But is not waste of that kind a part of the expense of raising these men?—Yes, but we pay actually the capitation on the number of men who embark.

5930. Yes, but that is loaded, from the War Office point of view, by a certain charge on account of waste, which necessarily arises in this way. Do you not think that India should bear a charge, just as the British Army bears a charge, on these grounds?—I confess, as we pay this capitation rate for men who embark, I do not see why we should.

5931. (*Mr. Courtney.*) Is not the question how that capitation rate is to be arrived at? Suppose, like in the case of the old Elector of Hesse, the men were sold, would not the selling person take into account the total cost of getting the force he did sell, including those who had dropped out on the way?—Yes, I should think he would.

5932. (*Chairman.*) I think that we could agree that this is part of the charge of raising this force; might we not be agreed upon that?—It is, I suppose, part of the charge.

5933. And, therefore, the plea on your part rather is that 7*l.* 10*s.* is a very high rate, and that minor charges of this kind should not be claimed though they are legitimate in themselves?—I confess that hitherto I have always felt that it was scarcely a legitimate charge; but perhaps it is part of the system.

5934. I do not see how you can drop out the cost of men who in the course of nature, by deaths or other casualty, have been an expense; I do not see where

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

that expense is to be charged; if you make a balance sheet that must come in on one side, must it not?—Yes, I suppose it must under the present system.

5935. And, therefore, you should rest on the general argument that the whole charge of 7*l.* 10*s.* is high and that minor items, though legitimately chargeable, should be reconsidered as to whether it is necessary to charge them to India?—Yes.

5936. Then comes the maintenance of young officers on first appointment previous to embarkation. On that the memorandum says: "As India pays a large "contribution for the training and education of the "officers required for India, Indian revenues should "be relieved of a portion of this charge for young "officers"?—Well, one of the contentions is that during the time that these officers are in England, they form part of the British army, and in some cases, while they are retained, their services are made available for duty, or might be made available for duty, which would otherwise have to be performed by officers who would have to be paid for absolutely by Her Majesty's Government.

5937. (*Sir Ralph Knox.*) These young officers are all in excess of the British establishment, are they not?—I do not understand that they are.

5938. A vacancy arises in a regiment in India, and it is necessary to replace the officer who has fallen out for one reason or the other; substitute is recruited in England; he is obtained from Sandhurst, or he is obtained by the Militia examination, and he is appointed to a regiment which belongs to India. Do you not think that that is a proper charge to make against the Indian Government?—Why should we pay for him while he is in England?

5939. Because he is part of the Indian army appointed to fill a vacancy, not appointed for duty in England—not required for duty in England?—Why, for example, should you charge for barrack accommodation, when probably he is on leave.

5940. But do we charge for barrack accommodation for him?—I have found it in calculations, in details, I think.

5941. I do not think so; but you would prefer a system under which the officer should be appointed and kept without his pay until he embarks for India?—No, I did not say kept without his pay; but I would prefer a system under which the charge should fall on the country in which the officer is serving at the time.

5942. But an officer, on appointment, you know, always gets two to three months' leave?—Yes.

5943. Whom is he serving under those conditions?—He is under the general authority of the service at home.

5944. But he has simply been appointed with the view to his being sent out to India to fill a vacancy in the Indian establishment?—Yes, but he has not reached India.

5945. He is in existence because the Indian Government must have him?—Yes, but while he is at home he surely adds in some way to the military strength of England; that is to say, you might utilise his services, if it were absolutely necessary.

5946. Yes, but the Home Government does not want him; he is wanted by the Indian Government; he is appointed because the Indian Government wants him. You would suggest that we should have a system under which officers should not be appointed until they actually embark, in order to meet the wants of India?—No, I should not do that.

5947. You think, then, that if appointed before they embark, the charge for any pay that they may receive should be a charge against the British Government, although they are not on the British establishment, and not against the Indian Government?- I should certainly say that the officers, being in England, might be paid for by the War Office.

5948. They might be, but ought they to be?—Yes, I think so.

5949-50. (*Chairman.*) Your criticism on this point falls under that general argument which runs through your criticisms upon the system, that, namely, when officers are in England, they should be considered as available for English purposes?—Yes.

5951. You hold that, while they are on English soil, they are available for England and not for India?—Yes.

5952. (*Sir Ralph Knox.*) But the logical conclusion of that argument is that India should pay nothing whatever of any expense of raising and training its officers in this country?—Well, this is comparatively a small item. I do not say that; I merely generally contend that we should get a certain drawback.

5953. (*Mr. Naoroji.*) But when the recruit is sent to India he is not sent simply as if India were an independent territory, and for Indian purposes only; he is sent there because British rule is in India; it is for the sake of British rule that they are sent there; a consideration must be made about that?—Yes.

5954. (*Chairman.*) Then, I suppose, on the next heading, cost of young officers of Royal Engineers while under instruction, that your criticism falls very much under the same head, does it not?—Yes.

5955. (*Sir Ralph Knox.*) The case is a little different there; the young engineer officers are under instruction, are they not? and the infantry officer is not under any instruction necessarily?—Still they form an integral part of the Royal Engineers. I do not understand that they are supernumerary in such a case; they form part of the Royal Engineer establishment in England.

5956. Then do you think that the full establishment of Royal Engineers in India can be maintained without raising any additional men to keep up the supply?—I do not quite understand your question.

5957. Half the engineer officer establishment or very nearly half, are serving in India. Do you think it is unnecessary to raise any additional officers in order to keep up the supply to fill the vacancies that arise on that establishment?—No doubt additional officers have to be raised.

5958. But you would seem to say that you thought these formed part of the necessary British establishment?—They form, while serving in England, surely part of the Royal Engineer officers in England.

5959. But they are the young officers specially passed into the Royal Engineers with a view to completing their training and being shipped out to India in order to fill the vacancies in India, and for no other purpose. Is not that their position?—That is so, no doubt.

5960. And do you not think the expense of that is a legitimate charge against India?—No; I do not think that it is.

5961. (*Sir Andrew Scoble.*) I should like to ask you about that, General Collen. Is there not some agreement between the Indian Government and the Home authorities as to the number of Royal Engineers that are to be employed in India?—Yes, it has been laid down.

5962. Can you tell me what that agreement is?—The establishment is 350, distributed as follows; Military Works Department, 150; Sappers and Miners, 61; Public Works Department, 106; Survey Department staff, 39; total 350.

5963. How long has that arrangement been in force?—That was settled in 1857.

5964. A considerable number of these officers are not employed on military duty, but on what you may call civil work in the Public Works Department?—Yes, the number in the Public Works Department was supposed to be 130.

5965. (*Chairman.*) Then there comes a small charge, the difference between the pay of two colonels and one lieut.-colonel on the Indian establishment of Royal Engineers, but employed at home, and the pay of three lieutenants employed instead by India?—Well, I think that in this case it was objected to at the time, but the reason hardly holds good now. I think it was objected to, because at the time the War Office laid stress on the want of lieutenant-colonels, but really we did not want them in India, and we paid the difference.

5966. Are they being paid for now?—Not at this moment, I think.

5967. I think we may look upon this as a case *de minimis*, may we not?—Yes.

5968. Then comes the training of veterinary surgeons for India?—That in my humble opinion comes under the same category as the other charges. These officers, I presume, do duty in connexion with horses in the British mounted services, and we thought that the charge was somewhat excessive.

5969. Sir Ralph Knox, the question how far these officers in training here are useful to England is a very interesting question and important to us;

what do you think would be the best time for taking that question as a whole? The question affects, you see, a great number of these headings. I suppose the War Office have a good deal to say upon the point, that is to say, that they do not think they are of value to England. We hear from Sir Edwin Collen generally his view that India ought not to pay until these officers become available for India. I suppose that you will deal with that point, will you not? or is it a point on which you do not lay any special stress?

(*Sir Ralph Knox.*) I think it is very important that that question is raised; but it is really the case that these are additional officers that the British Government would not think of bringing into existence, except that India wants them; and India wants them as junior officers thoroughly instructed and trained at the Royal Military Academy or at the Engineers' establishment at Chatham. They are not used in the slightest for Home Service.

(*Chairman.*) I understand Sir Edwin Collen's argument to be that, supposing need to arise here, these officers would be available, and therefore they are of service to England in case of need, though they may not in times of peace be necessary. They are in fact part of an actual reserve.

(*Sir Ralph Knox.*) Yes, but, in the same sense, it has been argued that the army in India is in the same condition, viz., that we can use them; under those circumstances we ought to pay for the whole of the army in India.

(*Chairman.*) It is a point that we must not pass by; and I was asking you when you thought it would be most convenient to take it up. Possibly Sir Edwin Collen will have an opportunity of answering you, and perhaps of suggesting questions. It had better be understood that you will ask questions on that point later, and we can then have an opportunity of hearing both sides.

(*Sir Ralph Knox.*) Yes, but it appears to me rather a question upon which some military officer should be asked as to the value of the existence of the men in this country. I think the financial view, the Secretary of State's view, would be that they are in existence only for India, and England does not want them.

(*Chairman.*) That is rather an important point. We have the advantage of the presence of SirEdwin Collen as an Indian military authority, and the question is whether we should not have an English military authority to give information on the point before Sir Edwin Collen goes. I should rather like Sir Edwin Collen to hear what the opinion of the English expert is.

(*Sir Donald Stewart.*) Is not the question one of general application? It would apply not only to the rank and file, but to the professional education of every class of officer trained in England for eventual service in India.

(*Chairman.*) Still, Sir Donald, do we not want an answer on this point? the Indian point is that each of these men in their different spheres, while they are here, is useful for English purposes.

(*Sir Donald Stewart.*) That is a point that should be considered.

5970. (*Chairman.*) As against that Indian view, ought we not to have an English military opinion? At all events we must consider that before next time. If possible, while we have Sir Edwin Collen here, the *per contra* opinion should be stated, so that he can give any answer that he may think fit upon it?—(*Sir E. Collen.*) One point I might mention, with reference to this cost of training veterinary surgeons, we do not make any charge for all the training they receive in India when they are returned to the British establishment. That also applies to a great many cases of officers; we do not charge, for instance, for the musketry training of the British army in India, although we were charged at home. I do not think we are now charged for the Hythe School of Musketry; that charge has been knocked off.

(*Sir Ralph Knox.*) That was when the Indian Government started the same schools of training in India; it was felt that we were under mutual obligations as regards that instruction.

(*Chairman.*) And then the charges were knocked off.

(*Sir Ralph Knox.*) And we knocked off the charge for musketry.

(*Sir Donald Stewart.*) How about signalling?

(*Sir Ralph Knox.*) There is no charge for it.

5971-2. (*Chairman.*) The next heading is cost of examination of candidates for the Indian Medical Service. That, of course, is merely an estimate, and I think it is hardly necessary to go into that question. It is a charge of over 400*l.* in each year. You think that a high one, and the memorandum suggests a reduction of 200*l.*?—Yes, we thought it was too much.

5973. Then come the educational establishments?—In this case, taking the Royal Military College at Sandhurst, the principle of the calculation apparently is, that the whole cost of the establishment is entered, and from that are deducted the contributions of cadets; the net result is so much; upon that interest is added on the total cost of land and buildings at 3½ per cent., namely, 930*l.* Now, we objected to that charge. Those buildings were erected, many of them, many years ago, in 1804, when India maintained its own military college, and we thought, analysing the calculations generally, that that was hardly a fair charge to make against India. Then we thought that it was hardly right that the actual expenditure on behalf of India should be taken in the proportion of one-half of the total expense. The War Office takes the number of officers of cavalry and infantry on the Home and Indian establishments, and gives them as British 3,606; Indian, including Staff Corps, 3,668; and then they say, "Well you must pay half"; but, of course, a great many officers of cavalry and infantry on the Indian establishment never pass through Sandhurst.

5974. And do all the British?—Now, at this time; a good many of them had not passed through Sandhurst, but had passed through Addiscombe, for instance.

5975. (*Sir Ralph Knox.*) But, I think, Lord Welby's question points to the fact that an equally large number of British officers did not pass through Sandhurst with the number of Indian officers that did not pass through?—At that time.

5976. At least at the time this claim was made?—That I do not know of.

5977. (*Chairman.*) The only difference now is that all officers, whether Indian or Imperial, pass through Sandhurst?—Yes, except I suppose the militia—they do not.

5978. (*Sir Ralph Knox.*) No, militia officers do not pass through Sandhurst?—But all but militia officers pass through Sandhurst.

(*Chairman.*) Would you admit, Sir Ralph, that there is any ground for inquiry under these different heads, which are set forth in the appendix?

(*Sir Ralph Knox.*) I do not think so; still less so, because of the fact that India now insists on all officers required for the Staff Corps necessarily going through Sandhurst; she will not take militiamen at all; in fact the larger proportion of the work for Sandhurst now is for the Indian army.

(*Chairman.*) And what do you say to that argument with regard to the excessive nature of the charge for buildings and so forth?

(*Sir Ralph Knox.*) I remember that at one time the College, in consequence of the great increase in the establishment of the army, had to be increased, and it was proposed to the Indian Government that they should share in the cost of erecting the buildings. They declined, I think very properly, but they said they would pay the necessary share of rent for the erection and construction of these buildings. A rent-charge is now made against them for the proportion of the College which is used by them, that rent being calculated upon the money that was shown to have been expended upon the buildings at the rate of 3 per cent. with ½ per cent. for depreciation. That is practically the charge that is made against them for the cost of the buildings at Sandhurst.

5979. (*Chairman.*) Well, now when we come to the Royal Military Academy at Woolwich, the class of criticism with regard to it is very much the same as with regard to Sandhurst?—Very much the same.

5980. I suppose, as far as the future is concerned, if all officers have to pass through these two establishments, you would not object to the proportional division of charge, would you?—No, with one exception, namely, that an officer does not complete his training in England, but has to go through certain military education in India, as for example, garrison instruction. We do not charge the War Office for the additional training that their officers get in India.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

5981. Then have you any remark to make on the Staff College?—The remark which I have to make on it is that the charge is calculated apparently in proportion to the number of officers on the British and Indian establishments who pass through the Staff College and hold staff appointments, and India was charged one-fourth of the annual expenditure at the time because there were 32 British and Staff Corps officers serving in India who had passed through the Staff College and were holding appointments. That we hardly think to be fair, because these officers may not remain in India, and we pay of course directly for the Indian officers who pass: we do not consider that, because the British officers are put on the Indian establishment, we should pay for this particular form of their education.

5982. (*Sir Andrew Scoble.*) Can you say in regard to these 32 officers, how many belong to the Indian Staff Corps, and how many belong to regiments which happened to be serving in India at the time of their admission to the Staff College?—No, I have not got the detail.

5983. What number of admissions to the Staff College, do you know, is allowed to Indian Staff Corps officers?—There are, three I think, now.

5984. Three out of how many?—Out of, at the time this was written, 32; I am not quite sure of the numbers at the present moment.

5985. Anyhow Indian Staff Corps officers are a very small proportion of the officers who pass through the Staff College?—Very small.

5986. (*Sir Donald Stewart.*) Is it not a grievance of the Indian Government that they cannot get admission for more of their officers?—We should have been very glad to have got some more officers admitted.

5987. (*Sir Andrew Scoble.*) Representations have been made by the Government of India on that matter, but they have not been able to obtain any greater number of admissions for the Indian Staff Corps?—No.

5988. (*Sir Ralph Knox.*) Is it not the case that many officers serving in India have passed through the Staff College?—No.

5989. Is it not a necessary part of the training of a certain proportion of the officers of the army?—Yes, it is a general training to improve the army; we do not see why India should pay particularly for the education of the officers who happen to be in India.

5990. But should not she bear her share of the cost of the necessary training given to officers to make them efficient for service in India?—Not in this particular instance, I think; I should say we might as logically charge the War Office for our military Education Department—the garrison instruction that the officers get in India.

5991. But those are omitted, because institutions of the same kind are maintained in both countries; of course the Indian Government might make a charge if we made a charge, but those are maintained, just like the regimental institutions, to keep up the training and efficiency of the soldiers. On the other hand, the Staff College is something special, and India has not a Staff College; and the only Staff College training which an officer of the British Army can get is here: and it is necessary that a certain proportion of the officers of the army should have passed through this college?—Yes, but it is an institution—apart from the few Indian candidates that are allowed to go through it—which was established for the British Army generally.

5992. Including that portion of it which is serving in India?—Yes, that is so.

5993. (*Sir Andrew Scoble.*) Is not the complaint this, that the proportion of officers whose services are secured to India is very small, whereas the number of officers who are practically paid for by India, cease in a few years to serve in India at all?—That is my argument.

5994. (*Sir Ralph Knox.*) But, equally, a considerable number of officers are passing from time to time out to India who have given some of their service in England and given the rest of their service in India, having been trained at the Staff College; and India has the advantage of those services?—The supply is kept up no doubt.

5995. (*Chairman.*) Then the Army Medical School at Netley. On that point I gather that the Indian Government are contemplating the possibility of a disconnection of the Indian service?—That was so when this was written; but it has since been determined to let things go on as they are.

5996. Do you think at present that the charges are too heavy, allowing that some payment should be made on account of Netley?—As I said, it was difficult to follow the method that was pursued in making the calculations; and I merely alluded to the fact that the India Office Committee considered that, as no surgeons had been appointed to the Army Medical Department since July 1887, and only four candidates were selected at the examination in August 1888, all of whom were for the Indian Service, it was necessary to guard against an undue proportion of the cost being charged against Indian revenues: but I am unable to say at the present time what the charge would be.

5997. Then the School of Gunnery at Shoeburyness. Here the memorandum contemplates a considerable reduction, 2,500*l.*?—One of the reasons that we thought made for the reduction of the charge was that we had to pay for the experimental branch of the School of Gunnery as well as the instructional, and that England would be obliged in any case to keep up an establishment to carry out experiments. Also we consider that the numbers of artillery on the two establishments should not form the basis of calculation. We thought a calculation should be made simply on the number of officers sent home from India to undergo a course of instruction.

5998. (*Sir Ralph Knox.*) But every officer of artillery goes to this School of Gunnery, does he not?—At some time or other; not through the long course, I think.

5999. He goes through some course there as soon as he passes out of the Academy and drill?—No doubt.

6000. That is part of the necessary instruction of a young artillery officer, is it not?—I do not think that in every case he goes to Shoeburyness.

6001. (*Sir Donald Stewart.*) I rather think that he must go through a course now?—Yes, through a course.

6002. I am not quite certain, but I think it is so.

6003. (*Chairman.*) Next the School of Military Engineering?—There of course the objection was on the general lines of the other case, that it was hardly fair to charge India so much for the instruction of the young officers of the Royal Engineers, when the professors and instructors had to be kept up in any case.

6004. Then there is the School of Musketry?—That charge has been withdrawn.

6005. The Artillery College?—There again the officers who go through this, I believe, do not always return to India by any means; they take appointments at Woolwich: and we thought the charge was excessive on that consideration.

6006 Now, taking the whole of this head of service, educational establishments, the Indian Government throughout criticises the charges made against them for one reason or another as excessive. Have you ever considered what course would satisfy you in order to arrive at a fair charge? Here, again, I go back upon the same limits as I have mentioned to you before, namely, that the War Office have a reason, and I think we should all admit a fairly arguable reason, on their side; you have a reason, and I think we should all admit a fairly arguable reason on your side, and I want to ask you: Have you ever considered in what form an opinion should be arrived at that would satisfy you as between those two sides?—No, of course, it was with the object of getting such opinion that this memorandum was sent home and placed before, as we hoped, Lord Northbrook's Commission; that was not done.

6007. Of course we should like to know whether the Indian Government have any recommendation to make upon that point?—No. I have never heard of any particular proposition of the kind.

6008. Do you not think it would be a desirable thing that they should formulate an opinion as to what would satisfy them, what form of investigation would reconcile them to paying the sum that that authority might recommend?—Personally I should say that we should have been very well satisfied with the Commission with Lord Northbrook as president, and the members that they had who were investigating the charges and the arguments on all these heads. As I said, Lord Northbrook, after having considered those papers, stated in the House of Lords that he thought 5*l.* a head was sufficient.

6009. I think Lord Northbrook's view was that, if any commission or committee was to go into these questions of principle, it would require to be a commis-

sion differently constituted from that over which he presided?—Yes.

6010. The Indian Government have not considered any form of inquiry that they would like and the result of which they would accept?—No, not with regard to the investigation of these charges particularly.

6011. (*Mr. Buchanan.*) Was this despatch sent to Lord Northbrook's Commission?—No; it was decided, I believe, at home that it should not be laid before his Commission.

6012. But were these points not considered by his Commission?—No. Of course the charges themselves were, but not the arguments which were brought forward by the Government of India in their despatch.

6013. (*Sir Donald Stewart.*) The India Office was very anxious that the memorandum should be laid before them?—Yes.

(*Chairman.*) Do you know, Sir Ralph, why it was not laid before you?

6014. (*Sir Ralph Knox.*) No, I cannot say that?—I think it is stated in the papers.

(*Sir James Peile.*) At first the War Office declined?

(*Sir Ralph Knox.*) Yes, they did.

(*Sir James Peile.*) Subsequently the Commission did not take the letter and memorandum into consideration, because the War Office amended their claims?

(*Sir Ralph Knox.*) They amended their claims in one or two points..

6015. (*Chairman.*) We have got, Sir Edwin, to No. 11. Advance of 25 days' pay to men embarked as drafts to India. On that no question arose, I think?—No.

6016. Then No. 12—Expenses of men awaiting discharge, including travelling expenses of invalids?—There again we have found great difficulty in following the calculation. We thought that the number of days India was charged was excessive, that is, India was charged in 1886–87, for 60 days for men with regiments, and for 36 and 78 days respectively for men who were with detachments or invalids; we thought that the charge for men while they were in England after disembarkation and joining the army reserve, or after discharge, was excessive. We thought that the transfer of the men to the army reserve should be quickly accomplished, and that Indian revenues should not be charged with the pay of the men for a single day after disembarkation, because they then come practically on the military establishment of England. With regard to invalids it appeared to us from the calculation that it was assumed that the invalid was detained 50 days after arriving at Netley.

6017. The contention is that that charge should be reduced by almost one-half?—Yes.

6018. Is that based on any calculation of actual reductions that might be possible?—It was based on a general conclusion, not on any actual calculations.

6019. (*Sir Ralph Knox.*) But it was stated, was it not, that actual experience showed that the invalids, who came from India, did remain in Netley, on the average, 50 days, before they were discharged or sent back to their regiments, was it not?—Was that the average?

6020. Yes?—Is that the average every year?

6021. It was taken over one or two years, I think; of course it may have varied since?—Yes.

6022. But that was the basis of the charge.

6023. (*Chairman.*) Then No. 13—Share of cost of pay and allowances of staff of hospitals and discharge depôts, and expenses of invalids, except pay and travelling?—There, again, we could not follow the calculations exactly.

6024. But there was a representative of India on Lord Northbrook's Commission; did he remonstrate against the data on which these calculations were made? For instance, did he object to the length of time that the men awaiting their discharges were kept upon Indian pay?—Not that I am aware of.

6025. Would you not rather have expected that the Indian representative who was present and heard all these calculations discussed, and took part in the discussion, would have objected if he had thought the data were insufficient?—I do not remember who the officer was except Sir Thomas Seccombe.

6026. I think in Sir Thomas Seccombe India always had a very stout champion of Indian claims?—Yes, I quite admit that under Lord Northbrook's Commission the claims of the War Office were very considerably reduced; but I cannot say whether Sir Thomas Seccombe took exception to those charges, or whether the majority of the Commission may have overruled him. I know this, that as regards the depôts, certainly in his last report, he did make a strong representation—that was at the conclusion of Lord Northbrook's Commission—to the effect that the depôt charges were excessive, and should be inquired into.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

6027. Yes, and the fact of his making such a representation, shows that his attention was fully directed to these matters?—Yes.

6028. And, if he did make a representation upon these other questions, is it not rather *primâ facie* evidence that he, who had to go into the details, did not object to the arithmetical calculations?—I should say so; but of course I do not know what passed before the Commission; it may have been a matter of compromise.

6029. Sir Ralph, have you anything to say with regard to Sir Thomas Seccombe? You see the point at issue is this; there are a great number of objections raised on details, and the difficulty is to find an authority to definitely decide between these different opinions. If you have had a committee on which India was represented, and if the Indian representative, along with the other members of the committee, went through all these arithmetical details, and if he did not object at the time, is not that rather strong evidence that these objections of detail are not altogether well founded?

(*Sir Ralph Knox.*) According to my recollection, Sir Thomas Seccombe did not raise any objection to these minor charges in detail. He went into very great details as regards the charge for the recruits and the period they had served in England, and the period they had to give in India and so on, because he held the view, as the Indian Government did, that an abatement should be made on that account. But I think he accepted the charges that were made on account of the invalids and so forth, from the evidence that was put before him.

6030. (*Chairman.*) If you, Sir Edwin, were assured on that point, should you be content to accept the fact that Sir Thomas Seccombe did not object as sufficient evidence that the arithmetical data were right?—I should be quite prepared to accept the evidence in regard to the arithmetical data; but in a case of this kind in regard to the hospitals, we make no charge against the War Office when soldiers are landed sick in India.

6031–2. That is a broader question. The point which I call the arithmetical point is this:—why should India pay for 50 days for invalids? I class that under the arithmetical objections. What, therefore, I wanted to know was whether, if you were satisfied that Sir Thomas Seccombe did not raise any question on these points, you would be satisfied, while entirely reserving your opinion upon the other points, that that point had been sufficiently investigated?—Of course I should be quite prepared to accept the statement made by Sir Ralph Knox that they are on an average 50 days in hospital, and, therefore, they are charged against India. But taking the question of the army reserve, I do not know why we should pay—I think it is 60 days before they pass to the reserve—because, directly they land in England, they become part of the establishment—at least, they become available.

6033. Your point is that there is no reason why you should pay the War Office for 36 days of a man's service in England, before he is transferred to the army reserve?—Yes.

6034. And what I want to know is whether, if Sir Thomas Seccombe did not raise an objection, you would accept the fact that he was present at the discussion of the question and did not raise an objection, as showing that there was reason for the decision?—I have no doubt that the point received every consideration from him; at the same time I should prefer ——

6035. To know the reasons?—Yes, to record the fact that we thought that India ought not to pay for the man after he had landed in England.

6036. (*Sir Ralph Knox.*) But this 36 days' charge for the man before he passed to the reserve, includes pay for passage, does it not?—28 days.

6037. It takes eight days after they have landed in this country for their discharge?—Yes; we pay everything, in fact—for the men going out and coming home, when they are away from England.

Major Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

6038. But this 36 days, which is put down as the claim for the period, does include the period of the passage home, does it not?—Yes, it is stated here—"including 28 days."

6039. Yes, including 28 days. Therefore, it is only assumed that it will take eight days after the man lands to complete his documents and pass him out of the army?—Quite so, but even so we think that the day he disembarks he should be paid for by England, just as we pay for every soldier whom we embark from England.

6040. But this man is sent home to be discharged, is he not?—He is sent home to be passed into the reserve, not discharged.

6041. (*Chairman.*) Then rebate on men returning from India?—There, again, the Government of India protested against the inadequacy of the rates allowed by Mr. Bouverie's Committee, which, however, are more favourable than the rate which was allowed by the War Office. The argument was that the service that the man gave to India was probably not more than six years out of the twelve total colour and reserve service, so that it might be said that he served the War Office for one-half the period of his service. As a matter of fact, the service in India now is only five years and four months. I have a return which I can put in showing this; it was the original War Office calculation, and that is the actual fact at the present time.*

6042. (*Sir Ralph Knox.*) Do you know when that calculation was made?—It was made some years ago, but I have a return showing the actual service of the men who have come, or are coming, home this last trooping season, and the average service in India of the whole of the returning troops is five years and four months.

6043. That is, I presume, after allowing for loss of service in consequence of invaliding, death, and so on?—It is taking the actual service of the men who are going home.

6044. But, of course, the invaliding, and the deaths and so on, do curtail the average?—I do not think the return takes into account the deaths. It is an abstract statement, showing the number of men who have proceeded or will proceed out of India during the trooping season 1895-96, the duration of their service in India up to 31st March 1896, which is the most unfavourable; and it gives the average for the four Commands, viz., five years four months and nineteen days.

6045. (*Chairman.*) Well, that brings us through all the headings, except deferred pay: and, to summarize, I would ask you whether you have made any calculation of the sums which the Indian Government think ought to be remitted under these different heads, because I see that, upon a number of cases, actual sums are spoken of. For instance, 100,000*l.* under the depôts, 10,000*l.* under the expenses of men who are awaiting discharge, and so on. Have you ever put the total charge on which the capitation is at present calculated on the one side, and the amount, which the Government of India think ought to be struck off from it, on the other; so that, at all events, we might get the views of the Government of India as to what the amount of the reduction should be, apart from those general question of what I may call consideration for the circumstances of India?—I think that the general conclusion come to was that there should be a capitation of 5*l.* per head, taking into consideration all the various contentions brought forward.

6046. That has not actually been put down? That would be taking one-third off?—It was actually put down at 5*l.* in the despatch of 1890.

6047. But upon what was that rate based?—It was based upon all these calculations.

6048. The proposal as shown in paragraphs 18 and 19 of the Despatch of 1890 is to deduct something like one-third, 260,000*l.* on 722,000*l.*

(*Sir Ralph Knox.*) That 722,000*l.* includes deferred pay, does it not?

(*Chairman.*) No, it does not include it. The War Office claim was in 1885-86, 770,000*l.*; 1886-87, 641,000*l.*; 1887-88, 722,000*l.* The Indian Government proposed a reduction of about 260,000*l.*; but I think the actual payments in those years were between 500,000*l.* and 600,000*l.*, were they not?

(*Sir Ralph Knox.*) Yes; the present payment is about 550,000*l.*

(*Chairman.*) 550,000*l.*; that really is a deduction very nearly equal to the amount taken off your claim by the Indian Government? Take the year 1887-8, 722,000*l.*, deduct from it 260,000*l.*

(*Sir Andrew Scoble.*) That leaves 462,000*l.*; the payment is 90,000*l.* more, you see.

(*Chairman.*) Yes, but a very large sum was taken off the amount of that claim.

(*Sir Ralph Knox.*) Yes. That claim, I think, I should explain, went before Lord Northbrook's Committee, and there were several changes introduced into it which were departures from the lines upon which the previous claims had been prepared; and Lord Northbrook decided that we should adhere to the old lines.

(*Chairman.*) Were those proposed departures supposed to be in favour of a larger contribution from India?

(*Sir Ralph Knox.*) Yes. They mainly arose in this way: we found that the actual expense which had been incurred in raising and training men for the cavalry, and for the mounted portion of the Royal Artillery, had been far in excess of the calculated sum; and it was proposed to charge India with the actual cost that had been incurred both at the Cavalry depôt and at the Horse and Field Artillery depôts: but Lord Northbrook decided that we should proceed upon the previous arrangement, which was a calculated sum considerably less than the actual charge.

6049. (*Chairman.*) We may now pass to deferred pay. Would you tell us the history of deferred pay? It is a comparatively modern charge, is it not?—Yes. It was introduced, I think, in 1876, and was first fixed at 2*d.* per day, and is now at the rate of 3*l.* a year. It is given for service, with the colours or in the reserve, up to 12 years.

6050. (*Sir Ralph Knox.*) But it goes beyond that for non-commissioned officers now?—Yes, up to 21 years, is it not? That is, for non-commissioned officers above the rank of sergeant.

6051. No; including the rank of sergeant?—Including the rank of sergeant? I thought it was above. The charge for deferred pay has risen from 29,000*l.* in 1879-80, to 208,140*l.* in 1892-93 as estimated.

6052-4. (*Chairman.*) The amount actually issued in 1879-80 was 29,000*l.* As you say, it is running forward. In 1891-92 it was 241,000*l.*; in 1892-93, 208,000*l.*; in 1893-94, 188,000*l.*; in 1894-95, 230,000*l.*?—It was said by the War Office in 1876, I think, that the maximum probably would be reached in 1890, and that the total amount would be 325,000*l.*, of which 51 per cent. would be paid by India. Then I think there was another calculation that it would be reached in 1895, and that 220,000*l.* would be payable by India.

6055. Well, it actually is 230,000*l.*?—It has increased beyond the maximum.

6056. That, I suppose, is due to the increase of the the forces in India, is it not?—I do not know whether the last estimate was made since the increase or before it.

6057. But at all events may we look upon it, as far as you know, that we have now about reached the maximum?—I am hardly able to say, but I should hope so.

6058. Do you happen to know, Sir Ralph?

(*Sir Ralph Knox.*) Yes. It is supposed to be now at its maximum; it varies from year to year, sometimes we have a high year and sometimes a low year.

(*Chairman.*) For instance, in 1892 the Indian charge was 242,000*l.*, falling to 138,000 in 1888.

(*Sir Ralph Knox.*) We look to the average normal Indian charge as about 211,000*l.* a year.

(*Sir James Peile.*) Three times seventy thousand?

(*Sir Ralph Knox.*) Yes, three times seventy thousand.

6059-60. (*Chairman.*) Well, against that increase of effective charge, could you tell us at all what is the effect of the short service system on the non-effective charge?—I think it would be very difficult to say what would be the financial effect of the short service system. I think, if I recollect right, that when the War Office claimed that there had been 200,000*l.* saved on pensions, Lord Hartington in 1881, when he was Secretary of State for India, contended that part of the saving on those pensions would have accrued in any case. Then there must be an extra charge on account of transport:

* *See* Appendices 55 and 56.

and I think that a Committee of the Council of India said that it would cause an extra charge of about 125,000*l.* to 150,000*l.*

6061. But the facts are not in that direction, are they?—I think that can be explained when we come to that subject.

6062. I may remark in passing that the cost of the Indian troop service in 1870–71 was 303,000*l.* and in 1877–78, before the increase of forces, about 193,000*l.*, and I think it has risen now to 255,000*l.* Therefore it can hardly be said that the cost of transport has increased?—No.

6063. And I may add that I was looking yesterday at the cost of transport, and I found that, if you take the average up to some little time ago, perhaps five or six years ago, it was 300,000*l.* a year, and since then it has fallen. Therefore I do not think, if we may judge from those figures, we can quite say there is any extra charge on that account?—But I think, if I might be allowed to say so, that the decrease must be due to other causes, because if you have an army which has to be relieved once in every six years instead of once in every 12 years, the expenses of transport must be larger; I mean, another set of considerations must come in.

6064. Quite so?—I think, with regard to the age of the troopships and so on, and the way the calculations are made they show a decreasing charge on that account.

6065–6. Quite so. I am only calling attention to the fact that, on the face of the expenditure, the transport charges have, as I have said, very largely decreased?—Yes.

6067. The decrease may be due, as you say, to other causes; but so far there is no extra charge to the taxpayer under that service?—No. What we should say would be that if we had the men for 12 years instead of, say, for six years in India, we should have got a much larger reduction of transport charges.

6068. Then on the other hand, while the deferred pay amounted to 230,000*l.*, calculations have been made as to what would have been the non-effective charge under long service, and what it will be under short service in a normal condition. I have before me a calculation by Sir Ralph Knox showing that, when the normal condition is reached under short service, the charge for deferred pay will be, as Sir Ralph Knox has stated, about 211,000*l.*, and the pensions about 302,000*l.*; whereas, the non-effective charge would have been, if the long service had continued, 971,000*l.*?—Yes, on the supposition, I think, that the long service spoken of is the long service of the Enlistment Act of 1867, under which men were enlisted for 12 years, and subsequently encouraged to re-engage for another nine years so as to complete 21 years' service with a pension; but we do not want that in India; we do not want a large pension list; all we want is to get rather longer service than the average time that the man now spends in India. I do not think we can go back to the long service; I do not think that any one would propose that; that is to say, not to a long service with re-engagement to 21 years.

6069. Then, what would your proposal exactly be? at present, under short service, service under the colours is seven years, is it not?—It is seven years, with five years in the reserve; and an additional year of foreign service, making eight years.

6070. And what would you propose?—I have not any distinct proposition to lay before the Commission, but, generally speaking, we should wish to get a longer time than the very short period of five years we now get.

6071. But, I suppose, the Indian Government have formulated in some shape what length of service they would like?—They have on various occasions, I think, expressed their opinions.

6072. Twelve years?—Well, 10 years, I think they have mentioned. In fact, the service was extended to 10 years, was it not, in 1883?

6073. (*Sir Ralph Knox.*) Some few men have been allowed to go on for 10 years, or asked to go on for 10 years?—I thought the terms of enlistment were altered.

6074. No.

6075–6. (*Chairman.*) Then on this question of the deferred pay, are there any other remarks that you would wish to make for the information of the Commission?—No, I do not think I have anything more to say except that it was introduced without the consent of the Government of India.

6077. (*Mr. Buchanan.*) Does that mean that they had no notice of it and were not consulted about it?—I think they were not consulted about it at all.

6078. And yet it entailed upon them this large annual charge?—Yes.

6079. (*Sir Ralph Knox.*) What is meant by saying that the Government of India was not consulted, is that the Government out in India was not consulted; not that the Home Government—the Secretary of State—was not consulted?—I referred to the Government in India.

6080. (*Chairman.*) I am under the impression that I have seen the objection raised that India got no benefit by the deferred pay?—Oh, it is not, I think, in this paper. Of course, the advantage of deferred pay has been questioned by officers, and I think it has been alleged as a reason that it operates against men re-engaging in India to extend their service, because they say, "We have got this amount of money coming; "let us go and spend it."

6081. (*Sir Ralph Knox.*) But do you really think that men would be allowed to extend their service or encouraged to extend their service much longer in India without at the same time giving them the option of going on to pension?—I think they would extend their service say for two or three years; I do not think it would be necessary to grant pension.

6082. Say 10 or 12 years service; 12 years as a soldier out of a man's life: do you think that it would be fair to him to require that he should return to civil life without giving him the option of going on to pension?—I think it is a point for the man to decide; you would no doubt get some reserve service out of him.

6083. But if it is for the man to decide, he must have the pension?—I do not think that you need give a pension for 10 years' service or 12 years service.

6084. No, but if he gives 12 years' service, do you not think that he must have the option to go on to 21 in order to have the pension?—I see what you mean; not necessarily.

6085. If he is a good soldier and a well conducted man?—In some cases it is advantageous to keep a man—not as a rule—after he is 30 or 32.

6086. But I am looking at it not from the government's point of view, but from the point of view of the man. Is it fair to enlist him and require him to serve 12 years as a soldier, and then send him away without any provision at all?—I should say that, if a man enlisted on those terms, there would be nothing unfair about it.

6087. Well, I ask the question because, I think, it is certainly held by all the authorities here in England that it would not be fair, especially when a very large portion of those years has been given in India?—Would you say he ought to have a pension if his service was for nine or ten years?

6088. Nine years of course is only one year more than the period he serves now?—If you reckon the additional year.

6089. Well then, when men were enlisted for 10 years, they had the option of going on for pension. Of course that is the great difficulty. If a man enlists for a short service and he serves for seven or eight years, though that is a long period to call short service, he is in a position of age and vigour to enter upon civil life; but if you keep him for 10 or 12 years and he gives those years in India, it is thought that he is really completely unfitted to start again in civil life, and therefore you must make some provision for him. The provision in former times was always that he should have the option of going on to a pension after 21 years' service?—I do not know whether that was the case with a large number of men enlisted in 1883. They were re-engaged because the War Office could not supply the number of recruits. India paid the bounty for them, and, I think, there were considerable numbers re-engaged to complete 12 years' service; but there was no question then raised of pension.

6090. No, but then the bargain was struck on the spot, as it were, with the men. The men had the provision given to them; they got their 10*l.* or 12*l.* to do that?—Yes; but that was different from a pension for life.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

6091. (*Chairman.*) The paragraph I was speaking of, and in which I thought that the advantage of the reserve to India was not admitted, is paragraph 18 in this paper of Sir Henry Waterfield:—"The principal "advantage of the short-service system is that a "reserve is provided by means of which the battalions "at home can be raised from a low peace establish- "ment to their full strength for service in the field; "but this advantage is not shared by India, where the "battalions are always kept at their full strength. "The system will, therefore, only benefit India when "she requires reinforcements of British troops, pro- "vided that she is then charged only with the cost of "the transport to India of the men sent to the re- "serve"?—Yes, that is a statement of the case.

6092. And would that represent the views of the Indian Government?—Yes, I think so.

6093-4. You have given us some valuable evidence on the subject of short service. Might I ask you, if you know what is the average service in India of men of Her Majesty's forces? Is it actually five, six, or seven years, or what?—Well, they actually serve on the average five years and four months in India.

6095. That is the average, as ascertained after you have taken into consideration the men who have re-enlisted and so forth?—It is the average of the men who have to go home.

6096. That is to say, if you take the average of all the troops belonging to Her Majesty's forces that go out to India, their actual service in India would be five years and four months?—Five years and four months.

6097. (*Sir Donald Stewart.*) That only applies to those who have actually come home every year?—Yes.

6098. A certain number of them remain?—Yes, the average service in India is five years, I think.

6099. (*Chairman.*) I do not quite follow that; if the service of the men who come home is five years and four months and if a certain number of men remain on, that would tend rather to lengthen the average service in India, would it not?—This, I think, means the average number of years in the army not with regard to Indian service only: but out of the whole number of men in India on the 1st January 1895 there were 45,399 between 18 and 25 years of age, and 19,184 between 25 and 30 years of age, and between 30 and 50 years of age 3,209, the total making up 67,792: so that 45,399 were under 25 years of age.*

6100. But then surely the average service would be very considerably increased if you took in the average service of those 19,184 older men, would it not?—A great many of those between 18 and 25 years of age were much younger than 25.

6101. Quite so, but I mean, if five years is the ordinary average service, it would be raised by the men who stay beyond that time, would it not? All those men would stop out to be 25, would they not, except those who were invalided home?—Yes.

6102. Therefore you have to take into consideration, first of all, the men under 25 years of age who have served their five years or five years and four months or whatever it might be, only reduced by the number of men who were invalided. Nobody would come home at 23 years of age or 22, except he were invalided, because his engagement was for seven years, was it not?—Yes.

6103. Therefore, if he comes home at 22 or 23 years of age, it must be because he is invalided; therefore, every man serves seven years unless he is invalided home?—That is including the years he has passed in England before he came to India.

6104. Then we understand that your complaint is that that is rather a short service for them, is it not?—We get a short period of that service.

6105. That the men are sent out to you not perfectly trained?—That has happened in some cases.

6106. But at all events as a rule, there is not more than about a year's training in England, is there?—There may be over a year now.

6107. Therefore, that would leave six years' service in India, would it not?—Yes.

6108. If they are engaged for seven years, and they are one year here, before they go out to India, that means six years' service in India?—Yes.

6109. And then a number of these men re-enlist for longer service, which is evident by there being pretty nearly one third of the whole force over 25 years of age?—Yes. I can only give the figures from the return that was published; and it is corroborated entirely by the calculation made by the War Office actuaries. They said that it would be five years and four months, and it is so in this return that I have.

6110. It is not quite easy to follow, Sir Ralph Knox, is it?

6111. (*Sir Ralph Knox.*) Yes, I think so; it is not likely that the service would be very much longer, inasmuch as so large a proportion of the men are enlisted at an age from 18 to 19, and the stipulation of the Government of India is that they shall not go to that country until they are 20?—Yes.

6112. And as their total service is eight years, including the year for which they are extended, because they go abroad, that would give for those men a maximum service in India of six years.

(*Chairman.*) That is what I say, six years is the maximum; but then, when you take the average service of the men, you have to add to that the number of men who re-enlist, and are therefore over 25 years of age; and as, from Sir Edwin Collen's figures, these appear in a proportion of 19,000 to 45,000, less than one-third, but approaching one-third, must have re-enlisted.

6113. (*Sir Ralph Knox.*) The number who extend their service is not great?—No, it is very small.

6114. I think I have a return showing it.

6115. (*Chairman.*) But there are 19,000 over 25 years of age?—Between 25 and 30 years of age.

(*Sir Ralph Knox.*) In the return, dated 1st January 1895, there were 74,800 men serving in India; the number of these serving on their original engagements was 61,649, those who had extended their service, some of whom might still have been on their original engagement, was 6,804; the number of re-engaged men was only 3,222.

(*Chairman.*) That does not carry you up to 74,000; that carries you up to 70,000.

(*Sir Ralph Knox.*) Then there was another batch who had enlisted for long service and who were in their first period—3,000; that makes the total.

(*Chairman.*) Really that makes 74,000, of whom 13,000 take longer service under one condition or another.

(*Sir Ralph Knox.*) Yes.

(*Chairman.*) But, so far as those 13,000 men are concerned, they would tend to lengthen the average service, would it not?

(*Sir Ralph Knox.*) Yes, each one of those would tend to lengthen the average service. I have here a return showing the services of the men who were sent out in drafts in 1894–95 which is interesting. There were 10,685 altogether. Of those only 1,392 had enlisted in the year 1894, 4,444 enlisted in the year 1893, that is the year before, 3,033 had enlisted in the year 1892, that is to say, had completed from two or three years' service.

(*Chairman.*) Before they went out?

(*Sir Ralph Knox.*) Before they went out—3,033 in 1892, and there are some—a small number—670 who had enlisted in the previous year, in 1890, and 64 in 1889.

6117. (*Chairman.*) Then would you give us your view as to what should be the principle upon which India is repaid, when she lends troops for expeditions outside India. Of course I am speaking of such expeditions as the expedition to Abyssinia, the expedition to Egypt, and the expedition to Malta?—I think the principle should be that India should be relieved entirely of the charges on account of the military forces lent to England, just as India paid for all the pay and expenses of the forces sent to India in the Mutiny; only that in the case of the Mutiny, I think, we paid for all the training of the troops, and naturally India would not bring forward such a charge in case she lent troops to England.

6118. In the case of Malta, I think, the whole was repaid, was it not?—It was.

6119. Can you tell us in the same way what was the proportion in the Egyptian campaign?—In the case of the Egyptian campaign India paid all charges except 500,000*l.*; she got a grant in aid of 500,000*l.*

6120. And do you know at all what the total charge was?—About a million and a half or two millions of Rx.

6121. Then, again in the case of Abyssinia, England paid all the charge, did she not, except the ordinary pay of the Indian troops?—Those were paid by India.

* *See* Appendix 57.

6122. The principle of that being that, where India does not replace the men—where her troops are lent for a few months and are not replaced—she might be asked not to make a charge for that which was already provided for in her budget?—Yes; but I would point out that that is not the way in which charges are dealt with, when the contrary case occurs, that is, when troops are sent from England to India, as in the case of the Mutiny.

6123. Quite so; that is the point I want to give you the opportunity of bringing out, namely, that from your point of view the two countries are not treated similarly?—No. I think, in the opinion of the Government of India, they should be treated exactly in the same way, and India should pay no part of any of the charges for forces which are lent to England for employment. Even in the particular case of Suakim, after the termination of the expedition of 1885 the Indian troops were left in garrison at that place, because, I believe, it was not considered desirable to employ British troops; but it was decided, contrary to the opinion of the Government of India, that the ordinary cost of the troops and vessels should be borne by India up to the date of their relief, which was to take place early in May; that is to say, India maintained a garrison at Suakim for Imperial purposes, the ordinary cost of the troops being borne by India, although, as we contended, the purposes of the garrison were distinctly of an Imperial nature.

6124. Might we not say that the rule as laid down in the case of the Malta expedition establishes the principle that where Indian troops are sent on a purely English expedition, then England bears all the charge; and, in the same case when India borrows troops for a purely Indian purpose, such as the quelling of the Mutiny was, then India pays all. But, of course, there is an argument that, in the case of Egypt and Abyssinia and expeditions of that kind, there is a certain partnership of interest in the war. There cannot be very much question, I suppose, that India would be injured by the closing of the Suez Canal; therefore, if it were thought that what was going on in Egypt might end in the closing of the Suez Canal, India was to a large extent interested in that and might, therefore, fairly contribute. Should you contest that?—I think it was generally contested by the Government of India.

6125. I am only trying to distinguish the different cases. There are some cases in which there is no question of either country being alone interested in the expedition. Then there are other cases, in which it would be admitted that both have a joint interest; I do not say that that necessarily carries with it that both have to pay, but they have got a joint interest?—I do not think that India had such an interest in Egypt that we should have been called upon to pay part of the charge for the Egyptian expedition.

6126. In that case you showed that India paid about 1½ to 2 millions of Rx., of which she only got back 500,000*l.* Well, that might be far too large a share, but should you be prepared to maintain that India should not pay a farthing?—I do not think that she ought to have had to pay anything for such an expedition.

6127. And would you carry it so far as to say that, if she only lent troops which she did not replace, she should not provide even the ordinary pay of these troops?—I should say that she should not even provide the pay of these troops, because she takes a certain amount of risk by the absence of those troops.

6128. You carry your argument so far as to say that, even where she is interested, she ought not to pay?—Well, I should say where she is directly interested, she should pay; but not where she is only indirectly interested.

6129. (*Sir William Wedderburn.*) Would it not be a more satisfactory method, where primarily the object is an Imperial one, that in the first instance the whole expenditure should be borne by Imperial funds, and then for the Imperial Government to prove what India might fairly contribute, instead of making India pay all, and giving a certain contribution?—No doubt that would be, from the point of view of India, satisfactory.

6130. (*Sir Andrew Scoble.*) Is not this the principle on which the Government proceed, that there is a certain solidarity of interest between England and India in all these matters?—Yes.

6131. And that the same treatment ought to be adopted in all cases; that there should be absolute reciprocity, and that where India is called upon to pay England should be called upon to pay, and *vice versâ*?—Yes. Are you speaking of expeditions, or of the whole subject?

6132. Of expeditions outside India?—There should be reciprocity, undoubtedly.

6133. And that is what the Indian Government has always contended for?—Yes.

6134. (*Chairman.*) But I did not know that Sir Edwin Collen admitted so much. I thought he was rather arguing that, wherever any charge arose outside India, the English Government ought to bear the whole charge?—I said in cases in which India was not directly concerned.

6135. Then how would you distinguish between "directly" and "indirectly?" Would shutting up Egypt not concern India directly? I am putting in my own words what I gather to be your thought, that in a case of that kind India need not contribute. In that case, I take it, you consider she is not directly concerned?—No, not directly concerned.

6136. And therefore you would not have her contribute in that case?—I do not think she should have had to contribute to the war.

6137. Then surely it follows that you can hardly imagine a case outside India in which India could be called on to contribute?—I should say, for instance, if the action of a certain nation threatened the frontiers of India, that is, outside India.

6138. That is part of the defence of India?—If a European nation threatened India, then of course India should pay her share.

6139. I believe the Persian expedition is a moot case very much discussed. I suppose the Persian expedition was undertaken because statesmen of the day, at all events, thought that India was interested in it?—The supremacy of the British Empire was interested.

6140. I am not arguing that India should pay the whole charge?—In Persia we approach, of course, very near towards India and its interests.

6141. In a case of that kind, you think, we might hold that India was directly interested and might contribute?—Yes.

6142. (*Sir Ralph Knox.*) Is not the converse of the case of troops being required in India from England, the case of England requiring troops from India in England?—No, not altogether.

6143. The idea is that there may be a disturbance or war outside both India and England in which both are jointly interested; there surely will be cases of that kind?—Yes, if India is directly interested in the case, then I think India might very well contribute.

6144. You would appear, I think, to limit direct Indian interests to cases occurring in the Asiatic Continent?—Yes, roughly I should say so.

6145. But not across the seas anywhere?—Take the case of Abyssinia, why should India have paid for Abyssinia?

6146. That is a case of across the seas?—Yes.

6147. And you would appear to limit Indian interests to the Continent of Asia?—Yes; but I do not say that, even in that case, I think India should pay the whole charge. Supposing it were a great Imperial war brought on by Imperial policy, surely India should not be called upon to pay the whole of the charges in that case.

6148. (*Chairman.*) But has not that principle been conceded in the case of the Afghan war, where England did contribute?—5,000,000*l.* was conceded.

6149. Did the Afghan War, cost 15,000,000*l.*?—Yes, I think it cost more than 20,000,000*l.*—22,000,000*l.*

6150. (*Sir Donald Stewart.*) 19,000,000*l.* I think?—I thought it was over 20,000,000*l.*

(*Chairman.*) But so far as the principle goes, that principle for which you are contending was conceded, I think, was it not?—Well, it was conceded on that special occasion by Mr. Gladstone, but I do not know that it has ever been laid down.

6151. No, but I mean that it was done in one case; I am trying to get the cases in which opinion in England and India is not very far apart. Now, for instance, in the Afghan war the principle of the contribution to India when Imperial policy is concerned, has been recognised, and a precedent has been created. So, too, in the case of the troops being taken to Malta, there has been no difference between England and India,

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

because it has been ruled that England should bear the whole charge. I do not know whether India assents to that. The Mutiny was a purely domestic matter. In that case India had to pay for the whole of the troops which she drew from our reserves. Now we come to the extreme cases outside, such as the Persian war, in which I gather that you think a contribution might be made by India. But in the Egyptian war and the Abyssinian war you think that no contribution ought to be made in any shape, not even in the lending of troops which are already provided in the budget, and therefore by the loan of which, if the whole charge is repaid, India would actually make a profit?—Yes; I say she has to take a risk. She may in the middle of the campaign have to raise fresh troops.

6152. But the arrangement was, in a case of that kind, that she was to be repaid; it was only when she did not replace her troops that she was not paid?—Yes.

6153. Now is there not a certain difference between making a profit by the war and not making an extra contribution?—But I think that was what was done in the case of the Mutiny, England not only charged India——

6154. That was for a purely domestic difficulty in India; and India bore all the charges: just in the same way when India sent a force to Malta, which was supposed to be on purely English business, England bore all the charge?—I think there was this distinction that we did not charge the Home Government for raising the troops that were sent to Malta.

6155. That is a very fair point to raise, that is to say, that we charged you more in the case of the Mutiny than you have charged us in the case of Malta?—England charged India the cost of raising the troops.

6156. (*Sir Ralph Knox.*) Was not the cost of the depôts that were established to enlist them, what India paid?—I think it was the cost of British troops to be sent to India.

6157. There was no capitation rate in existence in those days?—No.

6158. And the system was to charge for the depôts?—But also, I think, other charges entered into the calculation.

6159-61. (*Sir Andrew Scoble.*) I should like to ask with reference to two occasions in which England paid for the services of Indian troops: one was the China expedition in 1859, and the other was the Malta expedition in 1878. Now, in those two cases, did England pay more for the services of those troops than their actual pay, during the period they were employed on that foreign service?—England paid all the charges apparently.

6162. Yes, but what do you include in all the charges? Were they pay and transport and so on? or was there anything paid in respect of the training in the military establishments in India?—No.

6163. But simply the pay of the troops while they were employed on that service?—Yes.

6164. And it was the same in regard to the troops sent to Malta, was it not? their actual pay and allowances were defrayed by the British Government during the period they were employed in the Mediterranean?—Yes.

6165. (*Chairman.*) But are you quite sure that, in the case of the Mutiny, India was charged with the cost of raising the men? Are you quite sure that that principle of repayment was adopted during the period of the Mutiny?—I have always understood it to be the case.

6166. (*Mr. Naoroji.*) Lord Northbrook said so?—Yes, he did.

6167. (*Mr. Buchanan.*) Has not the principle of this charge been laid down by the Government of India Act of 1858 in which it says that:—"Except for preventing or repelling actual invasion of Her Majesty's "Indian possessions, or under other sudden and urgent "necessity, the Revenues of India shall not, without "the consent of both Houses of Parliament, be applicable to defray the expenses of any military operation, carried on beyond the external frontiers of "such possessions by H.M. forces charged upon such "Revenues."?—That principle has been laid down; but then I suppose the House of Commons ratified the charge.

6168. Does not that Act clearly lay down the principle that, whenever Indian forces are used outside the frontiers of India, they can only be charged upon the Indian Exchequer under certain special circumstances that is to say, when Parliament has given its assent thereto?—Yes. The Government of India said:—"We "consider nothing but the most extraordinary case of "necessity would justify the application of the revenues of India to defray the cost of a military operation carried on beyond the frontiers of India, without "the consent of both Houses of Parliament."

6169. That would show that at any rate the intention of Parliament when they framed the Government of India Act, 1858, was that cases like Abyssinia, certainly, should not have been charged against the Indian Government?—Yes. The Government of India went on to say, if I may venture to point it out: "We submit, "however, that before Parliament is called upon to "deliberate upon a question of this importance it would "be advisable that it should be placed in possession of "the opinion of the Government of India, and should "have an opportunity of learning any objections "which that Government may entertain to Indian "revenues being made to bear all the charges on "account of an expedition carried on beyond the "frontiers of Her Majesty's Indian possessions."

6170. Would you say this parliamentary control, however, has not been as effectual as the Government of India would like?—Yes.

6171-2. I mean, looking at the list of expeditions, we find that the Abyssinian expedition, the Perak expedition, and the two Egyptian expeditions have all been charged upon the Government of India. Still, looking at it from the point of view of the Government of India Act, would you agree with me in saying that, in accordance with what appears to be the intention of that Act, India should not have been charged with the ordinary expenses, much less with the extraordinary expenses, of any of these expeditions?—That is my personal opinion; but I can hardly express the view of the Government of India on those points.

6173. We know they urged it very strongly with regard to Abyssinia, and with regard to Egypt?—Yes.

6174. And was it not the fact that, with regard to Egypt, at first the Home Government wished to impose the whole of the expense on the Government of India?—That was so.

6175. It was only after the matter was brought before Parliament that the Government were induced to make a modification and contribute half a million, or whatever it was?—Yes.

6176. With regard to Perak, I do not know what the amount was, but I see that it was all charged upon the Indian revenues; was there any substantial Indian interest involved there?—I do not think so certainly.

6177. That was also the opinion of the Government of India?—It was.

6178. There was no resolution even submitted to Parliament on that occasion?—No; I am not aware of it.

6179. That was so: and that was a case in which the Government of India Act was not complied with in regard to these charges?—Yes.

6180. I gather that you would say that with regard to the Afghanistan wars there was an Imperial interest involved and an Indian interest involved?—There was.

6181. And, therefore, that the Home Government might fairly ask India to contribute a certain amount to the expenses of these expeditions?—Yes, or, *vice versâ*, India might ask the Home Government to contribute.

6182. I rather put it in the way I did, because I was going to ask you whether you did not agree with what Sir William Wedderburn said a short time ago, namely, that, in accordance with the terms and intention of the Government of India Act, the expense of all these expeditions, external to the frontiers of India should, in the first instance, be borne by the Imperial Exchequer, and, if need be, the Home Government could apply to India for a grant in aid?—I should not like to answer that question without fuller consideration.

6183. No. But you would agree that a fair claim might be made for part of the charge for expeditions like the Afghan expeditions being borne by India?—Yes.

6184. A part of it, as opposed to the case of those other expeditions?—Yes.

6185. Then with regard to the China expeditions, I see that the cost of the second and third China expeditions was borne by England, and that the expense of the first China expedition was borne by India?—That is to say, the ordinary expenses; the extraordinary expenses were borne by England apparently.

6186. Was there any reason for that which you know of?—I do not know of any.

6187. But you would certainly adhere to the later precedents as being more fair in their treatment of India?—Yes.

6188. I see, with regard to the third China expedition in 1859, that the ordinary charges were borne by England, except the expenses of the Indian Navy vessels. That, I suppose, means that the transport had to be paid for by India?—That is to say, such of the Indian Navy as were employed. There were many other transports, I suppose.

6189. To take a converse case, was the transport to Malta borne by England or by India?—I should think by England.

6190. (*Chairman.*) Speaking of the China war, in all fairness it should be said, should it not, that India has a certain interest in the matter, because she derives a very large part of her revenue from China—the opium; she is not altogether uninterested?—But, if I might say so, England derives a large part of her revenue from Indian tea which she taxes. We should not ask England to contribute towards the expense of putting down a disturbance in Assam, for instance, on that account.

6191. I was not saying that India was the only party interested; I was asking whether India had not a share in the interest?—Oh, no doubt.

6192. Happily India is getting so rich that she is making us independent of China for tea, and we give a large tribute to India for tea, do we not, as the fashion of speaking is?

(*Sir Andrew Scoble.*) Only in the sense of paying for what we drink.

(*Mr. Caine.*) And tax her well before we drink it.

6193. (*Chairman.*) But, practically, India had an interest in the trade?—Oh, she has an interest in China, of course, and in all other nations in the East.

6194. And it is also the case with regard to Perak, that India made an excellent bargain, for Singapore up to that time belonged to India?—I think it was transferred years before that.

(*Sir Andrew Scoble.*) I do not know that it was a very good bargain for India.

6195. (*Chairman.*) You have stated that the Indian Government objects to the 7*l.* 10*s.* capitation charge; and I think you have mentioned that Lord Northbrook spoke of 5*l.* in the House of Lords?—Yes.

6196. But he did not speak as an official of the Indian Government. Can you tell us whether the Indian Government have any rate to propose?—I think that is the rate they would propose, 5*l.*

6197. Then I think at the close of your memorandum you say: "The general principles should be determined "which should regulate the division between the "British and Indian Treasuries of the charges on "account of the European troops in India, with special "reference to the fact that the military forces of the "United Kingdom are organised to meet the require-"ments of the whole Empire, that India has no voice "in deciding on the nature of such organisation, and "that she, as a poor country, is made to enter into a "general partnership with England, one of the "wealthiest countries in the world. The contribution "to be paid by India should be decided with special "reference to the relative positions and wealth of India "and England, to the fact that India supplies a great "training ground for the British portion of the Indian "army. Further, it is considered that a contribution "should be made by the Imperial Exchequer towards "the cost of the fortifications which have been erected "on the frontier, or to defend the ports of India "against attack by great European Powers, and that "England should bear a share of the cost of Aden "which is practically an Imperial fortress." I read those paragraphs in order to ask you whether you would wish to amplify them in any sense?—No, I think that that represents in brief what I wish to say.

6198-9. We may now pass to the non-effective services. Would you explain to us generally the principle upon which the non-effective charge of Her Majesty's forces serving in India is calculated? There have been so many changes prior to the great change of 1882-84 that I think it is hardly worth while going back to the past. Perhaps you would tell us the way in which it is calculated at present?—The new system, as I understand it, is that the proper Indian share of the annual payment to each pensioner on the basis of past services, is ascertained in the same manner as has hitherto been the practice for the purpose of capitalization, but India is debited for the financial year, in the course of which the retirement occurs, with one-half of her annual share reduced by the chance of the pensioner not living one year. For subsequent years, India pays her original share, adjusted by the chance of the pensioner being alive in the year, and, in the case of temporary non-effective pay, such as half-pay, there is a counter charge in favour of India from the year in which the individual reverts to full pay. I should like to remark that, although the contention of the Indian Government at the time applied to the non-effective charges as determined in a great measure by the capitalisation system, yet what they said at that time appears to be applicable now to a great extent. They said in 1883:—

"There is no doubt an appearance of fairness—and we venture to think that it is only an appearance—about the present system. An officer or soldier serves, say, for 20 years in the Army, of which 10 years are passed in India and 10 in England. What, it may be urged, can be fairer than that India and England should contribute equally to the pension of this officer or soldier? Without doubt, if we once accept the principle that the division of charge should be made by a rateable distribution on an actuarial basis, the conclusion that each country should pay part of the pension in the exact proportion of the services which have been rendered to each is perfectly fair. But we maintain that in practice the rateable distribution is exceedingly unfair to India. It pre-supposes that there is a partnership between the two countries. And so, to a certain extent, there is, but there is no freedom of contract. It is a partnership in which the rich and powerful partner is able to prescribe the conditions under which the business shall be carried on, with very little reference to the wishes or to the means of the poorer and weaker partner. We would invite attention to paragraphs 44 to 47 of our Military Despatch, No. 401, of October 29th, 1881. We would also invite attention to the following passage in Mr. Cross's letter to the Treasury, of March 2nd, 1883. Speaking of the increase in the non-effective charges, Mr. Cross says:—

'Part of the increase is due to measures carried into effect by the British Government for purposes unconnected with India, such as the abolition of the purchase system, and consequent grant of pensions to officers, the compulsory retirement of officers on attaining certain ages, the re-organisation of the Army Medical Department, and other steps which, by compelling India at once to become liable for the capital value of such pensions, so far as they are due for service in that country, hinders the non-effective charge from falling in the manner expected when the arrangement was originally made.'"

And they then go on:—

"The argument as regards the abolition of the purchase system appears to us to be particularly strong. That system existed in England from the days of William III. It was a system with which India was but little concerned until the Crown took over the direct government of the country. It certainly appears to us exceedingly unjust that the Indian revenues should be called upon to bear any charge in order to get rid of this peculiarly English abuse."

And that of course has been already touched upon.

6200. That we have already touched upon; and I do not know whether I recall the evidence with sufficient correctness to say whether you did not think that certain modifications should be made in such a statement as that?—I think they meant, what I understood Sir Ralph Knox to mean, the consequences of the new system; it was not the absolute money that was paid to the officers, but it was the pension system consequent on the abolition of purchase.

6201. Yes; only in any ordinary system, where there is no purchase, there are always pensions to officers; therefore it was only bringing into force that which ought to be the normal condition of an army?—Yes.

6202. I think you agreed, after hearing Sir Ralph Knox's explanation, did you not, that no actual charge

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

19 March 1896.

had been placed upon India in connexion with the abolition? England took all the compensation to existing officers on her own shoulders; but no doubt when the purchase system was abolished, the mass of the officers came upon the same footing as the officers in the Navy, or in the Marines, or in the Artillery or Engineers, where there had not been a purchase system, and naturally became entitled to pension?—Yes.

6203. And therefore the abolition of purchase was the removal, so far as England is concerned, of an abnormal and anomalous system. That system had spared both England and India a pension charge, which, under ordinary circumstances, ought to have been paid?—Well, the view of the Government of India was, as I have pointed out, that the abolition of the system led to charges, which should not have been placed upon them. I suppose their view was that, as far as India was concerned, the officers of those days were as good as those who came after them.

6204. Of course, if I understand it, that would mean that the Indian Government would have liked to have gone back to a system of purchase, because it spared the Indian Treasury, along with the Imperial Treasury, the pensions which under any wholesome system are payable?—I do not think they would have said they would have liked to go back; but they thought that the payment of the pensions should not fall on the revenues of India, or not altogether.

6205. (*Mr. Buchanan.*) They were not responsible for the growth of the purchase system?—No.

6206. (*Chairman.*) From Sir Henry Waterfield's paper of August 10, 1895, I gather that the amount provided for military pensions shows a reduction of 71,394*l.* on the British forces, and an increase of 304,993*l.* on the Indian forces. It includes, I presume, the pensions of officers as well as of men?—Yes, it includes the pension of officers,

6207–8. Could you divide the charge between the pensions payable to the officers and the pensions payable to men?—I think it is given in the War Office paper sent to the India Office, dated 26th August, 1895. It gives the Indian non-effective account, 1894–95, under the different army votes—rewards to officers for distinguished services, half-pay, that is, half-pay of general and regimental officers, half-pay of departmental officers, retired pay of general officers, retired pay of regimental officers, retired pay of departmental officers, gratuities in lieu of pensions, pensions to widows of officers, gratuities to widows and children, pension to relatives, compassionate allowances and wound pensions.

6209–11. Could you give us pensions to officers apart from pensions to men in round figures?—The total charge against India in that year was 213,116*l.* pensions to soldiers.

6212. And the remainder would be pensions to officers?—There are also warrant officers and non-commissioned officers.

6213–4. Is that a parliamentary paper?—It is the agreement between the War Office and the India Office for the settlement for the year.

6215. We have already dealt with one important point of the subject in speaking of deferred pay, namely, how far the grant of deferred pay, upon the one side increasing the charge on the revenues, is compensated for on the other side by reductions of pensions under the short-service system?—Yes.

6216. I do not know that it will be necessary for us at the present moment to go further into that point. I understand that the Indian Government do not complain of the method in which the non-effective services are divided between the two Governments?—Except in the general form in which I have put the matter when I made that quotation from the despatch. I do not think they complain specially of any particular details.

6217. Well, how would you characterise that objection which you have read? It is not an objection to any given method of division between the two Governments, but it is an objection founded upon the principle of division?—On the fact that the partnership was not a free one; I think that was it in the first place.

6218. But that does not say whether any injustice is done under it?—With the exceptions that I mentioned, such as purchase and re-organisation of departments of the army, and so on, which threw an increased charge on the pension list about which they were not consulted, I do not think they have particular items to contest.

6219. Does it do more than confine itself to this complaint, that changes in organisation are made without their being consulted?—That is really what it comes to.

6220. Have you any remark to make on pensions payable to officers who have served in India?—No; I might venture to ask that Mr. Jacob should be referred to on that point; I am not sure whether he has anything to say or not.

6221. You have got no particular comment upon the payments to officers?—No.

6222. Except so far as you have made a comment, of course, in connexion with the abolition of purchase?—Yes.

6223. (*Sir Ralph Knox.*) Does not your contention really go so far as this, that no change must be made by the Home Government either in the organisation or the emoluments of the army on which the Indian Government have any wish to place a veto?—No, it does not go so far as that.

6224. Then how far does it go?—All that we would wish would be that India should be consulted when any important changes are likely to occur which might throw additional charges on the Indian revenue, and that the War Office would meet us in a spirit of reasonable compromise. I can only say that a very large number of charges are occasionally imposed upon the revenues of India which we do not object to, because we feel they are inevitable.

6225. But as regards, for instance, the abolition of purchase, supposing the Indian Government had formed their own views as to the advisability of a purchase system being maintained, and come to the conclusion that it should be maintained, you would take the position that, if the Home Government did not agree in that view, they must either not abolish purchase or undertake to pay all the pensions of the officers who might thereafter serve in India?—It would be impossible for me to answer the question quite as you have put it. I should say that the Indian Government could not have said they did not think purchase should be abolished. That would hardly come within their province; but they might have said:—"If you are going to abolish pur-"chase, and throw a large charge on the revenues of "India, we hope you will make it as little as possible."

6226. Is not that what the Home Government did?—We did not think so.

6227. (*Mr. Buchanan.*) These charges which have been thrown upon the Government of India, without the the consent of the Government of India, and in some cases without the consent of the Secretary of State for India, having been previously obtained, are of a very substantial character?—They are.

6228. And they have entailed very large extra expenditure upon the Government of India?—They have.

The witness withdrew.

Adjourned till Wednesday next at 11 a.m.

At the India Office.

THIRTEENTH DAY.

Wednesday, March 25th, 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.
Mr. COLIN G. CAMPBELL, *Secretary*.

Major-General Sir EDWIN H. H. COLLEN, K.C.I.E., Military Secretary to the Government of India called and further examined.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

6229. (*Chairman.*) Sir Edwin, I think you wish to give us some further evidence on the subject of short service, do you not?—I should be glad to be allowed to make a brief statement with regard to the subject of short service in its relation to India. I would first invite the attention of the Commission to paragraphs 8 to 12 of the despatch from the Government of India, Number 70, of the 25th March, 1890—that is in the collection of papers on the apportionment of Home charges. The case of the Government of India is I think stated there with some completeness. I would also ask permission to lay before the Commission the following paragraphs of an Indian Office letter, 252 W, of the 3rd May 1877. The quotations that I should like to have recorded are as follows:—"In Lord Salisbury's opinion it is "not only of paramount importance to the welfare of India, "but to the interests of the Empire at large, that the "British force maintained in India should always be in "the most effective possible condition. That portion of "Her Majesty's Army must be at all times ready to take "the field upon the shortest possible notice, and it should, "therefore be composed of well drilled and seasoned "soldiers. Our military strength in India rests, to a very "great extent, upon the prestige of our past victories, and "upon the esteem in which our British troops are held by "the native races, and Lord Salisbury is of opinion that "should their military character and appearance be im-"paired by an undue proportion of recruits or very young "men in their ranks, such a condition of things would "not only seriously injure their actual fighting ability in "a trying climate, but would dangerously affect the manner "in which they have hitherto compared with the native "armies."

6230. (*Sir Ralph Knox.*) That is nearly 20 years old, I think?—It is. The letter concludes in the following way:—"The almost unanimous opinion of officers of "high position and great Indian experience, who have "framed those recommendations, carry with them great "weight, and looking at the subject solely from an "Indian point of view, that plan"—(which has been proposed)—"would certainly provide India with a British "force more in consonance with its military requirements "than the modifications of it proposed in this letter."

6231. (*Chairman.*) Was there a plan put forward by the Indian Government? and were the arrangements which you have just mentioned the short service arrangements which had found favour in England?—It was a plan for obtaining a longer service for the army in India. There is also a considerable amount of opinion against the present short service.

6232. Might I ask, before you come to that, were you going to make any quotation from the Despatch of the 25th March 1890?—No, I merely alluded to that, because it is before the Commission.

6233. (*Sir Ralph Knox.*) I think, perhaps, it would be convenient with regard to that, to ask whether there was not a subsequent extension of the period of service in India?—Yes. It was more the general principles to which I wanted to call attention. There is also a considerable amount of opinion against the present short service as applied to India, in the evidence given before Lord Airey's Committee of 1881 and Lord Wantage's Committee of 1892, and, if it is not trespassing, too much on the patience of the Commission, I would like to allude to one or two points in the evidence before these two Committees.

6234. (*Chairman.*) Certainly?—Colonel McKay said that "the present system of short service would burden "the country with considerable expense and weaken "the efficiency of regiments in India." General Sir Henry Norman gave a summary of the opinions of 45 officers of experience as regards the type of soldiers required for Indian service:—"(1.) Soldier of good con-"stitution is of greatest value, from 25 to 30 years of "age. (2.) Age and length of service which produce "most valuable soldiers from 25 to 30, with from three to "eight years' Indian service. (3.) Deterioration com-"mences after 30 to 35, or after 10 to 12 years' service in "India. On this point military and medical opinion "differ a little. Medical men say 30 to 35, with less "Indian service. Military men, 35 to 40." General Sir Henry Norman says "it is a most serious military and "political evil to have British regiments in India, com-"posed of immature lads, who compared unfavourably in "physique and endurance with the native regiments "brigaded with them." Lord Strathnairn—that was before Lord Airey's Committee—said that "short service "failed from the first as regards India." Lord Sandhurst (Sir William Mansfield), expressed a strong opinion on this head: on account of (1.) "the youth "of the men which increased invaliding in India and "rendered home battalions inefficient. (2.) Ruinous "expense of continuous drafts, short service, and "equality of age inherent in short service militated "against a supply of good non-commissioned officers." General Sir Samuel Browne said:—"The men did not "get sufficiently matured or acclimatised for Indian service. "He thought a soldier was certainly fit for service in Indian "after 16 years. The present term of service for India was "too short." Colonel, now General, East, thought that "six years for Indian service was too short; neither men "nor officers got accustomed to the climate or country." Lord Napier of Magdala said, "Unfortunately the necessity for a reserve had obliged us to abandon the 21 years' service "for a short service one, which, making every allowance "for exceptional circumstances, had certainly given us "too youthful an army." Colonel Goldsmid, who was then Deputy Assistant-Adjutant-General at the Horse Guards, said, "Although India claimed to have not less than four "years of a man's colour service, and ought to get nearly seven, there were a good many men with less than four "years to serve in a battalion going out." Colonel, now General, Gosset, of the 2nd battalion, Dorset Regiment, suggested that "there might be a separate system of enlist-"ment for India with recruiting depôts in England, "where men might be obtained for service in India." Colonel Barton, 2nd battalion Royal Fusiliers, said that it "was a very great pity that service with the colours was "not longer." Colonel Wood, of the 57th Regimental District, said, "I would prefer to see men enlist for ten "years with the colours, and five with the reserve."

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

Colonel Green, of the 75th Regimental District, said "I have had no experience of very young soldiers in India, but "they failed most signally up the Nile." The Duke of Connaught particularly called attention to the cases of soldiers going out being under 20 years of age. He "did "not think it was possible to make certain of the men's "ages; they did not give their true ages on enlist-"ment." And with regard to service in the army in India he wished "to again point out the great necessity for "having the drafts really up to the age the regulation "said they were to be," and he gave an instance of an inspection of 250 men of the 1st battalion, Rifle Brigade, who he thought were distinctly under age. Mr., now Sir Ralph Knox—that was before Lord Wantage's Committee—said he thought "it would be an advantage, and econo-"mical to India, as far as the drafts were concerned, to "ensure that India should get a minimum of six years." Then there was a War Office letter of the 24th December 1889, in which it was said that a tour of seven years' Indian service should be obtained from every man. As I have pointed out, India only gets five years and four months of a man's service. With regard to invaliding, in 1887-88, 49 per cent. of the number invalided were under 25, while 25 per cent. had been less than two years in India, and 53 per cent. had from two to five years' service. 78 of the total number invalided had been less than five years in India. I have made inquiries, and am endeavouring to have a table prepared of the mortality and invaliding which the Commission require, but I may mention that I have a table which I brought home, of mortality and invaliding from 1871 to 1894, and this I will hand in to the Commission. The invaliding has been reduced, but it is submitted that this is not due to the youth of the soldier, but to the improved sanitary conditions under which he lives, and the larger number of troops quartered in the hills. There has been an increase of mortality from enteric fever. The recently arrived soldier is more apt to die from enteric fever than he who has been longer in the country, and with increased length of service in India the liability to death from enteric fever rapidly diminishes. I ask permission to put in the statistics of the Sanitary Commissioner of the Government of India, and his report for 1894, and similarly the statistics showing the increase of venereal disease.* The Sanitary Commissioner alludes to the increase of this disease following the arrival of the men entered under the short service system. I also ask leave to hand in a statement showing the ages of non-commissioned officers and men in India on January 1st, 1895.† I submit, therefore, that there is special force in the contention of the Government of India expressed in the Despatch of 1890, that "it can hardly be said that "immature soldiers are as effective for service in India as "men of a higher average of years and service, and while "the cost of the recruit has been increased the term of ser-"vice has been diminished." With regard to what was said about localising batteries and regiments, that is, fixing their permanent head-quarters in India, that is not put forward as a definite proposal, I mentioned it as a possible solution of the question. It is a matter which would naturally require great consideration, but as my personal opinion I would venture to say that a shorter service for home defence and a longer service for India is what is required. The question of localising batteries and regiments is mentioned in a memorandum of Sir Patrick MacDougall's in 1879, and I believe many regimental officers have been in favour of the plan. On the other hand I admit that there are strong arguments against it. There was also, I think, before Lord Airey's Committee, a memorandum of the evidence given by Sir Arthur Herbert in the same direction. We have to maintain in India battalions at what is practically war strength, 1,032. There is a reserve in England, undoubtedly, but we should not get reserve soldiers if England were threatened at home. India does not pay for this reserve, but she pays for the training of a large portion of it, and England has in the Native Indian army, for which she does not pay, a large reserve of military strength. The Government of India, are not I think, prepared with any specific solution of the difficulty at the present time. All they urge is the reasonableness of their contention that the way in which short service is at present worked is not advantageous to India, and that the disadvantages should be considered in fixing the charges to be made against India for the services of British troops.

6235. In order to summarise the results of what you have said, Sir Edwin, do I understand that your view is that at present the average service in India is five years and four months?—Five years and four months.

6236. And, following the quotations you have made from the opinions of distinguished officers, I should gather that their desire is a minimum of service of seven years, or something like seven years; would that correctly represent, do you think, what you have stated to us?—I think so—a minimum service of seven years.

6237. The minimum service should be seven years?—I can hardly offer that as an opinion of the Government of India. The opinions have differed on this subject, and I can only say that I imagine the Government of India would be very well satisfied if they could get that minimum of seven years' service, which was mentioned by the War Office.

6238. The evidence speaks of lads going out, but I do not know whether I gather rightly that that objection would be satisfied if all the men went out at 20 years of age? Is that so, or do you consider 20 years too young?—If it could be ensured that they were 20 years of age, but that is the great difficulty.

6239. At present I am endeavouring to obtain from you what is the general result of that evidence, corrected as it would be by your experience in the intervening time, because these Commissions sat, I think, some time ago?—Yes, one Commission sat in 1881 and the other in 1892.

6240. Then with regard to invaliding. Can you tell us what were the numbers invalided in the first year of your table and in the last?—The table is from 1871 to 1894. In 1871 the death rate was 17·53 and the invaliding 43·62. In the last year—1894—the death rate was 16·07 and the invaliding 25·45.

6241. Are those two figures fairly representative figures of the two periods, do you think?—There is no doubt that there has been considerable reduction in invaliding. In the intermediate years there have been considerable variations,—for instance, 1875, it was 40; in 1878 it was 44; in 1879 it was 41: then it sank to 26 in 1880; it rose to 38 in 1881, and it was 31 in 1884, but then in 1885, 1886, 1887, 1888 it was from 22, 24, 22, 22: then it rose in 1889 to 25, and in 1891 to 26. Invaliding has undoubtedly been reduced.

6242. (*Sir Ralph Knox.*) Were there not some epidemics in some of those heavier, years?—Yes, and I think that accounts for a great deal of the invaliding in the earlier years, because the cholera epidemics were much more frequent and more severe. Of late years very large sums have been spent in India on water supply, and we look to that as diminishing the rate of mortality—certainly from cholera.

6243. (*Chairman.*) Have you any knowledge of what the rate of invaliding at home is?—It is given in the Blue Book; I have no doubt Sir Ralph Knox has it.

(*Sir Ralph Knox.*) No, I have not got it; it is in the Medical Report, which I have not got here.

6244. (*Chairman.*) At all events, giving full force to what you have stated about the greater care taken in preserving the health of the troops, the result I presume you would say is a very satisfactory one?—The result of the greater attention now paid to all sanitary requirements in India; that is the way we put it.

6245. Quite so; I am only saying that the result as it stands now is satisfactory?—Decidedly so.

6246. Without attempting to argue that that is due in any way to the soldiers being younger?—Yes.

6247. By one means or another you have got a very satisfactory state of things in India, compared with what it was 20 years ago?—Yes.

6248. (*Sir James Peile.*) Might I ask—Sir Donald Stewart wishes this question put—whether the opinions you have read out just now with regard to the short service would apply to the present conditions, or to the period before it was ordered that the men should not go out under 20?—Some of the opinions undoubtedly refer to the present conditions.

6249. (*Mr. Jackson.*) Is it known what the average age of the invalided soldiers is?—In 1887-88 49 per cent. of the number invalided were under 25, while 25 per cent. had been less than two years in India.

6250. (*Chairman.*) You would always expect a very large per-centage of men under 25, because I suppose you would hold that 20 to 25 is essentially the soldier's age, is it not?—In India, he comes out at 20 and goes back after five years and four months' service, of course.

6251. But supposing the Indian Government were to make its own arrangements as to the ages at which it would take the men, I suppose it would take them at 20 or 21, and therefore, soldiers under 25 would constitute probably the larger part of the forces under any circumstances, would they not?—That of course would depend upon the length of time for which they could get the men.

* *See* Appendix 58. † *See* Appendix 57.

6252. If we take what apparently would satisfy the Indian Government, a service of seven years, the larger part of the force that was serving for seven years in India would be under 25, would it not?—I should think so, but might I say one thing—that I should not like to say positively that the Government of India would be satisfied necessarily with seven years, because I do not think anyone can say until they have thoroughly considered the subject again.

6253. That rather represents your own view, but you do not think it is contrary to the view of the Government of India; might I put it that way?—Personally, I should like rather longer service; it would be a step in the right direction.

6254. (*Mr. Courtney.*) But taking those figures you have given us, what proportion of the army in India now under existing service is under 25?—It is 45,000 out of say, 67,000.

6255. Two-thirds?—Yes, I suppose that is it.

6256. Two-thirds under 25, one-third over 25?—Yes.

6257. Well now, that one-third which is over 25 gives more than one-half the invaliding; 49 per cent. under 25, 51 per cent. over?—49 per cent. is the number invalided under 25.

6258. Therefore, 51 per cent. over?—Yes.

6259. One-third of the force furnishes more than one-half of the invalids?—Yes, on the face of it.

6260. That does not look as if they got better fitted for the climate?—Well, I can only give the opinion of all the officers, medical and military, who have considered the subject, that the best service of the men is from 25 to 30 rather than from 20 to 25.

6261. These are awkward figures to emphasise that?—I should like to have a further opportunity of going into that question. The figures regarding invaliding are for 1887–88; those regarding the ages for 1895.

6262. (*Sir Ralph Knox.*) I think I should like to pursue the subject we have got upon, before I take up the financial questions. I have got a note here as to the invaliding for periods anterior to those which you have quoted, which I think, are perhaps better for comparison than those you have mentioned. I have a period from 1863 to 1872, with the year 1873, and I find that from 1863 to 1872, the invaliding (that is in an undisturbed period) was 33½ per cent., and that the invaliding from 1884 to 1893, (a period during which short service was completely in force, the earlier period being that in which the old system was in force) the invaliding was 26 per cent., that is to say a reduction of 7, or practically one-fifth? You state that it is to some extent due, or rather you state that it is entirely due, to the fact that there have been great sanitary improvements in the barracks, and in the life generally of the soldier in India; but is it not also true that the shorter service at all events has not increased the invaliding?—I certainly understood that it had increased the invaliding.

6263. But it is clear from the figures that there has been a decrease from 33½ per cent. to 26 per cent.?—Yes, but surely a great deal of that is due, as I have said, to the improved sanitary conditions under which the men live.

6264. But surely your argument is really this, that all the soldiers in India are practically short service as compared with the previous army, that all the invaliding is from that body of men, and that therefore there has been an increase of invaliding, due to the fact that they are a younger body, the fact really being that all the invaliding is necessarily from this mass of young soldiers; is not that your observation?—Yes.

6265. But, as the fact stands, there is a decrease of about one fifth; it cannot surely be stated that the shortness of the service has given rise to an increase of invaliding in India, can it?—No, I do not think it can precisely.

6266. I find the constitution of the army in India under the short service system is stated at p. 80 of the General Annual Return of the British Army. In the army there is always a certain number of boys, is there not, specially enlisted, required for the service of the army?—Yes.

6267. That would account for a certain number of those who happen to be very young, who are under 20 years of age, would it not?—Not very many.

6268. But there is a certain per-centage of them allowed in each regiment, those under training for trades, for bandsmen, and so on?—Yes.

6269. There are not very many, but still out of a total of 75,000—as there were on 1st January 1859—there would be a fair number, would there not?—Under 18, 629; is not that it?

6270. There are under 18, 629?—18 to 19, 335.

6271. And 19 to 20?—576.

6272. (*Chairman.*) In India?—In India, yes.

6273. (*Sir Ralph Knox.*) A total of 1,544 out of 74,799. But then we come to the men of the regiments, and I find that from 20 to 21 years of age there were 6,000, I am stating the round numbers; from 21 to 22, 9,400; from 22 to 23, 10,200; from 23 to 24, 10,000; from 24 to 25, 9,000; from 25 to 26, 8,000; from 26 to 27, 5,700; then 27 to 29, 7,900, taking the two years together; and then above that age, 29 to 30 and upwards, something like 5,000 men?—Yes.

6274. Do you think that is an indifferently constituted army for active service?—I do not think it is an indifferently constituted army; but I do think that for Indian purposes it would be far better that the men should be of longer service.

6275. But you see you have a very large number extending throughout the whole of what may be called the military ages, as they are regarded by all the civilised people of the world—that is to say from 20 up to 28 years of age?—But, on the other hand, we have a large body of evidence in India to show that the best age for service in India is 25 to 30.

6276. Is there anything to support your evidence except the opinions of a few men that you have read out just now?—There is more than that; the opinions of a very large number of medical and other officers when the subject was investigated in 1877.

6277. In the German army the period of service is seven years, including reserve, is it not?—It has been altered of late, I think; it may be so.

6278. And they are enlisted at 20; is it not so?—I imagine so.

6279. That is to say, their total service, including reserve service, brings them to the age of 27 years. Does not this army, which I have just described, closely resemble in ages and service what the German army would be when mobilised?—It might be so; but, on the other hand, you must recollect that the army in India serve under totally different conditions of climate and country.

6280. But is it not acknowledged by all medical authorities that after a certain number of years a man shows great signs of deterioration, and that if he is kept, say, beyond seven or eight years in India, he fails completely?—Not according to the evidence that I have seen.

6281. Then what period would you state?—I think in the evidence that I have read to you it was given as after 30 years of age.

6282. This question of age was first taken up by the Sanitary Commission of 1859, was it not? the one over which Lord Stanley presided, and they went very carefully into these questions, both as to service in India and age, as bearing upon the conditions of the soldier in India; and evidence was laid before them which, I think, went to prove after eight years' service in India a man began to fail, that the climate began to tell upon him, and that the system of long service was a bad system for the soldier, as a man?—I certainly have not read that evidence of late, but I give you, on the authority of Sir Henry Norman, the conclusions that were arrived at, I think, in 1877 and later. Those conclusions were:—Soldiers of good constitution are of the "greatest value (that is for India,) from 25 to 30 years of "age. Deterioration commences after 30 to 35, or after "10 to 12 years' service in India. On this point mititary "and medical opinion differ a little. Medical men say "30 to 35, with less Indian service. Military men 35 to "40."

6283. However, you cannot draw our attention to any case in which the army out in India, constituted as it is now, has failed in any way to do the duty that has been imposed upon it, can you?—I think there are many officers in distinguished positions, who would say that the younger regiments nowadays could not do quite the same work as was done by regiments containing more seasoned soldiers in the ranks.

6284. That is the universal military opinion in India?—I would not say that it is the universal opinion, but I would say there is a large body of opinion in support of the statement.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 189 .

6285. You think there may be officers who hold a different opinion?—There may be, but I have not met them, I confess.

6286. (*Chairman.*) You speak of mortality as 16; 16 per thousand, I suppose?—Yes, 16 per mille.

6287. And the invaliding is the same?—Yes, that is per mille.

6288. (*Sir Ralph Knox.*) I have here some notes of the mortality in India in the earlier periods, that is to say, during the existence of the old system, and I find that from 1863 to 1872 the mortality was 25; from 1884 to 1893 the mortality was 16 per thousand, and that seems to be the mortality for the year 1894 as well?—1884 to 1893?

6289. Yes, it was 16?—It ran like this, I think, 12, 14, 15, 15, 14, 16, 15, 14, 17, 12, with the decimal added.

6290. Yes, but for the whole period from 1884 to 1893 it was 16? Yes.

6291. And for the whole period from 1863 to 1872 also it was 25?—Yes.

6292. That is also a considerable decrease, is it not?—It is.

6293. Before the Indian Mutiny the European army in India consisted of two forces, the local Indian force and the British force?—Yes.

6294. The total number being about 36,000 men, was it not—12,000 of the local force and 24,000 of the Imperial force?—Yes.

6295. The East India Company raised the recruits for the smaller force, the 12,000?—Yes.

6296. And the recruiting for the remainder of the force—the 24,000—was carried on under the Home Government in accordance with their system of organisation?—Yes.

6297. The East India recruits were collected at Warley, were they not?—Yes.

6298. And the others—the British troops—were collected at the depôts that were formed at Chatham?—Yes.

6299. We have heard a great deal of the Warley system and it has been quoted in many of the papers, and it has been stated that the cost of raising recruits under the Warley system was very economical. Can you describe what the Warley depôt was and what it did?—I know that the staff was a comparatvely small one; I have not got the detail of it here—and that the men were not trained for long periods.

6300. Was there any real period of training at all? Was it not merely a recruiting or receiving depôt, where, inasmuch as a thousand men cannot be raised in a day, it was necessary to begin to collect them some time before the draft was sent out, and as soon as a batch had been collected they were despatched; was not that practically the system, it being immaterial whether they had any training or not?—That I am unable to say, but my idea would be that they received a certain amount of training.

6301. Well, those men, who had been recruited two or three months before they were shipped, would necessarily have undergone some amount of drill?—Yes.

6302. But, on the other hand, some men were despatched after a very short period of drill?—That is quite possible.

6303. Whereas at the Chatham depôts the men were recruited throughout the year and were despatched as more or less trained men—it may be young men, but more or less trained men—to the regiments in India. Was not that the case?—I am unable to say that from my own knowledge, but I am quite willing to accept the statement.

6304. However, the two systems were as different as they possibly could be, were they not?—No, I should say not as different as they possibly could be: it depends upon the number of months the man was under training.

6305. The system, is described somewhere in this Sanitary Commission Report of 1859, and there four months is stated as the utmost time that any man was at the depôt at Warley?—At all events we got very fine material, according to the experience of the officers who were cognisant of what the recruits were in those days.

6306. The number of men sent out was comparatively small, of course, from the depôt at Warley, was it not?—Yes.

6307. And they were trained to a large extent in India, after they arrived in India?—Yes.

6308. And they were enlisted for life?—Yes.

6309. Naturally, as they were kept there only a comparatively short time, the expense at Warley was comparatively low, as has been stated?—Very low, yes.

6310. I find that, in calculating the average cost of recruits, some years were thrown in which were rather exceptional, those at the time of the Indian Mutiny; and I find also the years which were also exceptional during the Crimean war, when recruiting was freely opened, as many men as possible being raised in consequence of the withdrawal of European regiments from India; and I find that that disturbs the average very much. But in the earlier years, 1850, 1851, 1852, normal times, I find that 1,200 men were shipped at the cost of 36,000*l.* in 1850; 838 were shipped at the cost of 32,000*l.* in 1851, 1,000 men were shipped at the cost of 37,000*l.* in 1852, bringing the cost in those years up to 30*l.* apiece?—I think an average was stated of 26*l.*

6311. 26*l.*, yes, but in those earlier normal years the cost was 30*l.* to 40*l.* apiece?—But in the Appendix to the 4th Report of the Select Committee on East Indian Finance, page 226, where they omit the exceptional conditions, as they omit the exceptional years of and after the Mutiny, it was calculated at 26*l.* 7*s.* 5*d.*

6312. Yes, but that included the Crimean war time when an abnormally large number of men were sent out from the depôts, 2,000 as against 1,000 in the earlier years?—To India?

6313. To India; I merely mention that that disturbs the average and makes it come out somewhat cheaper than it would otherwise be. However, whatever the system at Warley may have been, it was not a system of training the men completely before they were sent to India; is not that the case?—It was not a system of training the men, and I should doubt whether the other system was a complete training.

6314. It was a training as far as a year's service or so would give him a training?—It was longer training, no doubt.

6315. One of the principal recommendations of the Sanitary Commission, in fact, their first recommendation in 1861, was, that no recruit be sent to India under 21 years of age, nor until he had completed his drill at home, was it not?—Yes.

6316. Is not that a recommendation which the Indian Government have constantly insisted upon since that time; at all events, that they require that the men should be 20 years of age and that they should be completely drilled?—Yes; that they should not have less than certain minimum periods of training, I think that would be the answer.

6317. The army of India was considerably increased after the Indian Mutiny, was it not?—It was increased during the Indian Mutiny.

6318. And maintained afterwards at a much higher figure than before?—For some time.

6319. Comparing the army now with what it was in the ante-mutiny period, what would be the increase?—Taking the number before the mutiny, do you mean?

6320. Yes?—All European troops together?

6321. All European troops together?—24,000.

6322. With the local Indian forces it would be 36,000—Yes, with the 12,000 it would be 36,000.

6323. It has now been doubled in fact?—Yes, that is against 72,000.

6324. As regards the infantry, how was that done; how was that increase made?—You mean during the mutiny?

6325. To supply India with this increased force?—I do not quite understand the question.

6326. During the mutiny were not 40 additional battalions sent out to India?—Yes.

6327. After the mutiny was quelled, was it not the case that India determined largely to increase the European force there?—That was so determined.

6328-9. And in order to obtain that force what steps was it necessary for the Home Government to take, do you know? Did they not raise 26 additional battalions for the British army?—That was for the service of India.

6330. Yes?—Yes.

6331. They added, that is to say, a force of 26 battalions to the force then in existence specially for the service of India?—Was that absolutely the case? it was not in connexion, for instance, with the foreign service in the Colonies and having one battalion abroad?

6332. No, this was before anything of that kind occurred. A second battalion was added to every one of the regiments from the 2nd to the old 25th foot, and a battalion was added to the Rifle Brigade and the 60th Rifles?—Yes.

6333–4. And that enabled the Home Government to supply India, so far as the cadres were concerned, with the additional force which it required; was not that the case?—Yes.

6335. That is to say, a special addition was made to the British army, in order to supply this additional force in India; it was not merely locating in India a portion of the British army already in existence?—Quite so.

6336. It can be easily understood, I should imagine, that to maintain this additional force was not such an easy matter; that it was necessary to take special steps in order to produce this additional force?—Yes.

6337. And difficulties were soon found, the result of which was that two Royal Commissions upon recruiting sat to consider the question; was not that the case?—Yes.

6338. One in 1861, and another in 1867?—Yes.

6339. The result of the recommendations of the Royal Commission of 1867 was, that an increase of pay was given to the whole army, was it not?—Yes.

6340. And that was done in order to obtain the additional number of men that were required in consequence of the dearth of recruits, was not that so?—Were there no other reasons?

6341. The Commissions were appointed because of the difficulty of obtaining recruits to maintain the army, and they made various recommendations, and amongst them was a recommendation to make considerable improvements in the position of the soldier?—But you would not attribute that entirely to the fact that India wanted a larger force.

6342. But the force, the strength of the army, which had been increased by 30,000 men upon a force of something like 120,000 men, made the problem considerably more difficult; would it not do so naturally under a voluntary service system?—Naturally, yes. But I think it might be said that the extra pay was necessary because, perhaps, wages had risen and so on; there was greater difficulty altogether in getting recruits.

6343–4. There was a greater demand, however, for them?—A greater demand, quite so.

6345. And one of the recommendations of the Commission was that the service of the soldiers should be extended from the old 10-year period to one of 12 years?—Yes.

6346. And also that the men should be given an additional penny if they re-engaged for longer service; was it not so?—Yes.

6347. Those were the recommendations of a Royal Commission which added considerably to the expense of the army; do you think that those recommendations were made with complete indifference to the condition of India, and the burden imposed upon India?—I have not the report of the Royal Commissions to refer to, and, of course, I am unable to answer that question.

6348. But you would not suppose that a Royal Commission, in making a recommendation of that kind as absolutely necessary in order to maintain the army, would disregard the financial interests of India, in making that recommendation?—That is a question you cannot expect me to answer.

6349. However, they made a recommendation, and the pay of the army was increased by 2*d.* a day, and the soldier who extended his service was offered an additional 1*d.* a day, was not that the case? and that imposed a considerable burden upon India?—Yes.

6350. The Indian Government has nothing whatever to do with the details of the recruitment of the army at home?—No.

6351. It is not in touch with the civil population here at home, and knows little about the conditions under which men can be obtained, does it?—I suppose they know a good deal through the medium of various reports of Royal Commissions and others.

6352. But still they are not in active connection with the population from which the recruits have to be obtained?—No.

6353. It is admitted that, under a system of short service, the soldier can only be recruited when entering upon manhood, practically at the age of 18 or approximating 18, is it not? it has never been otherwise under a system of voluntary service, has it?—I thought we enlisted a large number of men in 1892 about 20 years of age.

6354. Of course, there are some enlistments at higher es. I have here the ages at which the recruits were raised last year. I find that 18,000 were raised at the age of from 18 to 19, or 4,229 per 10,000; 7,659 between 19 and 20; 3,897 between 20 and 21; 3,000 odd from 21 to 22; and 2,000 from 22 to 23; that is to say, 60 per cent. were raised between the ages of 18 and 20 out of the total recruits raised. I find as far back as 1870 that the enlistment was much the same, much fewer recruits being required. From 18 to 19 the numbers were 3,000 per 10,000; from 19 to 20, 2,000; 20 to 21, 1,200; 21 to 22, 800; 22 to 23, 600. In fact, under a system of voluntary service the recruits in any large numbers can only be obtained from 18 to 20 years of age, that is to say, 5,000 out of 10,000 were raised between 18 and 20 years of age, so that it appears to be proved that under a voluntary system you can only get the soldier in large numbers at those early ages?—But you did get, as I stated, in 1892, a large number of men at 20 years of age.

6355. Yes, and we get now what may be called a large number—3,900 were obtained at 20 to 21, and 3,000 from 21 to 22?—Yes, but I thought there was a much higher proportion in the year 1892.

6356. Well, in one year it may be that there was a larger number obtained at a particular age: but are you aware that an experiment was made of raising the age from 18 to 19 somewhere about the year 1880 or 1881, and that it completely failed?—Yes.

6357. The result was that we did not in that year obtain more than one-half the recruits that were necessary to keep the army on its proper footing?—Yes.

6358. Will you not admit that those who are engaged in the business of endeavouring to induce young men to join the army, must know more, as to what it is necessary to offer them, than those who are serving in India and not in touch with the civil population at home?—Presumably.

6359. The difficulties of recruiting were not overcome by the measures which I have just alluded to; and the result was that the system of long service was done away with, and the system of short service was introduced in 1870; that was the case, was it not?—Yes.

6360–1. Well now, quite apart from the question of the efficiency of the army in India for the purposes for which it is required, and looking at the system in its financial aspect alone, if it can be shown that the present system is less costly than the system previously in existence, it can hardly be argued that the financial interests of India have been disregarded, can it?—That the short system is less costly than the long service system taking everything into consideration?

6362. If, taking everything into consideration, it can be shown that the one system is less costly than the other, it cannot be said that in the introduction of the system the financial interests of India were disregarded, can it?—No.

6363. Do you think that can be shown, taking everything into consideration?—I have never seen any accurate statement of the result.

6364. Well, the change from a long service system to a short service system necessarily resulted in two things, did it not, namely, that a larger number of recruits were required, entailing necessarily larger expenditure in raising, training, drilling, and transporting those men, but a reduced charge for pensions. Would not those two things result from the change from the long service to the short service system?—Yes.

6365. If it can be shown that, taking those two together, the saving that would arise from the reduction of the charge for pensions would counterbalance any increased charge arising from the raising, training, and transporting of recruits, the case is proved, is it not?—The case is proved if it can be absolutely shown that there has been a saving on the short service on its introduction.

6366. Yes, I mean if that can be shown?—Yes, from the financial point of view.

6367. Are you at all familiar with the variations in the pension charges arising from the adoption of the short service system?—I have seen the various statements that have been made.

6368. I suppose the Indian Government will admit that the sums of money which have been claimed from them year by year for a series of years would fairly represent the charge to the Indian Government on account of pensions, would it not?—Yes, but that whole question is rather complicated, is it not, by the capitalisation of pensions?

6369. No, not at all; the capitalisation system was simply calculating a lump sum, which was equivalent to the annuity imposed upon India year by year?—Yes.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

6370. Of course since then we deal simply with the annuity that is created?—Yes.

6371. I have here the charges which were made against India from 1876 to 1894–95. The first years, I think it must be admitted, were more or less abnormal. However, the sum claimed from India in that year—these are the actual amounts that were claimed, upon which the capitalisations were calculated in those earlier years—is 60,900*l.*; the next, 47,800*l.*; the next, 68,000*l.*; the next, 56,000*l.*; the next, 50,000*l.*; the next, 48,000*l.*; the next, 43,000*l.*; and I need not read the others, but the last claim which was made against India was 23,372*l.* as compared with those earlier years of 60,000*l.*, 68,000*l.*, 56,000*l.*, 50,000*l.*, 48,000*l.*, 43,000*l.*, and so on, gradually decreasing down to 23,000*l.*?—But I venture to think it was contended, was it not? in Lord Hartington's time, when a plea of that kind was put forward, that part of the saving would have accrued without the short service system.

6372. It would not accrue from the fact that the rate of the pensions of the men had been increased, would it?—No.

6373. Well, is not that the case? Have not the rates of pensions to men been increased?—The pensions of whom?

6374. The pensions of the men have been increased in the interim, have they not? the men are now being pensioned at higher rates than they were in the earlier time?—Yes.

(*Chairman.*) These are the pensions that come into the course of payment for the first time in each of these years.

(*Sir Ralph Knox.*) Yes.

(*Mr. Jackson.*) Does that mean the rate of pension, or the pension per year?

6375. (*Sir Ralph Knox.*) It is the annuity; that is to say, all the pensions that are created during that year. Inasmuch as the pensions themselves have been increased, in what other way could a decrease have arisen except from the fact that there are not so many pensioners?—Might I ask when the pensions were increased?

6376. In 1881–82, in Mr. Childers' time. However, accepting those figures, that represents a very considerable decreased charge in the non-effective?—Accepting those figures; of course I have had no opportunity of examining them.

6377. But still, these, you may take it from me, are the actual sums which are being claimed, and have been claimed, from the Indian Government during these years?—That is, as I understand, on the men enlisted under short service?

6378. Enlisted under any system anterior to these particular dates; but of course the earlier dates represent the men enlisted under the longer system of service?—But would not a large portion of the pension charge be reduced by the gradual elimination of men who had enlisted in large numbers—for instance, in the Mutiny period?

6379. In a particular year; there might have been a fall in any particular year in consequence of a large number having enlisted in any one year, and, as a matter of fact, a variation does appear; here is one year with 60,000*l.*, the next 47,000*l.*, the next 68,000*l.*, and then a drop to 56,000*l.*

(*Chairman.* What year do you begin with?

(*Sir Ralph Knox.*) 1876–77.

(*Chairman.*) Would not all the Mutiny men be off by that time; that is 20 years after the Mutiny?

6380. (*Sir Ralph Knox.*) Well, just going off. However, that represents a very considerable decrease, and if the constant charge arising from these annuities may be taken at about 22 times those annuities— 22 years' purchase so to speak—that would represent a very large decrease in the charge for pensions, would it not?—Yes, apparently.

6381. That can be verified, at all events, by the India Office authorities. You admit that, if it can be shown that that decreased charge is sufficient to counterbalance the increased charge arising from the recruiting, it would be proved that, so far as the financial interests of India were concerned, they were fairly considered in the introduction of short service in lieu of the system which existed before?—But would you not have to add the amount of the deferred pay which was granted at the same time?

6382. Admitting that deferred pay also should be regarded on the other side, though that is a moot point. Deferred pay, which we shall come to, was an increase of the pay of the army, added just as the previous twopence a day had been added in order to induce the men to enlist. It must be admitted, I think, on all hands, that of necessity the charge for the recruiting expenses went up with the introduction of short service?—Yes.

6383. But in the introduction of the system every pains was taken, was it not, to reduce the charge against India as far as possible? For instance, the double battalions having been introduced, the short service system, as it was worked, admitted of men being transferred from the relieving battalion to the relieved battalion, did it not?—Yes.

6384. Formerly the regiment used to come home *en bloc*, and a full regiment used to go out?—Yes.

6385–6. But now a regiment coming home leaves its short service soldiers behind it, who are taken up by the linked battalion going out; and at the same time the tour of service of all the battalions in India was increased, so that a reduction was made in the number of regiments relieved every year?—Yes, it was increased.

6387. Formerly five battalions were relieved every year; and, when the change was made, three battalions were relieved every year, is that not so?—Yes.

6388. Well, those two arrangements would go to reduce the number of men interchanging between Home and India, would it not?—Yes.

6389. At the same time that these arrangements were made India insisted more than ever upon having soldiers of 20 years of age sent to her in every case as drafts, did she not?—Yes.

6390. Inasmuch as the great majority of recruits are raised between 18 and 19, a very large number of soldiers must necessarily be kept here some two years at least before they can be sent out to India, must they not?—Is it proved that they cannot be obtained at a higher age than 18 to 19?

6391. I have read out just now a statement of last year's enlistments, and the number of men who were of the ages above 20, and that is certainly an insufficient number to supply the demands from India?—Yes.

6392. The drafts approximate something like 11,000 every year, do they not?—Yes.

6393. Some of these men, also the older men, are recruited for corps that do not give any service in India at all—that is to say, the Engineers and Army Service Corps and departmental corps generally would get those older men, who are many of them tradesmen, who would not go to India at all?—Yes.

6394. It being the case that these men have necessarily to be kept this period at home before they can be sent to India, that throws a considerable charge upon the Home Government, does it not, assuming that these men would not be required supposing they were not wanted for Indian service?—Yes.

6395. The charge made against India in these figures which are spoken of as represented by the 7*l.* 10*s.*—capitation payment for recruiting infantry—is for six months' pay, &c., is it not?—For six months. yes.

6396. Whereas it is the case, owing to the fact that India requires that all men shall be 20 years of age, that a very large number of those have at least two years' service, many of them more, before they get sent to India?—Yes, but you have the use of the men the whole time.

6397. But, assuming they are not wanted according to the requirements of the British army, those are all in excess, and their whole expenses are due to the fact that India has to be supplied with men of that age and with that amount of drill?—There is a certain portion of the British army stationed in India, and undoubtedly that army has to be supplied.

6998. But I asked some questions which, I thought brought out the fact that the greater part of the British army that is in India, was raised specially for service in India; that it is not that the British army consists of a certain force, and that it is of advantage to the British Government that that number should be located in India, but that an additional 36,000 men were raised specially to create this European army for India.

6399. (*Sir Andrew Scoble.*) Was not that in consequence of the assumption of the Government of India by the Crown?—I should think so.

6400. (*Sir Ralph Knox.*) Was it not really the result of the Indian Mutiny?—Yes.

6401. At all events, whatever the period of service that the man must necessarily give before he goes to India, the six months which are charged against India by no means represent the cost which is incurred on that recruit?—Not at present, but I think if you refer to the records of past years, complaints have been made that we got men with

less service than that; if you recollect, there was a distinct proviso in some of the recommendations of these committees, that we should get a rebate on less training than six months.

6402. We will come to that rebate presently; but at all events the last drafts that were sent out in 1894–95, were 10,685; and of that 10,685, 1,392 went out in their first year of service, 4,444 in their second year of service, 3,603 in their third year of service, and 670 and odd with service in excess of that?—Yes.

6403. So far, therefore, it is obvious that a considerable sum of money was expended upon those men in excess of a six months' charge?—No doubt.

6404. And, if it can be admitted that those men would not be in existence except for the purpose of supplying India with drafts, the whole loss as above the six months' charge, or nine months' charge as the case may be, falls upon the Home Government, does it not?—Well, if it be admitted that there is no need for possessing India at all.

6405. But if it is admitted that these are not required for the home service, but are required for the Indian service alone?—Yes.

6406. Well, now as regards the charge for the depôts claimed from India, as compared with the old system. The old system was practically to send the account of the depôt of the British regiment to the India Office, so that it should pay the total expense of the depôt maintained for raising and training recruits for a particular battalion, was it not?—I am not aware of the actual course of procedure, but I have no doubt that it was.

6407. Well, that is alluded to here in the report at page 29 of the* paper on the Apportionment of Military Charges between the Home and Indian Governments, and there it is stated as well as they could make it out. The Committee ascertained that the cost of a depôt for each regiment was 1,922*l.*, excluding certain charges in the way of equipment, clothing, and so forth. That was the cost of the depôt under the old system, as is given in paragraph 30?—That was the estimated annual charge, was it not?

6408. Yes; representing what had been the charge under the old system. Under the system of brigade depôts or regimental districts now in existence in connexion with the raising and training of recruits of the infantry, the charge (as calculated in the report of Mr. Bouverie's Committee, which is practically the basis of the present scale) was one-fifth of the calculated cost of a regimental district; and it is stated in that report that the total cost of one of these depôts, as estimated, was 9,647*l.*; one-fifth of that is 1,929*l.*, and that includes the clothing, and the equipment which are excluded from the previous calculation, and it also allows for the increased rates of pay which had been granted in the interim; these figures closely approximate, the one is 1,922*l.* and the other is 1,929*l.* Does not that demonstrate, at all events, that under the changed system there was no increased charge made against the Indian Government?—I would venture to remark that these calculations of rates by Sir Alexander Tulloch's Committee and Mr. Bouverie's Committee were never accepted by the India Office Committee, and, I think, not by the Secretary of State.

6409. No, but what Sir Alexander Tulloch did was to ascertain what had been the cost of the depôt under the former system under which the actual charge was made against India?—It was an estimate apparently.

6410. Yes, but it was calculated from what had been in existence before. In fact the actual cost was in excess of this calculation, because, as he states here, he allows for 30 privates being constantly at home, although in his report he states that the constant average for some time past had been 57. However, taking 30 privates as the necessary number to be constantly maintained at the depôt, the cost came out at 1,922*l.* Of course these are calculations, but the India Office would not question the fact that one captain, at 11*s.* 7*d.* a day, which is his rate of pay, costs 211*l.* 7*s.* 11*d.*, I suppose?—No, but I only wish to draw attention to the fact that, in all these discussions, these various Committees and the Secretary of State did object to the calculations which were made, but I have no means at this moment, nor probably at any other time, of proving absolutely that they were not based upon correct calculations; I can only rely upon the reports and recommendations of the Committees.

6411. There were representatives of the Indian Government upon this committee of Sir Alexander Tulloch, were there not?—Yes, I suppose so.

6412. And they were quite competent to examine the details of these figures, were they not?—Yes.

6413. And they accepted them, did they not?—They were not accepted by Sir Charles Wood, I think.

6414. No, but, as a statement by that Committee of ascertained facts, of what had happened in the past, this was a fair estimate, a moderate estimate of what that expenditure had been?—I do not see how it is possible for me to answer that question.

6415. Well, I will put it this way; if it be admitted that this represented the cost of a depôt under the old system—1,922*l.*; and if it can be shown the claim now made represents 1,929*l.*, and covers more expenses than the other calculation covered, it cannot be said that any largely increased cost has been thrown, by reason of the new system, upon the Indian Government?—No, not on those figures given by Sir Alexander Tulloch.

6416. Well, now with regard to the system which has been complained of arising from the dual battalions and so forth, the fact that the battalion at home supports the battalion abroad, and thus absorbs all the superfluous men from the depôt that may not be required by the Indian Government, relieves the Indian Government of all waste likely to arise from the fluctuations of the number of men who may be at the depôt?—I am afraid I do not quite follow that.

6417. Supposing a depôt merely exists—as they did exist formerly—for raising and training the recruits for a British battalion, and that these men are enlisted specially for that battalion, the result is that very frequently there will be a large number of men collected there who for various reasons, it may be want of training, or debility or inability, when the drafts were sent off, have to be retained at that depôt, not being fit to be sent to India?—Yes.

6418. In the same way men formerly came home from India invalids; they could only go to that depôt. The result of that was that there was a considerable accumulation of surplus men, practically waste, who belonged to the Indian battalion, and could only be used with the Indian battalion, was it not so?—I suppose so.

6419. So much so that frequently the depôt, which might be taken at an establishment of something like 90 or 100, swelled to over 200?—Yes.

6420. That was the system under which there was one depôt merely attached to the regiment serving abroad. The result of the new system is that all the surplus becomes at once absorbable in the battalion at home, and, instead of being a necessary excess charge in the depôt, it becomes absorbed in the home battalion, and this considerably decreases the charge that would arise on a depôt maintained for the special purpose of recruiting the regiment. Do you not see that that would operate in that way?—You mean men who have to be left behind on account of health?

6421. And men who come home invalided and recover. Those men are now absorbed in the home battalion. Formerly, they, as members of a distinct regiment, were retained at the depôt until they could be sent out again to India?—No doubt the linked battalion system is a great advantage.

6422. And it absorbs a considerable amount of waste that would have remained in existence at the depôt?—Yes.

6423. In that way it becomes possible to limit the charge made against India to the number of men who are actually supplied to India?—Yes.

6424. That is to say, to the number of recruits that are embarked, without charging her for the waste, except such as arises from desertions and so forth?—Yes.

6425. Is it not clear that the change of system, therefore, was one which was in the direction entirely of reducing the actual charges incurred for the services of India?—No, I should be unable to make a general reply in that way.

6426. Well, if it be the case, first of all, that for the depôt; we make a charge which is less than was made before, that for the training of the soldier we charge only for six months as against the actual cost of the men maintained in the depôt, and that further we have, in the existence of the linked battalion at home, a machinery by which we absorb all the waste arising from the depôt; does not that show that, so far as the cost of raising and training the men for India is concerned, a very economical system has been established?—Assuming that the calculations are absolutely correct, and are accepted; yet I cannot reconcile that with the fact that the increase was so very great—I mean the increase, say, to 205*l.* per man, which the Committees call attention to here.

* *See* Appendix 45, page 289.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

6427. I am speaking, mainly, now with regard to the infantry?—Yes; well the gist of all the reports of Committees and the evidence, I think, given by Lord Cardwell himself, was, that India had been overcharged; so that I cannot quite state a conclusion of that kind in a general way.

6428. But still I repeat that—I mean as regards the depôt charge—the charge is really less, notwithstanding the increase of pay to the army, than it was before, if these figures to which I have referred be admitted?—I confess I could not answer that off-hand.

6429. The other system of depôt which seems to find favour with the Indian Government, is that, practically, which exists at the cavalry depôt. There is no connexion between the depôt and any of the regiments at home, therefore there is no machinery in existence for absorbing what I have described as the waste necessarily arising from having a depôt merely to recruit and train for the regiment serving abroad. Are you familiar with the numbers of men that have been under training at Canterbury in the depôt in order to supply the draft?—I know them for some years. I know that we had 410 men for 1887–88, and I think the depôt cost charged against India was 90,000*l.*

6430. It is not unnatural that you should select an abnormal year in order to show a figure in your favour?—It was a year that I knew.

6431–2. But it is the case that ordinarily an annual draft of something from 800 to 900 cavalry men is sent out to India, is it not?—Yes, 800 or 900.

6433–4. And in order to supply that 800 or 900 men, there are, practically constantly at Canterbury, something like 1,300 or 1,400 men all the year round?—No, I was not aware of that.

6435. That is an illustration of a system of depôts which are consolidated and concentrated, and all working really with the object of training and sending out men to India, a system which is advocated, it appears, by some for the infantry?—I beg your pardon, I think it was said that probably the system of general depôts might be more economical to India than the system of numerous depôts; but there is another question arises with regard to Canterbury and that is, whether the Canterbury depôt is organised on a more expensive scale than is necessary to supply the men.

6436. Well, the men at Canterbury have to be trained as cavalry soldiers?—Yes.

6437. And India requires that they should should go out trained; that is what she asks for at all events?—Yes.

6438. And the draft to India is from 800 to 900 men every year; the number of men maintained here to produce that draft is from 1,300 to 1,400 constantly. Do you think that 23 officers for a force of 1,300 or 1,400 men being trained as cavalry soldiers—horses to be looked after and so forth—is an excessive establishment?—No, but did I understand correctly that that total was at the Canterbury depôt all the year round?

6439–41. I have the numbers here I think; June 30th 1892, 1,674; I should say that there is one depôt extra here for the regiment in Natal; 30th September, 1,720; 31st December, 1,627; 31st March 1893, 1,640; 30th June, 1,578; 30th September, 1,462. Then there was another depôt added for the regiment serving in Egypt, 31st December, 1,534; 31st March, 1,549; 30th June, 1540; 30th September, 1,596; 31st December, 1,078; 31st March, 1,400, and so on. So that practically throughout the year that number of men is maintained; and the number of officers varies, I see, from 19 up to 29, which is the highest at any one time. The establishment is 23, I think?—But I think the establishment of officers is exceeded sometimes, is it not?

6442. There appear to have been 29 at one time; more officers were attached, I suppose, during that time; but the establishment is 23, and it is an establishment of 23 that is charged against India?—Yes.

6443. There are 800 to 900 men to be sent out in draft every year. Do you think that 180 horses is a large establishment to charge against India for training 900 men to be drafted and sent out?—No.

6444. Would it surprise you to hear that the establishment has been doubled, notwithstanding that the 180 horses is all that is charged against India?—I fancy that was because many of the men were not trained.

6445. But India pays for 180 horses; and, in order to comply with the requirements of India, it has been necessary to double the establishment, and not only to double the establishment, but to lend 150 horses from another regiment, in order to give them sufficient staff to train the men. If that fact is established it could hardly be argued that England has been surcharging the Indian Government with the cost of the Canterbury depôt?—I am very glad indeed to hear the generosity of the War Office.

6446. But I want an answer to my question; it can hardly be argued that England has been surcharging the Indian Government in the matter of the cost?—Not on those figures, certainly.

6447. But do you think it is at all out of the way to employ 23 officers and 500 or 600 horses to train and draft off 900 cavalry men?—Not 500 or 600 horses?

6448. Well, to train 800 or 900 cavalry men, do you think it is too much to have two horses for three men?—I understood that the proportion was smaller than that.

6449. But do you think that two horses for three men is too large a proportion, in order to train the men properly as cavalry soldiers?—That is a matter which I must leave to the responsible authorities.

6450. As regards the cavalry depôt establishment, which has been criticised, are you aware of the fact that, after Mr. Bouverie's Committee, a small committee of officers, Indian officers and home officers, was sent down to Canterbury to report upon the Canterbury establishment, whether it could not be reduced; are you aware of that fact?—No, I have no recollection of it.

6451. Well it was so. In fact it may surprise you to hear that their recommendation was an increase. The Horse Artillery recruits in the same way are required by the Indian Government to be fully trained before they are sent out to India, are they not?—Yes.

6452. And of those that are sent out a very large proportion, at all events, have a very full training, have they not?—They had not at one time, I believe they have now.

6453. At one time the system obtained, which appears, as I have said, to find favour with the Indian Government, of having a special depôt in which should be collected all the men specially for India, and it was found that the small establishment agreed upon in consequence of the large waste that arises from raising and training those men, was insufficient to train completely the draft that was necessary; and, in order to comply with what was regarded as India's first requirement that the young soldier should be at least 20 years of age, men were sent out who had not quite completed their nine months minimum training. The draft that went last year, I find, consisted of 151, and of that 151 there were still a certain number of men who had not nine months' training, but the number was only three. There were 12 who had from nine months to a year, 67 from one to two years, 35 from two to three years, and so forth; and that training took place at a depôt which was specially in existence for training the recruits for the Indian drafts. Do you think that a man can be trained thoroughly and efficiently by any cadre which is short of a battery? There are 151 men to be sent out; do you think that you can have an organisation, which would thoroughly train a man, in any way short of a battery? that is, the non-commissioned officers and men and guns and so forth, in order to efficiently train a man as a recruit?—I should say certainly that a cheaper organisation would be possible.

6454. To train the man as a Horse Artilleryman?—Yes.

6455. But you admit this is a matter of opinion?—Quite.

6456. As regards the Field Artillery, I find that out of 724 there were still the odd 24 who had not completed nine months' training, but of the others 50 had been nine months to a year; 262 from one to two years; 190 from two to three years; 90 from three to four years and so on. Well, for that amount of training for men specially set aside for India, it is not extravagant to charge against India for nine months' training, is it?—No. Before we pass from this, may I ask whether you will allow me to go back to the previous question? I see in 1886–87 that the Horse Artillery depôt batteries cost 20,000*l.*, the whole of which was charged to India; and, as far as I can make out, we only had 138 recruits supplied.

6457. It may so happen in a particular year; the demand for the recruits varies, and India complains of having an excessive number of recruits sent out to her, just as she does of a deficiency of recruits; but that establishment, being a training establishment, has to be kept on foot continuously in order to supply the varying draft to India. It could not be decreased, I may say from a battery to half a battery in one year, because a decreased number of

recruits had to be sent out, and then raised to a full battery or a battery and a half the next year, because a larger number had to be sent out?—No.

6458. It is necessary to maintain, is it not, a constant cadre, with the view to train the number of recruits that may be necessary?—The point of difference is whether two Horse Artillery batteries constitute a larger depôt than is actually necessary.

6459. You would like that the depôt should be upon an organisation which did not isolate these Indian recruits and thus give rise to the difficulties I have referred to, as to waste, but would admit of their being blended with the home batteries, which would absorb the waste and supply the men for India direct from those batteries?—You mean with the batteries at home there should be no depôt?

6460. Or a small depôt—practically no depôt?—Where are the men to come from then; from that depôt or from the batteries?

6461. Well, they would be raised and drafted to batteries at home and trained there; and in that case the same process would go on as goes on with regard to infantry men—the waste men, the men unfit to go at the time for embarkation, and so forth, would be absorbed in the home battery, and not kept surplus undergoing further special training while waiting embarkation for India?—That would, of course, all depend upon whether it was more economical for India.

6462. But up to the present the expense of the actual depôt—the separate depôts—has been shown as the expense which is incurred on account of India?—Yes.

6463. But any arrangement which would absorb surplus men from that depôt, would reduce the cost, as standing to the account of India, would it not?—I suppose so.

6464. In fact, my approximation to the system which exists in the infantry, would admit of the men being raised and trained more economically than under the old separate depôt system?—Well, it depends very much. I suppose it would, but of course, the point is what the strength of the depôt ought to be.

6465–6. But, in order to turn out a draft of 151 Royal Horse Artillery men, you must have a considerable depôt, if they are to be trained for a minimum of nine months, when some of them have been enlisted at 18 years of age; they have to serve one, or two, or three years, or even more, before they can be despatched; it is necessary to have a considerable establishment in order to turn out the 151 men?—Yes.

6467. Especially if it is a separate establishment; but, if there is a power of taking off the waste or surplus men that may from time to time accumulate at that depôt, it would reduce that charge, would it not?—Well, I do not quite understand what the waste or surplus is.

6468. You cannot always recruit a man exactly on the day that you want to recruit him, and in order to be able to supply India with a draft of 900 men for the cavalry, 151 for the Horse Artillery, 700 men for the Field Artillery, you must take these men as you can get them?—Yes.

6469. And you must recruit many of these men, knowing that you cannot send them to India during that next year; you must take them because you can get them then?—Yes.

6470. And they have to be kept for a longer period than their nine months or twelve months, or even two years, according to their ages. Well, if you have an organisation to which you can draft all those men, who are inconvenient as it were for Indian purposes, into the general service, you avoid the waste that may arise in that way, do you not?—Yes, I suppose so.

6471. That system, in fact, is an economical system as compared with the system of special and separate depôts?—Well, that, I am afraid, I can hardly answer.

6472. At all events, it gets rid of the waste arising there?—It gets rid of the waste.

6473. With regard to the letter* of the 27th February 1895, in which the Indian Government complain of the various charges thrown upon them without proper consideration or consultation, I should just like to call attention to a few of them. I see here the first stands forth prominently, namely, increased rates of pay to medical officers of the British service in India in 1864–5. It is not the only case in which the British medical officer's name occurs. The amount there involved is 20,000*l.*; I find in 1873–74 there was a further 48,000*l.*; in 1876–77 a further 29,000*l.*, and in 1880–81 a further 13,000*l.*, all making up a considerable sum, and all apparently due to the necessity for increasing the pay of the medical officers. Are you aware of the conditions which led to those various increases of pay?—I believe that the Army Medical staff were not obtainable.

6474. The service in fact was, as I heard it described in the House of Commons the other day, boycotted by the medical profession, was it not?—Yes.

6475. I suppose the Indian Government would not have liked to have been kept without medical officers?—I think we should have been perfectly content, if you had allowed us to recruit our own medical officers and our own Medical Service. We think we could do it a good deal cheaper.

6476 Well, I cannot say I have ever heard of that proposal. But do you pay your own medical officers less than is paid to the British Medical Service?—No; but the fact of there being two medical services in India does not conduce to economy.

6477. But, in order to procure your own special Medical Service, it appears that you have to give them more than is paid to the Home Medical Service, both as regards pay and pension?—No. Of course there is a larger field for them in civil medical appointments. We never have any difficulty in getting officers for the Indian Medical Service.

6478. But still you pay them more than is paid to the British Medical Service?—In what way? not while they are on military duty.

6479. You give your own Medical Service more than is paid to the British Medical Service in pay and pensions?—Taking the whole amount we do, perhaps.

6480. At all events great difficulties existed in the way of obtaining medical officers at home for the British Medical Service, and it was necessary to make conditions by agreement with the heads of the medical profession, in order to obtain the necessary supply; that is acknowledged, is it not?—Yes, I believe so.

6481. And do you think that the Home Government disregarded the financial interests of India in coming to an arrangement which would enable them to obtain a supply?—Well, I think that, taking everything into consideration, we should have been very glad to have had one medical service for India, instead of two.

6482. And, notwithstanding that you pay for your special Indian Medical Service a larger amount in pay and pension, you think you could do it cheaper?—Well, when you speak of a larger amount of pay, of course you have to consider the whole of the civil appointments that there are in the medical service. I have heard it stated by very eminent medical administrators of the Medical Department in India that one Medical Service in India would be more economical than the two services.

6483. (*Sir Andrew Scoble.*) You would only have one staff instead of two I suppose?—Yes.

6484. (*Sir Ralph Knox.*) You mix up the medical attendants of the civil and the military populations?—No, not in that way.

6485. The next large item I see is a payment, which I have already alluded to, that is, the increase of 2*d.* a day. That was given in 1867–68, and an additional penny on re-engagement. That involved, according to this estimate, 250,000*l* additional expenditure. We have already given some consideration to that. It is not held that that was an unnecessary expenditure in order to obtain the recruits for the army, is it?—I think the heading of this statement is:—"Showing the annual charges and certain "initial charges which have been imposed upon Indian "revenues in consequence of orders by the War Office "issued in all cases without the concurrence of the "Government of India and in some cases without that of "the Secretary of State for India having been previously "obtained." I do not think it was ever alleged that in every case mentioned in this table the increase could have been postponed altogether.

6486. Then it is really not a practical argument; it is rather sentimental than practical?—Well, we think it is rather practical, because, when a large charge has to be imposed on the revenues of India, the Government of India would like to have something to say to it before it takes place.

6487. Do you think they could possibly have used any argument one way or the other with regard to this additional pay which was granted to the army in 1867–8?—Without going back to the whole circumstances of the time, I am unable to say.

6488. However, it did involve a considerable additional expense: but I do not know whether you can recall the fact

* *See* Appendix 45, p. 283.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

that soon after that, in consequence of the representations made by the Indian Government as to the great expense of the army in India, considerable assistance was given to the Indian Government by the Home Government with a view to relieve the Indian account of some of the heavy charges then incurred for the British army serving in India, do you remember?—I recollect that a very large claim was made by the War Office, and it was, I think, disallowed by Lord Northbrook's Commission; but I do not remember the particular instance to which you refer.

6489-90. No; what I refer to was this;—India represented to the Home Government that the British army was costing too much, and that they must send home some regiments. Some were sent home; but the Home Government entered upon a re-organisation of the army which largely reduced the charges for officers and non-commissioned officers, and that was carried into effect throughout the whole army in 1869-70, and relieved India of more than this additional charge of 250,000*l.*?—No, I do not recollect it, I must say.

6491. All the infantry regiments out there consisted then of ten companies. They were all reduced to eight. The number of troops in cavalry regiments were similarly reduced, but the number of rank and file were maintained; and that affected the organisation of the army throughout and effected a reduction of something like, I think, 300,000*l.* a year upon the charges for the British army in India. That to a great extent relieved India of this additional charge which was thrown upon them by reason of the increased pay of the soldier, did it not?—I am very glad to hear it.

6492. Further, the penny on re-engagement was abolished as soon as the short service was introduced, was it not? That is an item of 50,000*l.*, I think, out of the 250,000*l.* Then there is a charge put down here of 35,000*l.*, on account of the grant of good conduct pay at earlier periods to British soldiers. Is it not really the fact that that change gave rise to little or no increased charge for good conduct pay, and that practically at the present time the charge for good conduct pay is less than it was then?—I do not know that I can quite accept the statement.

6493. Well, it is obvious with regard to a pay which was given in accordance with length of service at various periods such as 5, 10, 12, 18 years, and so on, increasing by a penny a day, that, if men could not complete the periods of service which were conditions of that grant of pay, the charge would fall?—Yes.

6494. And would certainly admit of smaller grants being paid after shorter service without any serious additional charge?—Yes.

6495. In fact, I may say that at home, notwithstanding these grants at earlier periods, the charge for good conduct pay has been reduced by something like 30,000*l.* a year; and I believe it will be found to be the case, disregarding, of course, the increase arising from the depreciation of the rupee, that the charge for good conduct pay in India is less than the charge was in former times. There is another item here which I do not quite understand in regard to band allowance to British regiments in India. There is an estimate put down here of over 14,000*l.* a year. I cannot make out how in the world it is made up. It consists of only 80*l.* a year in sterling in each of the regiments. I have looked into it. It appears to me that it ought to be 3,000*l.* You have no note upon that?—No, I have no information to show how it was arrived at.

6496. Then there is another item, which is put down as giving rise to 46,000*l.* a year, that is:—"Addition of "a second lieutenant-colonel and two majors to each regi- "ment of British cavalry and infantry." Were the Indian Government not aware that that change was really intended to largely reduce the non-effective charge for pensions?—No, I do not think so.

6497. It was at the time calculated that by increasing the number of lieutenant-colonels and majors in the regiments the men in the lower ranks were saved from compulsory retirement according to the terms that were then in existence, and, inasmuch as the number of officers was not increased, by retaining officers of the higher rank there was an ultimate considerable saving as against the additional effective charge; in fact, the increased effective charge was proposed in order to largely decrease the non-effective charge?—I was not aware of that.

6498. These sums altogether, I find, approximate to something like 1,000,000*l.*; and about 500,000*l.* of this amount arises from the necessary increases of pay that have been from time to time granted to the soldier, in order to meet the difficulty of recruiting. Are those charges to which the Indian Government could possibly have raised any objection?—I think it is very possible they might have raised objection, but I could not answer in any very precise manner.

6499. But do you think that they could have raised an objection, which would have prevented the Home Government making these changes in the army outside India?—No, probably not.

6500. Is it not really the case that where the Home Government, which has to deal with the question of raising and training both officers and men, whether professional officers or combatant officers or the ordinary recruits, determines something must be done in order to raise these men, India can hardly exercise any voice in considering the details of such proposals; and that all that they would really say is that the excess charge will throw additional burdens upon India?—That is so.

6501. But that is about the only argument that they can adduce?—Yes.

6502-3. The first very large sum of rupees is put down as due to the increase of the annual allowance of practice ammunition to the British troops. Is it not optional with the Indian Government to decide the amount of ammunition that the British troops shall use in India?—Yes, I suppose that they would decide it on the recommendation of the military authorities in India; but, at the same time, I fancy that they would have to follow any changes which had been made at home.

6504-5. I see a great number of these rupee charges are due to increased stores issued to the troops, I presume in order to improve their efficiency. Well, generally the contention of the Indian Government is that whatever sum of money the Home Government can show that it spends necessarily upon raising and training the recruits for the maintenance of India, the Home Government should sit down and write one half, whatever that can be shown to be?—No. I think they would be satisfied with much less than that.

6506. But that is really the argument, that whatever can be shown to be necessarily expended upon the service, India is not to pay it?—No. I do not think that is the argument at all.

6507. Then what is the Indian argument?—I repeated a good deal of it before I think the Indian argument rests, not merely on the calculations which have been disputed by various committees, but upon the general grounds that England possesses in the army of India a great reserve of military strength, that India is a great training ground for the British army, that it has been very largely employed on various occasions—occasions on which India has never made any charges for raising the troops.

6508. Those all appear to me to be arguments in support of your case; but, notwithstanding, it all points to the same thing—that, whatever can be shown to have been spent necessarily upon raising and training these recruits for Indian service, the Home Government is to make a very large reduction on that charge because of the arguments which you are advancing?—Because of the general arguments.

6509. That is to say, a reduction is to be made on the cost of doing the thing on those general grounds?—And of course, on the ground of the presence of the strength of the depôts in England as part of the army maintained in England. That, as you know, has been made the subject of comment by many of these committees that have sat.

6510. If those depôts are only in existence really to serve the purpose of the Indian army, inasmuch as the men are merely under training as recruits, and are not efficient soldiers, it cannot be said that they add anything to the required forces of the Home Government?—But I understood the argument was that you sent them out as efficient soldiers.

6511. When their training is complete?—But then there must be a certain number of them at all events who are so efficient as to be able to take their place in the ranks, if emergency occurred.

6512. However, that is the argument—that, whatever can be shown to be the extra cost incurred by the Home Government, the full amount of it shall not be charged against India because of those general arguments which you have advanced?—Yes.

6513. (*Sir Andrew Scoble.*) I asked you last Thursday about the number of Royal Engineers employed in India, and you told me that the establishment was 350, of whom 106 belonged to the Public Works Department and 39 to the Survey Department?—Yes.

6514. Am I right in assuming that the officers attached to those two departments are employed wholly upon civil duties?—Yes.

6515. Is any part of their pay, while so employed, drawn from the Military Department?—No.

6516. Practically, as far as their services are concerned, they have no military value whatever?—Perhaps I might say that in the Public Works Department they are looked upon as a reserve, upon which we could draw in case of war; and, in regard to the officers employed in the Survey Department, we take them occasionally for field service.

6517. But is not their availability for military service rather a matter of theory than a matter of practice?—No, I think we have taken them on various occasions. For instance, in the late Chitral Expedition we took certain Royal Engineer officers from the Survey and from the Public Works for service in the field—not to any large extent, but still to some extent.

6518. If these officers cease to be employed either in the Survey or in the Public Works, then they revert to military employ and get military pay?—Yes.

6519. So that that is a contingent charge at all events upon the Military Department?—Yes, and I may mention that we practically pay for their training and we pay for their pensions.

6520. In the Military Department?—They fall upon the military estimates.

6521. (*Chairman.*) Their ordinary pay is paid out of the military estimates?—If they are employed in the civil department—in the Public Works Department or the Survey Department—then their ordinary military pay is charged against the civil estimates.

6522. And their pension?—That comes against the military estimates.

6523. (*Sir Andrew Scoble.*) I wanted to ask you a few questions in regard to a matter which I do not think has been gone into yet, and that is the Aden establishment. I believe Aden was first occupied about the year 1838, was it not?—Yes; 1839 I think it was.

6524. Is the whole expenditure of Aden now charged on the revenues of India?—Yes.

6525–6. With the exception, I think, of a contribution made by the British Government towards special defences?—They have paid a moiety of the cost of the actual works on special defences.

6527. Can you tell me what garrison is kept at Aden now?—Three companies of artillery, a company of sappers and miners, a battalion of British infantry, and a battalion of native infantry, but certain portions of the native infantry are stationed on the Somali coast, Zaila, Berbera, and other places.

6528. That is, the stations which are considered dependencies of Aden?—Yes, for military and political purposes.

6529. And the whole of the charge of this military force is defrayed by the Indian Government, is it not?—Yes.

6530. I see in Sir Henry Waterfield's paper—I do not know whether you have got a copy of it—"Payments on "account of Her Majesty's forces serving in India"?—Yes.

6531. Would you look at page 31; I think you will find that in 1894–95 the military charges at Aden amounted to Rx. 206,584?—Yes.

6532. Military works to Rx. 9,376?—Yes, that is really the maintenance mostly.

6533. And the special defence works to Rx. 32,010, of which, I presume, Rx. 16,005 would represent the Indian share of that expenditure?—Well, the Home Government covenanted to pay up to a certain limit; I think it was the half of 213,000*l.*

6534. Has the expenditure come to a larger amount than that?—They have had to pay separately for ammunition and stores; I think they pay half the cost of armament also. The total amount for works was a moiety of 213,147*l.* on the condition that, if the expenditure exceeded that amount, the excess should be borne by India. I am not certain whether it has exceeded the total amount.

6535. At all events, what the British Government would pay for this expenditure in 1894–95 would not be more than Rx. 16,005; that is, half the Rx. 32,010?—No.

6536–7. In your opinion, has the opening of the Suez Canal had any effect in increasing the importance of Aden as an Imperial station?—I should say that it has. Aden is the key of a great commercial route, not only to India, but to Australia and China. It is a position which is essential to Great Britain, and not only to India. I have some statistics from the Board of Trade, and I find that the total value of the trade between the United Kingdom and British India in 1894 was 67,553,348*l.*; that the trade between the United Kingdom and other countries in Asia was 42,868,618*l.*; and that the trade between the United Kingdom and Australasia was 54,824,476*l.*; so that the total under the second and third heads was considerably more than under the first head. Then the trade between the United Kingdom and the East Coast of Africa was comparatively small, and the steam tonnage in 1894—which is practically the only tonnage which passes through the Suez Canal—between the United Kingdom and India was 2,442,252 tons, and the tonnage of vessels between the United Kingdom and other countries in Asia was 1,407,565; while the tonnage of vessels carrying trade between the United Kingdom and Australia and New Zealand was 993,991 tons, and there was a small amount of tonnage of vessels carrying trade from the United Kingdom to East Africa—that is to say, steam tonnage which passes through the Suez Canal—but it was practically very small.

6538. Those figures show that the trade to India was about 63,000,000 and the trade to the other parts of the East and Australia about 96,000,000, do they not?—That is according to the statistics I have taken out.

6539. And the tonnage about equal?—Yes.

6540. Then do you now regard Aden as a vital point in the commercial highway to the East and Australia generally?—Yes; I should say that it is a very vital point, and that the Eastern trade, as apart from the purely Indian trade, has increased very considerably.

6541. Do you consider that the Suez Canal has very much increased the importance of Aden to British possessions in other parts of the world than India, while it has somewhat diminished its importance to India itself?—I should think that, of late years certainly, the relative importance of Aden to Great Britain has increased beyond its importance to India specially, and I might say particularly with regard to the politics of the Red Sea littoral and to the fact that European nations have obtained a footing there.

6542. Then do you consider that it is fair that the whole cost of maintaining this fortress should continue to be borne by India?—No, I think not.

6543. Apart from the military charges, the whole civil charges are borne by India according to this paper of Sir Henry Waterfield?—Yes.

6544. And the civil receipts are less than one-half the civil charges?—Yes.

6545. Rx. 22,890 being the receipts in 1894–5, while the charges were Rx. 49,128?—Yes.

6546. (*Mr. Courtney.*) Is Gibraltar in any way a set-off to that?—No, I should say not.

6547. Is it not a similar position at the other end?—But then Gibraltar would be of great strategic importance as regards the Mediterranean.

6548. Is it in any way a set-off?—Not in my opinion.

6549. (*Sir Andrew Scoble.*) In time of war the route to India would not be by Gibraltar but round the Cape, would it not in all probability?—Of course, if the Suez Canal was blocked, it would be so.

6550. I have only one or two questions I want to ask you about military expenditure generally. Apart from the question of apportionment of charge, and minor economies which may be found possible as time goes on, do you look for any reduction in the military expenditure in India?—Not any large reduction. I think we may always continue to pursue the path of economy with regard to the cost of departments and so forth; but I cannot say that I see any prospect of any very material reduction in military expenditure.

6551. I suppose there really would be only three ways in which you could make any very material reduction; one would be by the reduction in the number of troops; do you think that is feasible?—No. On the contrary, I think we have been very hard put to it to garrison India in a proper and efficient way with the numbers we have at present. I am speaking especially of the native army.

6552. Another way, of course, would be by the reduction of the reserve of military stores that you keep in India; do you consider that there is any material reduction to be looked for under that head?—No. We have done a good

Major Gen. Sir E. H. H. Collen, C.I.E.

25 March 1896.

deal in that direction, where we have considered that the scale of the reserves kept up was perhaps larger than is now necessary, having regard to the greater facilities of communication and so forth; but, I do not think, speaking generally, that it would be possible to reduce the reserves of stores.

6553. The third head I had in my mind was the reduction of pay of the troops; do you see any way of reduction in that direction?—No, I certainly do not. I can speak from some knowledge of the officers of the army; I know that it is a very much more difficult thing now to live in India than it was; it would be quite impossible to reduce the pay. Of course the pay of the British troops is fixed on a sterling basis, and we have been obliged to raise the pay of the native army.

6554. Is there any way, then, in which you think there might be a material reduction effected in the military charges in India?—Without touching on questions which have already been dealt with and speaking only of the native army, it is possible—although I only express a personal opinion—that, as the reserve increases, we may reduce the strength of the cadres; but, on the other hand, I am bound to say that that has been objected to strongly by the military authorities. In any case we want more officers than we have *got now*, so that it would not be a reduction of expenditure to any very considerable extent. At present the reserve is in a transition state, and I think out of the limit of 23,000 we have only got about 13,000 or 14,000.

6555. (*Mr. Courtney.*) Only one question about the possibility of the reduction of military force. You said you had been rather put to it of late with respect to the native army; would there be any possibility of reducing the charge of the military force by reducing the English proportion of your force?—Of course, if you reduce the English proportion there would be a considerable saving, but I have never heard it proposed in India that the British force should be reduced. It must be remembered that the extension of British territory in Upper Burma has absorbed a considerable portion of the increase, so that it cannot be said that the whole 16,000 men is available for the garrison of India proper. I should say, giving my own opinion, that it would not be right to reduce the strength of the British army in India.

6556. (*Sir James Peile.*) I suppose the reorganisation of the Native State troops would be a difficulty in the way of decreasing the English army in India?—That would be so; it would throw out the proportion.

6557. (*Mr. Courtney.*) Do you hold out much hope of changing the character of the British contingent, having it less efficient?—No; I should be sorry to see it less efficient than it is at the present time.

6558. Or less equipped up to the latest conception of European equipment?—That question is somewhat difficult to answer. Take as an example—supposing that a new gun for the Artillery was introduced in England, we should be quite content to remain with the present gun, so as not to incur very large expenditure for re-armament; but no doubt in the course of years it would be pressed upon us, and we should probably recognise the advantages of the better gun, if it were shown to be very much better, and we should have to re-equip the artillery with that. But, taking the case as it stands at present, we should be satisfied with the equipment we have.

6559. Would you not be pressed with the argument that it was necessary that the artillery should work with the same gun in India as in England?—No doubt we should.

6560. Is that an argument, do you think, that India ought to pay for?—I think that we might postpone the change as long as possible, but that ultimately we should have to accept the argument that the Artillery should be armed with the same gun.

6561. It is a necessary consequence of an identical army?—Yes, I admit that it is.

6562. And you would not contemplate with satisfaction the suggestion of an independent army?—No.

6563. (*Mr. Buchanan.*) I have only to ask you one question about that list of army charges which have been thrown on the Indian revenues in consequence of orders passed by the War Office without the concurrence of the Indian Government, and, in some cases, without that of the Secretary of State. You would not contend that any of these increased charges are not in themselves improvements in military service in India?—No.

6564. Your contention on the part of the Indian Government is that they should not have been imposed upon the revenues of India without previous consultation with the Government of India, if possible, and certainly with the Secretary of State?—Yes.

6565. In view both of the military interests and the financial interests of India?—Yes.

6566. Because while this country, having an elastic revenue, can easily bear an increase of 100,000*l.* or 1,000,000*l.* in a year, the finances of the Government of India are carried on on a very small balance indeed?—Quite so.

6567. And that in all probability the military authorities in India would have objected with reason to many of these proposed changes?—I think so.

6568. And what the Government of India would urge would be that, as far as practicable, and very much more than has been done in the past, their military opinion should be taken and their financial interests should be consulted?—That is the position I understand the Indian Government have taken up.

6569. Then one other question about the partnership theory, the theory that the Indian and the British Government are in partnership as regards army matters; that view is disclaimed by the Indian Government, is it not?—It is, for reasons which have been frequently given.

6570. Namely, that you get the burdens of the partnership and none of the advantages, or few of the advantages?—I would not say that we get none of the advantages; but, of course we feel that we have not an equal voice in the decisions which are arrived at.

6571. There are two partners and they are not equal in authority?—That is our position.

6572. And also the one is a very rich partner, and the other is a very poor one?—Yes, that is so.

6573. Or comparatively poor?—That is so.

6574. And therefore they are not equal in that respect either?—No.

6575. So that the theory of an identical army if, worked out logically and arithmetically, between this country and India, tends to the serious financial disadvantage of India?—It does, if worked out on a purely arithmetical basis.

6576. And the appeal which you, on the part of the Government of India, rather make to this Commission is that, although on that theory of an identical army, the arithmetical basis is the basis to take; still there are equitable grounds upon which you would claim for a reduction of the charges, or for generous and equitable treatment with regard to military charges which have to be borne between this country and India?—That is the general position we have taken up.

6577. (*Mr. Naoroji.*) I want first to read a few statements which are the fundamental premises on which the whole argument for all demands upon India is based. In the papers before us there is one extract from the report of the Committee of 1874, and the extract is admitted by Sir Henry Fowler. The extract is this:—"At the same time "India, as a component part of the Empire, must be "prepared to share in the cost of a system the expense of "which may be enhanced for Imperial purposes." The Government of India sums up, in their letter of the 25th March 1890, the principles upon which the War Office claims are made, as follows:—"The actual cost to the British Ex- "chequer is the cost of raising, paying, and maintaining "the force in the United Kingdom which would not "be maintained if the army had not to be kept up; "all the difficulties in the organisation of the British "army during recent years, and the grants of additional "inducements to men to join the army, have been mainly "due to the necessity of keeping a largely increased "European force in India." Then, Mr. Knox, I suppose that is Sir Ralph Knox, said in his memorandum of the 26th April 1889:—"That the actual cost to the British "Exchequer of raising and training the force necessary "to maintain the army in India, is clearly the cost "of raising, paying, and maintaining the force in "this country which would not be maintained if the "Indian army had not to be kept up;" and he says further, "when it it is borne in mind that all the difficulties in the organisation of the army during recent "years, and the grants of additional inducements to men "to join the army have been mainly due to the "necessity of keeping a largely increased European "force in India, it is difficult, in justice to the "home taxpayer, to see on what grounds any modification can be made of this claim as the payment "to be made by the Indian Government." Then Mr. Ryder put to you three or four questions, which I will repeat here. Question 5363: "May I ask a question with

" reference to the first question of Mr. Naoroji—whether " you are satisfied that it is quite fair to distinguish be- " tween the cost of the maintenance of the British rule " in India and the cost of the *de facto* Government of " India. Is it not fair to say that the *de facto* Government " of India is British, but that that does not affect the duty " of India, as a very large and powerful community, to pay " for the cost of its own Government?" In the next ques- tion he says " No doubt everybody will be agreed that where " India cannot afford to bear the whole of the charge, " England should come to its assistance. Really, my point " was that *primâ facie* it is the duty of India to pay for " its own Government: the fact that that Government is " British does not affect the duty of India to pay." Then he goes on: " but then would you go so far as, I think, " Mr. Naoroji did, as to draw such a distinction between " Imperial interests and Indian interests, as to hold that " the one was exclusive of the other, and that, if once you " granted that an interest was Imperial, then it ceased to " be Indian and became chargeable on the British tax- " payer instead of on the Indian." Then, " Surely it is of " Imperial interest that every part of the Empire should be " prosperous and should be defended against its enemies." " You really cannot separate the two; Indian interests are " Imperial, and must continue to be so as long as India " is part of the British empire, and, therefore, it is not " enough to say that a particular interest is Imperial " in order to prove that the charge should not fall upon " the Indian taxpayer." Then he says " That grant-in- " aid might be justified by the fact that India was over- " burdened by the charge of the Afghan war?" Another question. " It undoubtedly was an Imperial war, but so " also an Indian war may be Imperial in its magnitude, " and yet be still Indian?" Now, I have read these. What I have read, I think gives a full and fair statement of the British arguments, for the claim that Britain makes upon the Indian people, the premises upon which the argument and conclusion is based. I have to show that the whole of these premises upon which every claim on India is based is utterly fallacious and untenable. This necessitates my putting a few questions which I have here. The first question is, have the Indians the slightest voice in the expenditure of their revenue?—You mean the Indian nation as a whole?

6578. The Indian people?—The Indian people?

6579. Yes, of British India?—Not of course any repre- sentation, except through the action of the Legislative Councils.

6580. The Government of India itself speaks in one place of the people of India " who have no voice in the " matter "?—That refers to the special fact that the peoples of India had no voice in respect to the claims made by England, or the War Office, on India.

6581. Now with regard to the Legislative Council, is it not the fact that the Legislative Council cannot in any way affect or touch the budget? Some members may express opinions, but they can propose no resolution of reduction or no resolution of change of any kind, and so Sir David Barbour told us here?—That is so.

6582. So that even the Legislative Council of India has no voice whatever in the expenditure of the Indian revenues?—Well, I should perhaps qualify that by saying that they could raise interpellations on questions such as these; for instance, the home charges have been mentioned.

6583. But they cannot put a single motion for reduc- tion, as the budget is discussed in this country in the House; nothing of that kind?—No.

6584. Then the next thing is, are not the Indians distrusted, and is not that one of the reasons why Britain increased the European force, for its own interests?—No, I should say not, certainly.

6585. That is to say, that they are not distrusted?—No; on the contrary I should say that the Government of India rests on the loyal contentment of the people of India.

6586. That is right, that is exactly the case; the Govern- ment of India has to depend entirely upon the loyalty of the people, but yet are not the people distrusted? They are disarmed; there cannot be a single officer in the army; they cannot even occupy higher places in their own services, even in India. These are simple facts I am asking; I am not asking any opinion?—I should not say that they were distrusted; but those questions of yours seem to me, if I may venture to say so, to enter upon large questions of policy which I am unable to go into.

6587. As to questions of policy, I do not think that this Commission is precluded from asking such questions, because the reference is quite clear; it has made no exclusion whatever of any questions as to policy; but still I am not putting these questions as to policy, I am simply putting these questions of fact, in order to show how far the ground upon which the whole claim is made is untenable. Are not Indians refused as volunteers?—They are not excluded, I think, if they adopt the uniform, and can speak English. Parsees, I think, are not excluded.

6588. Not altogether, in some places; in Quetta, I suppose, there may be volunteers; but I do not know that there are any volunteers on our side; no, they are not admitted. I only point out all these disqualifications.

6589. (*Sir Donald Stewart.*) But I think you are wrong. Is it not a fact that any native can be appointed a volunteer if he is accepted by the commanding officer of a volunteer regiment?—Yes, I think so.

6590. (*Mr. Caine.*) But he cannot claim it as a right?—No.

6591. As matter of fact he never is accepted by the colonel of the regiment?

(*Mr. Naoroji.*) Is not a military education entirely refused to Indians in the military colleges of this country?

(*Sir James Peile.*) Has that question anything to do with expenditure?

(*Chairman.*) You were asking about education, were you not, Mr. Naoroji, whether they were excluded?

(*Mr. Naoroji.*) Military education. It is entirely refused to Indians in this country; they will not admit a single Indian.

(*Chairman.*) May I ask what is the line of that argu- ment?

(*Mr. Naoroji.*) I want to show that Indians cannot be considered an integral or component part of the British Empire. They do not enjoy the rights or the gains of the British Empire, while it is proposed that they should submit to every duty of the Imperial citizen. Well, I want to show that that is what they do not possess. Until they possess those rights, the argument that they are bound as citizens of the British Empire is not a correct argument; it is altogether a one-sided argument; there- fore, I am obliged to point out all the disabilities of the Indians; that they have no rights and no gains of the Imperial citizenship or of the country, while these claims are made upon them on the ground that they are Imperial citizens.

(*Chairman.*) I should have thought that on that line you are entering, Mr. Naoroji, on questions which lie outside our reference.

(*Mr. Naoroji.*) No, I contend that it is not.

(*Chairman.*) Have you got the reference?

(*Mr. Naoroji.*) The reference does not in the slightest degree exclude any such questions.

(*Chairman.*) Let us look at the reference and see. I do not want to suggest to the Commission the exclusion of any questions which come fairly within the reference:— " Whereas, we have deemed it expedient that a Commis- " sion should forthwith issue to inquire into the admi- " nistration and management of the military and civil " expenditure incurred under the authority of the Secre- " tary of State for India in Council, or of the Government " of India, and the apportionment of charge between the " Governments of the United Kingdom and of India for " purposes in which both are interested."

(*Mr. Naoroji.*) That includes everything; there is no exclusion whatever, saying that policy, or this, or that, shall not be discussed. The whole expenditure depends upon the manner in which the expenditure is incurred. The expenditure depends, and the manner depends, upon the kind of policy or system. I may use the word " system " to avoid the word " policy," if you like; it is the kind of system that is introduced in the expenditure, which neces- sitates all this apportionment and all these claims that are made upon us.

(*Chairman.*) What is the connexion between that question of policy and the administration and management of the military and civil expenditure?

(*Mr. Naoroji.*) Just this: the way in which the Europeans are brought into India, and the employment of the large European services are for the interests of both India and England, and consequently I say that there must be a fair apportionment of charges in both countries between them. I will lead to that conclusion gradually.

(*Chairman.*) Perhaps you will go on, Mr. Naoroji, bearing in mind the expression of opinion which has been made.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

(*Mr. Naoroji.*) That is the end, that I want to make Britain liable for a portion of the charges in both countries which are for British interests. That is the next question that I am to put here. Have the Indians any share whatever in the gain and glory of the British nation or country just as the Irish or the colonials have? I will explain what I mean?—I cannot speak for the Irish, but I think that the natives of India have a great share in the glory of the campaigns which have been won to a great extent through the valour of native troops.

6592. In that way they have only to give their blood and their money for the enhancement of the British Empire. If that be glory I do not know. However, I will explain this: An Irishman, or a Scotchman, or a Welshman, or a Colonial, as well as an Englishman, can have a post in any of the military, naval, or civil services, or in any of the services of the Empire in any part of the British Empire, having thus a share in the gain and glory of the British Empire. Are Indians in that position? With the exception of the lower services, and the few exceptions of the higher civil service, in their own country, are they not entirely shut out from any share in the Imperial gains?—In the Imperial gains?

6593. Yes, Imperial benefits; they have no service in the higher ranks of the army?—No.

6594. No service in the Navy?—That is perfectly true.

6595. No service in the Civil Service here. Are we not a part of the Empire; should we not have a fair and full share in all the services in this country also, as well as in India?—I am not competent to answer a question of that sort, because that seems to belong rather to civil and political questions.

6596. As a matter of justice merely?—But I should say that natives of India have a distinct share in the Imperial gains, because they are able to live in peace and comfort; whereas otherwise they would not be able to live at all in India.

6597. But with that peace and comfort of the Indian, does not also the very existence of the British rule depend upon those services? If there were no peace and order, and if the country were in a disorderly state, the British rule would not be able to remain there very long; is it not for the British interests also?—That is a matter of opinion.

6598. Then as a continuation of that disqualification, Lord Salisbury has said (Hansard, Vol. 185, p. 839), "it "would be a great evil if the result of our dominion "was that the natives of India who were capable of govern- "ment should be absolutely and hopelessly excluded from "such a career;" and also with regard to the present system of British administration, he said that "it creates "a terrible amount of misery." How far you may agree with that I do not know?—No; I do not know that I ought to be called upon to answer a question of this kind; but I do not agree with the latter opinion.

6599. For the little admission Indians have in their own country into the higher civil service, none into the military and naval services, are they not most unjustly treated in being compelled to come to this country for their examinations, instead of being simultaneously examined in India itself?—That, I venture to submit, is not a question which is concerned with the military expenditure of India.

6500. The whole expenditure is the question. I want to refute the grounds on which the War Office Memorandum and Mr. Ryder's reasons are based—namely, that India is a part of the British Empire and is bound by all the duties of the British Empire; and, therefore, of course, you may answer just as you think proper?—Well, if you ask for my own personal opinion, I think it is a very good thing they should have to come.

6601. If an Englishman wants service in the Colonies, he must go there; but if an Indian wants service in his own country, he must come here; is that justice?—I think it turns upon the consideration of many other points.

6602. Do you not compel Indians to pay every farthing for whatever you choose to do for your own interests, or what you call Imperial interests, for the benefit of the British taxpayer? Are not the British services in India for the benefit of the British taxpayer to keep his rule in India, to have the British Empire, and must he not share, therefore, in the cost of keeping up that British Empire?—I think that the cost of the service that is maintained in India is, to a very great extent, for the benefit of the native himself.

6603. I grant even that much, though it is not quite logically so; but is it not also for the benefit of the British themselves?—It is certainly for the maintenance of the British Empire as a whole.

6604. And, therefore, should they not bear a share or take a share in the cost. Of course, though you employ the native army, I do not say a word. You would require that under any circumstances, whether the British were there or not; but the British army or services would not be required in India except on account of the British rule?—If the British rule is to obtain in India, I presume a portion of the British army would be required there, but I think I have given reasons before the Commission to show that in my opinion India should receive generous treatment at the hands of the Imperial Government on account of certain services connected with the British army.

6605. I will not go into the many disqualifications, notwithstanding that we have had repeated pledges; we have the Act of 1833; we have the Proclamation of 1858; we have the Act of 1870 to make us something like Imperial citizens. There is the declaration on the occasion of the assumption of the Imperial title; then the declaration in the Jubilee year, that we would be treated equally with all British subjects; but these pledges have never been fulfilled. Lord Lytton says that all these pledges have been avoided by every possible kind of subterfuge; therefore is it right and is it just to say that India is a component or an integral part of the British Empire? Is it not more just to say, as Macaulay once said, that it is more the slave of the British Empire than a partner or component part of the British Empire?—No, I should say that India was a component part of the British Empire.

6606. Therefore, the theory that India is an integral or component part of the Empire, and must take its share of the expense of the Empire and not at all of the profits or interests or rights of the Empire, is not that something like adding insult to injury?—Not in my opinion.

6607. Well, the Government of India say,* in their letter of the 10th August 1883, "We maintain that the system "itself is unjust. It presupposes that there is a partner- "ship between the two countries, and so to a certain "extent there is, but there is no freedom of contract. It "is a partnership in which the rich and powerful partner "is able to prescribe the conditions under which the busi- "ness shall be carried on with very little reference to the "wishes or the means of the poorer and weaker partner." That is what the Government of India says; I do not know how far you agree with that?—I agree with that entirely with reference to particular charges which we are discussing.

6608. I apply that to the whole charge, everything that is for the common interest, because our purpose to-day is to discuss what are those charges which are for common interest for the purposes of both, and what apportionment should be made.

(*Chairman.*) Where are you quoting that from, what the Indian Government says?

(*Mr. Naoroji.*) From one of the papers here.

(*Chairman.* What did it refer to? Should you not state what the Indian Government referred to?

(*Mr. Naoroji.*) The Government of India's whole argument is with regard to the army charges only.

(*Chairman.*) When you are making a quotation, I think it would make it clearer to say what the quotation refers to.

(*Mr. Naoroji.*) Yes.

6609. (*Chairman.*) You gave a quotation, and it might refer to the whole question you are raising, or it might refer merely to these army charges. I think Sir Edwin Collen understood it referred to the army charges?—The army charges, yes.

6510. (*Mr. Naoroji.*) The Government only applied it to the army charges; I apply the language to the whole general principle involved. I must confess I feel exceedingly grateful to the Government of India for the manner in which they have been fighting the War Office here. But is it not the fact, as I have already said—and I will just give a little authority—that even the opinion of the Government of India is no expression of the views or wishes of the Indian people? If the Government of India says anything or asks for anything, that this or that should be done for India, it does not mean that it is the voice of the Indian people?—Well, I should hope that the voice of the Government of India would represent the voice of the Indian people.

6611. You think that the voice of the Government of India would represent the voice of the Indian people?—I should hope that it would do so.

* *See* Appendix No. 45 Apportionment of Military Charges. p. 306.

6612. However, I have got an authority here. Mr. Gladstone says, in a speech in the House of Commons on the 12th March 1880, "it appears to me that to make such "a statement as that the judgment of the Viceroy is a "sufficient expression of that of the people of India, is an "expression of paradox really surprising and such as is "rarely heard among us." That is his opinion. And he also points out what the relations of Britain are with India, and the principles upon which India is governed, and he says here—he emphasises this position by the words—"The law and argument of force, which is the "only law and the only argument which we possess or "apply to place the whole of this burden on the shoulders "of the people of India." He refers here to the Afghan War, but I ask whether that is not altogether a true description of the whole relations between England and India?—But I should not in any case say that it was the opinion of the Viceroy. I suppose one may speak of it as the opinion of the Governor-General in Council or of the Government of India.

6613. The Government of India; but that is not necessarily the opinion of the people of India. If the people of India were consulted whether this large British army should be kept up there or not, perhaps we would come to a very different result; is not that possible?—Quite possible.

6614. (*Sir James Peile.*) Is there such a thing as the opinion of the people of India?—I have never heard of the people of India except as an expression; I mean I have always understood that India is composed of many peoples.

6615. Very antagonistic to each other?—Very much so

(*Mr. Naoroji.*) You may call them peoples if you like or people; those who are called British subjects in British India, no matter whether they are called peoples or people; you may use any expression.

(*Sir James Peile.*) I asked whether there is such a thing as the opinion of the people of India?

(*Mr. Naoroji.*) There is no such thing as the opinion of the people of India, because they are not asked; they have no voice at all; they are not allowed any opinion; that is the very thing I contend.

(*Mr. Caine.*) They express it without being asked occasionally.

6616. (*Mr. Naoroji.*) They do express it, and that is all they can do. Therefore it resolves itself into this: that as long as the Indians are not allowed to have a full and fair share in Imperial rights and interests, it is not right to demand from them a share of the Imperial duties?—I am unable to answer a question of that kind, except in a general way.

6617. Then again, the Government of India is not like the Government of France or the United States, say, treating on behalf of the Indians on an equal and independent footing with Britain; the Government of India is simply a department as it were of the British rule, and their chief and primary business there is to protect British interests, is it not?—No; I should say it was to govern the people well.

6618. Then I will read you a few more extracts; I have already read to you some extracts before, and I will read a few more extracts of what the Government of India say—I may say here again that they refer to the fight with the War Office, but I apply them as very important and applicable to the whole general relation between India and England. I am adopting their words. One is this: the previous questions I have put were to show that the army of India, or all the European services in India, were for maintaining the British supremacy, and there is a strong paragraph upon that point which I have already quoted, and with which I will not trouble you now. There are further advantages, the Government of India points out in their letter* of the 25th March, 1890, to the British people. "The army of India affords (as indeed it "has been clearly stated in bygone years by the Govern-"ment of India) a great reservoir of military strength to "England." That is the fact?—Yes.

6619. †Again in the same letter, they say, "We may "especially lay stress on the fact that the Indian army "supplies a great addition of military power to England, "that a large part of the British army is trained at the "expense of India, that the whole of the men passed "into the reserve from the 70,000 troops in this country "have been maintained entirely out of Indian revenues "from the date of their first recruitment." In the ‡India Office letter to the War Office of the 9th August 1872, it is said, "It is well known that India offers the best, "if not indeed the only training ground for the British "army in time of European peace. . . . A very "large and certainly not the least valuable portion of "the reserve will consist of men whose entire military "training and experience will have been acquired at the "expense of the people of India." Further in the * Memorandum inclosed in the Government of India letter of the 25th March 1890, the following passages occur; "India is incurring great expenditure in the increase of "the army, and in armaments and defences for the main-"tenance of British supremacy in the East. It is surely "not unreasonable to consider that England should bear "a share of this burden, the principle should be that of "true reciprocation, and India should not be charged on "account of expenditure which must necessarily be in-"curred by England for the maintenance of her army and "the Empire at large." . . . . "That India should "be considered as affording a training ground for the "officers and men of the British army, that the relative "financial capacities of the two countries should be "considered, and the whole matter adjusted on broad "and statesmanlike views of public policy." Well, I apply all these, in the words of the Government of India, to the general question of all the relations between Britain and India in regard to charges in both countries for their common interests. It was suggested by Mr. Ryder that the Government here, or the British Exchequer, was requested and prayed to show mercy and pity to a poor partner, and that it is only in that way that we are asking from Great Britain not to charge this and not to charge that. Well now, I maintain, as Mr. Fawcett did very distinctly state—he said (Hansard, Vol. 250, p. 454) distinctly he wished to explain (this was on account of the Afghan war that he said this), that so far as India was concerned, this was not to be regarded as a matter of generosity, but of justice and legality; and he again repeated the words, "the matter must be decided on grounds of "strict justice and legality." And then Mr. Gladstone (p. 932) completely adopted all that Mr. Fawcett had urged, both with regard to the principle upon which the expenses of the Afghan army should have been apportioned between the two countries, viz. that of a very substantial contribution from Britain; but not on the ground of generosity or pity, but on the ground of simple justice and legality: and that is what I ask should be done. Do you not think so?—I think certainly that the principles of justice and legality should be followed.

6620. The War Office or any department here says, "Such and such expenses, that we undergo, are for the "benefit of India also, and therefore India must take "a share in them." Now on the same principle, should I not also say that whatever is spent here from the Indian revenues, which is also entirely for the purposes of the two countries—not for England alone—should also be shared by the British Exchequer on the same principle? I will just give an instance, such as the India Office building and establishment, the Engineering College, the examination expenses, and a number of expenses that are defrayed here in this country, every farthing of which is spent in this country, is enjoyed by the people of this country. Taking also the cost of the exchange compensation, ever farthing of which would be spent in this country. Very well, whatever is paid out of the revenues of India for common purposes, not only for common purposes, but even entirely what is spent here, should not the British Exchequer take a share in it, just on the same principle as they demand from India that we should take a share in the War Office expenditure?—Looking at the matter from an Indian point of view, I should be very glad if that conclusion were arrived at.

6621. Then also, even in the apportionment—supposing that for particular purposes very large expenditure is incurred which is in the interests of both countries, it should also be taken into consideration what is the capacity of each country, more especially as it is under the British administration that India has become extremely poor and the poverty is acknowledged by three successive latest Finance Ministers. I have already given you the figures with regard to the capacity the other day, and therefore I will not repeat them here again?—I think the question of the capacity or the wealth of the countries might certainly be taken into consideration in discussing the question.

6622. With regard to these frontier wars, in which you urged the other day that the British exchequer here should take a proper share, in which the interests of both are concerned, I do not remember that you exactly agreed

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

with me in excepting those small frontier wars where the tribes come and disturb the Indian frontier?—Yes.

6623. And now with regard to wars outside India, in which the chief interest is that of the British Empire, not only within the British Empire but everywhere all over the world, taking Egypt and the British interest connected with that, or the Abyssinian expedition, or any of those expeditions, is it not just that the British exchequer should take a fair share in the whole expenditure, or rather that they should pay the whole expenditure—not take a fair share—in that India has no concern, except that they use Indian troops, and therefore India helps with the blood of her troops to maintain the Empire outside of India?—Yes; I think that in cases such as those you have quoted, the British exchequer should bear the expenditure.

6624. Then with regard to the exchange compensation—and I have already quoted Lord Kimberley's words that the British services in India are for the essential purpose of maintaining British rule there, and the European officers are specially for that purpose, the argument that was urged was that if this compensation were not given, it would dissatisfy the officials and the officers and would impair the service. Very well, that service is chiefly, mainly,—I do not go to the logical conclusion of it, entirely—for British purposes, and in addition to that we have this consideration, that the whole of the exchange compensation would be entirely spent in this country; therefore, to say the least, instead of putting the whole of that burden of exchange compensation on India, is it not right and just that some portion of it fairly should be contributed by the British people themselves?—No, I certainly do not think so.

6625. For this double reason, that it is entirely because they are Europeans that this exchange compensation has at all arisen, and Europeans are for the interests of both—I grant that—and that, therefore, if this European service is not to be impaired, as much for the sake of the British rule and supremacy as for the sake of the Indians, and also because the whole of the money to be spent here besides, not a farthing to be spent in India, is it not right and just that the British exchequer should contribute a fair proportion of it?—No; I should say that it is a purely Indian service, which Indian revenues should pay for.

6626. Not only this exchange compensation but the whole exchange question arises simply because there are European services in India: otherwise any other country, such as China, or any other Eastern country, will have nothing to do with any difficulties or troubles of exchange, it is a mere matter of business.

6627. (*Mr. Caine.*) Just one or two questions. I understood you to say in reply to Mr. Courtney that you could not see your way to reduce the army in India at all?—I gave it as my opinion, with that one exception which I named, it would not be advisable to reduce the strength of the British or native armies.

6628. Neither?—Neither.

6629. Would you object to varying the strength of the two; would you reduce the British army if the numbers were replaced with native regiments, or even with more native regiments than the British which were displaced?—No; I think the proportion should be maintained as at present.

6630. Then what are the main motives of maintaining that proportion; what is the chief motive? Is there any distrust of the Indian troops—of their loyalty?—No, no distrust; but at the same time the proportions have been fixed on various considerations, and I imagine it would be right to maintain those.

6631. You do not think that there can be any economy effected by the variation in the proportion of British troops then?—Economy would be effected, for instance, if you reduced the more expensive branches of the army, say the British cavalry or the Horse Artillery.

6632. That is what I am leading up to. I will take the British cavalry; there are about 6,000 of them in India?—Nine regiments; yes, 6,000.

6633. Then there will be about, I suppose, a thousand men drafted annually from this country or thereabouts—a little over?—800 or 900, I think.

6634. Well, they cost 227*l.* per man before they are embarked from this country, is not that so?—That was the figure given; I am not sure whether it is that at the present moment.

6635. It costs a great deal at any rate?—It does.

6636. There is 227,000*l.* you may say for recruit charges alone before you get them?—Yes.

6637. That surely makes it a very very costly force?—It is undoubtedly a costly force.

6638. Supposing the Indian army were diminished by the total number of British cavalry and increased by an equal number of Indian cavalry, do you see any objection?—Yes, I do.

6639. Because there would be a very large saving, would there not? I do not ask you to go into the figures off-hand?—There would be; but at the same time I do not think military opinion would hold that we could afford such a large reduction.

6640. But supposing that you make that change and add to the number of the British infantry, if you want to stiffen up the proportion; would there be any objection to that? Just let us go off that for a moment. Surely it is now allowed that the Indian cavalry are as good in all respects as the British cavalry, and better for the purposes for which they are wanted in India?—The Indian cavalry is undoubtedly very excellent; but with reference to their being as good as British cavalry for the purpose for which they are required in India, I should hardly like to answer in the affirmative.

6641. For what are British cavalry required in India?—British cavalry are necessary in India. After all, there are only nine cavalry regiments scattered over an enormous area of country, the stations being in the Punjab, Rawal Pindi, Sialkot, and Umballa, and in the North-West Provinces—Meerut, Muttra, and Lucknow. At Mhow, in Bombay, and at Bangalore, and Secunderabad, in the Madras area. Then those points are very far distant, and for the maintenance of order in the country, the power of being able to send troops out into the district, you must have a proportion of British cavalry. I mean, however loyal and contented a population may be, yet there are always unruly spirits who may require repression, and native cavalry could hardly act entirely in the place of British cavalry in that case.

6642. There have not been any cases of that kind for a great number of years? There was a disturbance the other day, for instance, at Jhalawar; the Prince of Jhalawar was supposed to be in revolt, or something of that kind, and they sent native troops without any hesitation there?—Yes. That, of course, was in a native State; but I am only saying generally, that you require a proportion of British cavalry in India also; of course, in case of the army having to act beyond the frontier of India.

6643–4. But, surely, if they had to act beyond the frontier, the Indian cavalry are far better than anything that could be brought against them in the way of cavalry?—Well, it depends. Supposing you were opposed to an European nation?

6645. Yes, take Russia, for instance; surely it is admitted by all military authorities that the Indian cavalry are superior to Cossacks?—I hope they are.

6646. You would not doubt it for a moment, I should think?

6647. (*Sir Donald Stewart.*) Still, you will find others than Cossacks?—Yes.

6648. (*Mr. Caine.*) Then they are better than Afghan cavalry? But, on the whole, you could not see your way to encourage the idea that we could do with less, or without any, European cavalry?—No. I should prefer not to give an answer to a question of that kind off hand, because it requires a great deal of examination.

6649. Oh, I quite admit that?—And it is a matter that might be well considered; but I should not hold out hope of any large reduction of British cavalry.

6650. Would you be prepared yourself to treat it as a more or less open question? or is your own mind closed on the subject?—No, my own mind is not closed upon the question of the strength of the British cavalry and Horse Artillery; there is no reason why it should not be considered.

6651. Now the question of Upper Burma. Do you think that the acquisition of Upper Burma necessitates any increase, or has necessitated any increase, of the British army in India?—Yes; a portion of the increase which actually took place, has been absorbed by Upper Burma.

6652. Yes, but could you not deal with Upper Burma with native troops just as well as you can with British?—Not, I think, in the opinion of the responsible military advisers of the Government of India.

6653. (*Sir James Peile.*) No increase was actually made in the number of British troops on account of Upper Burma?—No.

6654. (*Mr. Caine.*) The Burmans are a different race altogether?—Yes.

6655. Have you had any experience of the Volunteer force of India?—Yes, I know a good deal about it.

6656. There are a great number of Eurasians in it?—Yes.

6657. Do you find that they become effective and capable?—Yes, large numbers of them are so.

6658. On the whole, do you think them much inferior to the British Volunteers in India, the young clerks who come out of offices, and so on?—I suppose that, generally speaking, the physique of the Eurasian is not equal to the physique of the European; but, on the other hand, I have known a great many fine able-bodied Eurasians.

6659. Do you think it would be possible to enrol a couple of Eurasian regiments for Madras and Bengal, and let them take the place of British regiments?—That is a question, which has been very often debated. Personally, I should be very much in favour of having Eurasian regiments, because I should like to see the community encouraged; but the military authorities generally have felt that it could only be done by reducing the strength of British troops; and, therefore, they have been rather opposed to it.

6660. Do you think that Eurasians could be drafted into British regiments in India?—No, I do not think so.

6661. You think they would have to be kept apart?—Yes.

6662. But, on the whole, you think they would make fair fighting material; the mixture of race would not lead to cowardice?—I think they would make fair fighting material.

6663. Upon that point, may I ask you,—although it is hardly fair to ask you,—do you not think that a training ship might be put down at Calcutta for Eurasian boys? It would not be a very costly experiment, and it would create an Indian Marine?—Well, they have an Indian Marine, of course, which is composed chiefly of European officers and natives.

6664. Yes, I know; but I was thinking more of a fighting Marine?—We have not got a fighting Marine.

6665. You have a defensive marine—the guardships of the ports, and so on?—That is all under the Royal Navy.

6666. You live a good deal in Calcutta, I suppose?—Yes.

6667. And you know, of course, that the Eurasians feel very strongly on this point, and think it would afford a very considerable relief to the poverty that exists among that class?—Yes. I think that it has been considered, but I am under the impression that the result was that there was no outlet. You might train them, but there was no outlet for them except, perhaps, in steamship companies, and so on. I can only say that, generally speaking, I should be exceedingly glad to see any proposition carried which might tend to assist the Eurasian community.

6668. What is the strength of the Volunteer force in India?—It is about 29,000.

6669. Do you see any reason why, at any rate, in Presidency towns, there should not be some extension of the right of volunteering to natives of India?—I think that for the purposes of the Volunteer force it is better that it should be composed only of Europeans and Eurasians.

6670. I suppose, in case of invasion—serious invasion—you would rather look to a volunteer force to maintain peace and order—at all events, in the large towns?—They would act for garrison purposes in large towns.

6671. You know that amongst a certain class of that community in India, especially in the large towns, there is somewhat of a grievance about this Volunteer question, and there are constant public declarations made that natives of India would volunteer to a very considerable extent, if they had the opportunity of doing so. Now if there is any class objection to their volunteering and enrolling in the same corps as Englishmen or Eurasians, would it be possible, at all events, to make some tentative experiment in a limited way, some attempt at enrolling volunteers among the Indian people themselves?—I should not advise the experiment myself.

6672. Not even if it were confined to Presidency towns or large towns where there would be an overwhelming force of Europeans at any time?—No; I think it better to confine the volunteers of India to Europeans and Eurasians.

6673. You said in answer to someone—I think it was to Sir Ralph Knox, when he was talking to you about the reduction of mortality—I think you agreed with him—that over a certain period—I do not quite remember the period—the invaliding had been reduced from 33 to 26 per 1,000?—Yes.

6674. Do you think that the great encouragement which Lord Roberts and yourself, and many others in India, I know, have given to the temperance movement, has had any direct effect in reducing the invaliding?—I think it has had a very great effect upon the army in India.

6675. For good in every way?—For good, yes.

6676. And the general improvement of the barracks and providing recreation rooms and all that sort of thing, has had the effect of keeping them in barracks?—Quite so.

6677. (*Sir Donald Stewart.*) Is not the strength of the British army in India regulated entirely by the Government of India?—I think is is regulated by the Government of India, in so far that if they showed good grounds for an increase, for example, Her Majesty's Government would probably endeavour to meet their wishes. On the other hand, if the Government of India were now to propose a large reduction, it is quite possible that Her Majesty's Government at home would say, "We cannot accept this;" they might overrule the Government of India in such a matter.

6678. Has the Government of India ever been, in your experience, overruled in a case of that sort where they desired to reduce the European forces?—I think I could point to some instance, but I cannot recollect it at this moment.

6679. I ask this question, because some of your arguments seem to imply that India keeps up a force which may be said to be a reserve for British Imperial purposes, irrespective of the requirements of India?—I was speaking, I think, of the whole army of India, British and native. It is not an argument that has been used by me personally, nor is it a new one. It has been used for many years, and it appears in many despatches of the Government of India. Supposing there was a time of great Imperial need, the army of India, as constituted in India, might under certain circumstances supply a very considerable addition to the military forces of the Empire.

6680. Yes, but does India maintain any troops for that express purpose?—No.

6681. Then it is entirely in the power of the Government of India to reduce the military force of the country, if they think circumstances permit, is it not?—I do not think that it can be said to rest with the Government of India. I should say that it is Her Majesty's Government which determines the strength.

6682. Have you any authority for that statement?—I cannot quote chapter and verse, but certainly that is the impression I have always had.

6683. Of course, if the Government of India desires to reduce or increase the British establishments in that country, they have to get the final sanction of Her Majesty's Government; but have you ever known a case in which the wishes of the Government of India have been set aside absolutely by the Home Government?—I am not able to give the reference, but I am under the impression that on one occasion Her Majesty's Government did not accept some proposal of the Government of India.

6684. But was that not in regard to certain reductions in the native army?—I thought that it referred to some particular alteration of strength of the British army.

6685. Perhaps you could get that?—I will endeavour to do so.

6686. Then do you not think that some reduction might be made, even now, in the combined strength of the British and native armies in India?—No, not to a material extent.

6687. Have you any idea of the cost of maintaining what is called the Imperial service troops?—No, I cannot give the figure.

6688. (*Sir Ralph Knox.*) I should just like to ask one question with reference to what Mr. Caine let drop just now—that each cavalry soldier going to India cost 208*l.* Did you recognise the figure?—I thought he said 227*l.*, but I think in my reply I said that although that may have been the figure for one year, yet I could not say that it was correct at the present time.

6689. It may have happened, of course, in one of the years, to which you alluded, that a comparatively small draft went out, although the cavalry establishment was maintained during the year; but I find in the three years of

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

the later claims under Lord Northbrook's Commission that the total expenditure for the cavalry depôt and for the cavalry recruits sent out in each year was 70,000*l.*, 67,000*l.*, and 69,000*l.*, and for a draft of 900 recruits that gives an average of a little under 80*l.* a man. That would represent the more normal charge, would it not, as covered by the 7*l.* 10*s.* ?—Does that include capitation ?

6690. It includes capitation ?—Everything ?

6691. Everything; that is to say, for those three years. It may be taken as the charge which led to the settlement of the 7*l.* 10*s.*; the charge for every cavalry man shipped was just under 80*l.* a man ?—Yes.

6692. That represents more probably the figure than 227*l.* or 208*l.* ?—Yes. Might I be allowed to say something about those questions which were put to me with regard to Aden. I do not think the Government of India would desire to be entirely relieved of the charge of Aden. There are particular reasons why, in their opinion, India should pay part of the cost of Aden, because, if the Suez Canal were blocked, Aden would have to be reinforced from India, and the native portion of the garrison would probably always have to be sent from India. Aden is an Indian town; with the exception of some Arabs and Somalis, the population is Indian; the laws and government of Aden are Indian, so that I think the view of the Government is that India should conduct the administration of Aden, but that they would wish to lay before the Commission their views in respect of being relieved of a portion of the charge by reason of Aden being really an Imperial fortress and a coaling station for the mercantile marine, and a strategic point on the great commercial highway to the East. I do not think any question was asked as to what the Government of India would wish as to the relief to be afforded to them in respect of the cost of Aden, therefore I ask permission to make these few remarks.

6693. (*Chairman.*) Quite so. I suppose you would say that the opening of the Suez Canal is a matter of importance to India ?—As being on the general highway to the East, undoubtedly.

6694. With reference to that I would like to call your attention to a point which I think is of interest to India. I see that, before the opening of the Suez Canal, the exports of India to England were about 29,000,000, and the trade to European countries which are served by the Suez Canal was then about 5,000,000. In 1893–94 the exports of India to England had only risen from 29,000,000 to 37,000,000, while the exports to the countries served by the Suez Canal had risen to 22,000,000, an increase in the case of the United Kingdom of about 27 per cent., and in the other case of 440 per cent. I think I would put that before you as worthy of consideration, as showing that the fortress, as commanding one entrance to the Suez Canal is of some importance to India ?—Undoubtedly.

6695. I should like to ask you one question with regard to the fortification of Aden. I am speaking from recollection now, but there has been a very long controversy between the Imperial Government and the Colonial Governments, and I think the Indian Government (on that point I am not quite sure) as to the cost of fortifying different places throughout the world; and my recollection is that the Imperial Government and the local governments halved the cost of making the works ?—Yes.

6696. And that the share of providing the ordnance for the works fell very heavily upon the Home Government: I am not sure whether that is the case with Aden, do you happen to recollect what was the up-shot of the arrangements made in that respect ?—I understood the arrangement to be that the cost of works and armaments was shared; and that India provided ammunition and stores for the armaments.

6697. Your recollection includes the armaments ?—I think so.

6698. In several cases what was intended to be an equal division between the Home Government and the Indian Government, resulted, owing to the largely increased charge of the armaments, in the Imperial Government taking about two-thirds and the local government about one-third. I cannot remember precisely whether that applied to Aden, as well as to several other ports. It was with regard to that that I wanted to ask you what the arrangement was in this case ?—It was half-and-half, leaving out the ammunition and stores.

6699. (*Sir Donald Stewart.*) The guns and fortifications half-and-half ?—The last agreement was that the entire charge of 54,590*l.* for ammunition and stores should devolve on India.

6700. The Treasury refused, if you remember, to pay anything on account of the removal of the arsenal from Aden town up to the fortifications ?—Yes.

(*Chairman.*) The European forces in India are reckoned, in their total number, at 75,000, are they not, 74,000 odd ?

6701. (*Sir Donald Stewart.*) About 71,000, is it not ?—It depends whether you take officers or not. I should take it at 72,000 warrant officers, non-commissioned officers, and soldiers.

6702. (*Chairman.*) I ask that, because, when we were speaking of the troops, comparing those under 25 and over 25, you gave the numbers, which I took down, 67,000 or 69,000 ?—67,000 I think it was.

6703. Do you come at those figures by excluding the officers ?—The officers are excluded; that is taken from a War Office return.

6704. And, therefore, we may take it that, when we are dealing with the rank and file, that total number which is given at somewhere between 74,000 or 75,000, is represented by the 69,000 or 67,000 rank and file ?—Yes.

6705. You may remember that from your answers to some questions it appeared that there are something like 26,000 rank and file above 25 years of age, and that the remainder, amounting, I suppose, to something like 41,000 or 43,000, were under 25 ?—Yes.

6706. Now, taking that, I am struck by the fact that such a large portion of your European force is over 25 years of age; and I wish to ask whether, supposing you were to have a ten years' service, and for the purpose of that you sent out 8,000 men every year, you would not find that you would get very little more than 26,000 men over 25 years of age? I will not ask you to accept my figures, but I have reckoned it out roughly and I came to the conclusion that, at the outside, you would get probably on that principle, with the ten years' service, 28,000 men, allowing for the mortality of course. I want to put it to you, have you not got under the present system very nearly a ten years' service ?—I think that these numbers over 25 must be due in great measure to men being on previous engagements, and also to our having had to pay bounties to re-engage men. There were certain years we could not get men from England, but the re-engagement has been effected every now and then, not every year.

6707. But at all events it appears, that you have a very large force over 25 years of age, and so far that should modify the criticism that you have given against the present system, should it not ?—Yes, but perhaps I might say that, unless there are particular measures to counteract the effect of the limited time spent in India, eventually we must work down to a larger proportion of younger men.

6708. At all events, at present, when you speak of an average service of five years and four months, we must bear in mind that one-third of your force are above 25 years of age, and therefore men of comparatively long service ?—They have longer service.

6709. There has been a good deal of conversation concerning the burden cast by short service; but it struck me, in listening to the evidence that you gave, that you had scarcely given sufficient weight to the diminution on the other side that had taken place, and was taking place, in the pensions. I want to ask you, now that you have heard what Sir Ralph Knox has had to say upon that point, whether you are prepared to press that point so strongly that short service is, as I understood you, a financial burden upon India ? I gather from the papers I have read, and the evidence which has been given, that so far from being a financial burden, it is rather a financial benefit to both countries ?—I am afraid I should find it very difficult to pronounce on that point, because you have to take into account not only the diminution of pensions —the statements with regard to which I may say I have never seen before to-day—but also the additional cost of transporting men; that is eliminating the economy which has been effected in the transport service. I really do not know how to arrive at it.

6710. You observe what I want to call your attention to. I think it should be looked into a little bit closer, because it is very important that the complaints of India on this matter should be, as far as possible, based upon figures upon which both the War Office and the India Office can agree ?—Yes.

6711. Now, taking that question of pensions, it is a subject, I think, that will require a little consideration on the part of the India Office if it is really the case that the new pensions coming into course of payment in the

course of the year have fallen from whatever sum you like, say, 60,000*l.* to 20,000*l.*, which is entirely in accord with the estimate made at the War Office at the time that the short service was introduced. At that time they reckoned that, when the short service got into its full operation, its effect on India would be that, when it arrived at the normal amount, the decrease of charge for pensions would be 670,000*l.* a year, and the increase in consequence of deferred pay would be 211,000*l.* Now, in the paper before us we have the fact that deferred pay amounts actually to 230,000*l.* We have got no calculation—and it is very difficult to arrive at a calculation, on account of the change in the system of paying over the pensions—at the present moment to show us what the actual decrease in pensions is; but you will see, that being the prophecy made in 1889, that the figures that Sir Ralph Knox has given us to-day point, I do not say up to these figures, but very much in that direction; and it seems to me that the War Office is likely to make out a case that the short service system has been financially—I do not speak of it in any other sense—a boon to both Services, instead of being, as India represented it, a burden; and I think it very desirable, and I think you will think so too, that the Indian case should be put moderately, and what I should call correctly, do you not?—Entirely.

6712. And that, if it has been a financial benefit, we should then know whether there are objections to it in other respects which have any gravity?—Quite so.

6713. One question, in passing, that arises out of the question put to you by Mr. Naoroji. Is it not the case that native Indians are admissible to the Civil Service here like any other subjects of the Queen?—Yes. To the Indian Civil Service.

6714. Now, I think there are two points which we left over from last meeting, namely, the question of transport and the question of the Indian Marine. Take the transport first. You were speaking just now of the increased cost of transport. Of course, if the drafts sent out are much more numerous, there must be an increased charge in some shape for transport; but it is very difficult to put that down, because under those circumstances it seems most creditable to the Indian administration that the cost of transport seems to me to show nothing but a continuous decrease?—That was the Admiralty administration of the transports: it was not the Indian administration; I mean that the Admiralty worked the transport, and I think that the decrease is due to the greater economy in working the transports, notably by the decrease in the number and by shortening the voyages, and not allowing them to be so long in port. I think that is the explanation that can be given of the decrease of charges.

6715–6. Still it is a very satisfactory result for the India Office and the Admiralty between them that, under circumstances in which, as you very rightly pointed out, we might have expected an increase owing to the larger number of men that had to be sent out, we should really see a decrease amounting, as far as I make it out, in the 20 years to something close upon 70,000*l.* a year?—Yes, but I think the causes which I have mentioned operated towards that reduction to a very large extent.

(*Sir Ralph Knox.*) There is no doubt there is a reduction in the charge for freight, and in the price of freight; the cost of freight is very considerably reduced; but I think we can admit that in transport there has been an excess charge as compared to what it would have been—I am prepared to admit 50,000*l.* a year, that there is an excess charge of 50,000*l.* a year, as compared with what it would have been under the old system; but, notwithstanding that, there is a considerable saving under the short service system.

(*Chairman.*) But among the tables which I have read, I have seen that the larger part of this charge in all these years took place under the head of the Admiralty transports, and that the freight taken up from the trade was comparatively very small.

(*Sir Ralph Knox.*) Yes, it is small.

6717. (*Chairman.*) Therefore the larger part of this economy must have taken place in working the Admiralty transports?—Yes, I think so.

(*Sir Ralph Knox.*) But since freight has been accepted, the charges are not high. I have the returns for the last few years, and taking these last few years, I think they show that there is an excess charge for carriage on the number of men carried of about 40,000*l.* to 50,000*l.* a year.

(*Chairman.*) Now let us just sum up the financial result of short service. As I understand it, you, Sir Ralph Knox, are ready to admit on the part of the War Office, that, other things being equal, the larger number of men that has to be sent out now owing to the short service system (always bearing in mind that there has been a large increase of the force, which has nothing to do with the short service) has caused a portion of an extra charge for transport, which might be reckoned at 50,000*l.*; also, we know that there is a charge of 211,000*l.* for deferred pay: then, on the other hand, there comes the saving on pensions; and I ask you whether you do not think that, inasmuch as the Indian Government seem to have overlooked that point, it is not very desirable that it should be cleared up; and whether it would not be possible, assuming the charge to keep its normal effect, to get your actuals, to see, as it is operating now, with the experience you have gained since 1889, whether the saving has come to anything like what was anticipated.

(*Sir Ralph Knox.*) I will have a paper prepared and give it in.*

(*Sir James Peile.*) It is recognised in these papers that deferred pay was to be in lieu of pensions.

6718. (*Chairman.*) And, I think the evidence put before us certainly left upon my mind the impression that the India Office rested their case upon the fact that short service was a financial burden upon them?—Not the India Office; I think it was brought in incidentally in the despatch of the Government of India.

6719. Is there any other point with regard to transport to which you would like to call our attention, any suggestions that occur to you?—I would rather leave that question to Captain Hext, beyond saying that there has been a great deal of discussion in respect to the employment of transports. The Government of India have always been anxious that they should be allowed to employ some of their own transports, such as the Warren Hastings and the Clive, on this service, and there have been committees both at home and out in India; but no definite conclusions have ever been arrived at. The present system is to employ hired transports. I do not think we have received the accounts of the cost, but I think there was a larger sum entered in the estimates of this year on that account.

6720. That change took place comparatively recently, did it not?—Recently.

6721. Were the Government of India an assenting party to the change or was it one of those cases in which changes were made without their full assent?—They were consulted, but they were anxious to try the experiment I have mentioned.

6722. Of the open market?—Of having some of their own transports as well as the open market; they felt that it would be more economical.

6723. When you speak of your own transports, were these vessels belonging to the Indian Government which they were anxious that the Admiralty should take over in place of the Euphrates and those other ships?—No, they simply would have placed the ship at the disposal of the transport Department at home for the carriage of the men.

6724. Have you formed any judgment yourself as to whether the old Admiralty system of maintaining Government transports for the Indian service was dearer than that which has now been adopted, of which the principle, I understand, is to go into the open market?—No, I do not quite know what the last rates in the open market are; but I should say that of late years, certainly, the Admiralty transport arrangements have been decidedly economical.

6725. Economical?—Of late years; but then we are confronted with the difficulty that these transports, which India had purchased, were said to be unable to run any longer.

6726. Yes, exactly, therefore it was a question of replacing them?—Of replacement and of the system which should replace that arrangement.

6727. Quite so, but at all events on this point we shall hear the details and the detailed criticism, if necessary, on the present system from Captain Hext?—From Captain Hext. All that the Government of India wished was to have a trial of the Warren Hastings to see, from actual facts and expenditure, whether she could run in an economical way as compared with the hired transports or with the transports under the Admiralty.

6728. (*Sir Donald Stewart.*) Are there no legal and other difficulties which stand in the way of this system being carried out?—There is a difficulty about an Indian Marine vessel entering European waters; but I think that has been

* *See* Q.12,946.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

25 March 1896.

overcome before, and at all events a short addition to the Act would overcome it.

6729. (*Chairman.*) That return (*handing witness a return*) would rather interest you, Sir Edwin; you might, perhaps, on reading it express an opinion?—I said that I thought that the economy of the arrangements in recent years was very satisfactory.

6730. Yes, but Sir Ralph Knox points out to me (I do not know whether that applies throughout the Admiralty administration) that the Admiralty charge nothing for capital?—The ships were paid for by India.

(*Sir Ralph Knox.*) You see there the rates brought out simply upon the working—those rates are really in excess of what the rate has been during the last few years, during which they have been using freight.

6731. (*Chairman.*) Because the cost of freight includes payment for capital?—This does not include payment on account of capital.

6732. (*Sir Ralph Knox.*) It does in the last few years, because it is payment for freight, it includes remuneration to the companies?—But it is only up to 1893-94.

6733. Was it before that that they hired?—Before that.

6734. (*Chairman.*) It began before I left the Treasury, I think?—Yes.

6735. (*Sir Ralph Knox.*) There is certainly one year under the hiring system, if not two years there?—I may point out that the column "employment of hired vessels "to supplement Indian troop service," is entirely blank. This is Indian troop service; there is nothing about hired transports. It gives cost of the troopships, the Crocodile, the Euphrates, &c.; I think it is entirely the troopships. You see the column here: "Employment of Her Majesty's "ships (which are hired vessels) to supplement Indian "troop service," is entirely blank. There is no indication in the return of any of the transports being hired.

6736. (*Chairman.*) Is there any other point you would like to mention with regard to the transport?—No, I think not.

6737. Now we pass on to the last question, on which also we shall hear at length from Captain Hext; but I should like to ask you whether you would like to say anything about the payment to the Admiralty for the use of the naval squadron?—I think I should like to invite the attention of the Commission to a few points, but the details might be left to Captain Hext. The first point to which I would invite the attention of the Commission, is that the Admiralty agreed in 1862 to take over the duties of what was then the Indian navy, free of cost. They did not actually use those words, but Sir Charles Wood, in writing, said, "Her Majesty's Govern-"ment must be responsible for the defence of India against "any serious attack by sea," and he went on, "Her "Majesty's Government therefore consider that in future "vessels of the Royal Navy should be employed in those "seas, instead of vessels of the Indian Navy, but as the "purposes for which they are employed are imperial, so "their cost should be borne by the Imperial Exchequer."

6738. What year was that in?—That was in 1861.

6739. When Sir Charles Wood was Secretary of State for India?—Secretary of State for India.

6740. Therefore that is not the *dictum* of the Imperial Government, it is an expression of opinion by the Secretary of State for India?—The expression is that Her Majesty's Government must be responsible.

6741. Well, that I should venture to put to you, coming from the India Office, is the expression of the opinion of the Indian Government; it is not a pledge on behalf of the Imperial Government?—No.

6742. We would also remember that that was a moment when the Indian Government was emerging from the Mutiny, when, no doubt, there was every desire to meet them?—Yes: then the Admiralty inquired what force had hitherto been maintained for such duties as the Royal Navy would henceforth be required to take for the protection of the Indian seas, and the India Office replied in November 1862, giving a list of the duties; and the Admiralty answered in November 1862, that they would undertake that Her Majesty's ships should carry out the various duties as detailed. Those arrangements which were then made went on for some years, until in 1869 the Government of Bombay made some complaint with regard to some of the ships not being present, or their ports not being visited, but at all events a subsidy was then sanctioned amounting to 70,000*l.* This was reduced to 41,600*l.* in 1888, and in 1890 certain demands began to be made, which now amount, including the sum for the defence squadron which has been built at the cost of India, namely, two turret ships, two gun boats, and seven torpedo boats, to 160,000*l.* I venture to think there is another point which I should be glad if the Commission would consider, viz., that sufficient stress has hardly been laid on the services of India to the Navy, in the way, for instance, of the protection of the ports, the ports in which Her Majesty's vessels can refit, and the addition of ships to the Navy at the cost of India. I am speaking of the defence squadron which has been taken over by the Admiralty at a cost to India of about half a million. India undertakes, at a very moderate charge, repairs, docking, supplies, and stores to all Royal Navy vessels; and the construction of new works in the dockyard at Bombay, principally to meet Admiralty requirements, has cost no less than Rx. 220,000 it has been estimated. I may here mention that we had an hydraulic lift in Bombay which was got out from England in order to dock Her Majesty's ships principally, and that cost us from first to last about Rx. 320,000, and was really quite useless.

6743. (*Sir Ralph Knox.*) Is not some charge on account of that made in these moderate charges which you make against the Admiralty when a ship is repaired in the dock?—Not in the dock.

6744. Is no charge made on account of these capital charges?—Nothing as far as I can recollect; Captain Hext will be able to tell you. Then India provides and keeps up a Marine Survey which no other dependency does, costing about Rx. 20,000 annually, and provides a ship at a cost of Rx. 40,000, and numerous other details might be given. What I think India contends for is that they pay too large a charge for the cost of the East India squadron or the number of ships that are placed, so to speak, at the disposal of India; that India really has no control, and never can have control, over ships of the Royal Navy in the same way that she has over British regiments serving in India; also that the basis of the Australian agreement which was said, I think, by the Chancellor of the Exchequer to be that upon which the charges against India should be based has not been followed. If the same terms, namely, that the subsidised ships should be in excess of the ordinary squadron and the same subsidy, namely, 11*l.* 4*s.* per ton, be adopted, for the 100,000*l.* India is now asked to pay the Admiralty ought to add 8,722 tons of shipping to the Indian squadron, which protects not only Indian trade but that of Australia and China. India has provided the following vessels:—The "Magdala," "Abyssinia," "Plassy," "Assaye," and seven first-class torpedo boats, at a cost to India of 474,497*l.*, and has recently expended 67,000*l.* in re-arming the two first ships, all of which are at present handed over to the Admiralty, and are shown in the Navy list. A subsidy of 60,000*l.* per annum is also paid to the Admiralty for their crews. If this 60,000*l.* is added to the 100,000*l.* now sanctioned by the Secretary of State, India will pay 34,000*l.* more than Australia, on the basis of that agreement, for almost exactly the same amount of tonnage, but with this difference that India has paid for and provided 7,710 tons of shipping and seven torpedo boats, and no increase to the Royal Navy Squadron has been made. I would venture to ask the consideration of the Commission to this question of subsidy. There was a committee to determine what the Indian charge should be; they could not come to any conclusion, and it was referred to Lord Rosebery for arbitration; he gave a decision, which the Secretary of State adopted, but at the same time said that the question must remain to a certain extent an open one as it would be considered by this Commission. I only give my personal opinion on the particular point which I am now mentioning; it is this, that India is quite capable with her Indian Marine which costs something like Rx. 180,000 a year (and she has a good number of ships) of performing what would be called the maritime police of the coasts, the transport of troops which the Marine now carries out, and such things as the suppression of piracy and the local slave trade, all of which duties are assigned to the Indian Marine, in the Indian Marine Act. We are not allowed to have the armament of these ships on board, although they are kept in reserve. If we were allowed to use the armament, or rather to put it on board, we should be able to use the Indian Marine vessels for the local police of the coast and the Royal Naval squadron would be free to protect the great highways of trade. India, I think, considers that at all events some reduction of this subsidy should be made. We have provided for the local defence of the ports, which was one of the duties specified by Sir Charles Wood as liable to fall upon the Indian revenues; we have provided this defence squadron at a very large cost—at a cost of half a million; and we give a subsidy to the Admiralty of 60,000*l.* a year for manning this defence squadron.

At the same time, although that defence squadron was created for the local defence of Indian ports, the Admiralty now contend that the squadron must be used according to the decision of the naval Commander-in-Chief in time of emergency, with this exception—that the Viceroy or the Governor-General in Council may request the detention of some particular vessel at a particular port, if it is considered that that port would be left undefended.

6745. (*Chairman.*) I think the decision under the arbitration conducted by Lord Salisbury, was rather wider than that. The eventual discretion was to rest with the naval officer as to what was to be done, yet he was to act in concert with the Indian Government. Lord Salisbury's arbitration broke down, because, instead of fixing figures, it laid down lines upon which the Imperial and the Indian Governments at once disagreed?—I think the question may probably be divided into two parts: first that relating to the East India squadron or to the four ships which are subsidized by India at the present time; and then secondly there is the part relating to the defence squadron. I was referring to the defence squadron I believe in regard to the East India squadron it comes to this, that the Admiral is supposed to comply with the wishes of the Government of India, when he can do so with justice to other considerations affecting the navy. Then with regard to the defence squadron the only condition is that in cases of extreme urgency the Governor General in Council may veto the removal of vessels from ports to which they are allotted.

6746. What was the position of the Indian Government up to 1861: was it the same as that of those colonies of which you have spoken, or had she a navy of her own?—She had an Indian navy.

6747–8. Therefore she and the colonies are in rather different relations; she had a navy, which the colonies never had. She had a navy, the duties of which the Admiralty said they would undertake without the question of cost being mentioned?—I am not saying that that can be brought up as an argument for not paying something now; but at the same time it is a fact that the basis of the present arrangements was the Admiralty undertaking the duties which had been performed by the Indian Navy.

6749. (*Sir Donald Stewart.*) But the Indian Government always contributed something from the beginning?—I was not aware of it.

6750. After the abolition of the Indian Navy?—After the abolition? I do not think anything was paid till 1869.

6751. I should like to clear up one point. Do you suggest that the Indian Navy should be re-established to a certain extent?—No, not in the form of an Indian Navy, but I think that under the Marine Act we might very well employ Indian marine vessels on such duties, for instance, as the suppression of piracy, maritime police, and so forth.

6752. But would Parliament agree to that?—That I am unable to say.

6753. It has always hitherto objected?—Yes, I think the Admiralty have said that legislation would be necessary.

6754. (*Chairman.*) Do you know what the cost of the old Indian Navy was?—No, I have not got that.

6755. It was with some difficulty and research that the Imperial Government got together a few facts about that charge, and I think the calculation they made showed that at the time by the transfer the Indian Government got an advantage of about 300,000*l.* or 400,000*l.* a year; and probably, if they had kept their navy, looking to the advance of the cost of the present navy, it would have been something very like a million, the greater part of which they have saved; and I would put before you whether, on the whole, 100,000*l.* a year is not a very good contract for the Indian Government for getting the naval defence taken off her hands?—I venture to say that after the Indian Navy was disestablished the Indian Government did pay very considerably for what was called the Bombay Marine to maintain small vessels in the Persian Gulf, and do other work which was necessary. It was not as if the cost of the Indian Navy was reduced altogether and there was no other expenditure.

6756. Reckoning from the Imperial side, it was very difficult to get information, and we never could find out that the India Office had any record of the cost of the Indian Navy; but there was a book written by Captain Lowe, and with the aid of that and with assistance from the Admiralty, I think the calculation was that India got off about 300,000*l.* or 400,000*l.* a year at the time, and if she had continued to keep her navy, looking at what the increased demands of a navy now are, she would have had a very heavy charge upon her now. But I am not pressing that point; I only bring it before you that there is a *per contra* argument?—Yes.

6757. Was there anything more that you would wish to say on the navy?—Only that generally speaking the Government of India think that the subsidy might be reduced on the ground of the East India squadron not being necessary absolutely for the protection of Indian ports. We have provided at great cost for the local defence of the ports, and consider that the East India squadron should be reckoned as part of the general naval force of the empire and maintained for the defence of the high seas.

6758. A conversation took place between you and Mr. Naoroji, and a remark was made on the point of India being a very poor country, and with an inelastic revenue. I think it right, when statements of that kind are made, which are very commonly believed, to show that there is a *per contra*. I will only turn to the Statistical Abstract, and I point out a record which I think very few countries can show. I do not think that between 1883 and 1893 there has been any very heavy increase of taxation. In 1883–84 the gross revenue of India was Rx. 71,000,000, and in 1893–94 it was Rx. 90,000,000. I am quite aware, of course, that part of that comes from railroads, but when you speak of a poor country and an inelastic revenue, you would have to go a very long way through all the countries of the world before you could find so elastic a revenue as that.

The witness withdrew.

Adjourned till Thursday the 16th April at 11 a.m.

At the India Office.

FOURTEENTH DAY.

Thursday, April 16th, 1896.

PRESENT:

THE LORD WELBY, G.C.B., (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Captain J. Hext, R.N., C.I.E.

16 April 1896.

Captain JOHN HEXT, R.N., C.I.E., Director of the Royal Indian Marine, called in and examined.

6759. (*Chairman.*) Captain Hext, what post do you hold in India?—Director of the Indian Marine.

6760. Is that a post of the Indian Government, or is it a post to which you are nominated by the Admiralty?—The appointment was made by the Secretary of State after asking for my services from the Admiralty.

6761. Therefore you are nominated by the Secretary of State?—By the Secretary of State.

6762. For what length of time do you hold the post?—Five years.

6763. And you are the chief of the department of the Indian Government which deals with all questions relating to maritime service?—Yes, under the Military Member of Council, who is my chief.

6764. You report to the Military Member of Council and to no one else?—To the Military Department, yes.

6765. Have you any power of direct communication with the Home Government?—No.

6766. Your appointment has been renewed, has it not?—I have had two extensions of five years each; I have held the appointment for over 13 years.

6767. Has such continuation of service taken place on previous occasions, or have your predecessors only held the post for five years?—My predecessors, I think, have never held it for more than five years, often for less.

6768. Was your post created at the time of the abolition of the old Indian navy?—No; the first person who held the post, or what corresponded to the post, was Admiral Bythesea, about 19 years ago.

6769. Then previous to the abolition of the Indian navy, who was the chief of the Indian naval department?—I think Commodore Wellesley, Royal Navy, afterwards an Admiral, was the last actually in charge of the Indian Navy.

6770. Was he an English admiral or an Indian admiral?—English.

6771. And was he an independent head of department; that is to say, was the Indian Marine Department then a separate department of the State?—As far as I know yes.

6772. It was not under the Military Member of Council?—I think it was more under the Government of Bombay than under the Government of India.

6773. Then at that time the Indian Government borrowed an officer from the Royal Navy to be the head of its Naval Department?—Yes, at intervals, not consecutively.

6774. Could you tell us why the Naval Department should have been under Bombay? Was it because the docks and the chief naval arsenal were at Bombay?—That was, I believe, the reason. Bombay dockyard was under the Government of Bombay until the Indian Marine was constituted, and then it was taken away.

6775. Would you describe the existing arrangements under which the maritime service of India is conducted?—There is an Indian Marine Service Act of 1884.

6776. Is that the Act that now regulates the conduct of the Indian marine?—Yes. Perhaps I might say, that after the abolition of the Indian Navy two small services, namely, the Bengal and the Bombay marine, came into existence for local purposes. They were found to be very expensive and inefficient, and the Government decided to amalgamate and form what at present constitutes the Indian Marine for the purposes of the transport of troops, the guarding of convict settlements, the suppression of piracy, survey of coasts and harbours, the visiting of lighthouses, the relief of wrecked or distressed ships, and other local purposes.

6777. Then I suppose that department was constituted about the time when Admiral Bythesea was put at the head of it, was it not?—I cannot give you the exact date; but the first person who was actually appointed Director of the Indian Marine was Admiral Brent in the beginning of 1882.

6778. (*Sir Donald Stewart.*) What was Admiral Bythesea's title? Was it not Advising Naval Officer to the Government of India?—Yes, it was a different position.

6779. (*Chairman.*) And when was the title under which you now hold the post first created?—In 1882, when Admiral Brent was appointed.

6780. This Department having been created, its seat was fixed at the central seat of Government, I suppose—Calcutta?—It is directly under the Government of India now.

6781. And therefore this department had its seat at Calcutta?—And Simla on occasions. My headquarters are at Bombay, the principal dockyard.

6782. Of how many ships does the Indian Marine now consist?—Ten sea-going ships and five river steamers and some small craft.

6783. By small craft do you mean torpedo boats?—No, by small craft I meant small steamers, such as the tender to the surveying ship, a small steamer of 70 tons.

6784. Have you any torpedo destroyers?—Those are under the Admiralty at present and borne on the Navy list; they form an addition to the Navy.

6785. What are the special duties upon which those ten sea-going ships and the five river ships are employed?—Three vessels are transports; one ship is at Aden, one ship in the Persian Gulf, one ship at Port Blair and the Andamans, one ship on the coast of Burma for lighthouse work; one ship with the Government of Bengal for work on the Hooghly, and one surveying ship. I think that is all.

6786. And the five river steamers, how are they employed?—Four on the Irrawaddy and one on the Tigris.

6787. Are any of these ships employed in the transport of troops coastwise?—Three of the ships are constantly employed in carrying troops on the coast of India.

6788. And that is the force employed upon carrying troops from place to place?—From place to place. I think we have carried on an average in the ten years over 65,000 souls per annum in the Royal Indian Marine troop-ships.

6789. The duties, I think you have stated, in which the ships are employed are the suppression of piracy, the transport of troops, looking after the lighthouses, looking after the convict establishment, and surveys?—Surveys, and other local objects, according to the Act.

6790. But I see you mentioned that one of the ships is in the Persian Gulf?—Yes.

6791. The correspondence which has passed between the Home Government and the Indian Government would have left one under the impression that the Persian Gulf service is discharged by the ships of Her Majesty's Navy; how come you to have a ship of your own there?—The "Lawrence" was built in 1884 for special service in the Persian Gulf.

6792. How would you distinguish that special service from the service which the Navy is bound to perform there?—One is directly under the Government of India and the other is under the Admiralty.

6793. Is that an arrangement with which the Government of India is satisfied?—I should say not.

6794. That is to say, I presume, that the Government of India would consider that the Admiralty is bound to maintain the whole force required in the Persian Gulf?—Yes, or, at all events, contribute considerably towards it.

6795. Has any correspondence on that point passed between the Admiralty and the India Office?—I have got a correspondence about the armament of the "Lawrence." When the "Lawrence" was built by the Government of India to carry out one of the duties of the Marine under the terms of the Act, namely, the suppression of piracy, which is the principal business in the Persian Gulf, a formidable armament was placed on the "Lawrence." To this the Admiralty objected, and the armament was ordered to be taken out and kept in store in Bombay until an emergency occurred.

6796. The point I want to understand is why, if the service in the Persian Gulf is considered a service for which the Admiralty, under the arrangement between the Home and the Indian Governments, ought to provide, a vessel of the Indian Marine should be stationed there. You will recollect that, under the decision of what is called the Foreign Office Conference, the Indian Government were to be consulted as to the number and class of ships required in the Persian Gulf and off the coast of India for Indian purposes. The whole of the arrangement appears to contemplate that the service in the Persian Gulf should be conducted by the Royal Navy?—The "Lawrence" is a faster and better ship for taking the Resident about and inspecting the Gulf, and going round the pirate coast, and she was added to the Persian Gulf squadron on the representation of the Political Department of India.

6797. That is to say, the Indian Government think it necessary to keep a vessel of their own there generally for their own purposes. Incidentally this vessel may help the Admiralty squadron in such service as the suppression of piracy; would that be the position?—Yes, but I think in the case of Bahrein some time ago, when the senior naval officer in the Gulf and the Resident both considered that in case of warlike operations the "Lawrence" would be a very valuable auxiliary to the "Sphinx," the Government of India was asked whether she might co-operate. This was referred home and the answer was "On no account." In the recent operations at Bahrein, the "Lawrence" might actually have been taken by a combined attack of Arab dhows when lying at anchor, presenting the spectacle of a Government ship, provided for the suppression of piracy, in a condition of helplessness.

6798. That condition was due, I presume, in your opinion, to the fact that you have mentioned before, that there had been a difference of opinion as to the armament, and that the armament which the Indian Government thought necessary, had been removed from her?—Yes; though her officers, all serving under the Act, are liable to transportation for life for cowardice before the enemy, they have no means of fighting or protecting themselves, since the Admiralty have insisted on her armament being removed.

6799. But if the vessel belongs to the Indian Government, is not the Indian Government at liberty to put its own armament on board without being overruled by the Admiralty?—I should say that according to the Act there was no question of it; but apparently the authorities at home think otherwise.

6800. At all events the result is that the Indian Government keeps a vessel in the Persian Gulf under an arrangement, to which, as I gather, you think exception may be taken?—I think much more use could be made of her, if she was allowed to do her legitimate duty.

6801. You are not raising any question as to her employment in the Gulf being contrary to the arrangement entered into between the Admiralty and the India Office; you are rather objecting to the limitations under which the Admiralty require her to be employed?—I also wish to point out how useful she would be if properly employed; and how, through her presence there, the naval squadron might be reduced.

6802. I take it that, so far, you do not make it part of your objection to the arrangement, as it at present stands, that the Admiralty ought, in order to perform this duty, to provide another ship?—I have always maintained that the Persian Gulf, being outside the limits of Indian waters, the Admiralty ought at all events to bear a portion of the cost of the squadron.

6803. And therefore you would put it that the sum that India pays for naval services should allow for at all events a portion of the charge of the "Lawrence"?—Yes, certainly, I think her services should be taken into consideration, as she is, in my opinion, almost the most valuable ship in the Persian Gulf.

6804. And practically your view of what the arrangement should be may be summarised as follows:—that it is quite right that the Indian Government should keep a vessel in the Persian Gulf; but that, inasmuch as there is an arrangement between the Admiralty and the India Office by which the naval service in the Persian Gulf is conducted by the Navy, therefore the Admiralty should contribute towards the cost of the vessel which the Indian Government consider it necessary to have there?—I think that the Admiralty should keep one ship, and that the "Lawrence" should be considered the equivalent of a second ship on the part of India.

6805. And an abatement made accordingly in the cost?—Yes.

6806. (*Sir Donald Stewart.*) Surely the purpose for which the "Lawrence" is there has nothing in the world to do with the Admiralty?—Nothing whatever.

6807. That is my point; that is what you, Mr. Chairman, are trying to bring out, that it is there for local purposes only.

(*Chairman.*) Quite so, but I understand Captain Hext to say that incidentally and along with the service rendered to the Indian Government, the "Lawrence," is, or ought to be, useful in the suppression of piracy.

6808. (*Sir Donald Stewart.*) I do not think that is the idea of the Government of India; I never heard of it before?—The Government of India consider, and they have put it in writing, that the presence of the "Lawrence" in the Persian Gulf enables them to dispense with one of the men-of-war there.

6809. (*Chairman.*) The Government of India have put it in writing?—Yes.

6810–11. (*Sir Donald Stewart.*) Was that because a vessel of the Royal Navy was employed for taking about the officers?—No, it was mentioned in the correspondence when the subsidised Royal Navy ships were reduced from six to four. The numbers of the despatches are Nos. 61 (Political) of 1881, 19 (Marine) 1884, and 2 (Marine) of 1887.

6812. (*Chairman.*) The "Lawrence" is not a mere despatch boat; she is a vessel of some magnitude, is she not?—She is over 900-tons; she is very similar to the "Sphinx."

6813. And, at all events, your contention would be, that although she is placed in the Persian Gulf for Indian purposes, yet her presence there is also useful for the same purpose that the Admiralty squadron is there for, and that therefore that ought to be taken into account in the settlement between the two Governments?—That, certainly, is my opinion.

6814. You mentioned also that there was a steamer on the Tigris; for what purpose is she there?—She is a small steamer called the "Comet," kept at the Residency at Bagdad.

6815. For the use of the Residency?—Yes, she is armed with two machine-guns.

Captain J. Hext, R.N., C.I.E.

16 April 1896.

6816. You have told us what the number of the ships belonging to the Indian Marine is; would you now tell us what their total charge is? Can you give us the total charge for any convenient year of which you may have the figures before you?—Take 1893-94; the estimate was Rs. 17,20,000, the actual Rs. 11,71,655.

6817. That is a very great difference, is it not, between the estimate and the actual?—Yes; we have had a decrease on the estimates for, I think I may say, the last 10 years.

6818-21. How came such a decrease to be possible within the year; on what heads was the saving made?—The decrease is only apparent. It is chiefly made up by deducting from the actual expenditure recoveries on account of work done for, and stores supplied to, other departments for which an insufficient estimate had been made. We have done in the dockyards lately, both in Calcutta and Bombay, a very large amount of work for the outside departments of Government, and we include that in the estimate so far as we can foresee it; but we are repaid for it afterwards. Then we also hired out some of our ships to the railway department in Burma, and for the conveyance of Her Majesty's troops; and the recoveries on this account reduce the net charge.

6822. I notice also that in the paper which I have before me, which gives the figures of 1894-95, here again there is a very great decrease. The estimate was very nearly 18 lacs and the expenditure was 12?—Yes.

6823. Therefore in those two years the estimate seems in each year to have been founded on the estimate of the previous year rather than upon the actuals, because if I remember what you said just now, the estimate of 1893-94 was 17 lacs and the expenditure nearly 12 lacs?—Yes.

6824. The estimate of 1894-95, the subsequent year, was very nearly 18 lacs, being only about one lac more than you mentioned in 1893-94, and the expenditure again was 12 lacs, showing that in both years the estimate was one-third more than the expenditure?—The explanation is mainly the same as that which I have given in regard to 1893-4.

6825. The actuals in 1892-93 and 1891-92 were nearly 17 lacs?—Yes.

6826. Therefore a great fall has taken place in 1893-94 and 1894-95?—Yes. But that, as I have already said, is more apparent than real, because it is due to the large receipts in the later years from other departments.

6827-8. Perhaps you will tell us, Captain Hext, the reasons of that decrease. The chief heads of decrease will be quite sufficient?—For instance, the gross expenditure under No. 4, Dockyards, amounted to Rs. 8,21,000 against a provision of Rs. 7, 16,000 rupees.

6829. That is an increase?—That is an increase, and the increase is chiefly due to the wages of artificers and men, owing to work undertaken for other Departments of Government, not provided for in the Budget.

6830. Against which you have called our attention to the fact that the receipts were large?—Yes; this increase is more than counterbalanced by the recoveries effected, which amounted to Rs. 3,34,478, against a Budget provision of Rs. 1,73,070.

6831. Therefore that increase of receipts would account, you may say, for 2 lacs of the expenditure?—2½ at least.

6832. But what are the headings in which the decrease of Rs. 6,94,000 took place?—There is a decrease under salaries of about Rs. 12,000, owing to the absence of officers on leave and vacancies in the establishment.

6833. And what was the result in the stores; what was the estimate of stores?—The gross expenditure in the purchase of marine stores and coal amounted to Rs. 6,11,000.

6834. And what was the estimate?—Rs. 6,68,000.

6835. And therefore there was no decrease there to speak of?—About 57,000 rupees.

6836-8. But in the items which you have mentioned as yet, we do not find, I think, sufficient to account for the diminution by such a large sum as very nearly 6 lacs?—The net decrease is Rs. 5,65,000. Under dockyards, owing to an under-estimate of the recoveries, the net expenditure fell Rs. 1,08,000 below the Budget estimate. Under marine stores, for the same reason, the net expenditure fell Rs. 2,83,000 below the estimate. Other smaller decreases are accounted for by a reorganisation of the Marine Survey Department, and other minor variations in the course of the year, which account for about one lakh; making altogether a reduction of about 5 lakhs in the net expenditure. On the other hand there was an unforeseen increase in the receipts of Rs. 66,000 on account of hire of Royal Indian Marine vessels, chiefly due to a payment on account of the conveyance of Her Majesty's troops between India and Hongkong.

6839. But, as I understand, the figures given there show gross expenditure, against which the receipts are taken off afterwards; or are those figures after deducting all the receipts?—The 18 lakhs and the 12 lakhs are net figures after taking off the receipts. It is the actual balance after everything is completed for the year.

6840. It is rather difficult for me to follow it for this reason: the estimate was, putting it roughly, for 18 lakhs, against an actual of 12 lakhs; that makes a difference of 6 lakhs. But at the time the estimate was framed, it does not seem to have been in contemplation that such a large amount would have been done for outside departments, because the estimate for the recoupments was so small?—Just so.

6841. And therefore it looks as if the estimate was framed as a normal estimate in the expectation that the ordinary service would cost 18 lacs. As a matter of fact it cost 12 lacs. You account for that by saying, "We did "so much work for outside bodies which gave us receipts "back." But the Government had not foreseen that at the commencement of the year, otherwise they would have made a larger provision for recoupments. That large decrease remains after the receipts have been deducted?—On the receipt side of the account are entered sums received in cash on account of sales of old stores, repairs to ships not belonging to the Government, &c. Recoveries from other Departments of Government for work done for them have, since 1893, been deducted on the expenditure side from the gross figure, the result being the net expenditure properly chargeable to the Marine Department. When from the net figure are deducted the receipts, the result is the net charge of the Department, so far as it is shown in the Indian accounts.

6842. The point which was in my mind was, had you any reason to think that during those years the service was in any degree starved? We have seen that the expenditure in the years 1891-92 and 1892-93 was 16 lacs; in 1893-94 and 1894-95 it fell in round figures to 12 lacs. Of course, under financial pressure we know that departments are occasionally asked to reduce their expenditure; do you think that that expenditure so much below the estimate is due in any sense to what I would call starving the service?—No, certainly not.

6843. Not this cutting down of the stores?—No, certainly not; not in any way. I think our ships are more economical, and I think the work is more economically done. With the exception of doing a large amount of outside work, and being paid for that, which we used not to do in times gone by, I can give no reason.

6844-6. I daresay you could get a statement prepared for us, giving the chief heads of service gross, showing the increase or decrease of actuals as compared with estimate, putting down at the bottom the estimated receipts and the actual receipts. I think that would enable us to form a judgment as to the course of expenditure?—Yes.*

6847. Why are the estimates on stores so much in excess?—The decrease is due to a smaller purchase of coal. On the other hand, the recoveries on account of stores issued to other Departments were over 2 lakhs in excess of the estimate; so that the net expenditure is over 2½ lakhs less than the estimate.

6848-9. (*Mr. Courtney.*) But your estimate of expenditure on stores in 1894-95 was very much in excess of what you actually did expend on stores?—The sum of Rs. 6,68,000 was included in the estimate. The amount actually expended in India was Rs. 6,11,000. The decrease, as I have stated, is under the item coal, which depends entirely upon the requirements of the service and the movements of ships at out-stations in connection with the trooping arrangements. A sum of Rs. 6,84,900 was provided in the Budget as a deduction on account of supplies to other Departments; but the actual recoveries amounted to Rs. 8,90,189, due to more work having been done for, and stores supplied to, those Departments and the Royal Navy, than was anticipated.

6850-1. (*Chairman.*) Now can you give us what the actual expenditure on the stores was?—The figures I have quoted do not include stores received from home; they do not come into our review at all.

6852. They come into a separate account?—They do not come into my Budget.

* *See* Appendix No. 61.

6853. You issue to other Departments stores received from home; they do not form part of your Budget, and yet you carry the recoupment got from the sale of these stores to the credit of your Budget?—Yes. The actual amount estimated to be purchased in India in 1894–95 was Rs. 6,68,000; to be issued to other departments Rs. 6,84,000 which includes work as well as stores.

6854–5. The point that struck me was this: you have given us the recoupment from stores, and then I ask you what was the expenditure on stores; and you say that the Indian Marine Budget does not give those figures because the larger part come from home. Then I ask, if the stores that come from home do not enter into the Indian Marine Budget, why do you credit, in diminution of that Budget, the recoupments derived from stores brought from England?—I cannot explain the matter, except that the recoveries, being made in rupees, must be brought to account in India.

6856–7. I think it would assist us very much if you would get prepared for us a table showing for the years 1891–92, 1892–93, 1893–94, and 1894–95, under the different heads under which your Budget is framed, the estimate and the actual, first gross, if you please, and putting at the bottom what the recoupments have been?—Yes.*

6858–9. Taking your estimate, I see it is framed under nine sub-heads: general supervision, marine survey, miscellaneous or shore establishments, dockyards, salaries and allowances to officers and men afloat, their victualling, the purchase of marine stores, the purchase and hire of ships and vessels, and miscellaneous, and the actuals of 1892–93 gross appear to have amounted to 19½ lacs. That is the gross expenditure?—That is the gross expenditure for 1892–93.

6860–3. If you were putting it roughly into pounds, I suppose you would call it, according to the old-fashioned way of reckoning the rupees at 10 rupees to the pound, 200,000*l.*?—About 200,000*l.*, yes.

6864. Well, out of that the salaries and victualling come to about 700,000 rupees?—Salaries to officers and men afloat, nearly 600,000 rupees; victualling &c., 1¾ lacs, making very nearly 800 000 rupees.

6865. I am now taking out the chief heads. The dockyards in that year were about 5½ lacs?—Yes.

6866. And the purchase and hire of vessels about 4 lacs. I reckon that those four headings make up very nearly 18 lacs out of the 20. And then we come to the purchase of stores and coal, which only amounts to 171,000 rupees, which is a very small sum apparently for stores. You do not think that that heading was cut down in that year?—No. The Rs. 1,71,000 is a *minus* figure, and is arrived at owing to the excess of recoveries from other Departments over the outlay on stores in India. The gross expenditure on marine stores in India in 1892–3 was Rs. 6,74,000, as against a Budget estimate of Rs. 6,00,000. The only coal that we buy in India is a certain amount which we get in Calcutta.

6867–9. The expenditure on dockyards at Bombay and Calcutta does not appear to be a very heavy one, 5½ lacs. Is that the total expenditure?—That is the total expenditure.

6870. Therefore on dockyards you do not spend in the year beyond 50,000*l.* (upon the conventional method of turning rupees into pounds) and something like between 30,000*l.* and 40,000*l.* taking the actual rate of the rupee?—This only applies to the Budget grant in India; it does not apply to stores received from home.

6871. What is included in "dockyards"? does "dockyards include stores, because you have got a heading down below of "marine stores"?—The latter is only the purchase of marine stores in India.

6872. Yes, but what comes under the head of "dockyards": stores do not come under the head of "dockyards?"—All the stores that we should work up in the repair of ships—boiler plates, thousands of things that we get from home. This Budget in India does not include any purchase of stores in England.

6873–4. Can you give us out of the Home Accounts what the expenditure on stores for dockyard purposes is?—In 1893–4 the expenditure in England on marine stores for India amounted to nearly 132,000*l.*, and most of these stores would certainly be for the dockyards.

6874. At all events, as far as the Indian Budget goes, out of Rs. 20,000,000, something like 800,000 goes on the pay and victualling of the men, 500,000 goes to dockyards and 400,000 for hire of ships?—For hire of ships.

6875–7. What is that hire of ships for?—Purchase and hire of ships. In this particular year it was principally due to the purchase of the Indus Flotilla from the North-West Railway, and of the "Elphinstone."

6878. Can you give us the number of ships detailed for service in the Indian seas by the Admiralty?—Ten, including the "Magdala" and "Plassy," which were handed over to the Admiralty by India.

6879. (*Sir James Peile.*) Those two are turret ships?—One is a turret ship, the other a torpedo gunboat.

6880. (*Chairman.*) Are those eight ships all ships belonging to the Royal Navy, or ships they have taken over at different times from you?—All belonging to the Royal Navy.

6881. They compare with those ships, which, I think, seven or eight years ago you thought might be reduced to four?—About eight years ago six ships were subsidised out of a squadron of, I think, ten ships. Shortly after this the subsidy was reduced to a payment for four ships only.

6882. And now there are eight of them?—Yes. In those days they had quite as many ships; but the subsidy sanctioned in 1869 was for six ships.

6683. And it was only paid upon that?—Not for the whole squadron, but for six ships of the squadron. The subsidy was reduced to one for four ships in 1888.

6884. Therefore the Admiralty keeps out there in your waters eight ships; in respect of those you make a payment on only a portion?—Just so.

6885. In addition to those eight ships you have handed over to the Admiralty two ships which you have built and paid for yourselves?—We have handed over two turret ships, two torpedo gunboats, and seven first-class torpedo gunboats.

6886. Those torpedo catchers and torpedo boats are outside these eight vessels, of course?—Yes, entirely.

6887–8. Would you give us the total number of vessels under the Admiralty that are now employed in Indian waters?—The "Magdala" and "Plassy," two of our ships which are in commission, are included in those 10 ships. Then in addition, in reserve with their crews ready to go on board them, are the "Abyssinia," a turret ship, the "Assaye," a torpedo gunboat, and seven torpedo boats, three in commission and four out of commission.

6889. Have you any of these torpedo boats or torpedo catchers in commission?—The "Plassy" is a torpedo gunboat in commission, and three torpedo boats are in commission out of the seven.

6890. Therefore there are 10 ships in commission and four torpedo boats in commission?—10 ships and three torpedo boats, and in reserve two ships and four torpedo boats.

6891. The Admiralty is now responsible for all these ships and receives in respect of them that 100,000*l.*?—No, the Admiralty is responsible for eight of these ships. Shall I give their names?

6892. If you please?—The "Bonaventure," the "Brisk," the "Cossack," the "Lapwing," the "Marathon," the "Pigeon," the "Redbreast," and the "Sphinx."

6893. Eight?—Eight, and for a portion of those the Admiralty receives at present 100,000*l.*

6894. But then where are you counting the "Magdala" and the "Plassy"?—For the "Magdala," "Plassy," and vessels in reserve, they receive 60,000*l.* more.

6895. (*Sir Donald Stewart.*) 61,008*l.*?—Yes.

6896. (*Chairman.*) That is the sum in the accounts described as subsidy to the Admiralty for maintaining Indian defence vessels, 61,008*l.*?—Yes.

6897. I think that gives us a view of the force that the Admiralty keep on the Indian coasts, and the manner in which payment is made for them?—Yes.

6898. There is nothing extra to be added to that, and any charges that fall on India, apart from these two sums, the contributions of 61,000*l.* and 100,000*l.*, we should find in the Indian Marine Budget?—The Indian Marine Budget is entirely separate from this.

6899. Quite so; I want to get the total charge to India?—Of the Marine and Navy.

6900. Of the Marine and the Navy, and I find two very small sums which we may leave outside—pay and passage of marine officers; I find the stores for India in this particular year, were 132,000*l.*, and then comes your Marine Budget, which was put down practically at 2,000,000 rupees?—Yes.

6901. Diminished apparently by receipts to about Rs. 12,00,000?—To about 12 lacs of rupees, yes.

* *See* Appendix 50.

Captain J. Hext, R.N., C.I.E.

16 April 1896.

6902. And that actually covers the whole of the expenditure of India on marine services. Does it include non-effective?—It includes the whole of the expenditure of India on marine services, on Imperial marine services.

6903. And on local marine services?—Not the small expenditure incurred by Provincial Governments on minor vessels on rivers.

6904. By whom are they paid?—They are paid for by the Provincial Governments.

6905. Would this include the non-effective service, pensions?—All the pensions of officers are paid in this country.

(*Sir Donald Stewart.*) Those of the non-effective officers and men residing in England.

6906. (*Chairman.*) Where are the pensions of the officers employed on the Imperial ships, the Royal Navy?—They are included in the contribution; it is only pensions of the retired officers of the Indian Marine.

6907. Therefore we have to add to your budget only the pensions paid in England to your own officers?—Yes, undoubtedly.

6908. Then summing up the whole matter, the whole marine charge to you is this: 160,000*l.*, which is paid as subsidy for the ships of the Royal Navy and Defence Flotilla, which, of course, we must turn to rupees at the rate of exchange; then the stores for India, 130,000*l.*, which we must treat in the same way; and in addition to that there is your budget of 20 lacs, is it not?—Yes.

6909. With a slight addition (inasmuch as the force is not a very large one) for pensions paid in England of the Indian Marine force?—Yes. It amounted in 1894–5 to 28,492*l.* In 1861–2, the year before the abolition of the old Indian Navy this charge amounted to Rx. 26,526. A considerable amount of the charge in 1894–5 is still being paid to officers of the old Indian Navy.

6910. Now up to 1863 the Government maintained its own Navy, did it not?—Yes.

6911. Have you figures showing what was the cost of the force at that time?—No, and I do not think that anybody else has.*

6912. You do not know how many ships there were?—I can give you a rough idea of the number of ships, I think. Directly after the abolition of the Indian Navy there were three steam transports, four paddle-wheel frigates, one paddle-wheel sloop, and two screw gunboats; several other vessels were sold.

6913–4. Would there not be a Navy List that would show you how many ships were actually possessed in 1863?—I find that there were 3 screw steamers, 13 paddle steamers, 6 screw gunboats, 12 sailing vessels; in all 34 sea-going vessels. There were also two river steam vessels. But of the steam vessels many were very small; and the sailing vessels were mostly in reserve.

6915. In the same way we could find what was the Budget estimate for the Indian Marine at that time?—I do not know that at all; I should think so.

6916. You have no figures?—I have never seen any figures.

6917. You see, it is rather an important point, in considering the case generally, to know whether the change has been an increase of charge to India or a diminution?—Yes, but it is, I would suggest, more important to India to take what we can save at the present moment.

6918. That is one very important view of it; you admit there is another view?—Oh, quite so; there are two sides to every question.

6919. I think there has been a good deal of difference of opinion as to what the precise duties of the Indian Navy were; can you tell us of any paper in which it has been laid down what the duties performed by the old Indian Navy were?—I have never been able to find one. The only book is Low's "History of the Indian Navy"; he gives the detail of the whole service and the duties performed.

6920. Is that book held by the Indian authorities as an authority on the subject?—No, I would not say that, but it quotes largely from despatches, and evidently is very carefully compiled.

6921. What is the date of the book; was it published since the abolition of the Indian Navy?—I think so. I do not know the date, but it describes the abolition.

6922. You do not know from the correspondence which passed at the time of the abolition, what the duties then undertaken by the Indian Navy were?—They virtually did the police of the whole of the Indian seas.

6923. Including the Persian Gulf?—Including the Persian Gulf; then too they assisted in China, they assisted in the first New Zealand war, and they assisted in all the operations in Borneo, in co-operation with the Navy.

6924. What are the dates of those wars; were they before the abolition?—New Zealand was before the abolition a long time—I am talking of the first New Zealand war; the China war was before the abolition.

6925. You do not mean the China expedition which took place at the time of the Mutiny?—No; after the Mutiny; Borneo was before that, in Raja Brooke's time, I think. The Indian Navy ships did very good service there.

6926. Did India receive any payment in respect of any service she did then, or was it a gift?—I believe it was a gift; I am not certain; I never found any record of payment.

6927. Then India at that time did all the service apparently which the squadron, for which she now pays the Admiralty, now performs?—The East Indian Naval Squadron was for a considerable period combined with the China Squadron, and the bulk of the ships were kept in the China seas.

6928. I think it was always held then that India was bound to find means for the protection of her own ports, was it not?—Yes, certainly for the protection of her own ports.

6929. Which is now provided for by the gunboats and torpedo boats which have been handed over to the Admiralty?—By ships paid for by the Government of India and handed over to the Admiralty.

6930. You do not wish to put in any statement of what you consider were the duties performed by the old Indian Navy, as a contrast to the duties now performed by ships of the Royal Navy, for which these payments are made to the Admiralty?—I presume their duties were very similar indeed to those enumerated in the Act of 1884; the suppression of piracy and the protection of penal settlements and local duties round their own coasts.

6931. That was what the Indian Government was bound to do when it maintained its own navy?—Yes; but they have also provided for the defence of their harbours by providing the turret ships before mentioned, and also by paying the Admiralty for commissioning them.

6932. Then would you hold that at the time, when the Indian Navy existed, the Royal Navy had any duties to perform in Indian Seas?—Protecting the Imperial interests, certainly.

6933. Not in any way connected with the defence of India itself?—Nothing in connection with the defence of India.

6934. Nor with the defence of Indian trade?—The Indian trade is virtually English trade. It is all carried in English ships and paid for by English money. The trade of India itself is next to nil.

6935. I want to get at what you think was the duty of the old Indian Navy. India had certain trade; do you consider that when that Indian Navy existed it was bound to look after the Indian trade, or ought the Royal Navy to have maintained ships enough in Indian seas to guard that trade?—I think undoubtedly the Royal Navy should have provided enough ships to guard that trade.

6936–7. Do you think it did so in the old time? I may put it in this way: in the old East Indian trade was not the East Indian fleet a fully armed fleet, which defended itself?—In the time of the old East Indian fleet, their trade extended to China, and the ships were undoubtedly armed and fought their way, but they had nothing to do with guarding the trade route.

(*Sir Donald Stewart.*) I do not think the witness quite understands what you mean by "the trade": you are referring to the time when the East India Company was a trading company.

(*Chairman.*) Yes, up to comparatively recent times.

6938. (*Sir Donald Stewart.*) Well up to 1832, not later?—They defended their own ships in those days.

6939. They were armed ships?—They were armed ships.

6940. (*Chairman.*) And therefore at that time the Indian Government may be said to have relied upon its own

* *But see* Appendix 61.

resources for the defence of its own trade?—Simply because there was no squadron there.

6941. India had a large trade with England at that time; you have told us that you think that England is bound to defend the Indian trade; how far was that actually the case? India at that time sent yearly a large fleet of vessels to England; were not those vessels as a rule armed and manned so as to defend themselves, and is it not the case that the English Admiralty did not provide a fleet in the Indian seas to convoy and look after those vessels on their voyage home and back?—That undoubtedly is the case, and it also extended to China.

6942. As far as the Indian trade to China goes?—No, as far as the English trade to China goes; vessels not under the East India Company trading to the east were also armed to protect themselves.

6943. That England would look after; but it comes to this, that England did not provide a force in the Indian seas to look after Indian trade?—Not back into the thirties, certainly.

6944. I am speaking of that time and previous to that time?—Yes.

6945. And even, I presume from what one reads, that was the case in the great war?—There was a very small squadron of English ships in the Eastern seas at that time.

6946. (*Mr. Buchanan.*) I suppose before the abolition of the Indian Navy in 1863, the Imperial authorities at home professed to protect the Indian trade with England as much as they professed to protect the trade of any other of our colonies with England, out of Imperial sources?—I should say that was the case.

6947. Between 1832 and 1863, when the Indian Navy was abolished, there was no particular liability placed upon the Indian Navy to protect the trade between England and India, was there?—The fact of having an Indian Navy certainly would not exonerate the mother country from protecting the trade routes.

6948. (*Chairman.*) As a matter of fact, in the time when the Indian Navy existed, did not India practically look after her trade, upon her side of the Cape? According to all one has read, the force that the Admiralty kept at the other side of the Cape was a very small one; it may have been a dereliction on the part of the Imperial Government of its duty, but practically the Indian trade was conducted in ships that defended themselves?—That is undoubtedly the case; but at the same time I do not think the home Government is exonerated from trying to protect its commerce, because the East India Company tried to help itself.

(*Chairman.*) I limited myself particularly to the question of fact.

6949. (*Sir James Peile.*) I see in a despatch from the India Office in 1862, it is said: "at all times there have "been several vessels of Her Majesty's Navy in the "Indian seas for the general protection of trade" and also "a considerable squadron of the Royal Navy has "always been maintained on what is called the East India "and China station." I suppose that is correct, is it not?—The bulk of the ships were certainly in China; then shortly after that, in 1865, they divided the station.

6950. Yes, it is speaking of the time before 1862; then, at all times, in fact.

6951. (*Sir Donald Stewart.*) Is it not the case that the duty of the Indian Navy was what may be called the maritime police of India and had nothing to do with the protection of trade in the eastern seas?—Yes, decidedly so.

6952. It was entirely intended for the protection of the coasting trade of India?—Exactly so, but it was employed on occasion to assist the Imperial Government on expeditions.

6953. Oh, yes, but their chief duty was the protection of the coasts and coasting trade?—Yes, and beyond that, they were largely employed in carrying the mails.

6954. That was after the overland route was established?—The overland route was first inaugurated by the Indian Navy and run by their steamers.

6955. (*Mr. Courtney.*) But if you carry your mind back to the time when the East India Company had a monopoly of the Eastern trade—had, for example, a monopoly of the tea trade—would the protection of that commerce as regards India be at all different from the protection of the commerce between the United Kingdom and the West Indian Islands in respect of sugar?—It is very hard to answer that question, sir, because the Indian Navy proper did not come into existence until considerably after the East India Company had armed ships trading and sailing to England. I do not think the Indian Navy was in existence till after 1800—considerably after the French war—but their ships, undoubtedly, as Sir Donald Stewart said just now, carried arms to protect themselves and sailed in fleets.

6956. Was not the Government of India looked upon as a rather more independent political organisation than the Government of the West Indies, and did they not look after their own merchant ships, and arm them in a more complete fashion than the traders to the west?—Undoubtedly so.

6957. (*Mr. Buchanan.*) But all that came to an end long before the abolition of the Indian Navy?—Yes.

6958. (*Sir Donald Stewart.*) The Indian Navy was only established in 1829; up to that time it was designated the Bombay Marine?—Yes.

6959. (*Chairman.*) The point that I am anxious to get your opinion upon is this: the Admiralty has a great duty to perform; but up to a certain time the Indian Government, alone among the depeadencies of Great Britain, maintained its own navy; that Indian Navy was abolished and its duties undertaken by the Admiralty; but what was the position before that abolition? As a matter of fact, while the old East India Company existed, a very small squadron was kept by the Admiralty in the eastern seas, which would be quite incapable of looking after Indian trade in the manner in which it ought to be looked after: and may we not say that, in consequence of that, as matter of fact, the Indian Government made their trade look after itself; and that at the same time it kept a navy of its own, which discharged all duties round its own coasts?—I think the situation may be summed up by saying that after the Mutiny, with a view to a reduction of expense, it was considered desirable to abolish the Indian Navy, which undoubtedly cost a very large sum of money. The Admiralty agreed to take over the duties free of cost; and it must be recollected that India was no longer a trading company making money and protecting its own commerce to preserve that money, but part of the Imperial Government.

6959*a*. I want to ascertain whether you would differ from me, when I say that, rightly or wrongly, the English Navy did very little for the protection of Indian trade east of the Cape, in the period of the Old East India Company?—Undoubtedly that is the case.

6960. (*Mr. Mowbray.*) Does not that partially arise from the fact which you mentioned just now, that the Company was a trading company with a monopoly, trading for a profit?—Yes; therefore they defended their own ships.

6961-2. (*Sir William Wedderburn.*) Therefore the protection of that trade would not be a public service so much as a service to the East India Company?—They protected their own private trade undoubtedly.

6963. (*Chairman.*) Quite so, a very great change took place in the relation of the two powers?—Yes.

6964. But at the same time the fact remains that of old times the Royal Navy did not undertake any very extended service in the East?—That is undoubtedly true.

6965. Sir Donald Stewart just now described the Indian Navy as only doing maritime police duties. I should like to read to you an extract from Sir Charles Wood's despatch at the time that the abolition of the Indian Navy was under consideration, in which he says:—"The nature of the services required to be performed by "vessels of war in the Red Sea and upon the eastern coast "of Africa has recently been much changed, in consequence of the extension of the foreign slave trade and "the more frequent presence of foreign ships of war. "Her Majesty's Government, therefore, consider that, for "the future, vessels of the Royal Navy should be employed "in those seas, instead of vessels of the Indian Navy; and "that, as the purposes for which they are employed are "Imperial, so their cost should be borne by the Imperial "Exchequer."

(*Mr. Courtney.*) He had been Chancellor of the Exchequer.

6966. (*Chairman.*) I think the Chancellor of the Exchequer does not carry his prejudices into the India Office. You see from that quotation that the vessels of the Indian Government had been employed in the Red Sea and on the East Coast of Africa in connexion with the slave trade, because that is implied in those words?—It is implied, but it was only to a very small extent.

6967. Quite so; the words imply that the service must be extended?—The vesseb that was there, so far as my

Captain J. Hext, R.N., C.I.E.

16 April 1896.

memory goes, was only a small schooner or something of that kind.

6968. But at all events the Indian Navy was doing that service, whatever its extent, on the East Coast of Africa and the Red Sea. With regard, however, to the remaining duties, Sir Charles Wood's despatch says: "There remain, "however, duties of considerable importance which must "be performed at the charge of the Indian revenues, and "for which some marine service is required. The police "of the Persian Gulf should, in my opinion, at any rate "for the present, continue to be performed by a local ser- "vice. India is bound, in like manner with the Colonies, "to provide at her own cost sufficient means for the pro- "tection of her ports against a small attacking force from "the sea, by batteries on shore, or by defences afloat . . ." I should say these are extracts only; this is not a continuous quotation. Would you be prepared to take that, as laid down by Sir Charles Wood, as a definition of the duties which the old Indian Navy performed?—Yes; and not only that, but I am prepared to say it is being performed by India. Every single thing mentioned there has not only been performed, but is now being performed.

6969. Under the recent arrangements?—Under the present arrangements.

6970. Do you mean that she pays for the service?—The Government of India have provided for the fortification of the harbours, not only by batteries, but by building special ships, viz., two turret ships, the "Magdala" and "Abyssinia"; two torpedo gun boats, the "Assaye" and "Plassy"; and seven first class torpedo boats, and they pay 61,000*l.* a year for manning them.

6971. And the police of the Persian Gulf?—And the police of the Persian Gulf. We pay the Admiralty for that, and are doing it ourselves to a certain extent; or at all events we could do it.

6972. But at all events you would not differ from that definition as laid down by Sir Charles Wood?—Except that the time has come, I think, when the Imperial Government should bear a portion of the expense of the Persian Gulf.

6973. (*Sir Donald Stewart.*) Do you mean to say that the vessels of the Indian Marine are now capable of defending the ports against an attacking force of armed vessels?—We provide for that by turret ships, which we paid for.

6974. That is only in Bombay?—The other principal ports are protected by batteries, which India has provided, and by submarine defences.

6975. How would you protect the whole line of the Indian coast? You could not do that; you have no armed vessels; that is the point?—Well, undoubtedly, the Navy will never do it, whatever you pay them. They distinctly say that they will not do that. "The protection of "her own ports against a small attacking force by sea" is one of the duties reserved for the Government of India. Do you think that includes the whole of the outside ports, Sir Donald? all the little ports such as Calicut and Cannanore? That is an impossibility.

(*Sir D. Stewart.*) I mean that is one of the duties which your ships, as at present equipped, are not capable of performing; that is all I wish to point out.

6976. (*Chairman.*) At the time of the abolition of the Indian Navy was there any opinion in India in favour of retaining it, or was the Indian Government and Indian opinion in consonance with the Secretary of State in desiring to abolish the Navy?—The Government of India, having carefully considered their existing ships, and the expenses attached to them, and after consulting the commodore commanding the Royal Navy squadron, sent a letter (No. 3, dated 22nd February 1870), objecting most strongly to the proposal, on the grounds, "that the "scheme detailed in your Grace's despatch of August 31st, "1869, which is altogether dissimilar to the proposal made "in our despatch of 10th June 1869, No. 20, is not suit- "able, and it would, under the proposals of the Board of "the Admiralty, involve a charge on the Indian revenues "for which sufficient value would not be returned."

6977. That was in 1869, was it not?—That was in 1869, when the subsidy was first asked for.

6978. My question referred to 1862; I want to know whether in 1862 the Indian Government, and Indian opinion itself, were in favour of the abolition of the Navy, or whether there was a difference of opinion?—I should say they were in favour of it, because they thought the work was going to be done for nothing.

6979. Do you know whether, in that correspondence of 1862 when the Admiralty took over the defence of the Indian coasts without payment, any mention was made of payment; was the subject at all discussed?—Sir Charles Wood, in his despatch, says: "As the purposes for which "they (the vessels of the Royal Navy) are employed are "Imperial, so their cost should be borne by the Imperial "Exchequer."

6980. That is in one despatch, but are you aware whether the subject was ever mentioned and discussed between the Home Government and the Indian Government?—I cannot say; I never saw anything bearing on it.

6981. Then, coming to 1869, do you know what led to the first application that a subsidy should be paid by India for the use of the Admiralty ships?—I imagine it was a complaint by the Bombay Government that their work was badly done, and that the Royal Navy ships were not performing their duties. I cannot say that there was any other reason that I know of.

6982. There was a complaint to that effect?—There was a complaint to that effect, and a proposal to revive on a small scale the Indian Navy.

6983–4. And that was the despatch to which reference is made in the answer, which you were quoting, of the Indian Government to, I suppose, the Duke of Argyll?—To the Duke of Argyll. Here are the two despatches (*despatches produced*).

6985. And at that time the Commodore, at all events, gave reasons why a Royal Navy force would not be so useful as vessels belonging to the Indian Government?—Just so; he said he thought that white men could not stand the heat of the Persian Gulf; and he said he thought the duty would be more efficiently performed by Lascar crews.

6986–7. And then the Government of India and the naval Commodore commanding agreed that the force of six ships was no longer required?—Yes; you will find it in the despatch of February 1870 from the Government of India to the Secretary of State.

6988–9. "Sir Leopold Heath states various reasons why "a force of the Royal Navy would not be so useful for "our purposes as vessels belonging to the Indian Govern- "ment, which could remain in the Persian Gulf at all "seasons; nor does he think it would be at all expedient "to have a mixed crew of Europeans and Natives in "vessels of the Royal Navy; and he thinks small vessels, "such as are wanted for service in the Gulf, could not "with safety to their crews, if these were wholly Euro- "peans, remain constantly in the Gulf during the hot "season. We are not disposed to concur with the Com- "modore in his objections to placing mixed crews in "vessels of Her Majesty's Navy." Therefore, it appears that the Indian Government at one time were not supporting, at all events wholly, the contention of the naval Commodore which would have re-established an Indian force?—With the exception of his view as to the mixed crews, I think they supported his views right through in the whole despatch.

6990. That is your reading of the despatch?—That is my reading of the despatch. The only point in which they differed was that the Commodore wished mixed crews, and the Government of India did not agree with him on that point; on all the other points they were agreed

6991. And therefore, in your opinion, the Government of India at that time would have liked to re-establish a naval force?—I might read some other extracts from that despatch. They proposed in it to maintain a fleet of eight vessels "for the police purposes of the Indian seas under "our own orders, . . . two for service in the Persian "Gulf. . . . . one of rather larger size; . . . . "one at Aden; one for Rangoon, of light draught, so as "to be capable of going up the river, but also fit to go to "sea at all seasons; one for Port Blair and the Nicobars; "one for the Arracan Coast, and one for the Tenasserim "coast." And further: "In the above scheme, we have "not referred to other wants in the shape of steamers for "river and harbour service, or for conveyance of troops "from port to port in India. Of these we are greatly in "want, nearly all our steamers being worn out," and they wished not to pay the subsidy, but actually to re-start a small Indian Navy.

6992. A small Indian Navy?—Yes; in the 18th paragraph the Government of India actually asked that ships might be built.

6993. That Indian Navy would not have provided, as apparently it had provided in former times, though in a

very insignificant manner, for service on the East Coast of Africa, but it would practically have done all the Indian service that the old Indian Navy performed?—Quite so.

6994. That was their view at that time?—Yes.

6995. The Secretary of State over-ruled that?—The Secretary of State over-ruled that, and sanctioned the subsidy in direct opposition to the wishes of the Government of India.

6996. Is it your opinion that, on the subsidy being paid, the Navy did the work which they undertook to do?—I do not think they did the work satisfactorily.

6997. Was the Indian Government able to remove all their ships from the Persian Gulf?—Yes, until the "Lawrence" was provided.

6998. Was not the "Sir Hugh Rose" still kept there?—She was still kept there, from 1871 to 1874; she remained after the subsidy was given, doing duty under the approval of the Commodore.

6999–7001. And matters remained so until the passing of the Act of 1884, did they not? What led to the passing of that Act?—The discipline and the status of the Indian Marine.

7002. Was it a kind of Mutiny Act for the Indian Marine?—Just so, it is almost a copy of the Naval Discipline Act, with the exception of the punishment of cowardice by death; we punish cowardice by penal servitude; that is the difference between the two, I think.

7003. But I see that the Act appears to enumerate certain duties of the Indian Navy. Is that in the preamble of the Act?—Yes, I think so.

7004. I want to know how far the recital of duties was a necessity of the case, and whether it is an authoritative recital of the duties?

(*Sir Donald Stewart.*) The necessity of the case was this, that the vessels were under no law whatever. They were not merchant vessels, they were not vessels of the Royal Navy. There was no Indian Marine Act in force at the time.

7005. (*Chairman.*) Have you the Act there?—Yes.

7006. What does it say about the duties; where does that come in?—In the first paragraph:—"Whereas a "marine establishment, called Her Majesty's Indian Marine "Service, is employed under the direction of the "Governor-General of India in Council for the transport "of troops, the guarding of convict settlements, the suppression of piracy, the survey of coasts and harbours, "the visiting of lighthouses, the relief of distressed or "wrecked vessels, and other local objects, and maintained "out of the revenues of India."

7007. And would you say that you look upon that as the authoritative definition of the duties which the Indian Marine now performs?—Undoubtedly. And the last clause in the Act is an important clause. It says:—"In case a state of war exists between Her "Majesty and any foreign power, it shall be lawful "for Her Majesty by Proclamation or Order in Council "to direct that any vessel belonging to Her Majesty's "Indian Marine Service and the men and officers from "time to time serving thereon shall be under the command of the senior naval officer of the station where for "the time being such ship may be. And while any such "vessel is under such command such vessel shall be "deemed to all intents a vessel of war of the Royal Navy, "and the men and officers from time to time serving in "such vessel shall be under such Naval Discipline Act "or Acts as may be in force for the time being and subject to such regulations as may be issued by the Lords "Commissioners of the Admiralty, with the concurrence "of the Secretary of State for India in Council."

7008. Then there is no mention in the Act of the subsidy paid by India for the use of ships of the Royal Navy?—No mention at all.

7009. It was not at all necessary for the purposes of the Act?—No.

7010. The Act simply defines the local duties which are still left in the hands of the Indian Government?—Yes.

7011. Somewhere about that time was not the subsidy very much reduced?—The subsidy was reduced in 1888, the Indian Government having added the "Lawrence" for permanent service in the Persian Gulf and placed an armament on board of her in compliance with the Act passed in 1884.

7012. The number of ships subsidised was reduced from six to four?—Yes.

7013. And the subsidy amounted to about 48,000*l.*?—48,700*l.*

7014. And that arrangement continued until a discussion arose two or three years later between the Home Government and the Indian Government, which brought up the whole question, and which led to what is called the Foreign Office Conference?—Yes.

7015. Have you any observations which you would wish to make to the Commission on the results of that Conference, which, as you know, was held under the presidency of the Prime Minister, and which was attended by the Secretary of State for India on the one side, the First Lord of the Admiralty and the Chancellor of the Exchequer on the other. It was in fact a kind of arbitration by the Prime Minister, on the question at issue between the Home and the Indian Governments?—The Conference decided that India should pay the full cost of vessels specially allotted for service in Indian waters, but that the question of what ships suited Indian purposes should be considered. India held that three vessels, the "Sphinx" and two gunboats of the "Pigeon" type, would be sufficient. But the Admiralty disagreed with this and wanted to substitute very much larger vessels. It must be recollected that the Admiralty in 1869 thought that there should be three vessels for the Persian Gulf, and that their size should be only 465 tons each; but now they proposed that India should pay on the cost of the "Marathon," a comparatively large ship, and the "Cossack," a ship larger than the Government of India thought it wanted, one gunboat of the "Redbreast" type and the "Sphinx."

7016. Do you wish to bring before the Commission any views with respect to what I would call Lord Salisbury's decision?—I would point out that of the vessels proposed by the Admiralty the "Marathon" drew too much water to be of any use on the coast of India, in the Persian Gulf most notably; that the size of the vessels was much larger than was required, and that the principle upon which they were paid for, appears to me to involve Imperial and not Indian purposes.

7017. You say "appears to me"; in putting the answer in that form do you mean that in so saying you do not represent the Indian Government?—Yes, certainly I represent the Indian Government in saying that those ships are larger than are required for their purposes and unsuited for their work.

7018. There are one or two points in the decision of the Foreign Office Conference of 1890, upon which I would like to learn whether you have any objections to offer. If you remember, it was agreed then that the Indian Government was to be consulted as to the number and class of ships required in the Persian Gulf. Under that decision India and the Admiralty were practically to agree upon the number of ships; and when that number was settled, then the ships were only to be employed in concert with the Indian Government. Those were the heads of Lord Salisbury's decision?—But the Indian Government could not agree with the Admiralty; that is where the difficulty came in.

7019. That is where the difficulty came in. Then the next step was that Mr. Forwood was to confer with the India Office, and draw up a memorandum on the subject containing the different proposals. Do you remember how that came to break down?—Because the Admiralty based the scheme on ships of a size that India said were not required.

7020. And therefore India objected to the Admiralty proposals?—Objected entirely to the ships they selected to base their proposal on. We wished the proposal based on the Sphinx and the two small gun-boats; they based their proposal on larger ships—first they made it 109,000*l.*, and then 117,000*l.*.

7021. Was that the figure that resulted from the proposal in Mr. Forwood's memorandum?—Yes, it is a figure that resulted from the calculation on the cost of the larger sized ships, which India said she did not require.

7022. And therefore Lord Salisbury's decision failed of effect?—Yes, because the Government of India and the Admiralty could not agree upon the size of the ships.

7023. But is the Indian Government satisfied, so far, with those conditions, as laid down by Lord Salisbury, that the Indian Government are to be consulted as to the number of ships, and that when that number is settled those ships are not to be employed beyond certain limits, except with the consent of the Government. Would that satisfy to a certain extent your view as to what the conditions between the Indian Government and the Admiralty should be?—The Government of India virtually accepted

Captain J. Hext, R.N., C.I.E.

16 April 1896.

Lord Salisbury's terms, provided they had the ships of the dimensions that they proposed themselves, and the calculated cost according to the Admiralty, came to under 49,000*l.*

7024. That is to say, practically, Lord Salisbury's decision was put into force, namely, that the Indian Government and the Admiralty consulted together, but Lord Salisbury's decision failed at this point: it did not provide what was to take place when the Admiralty and the India Office were in conference?—Just so.

7025. And the consequence was that in the following two or three years the deadlock remained as bad as ever?—Yes, that was so.

7026. Then came an endeavour, between the Home Government and the Indian Government, to choose an arbitrator; and first of all, I think Lord Rosebery was proposed when he was out of office?—I believe so.

7027. I beg your pardon, no; first of all the Duke of Devonshire was asked; but the difficulty arose that the Home Government and the Indian Government could not agree upon their case?—That is quite the case—the Indian Government could not agree with the Admiralty as to the size of the ships; that was what they fought about.

7028. About the case to be submitted to the arbitrator?—That was done by the Secretary of State; of course he is the Government of India.

7029. Yes, but the reference to the Duke of Devonshire's arbitration was rendered fruitless by that fact, that the two Governments could not agree upon their case, I think?—I have no knowledge of that.

7030. Then came the selection of Lord Rosebery as arbitrator, and he gave it up on taking office; and lastly, the deadlock continuing, it was decided to refer the matter to Lord Rosebery as Prime Minister, was it not, and that is the origin of the Rosebery award—I am only going through the facts now?—Yes.

7031. And now, do doubt, you would wish to give us the objections of the Indian Government to the Rosebery award?—I think too much importance appears to have been attached to the words "for Indian purposes," and "local purposes," used in the Foreign Office Conference, and again by Lord Rosebery in his letter of December 6th, 1894. During the last 12½ years no single case can be traced of a man-of-war having been in Indian waters for "local purposes," with the exception of Bahrein, which, I submit, was partly imperial.

7032. Bahrein being in the Persian Gulf?—Yes; and with the exception of one vessel sent recently to Goa, where it was replaced by the "Plassy," a vessel paid for by the Government of India. A comparison is made between the subsidies paid by India and Australia, on which the Chancellor of the Exchequer held, according to Sir Henry Waterfield, that the basis of the Australian agreement ought to be applied to India. That was at the Foreign Office Conference.

7033. Where do you get that statement of Sir Henry Waterfield? Is it in his paper on payments?—No. It is in a letter from Sir H. Waterfield to Sir D. Barbour dated 28 March 1890, which is on record in India. He says that the Chancellor of the Exchequer "said that it was absurd to "argue that, because 30 years ago a rate based on the pay "and victuals of men was considered sufficient, it should "be considered so nowadays, when, owing to the change "in ship-building the vessels cost infinitely more, while "they carried less sailors. He maintained the principle "was radically wrong, and that the basis of the Australian "agreement ought to be applied in the case of India."

7034. Sir Henry Waterfield does not say where he quotes from the Chancellor of the Exchequer?—He does not say that, my Lord; he simply says—those are the actual words—"that the basis of the Australian agreement "ought to be applied in the case of India."

7035. (*Sir Ralph Knox.*) This agreement was made in the meanwhile, was it not?—That agreement with the Australian Government was made just before the Conference actually met, and on those grounds we thought that India should be charged—in fact it was distinctly so said—on the lines of the Australian agreement. One point I wish to bring out is that those lines have not been followed.

(*Mr. Ryder.*) I rather think you are referring to a memorandum of a Conference at the Foreign Office, where there was a reference to the Australian agreement.

7036–8. (*Chairman.*) The force of Captain Hext's observation is that he gets a powerful ally upon his side, if he can quote the Chancellor of the Exchequer; and especially, if it was a memorandum that would represent the Chancellor of the Exchequer individually in any way?—I have quoted from Sir H. Waterfield's letter dated the 28th March 1890. It bears upon the subsidies paid by India and Australia. According to the last produced evidence, Australia for 126,000*l.*, which they submit must not be exceeded, has four cruisers and one gunboat in commission, total tonnage 11,035 tons; and one cruiser and one gunboat in reserve of 3,310 tons; and the whole of these ships are in addition to the Royal Navy Australian squadron; thus, even if we leave out the two ships in reserve, Australia pays 11·4*l.* per ton. Even if India accepts the Admiralty proposal for "Marathon," "Brisk," "Pigeon" and "Sphinx," total tonnage, 6,605 tons, and the subsidy now fixed, viz., 100,000*l.*, India will pay at the rate of 15*l.* a ton; and not only this, but not a single ship is added to the existing squadron. Thus Australia pays 11·4*l.* per ton, and has an addition to the local squadron of 14,345 tons, and India pays 15*l.* per ton without the addition of a single ship. I submit that no grounds have been put forward for such an extraordinary difference in the way of calculating the amount of the subsidy, and I think India should demand to be put on the same terms as Australia, as the Government of India asked might be done in paragraph 4 of their Despatch of 13th May, 1891, which request apparently was not laid before Lord Rosebery. A point not touched on in any of the papers I have seen is the certainty of the whole of the subsidised ships being withdrawn from their stations in time of a great naval war. The example of Australia is eulogised "in contributing liberally for the protection of their floating trade." If the same terms, viz., that subsidised ships should be in excess of the ordinary squadron, and the same subsidy, viz., 11·4*l.* per ton be adopted, for the 100,000*l.* India is now asked to pay, the Admiralty ought to add 8,772 tons of shipping to the Indian squadron, which protects not only Indian trade, but that of Australia and China. India has also provided the following vessels, the "Magdala," "Abyssinia," "Plassy," "Assaye," and seven first-class torpedo boats, at a cost to India of 474,497*l.*, and has recently expended 67,000*l.* in re-arming the two first ships, all of which are at present handed over to the Admiralty, and are shown in the Navy List. A subsidy of 61,000*l.* is also paid per annum to the Admiralty for their crews. If this 61,000*l.* is added to the 100,000*l.* now sanctioned by the Secretary of State, India will pay 35,000*l.* more than Australia for almost exactly the same amount of tonnage, but with this difference—that India has paid for and provided 7,710 tons of shipping and seven torpedo boats, and no increase to the Indian Royal Navy squadron has been made.

7039. I think the Commission are very anxious to hear generally the objections which you bring forward?—To Lord Rosebery's award?

7040. We have now reached a very important point in the inquiry as to the Indian Navy; but the Commission at this present moment are hardly in a position, I think, to judge it fairly; first of all, they have not actually got before them, I think, the Rosebery award in full?

(*Sir Donald Stewart.*) No.

(*Chairman.*) And further than that, we have not got before us what is extremely important, the case on both sides on which that award was given; and I wish to suggest to the Commission that Captain Hext should continue his objections to the Rosebery award so that we may get them on record, and that we should distribute to the Commission the Rosebery award and the case. Perhaps Mr. Ryder or Sir Donald Stewart could tell us whether they think there is any reason why the case on which the Rosebery award is founded should not be published with the other papers laid before us. I am not aware of any reason against it, but it seems to me impossible for the Commission to form an opinion upon the award without seeing the case. I do not see any good reason why we should not have it printed and sent confidentially round to the members of the Commission, when Captain Hext has finished his comments on the Rosebery award; I should then ask the other members of the Commission whether they would ask any questions upon the evidence as far as it relates to the arrangements prior to the Rosebery award, but consideration of the Rosebery award itself must take place when the Commission have had time to read that award and the case on which it is founded.

7041. Captain Hext, before you go on with the observations which you were making upon the Rosebery award, I should like to call your attention to a memorandum which I think you have before you, drawn in the India Office, on the subject of payments in respect of services in which both the Imperial and the Indian Governments are interested. That memorandum, at the close of section 26, which

deals with the naval service and alluding to the Rosebery award, says, "In view of the decision of the Prime "Minister, it is not desired by the India Office to dispute "the arrangements recently made upon any arithmetical "or technical grounds. But the attention of the Commis- "sion is requested to the broad question whether it is right "to exact from India within 17,000*l.* of the full charge, "effective and non-effective, of the squadron, seeing that, "although the admiral is required to comply with the "wishes of the Government of India when communicated "to him, still the ships are not at their disposal in the "same degree that the army is. The vessels not employed "in the Persian Gulf are under the command of the Ad- "miralty, and must be occasionally employed on other "than Indian services (*see* Treasury letter of June 30th "1888) for which India gets no return. The number and "class of the vessels employed is not that which the "Government of India think necessary, but that which "the Admiralty determine." This is a memorandum communicated to the Commission, which we must regard as an authoritative statement of the views of the India Office. I would therefore ask you whether you concur in the opinions which are submitted for the consideration of the Commission in this memorandum, and whether you have any addition which you would wish to make to them?—I think they state the case of India very clearly, and especially with regard to clause 3 of para. 26 which runs, "The number and class of the ships employed is not that "which the Government of India thinks necessary, but "that which the Admiralty determine," as the decision as to the size of the ships, which the Admiralty consider necessary, is directly opposed to what the Government of India requires.

7042–4. With reference to that point, how would you meet the *per contra* argument, that, if you entrust the performance of a duty to an expert, you must give great weight, or almost predominant weight, to his opinion?—The Admiralty apparently base the class of ships on their view of the needs of India and the Imperial duties which are required to be performed. The Government of India base their view as to the size of the ships on the duties which they wish to be performed; and the Government of India surely are in the best position to decide what they require.

7045. If you look at the beginning of paragraph 26 of the Memorandum, it is stated, "It is not desired by the "India Office to dispute the arrangements recently made "upon any arithmetical or technical grounds." As far as you are aware, would the Indian Government agree with the India Office, or would they wish to advance any reasons for contesting the arithmetical or technical grounds?—The only reasons that India would wish to advance, I think, would be with regard to clause 3. For instance, the Admiralty say that the "Marathon" is required. The "Marathon" is a ship that draws 22 feet or more, and would be perfectly useless in any operations in the Persian Gulf, inasmuch as she could not go near Bahrein, could not approach Bushire within a considerable distance, and numerous other ports; in fact, in nearly the whole of the Persian Gulf a ship of that draught is prohibited.

7046. But that involves a difference of principle, does it not? because I think you said just now that the Admiralty recommendation, or the Admiralty proposal, was based upon their ships undertaking a larger sphere of duties than those which are now undertaken?—Than those which the Government of India require.

7047. Yes; therefore the India Office called attention to the point concerning the "Marathon," not on arithmetical or technical grounds, but on the ground of principle: and I presume that that ground of principle would be that the "Marathon" is not required in their view for their purposes?—I presume the principle was that the Admiralty required it for Imperial purposes to which in their opinion India ought to contribute, but to which India thinks it ought not.

7048. The Admiralty would differ from your view; that, however, opens a point, not of arithmetical calculation, but of principle?—Just so; the arithmetical calculation is on the larger size of ships, and that, therefore, affects the subsidy very largely. Large ships, the Government of India hold, are useless to them for their own purposes. Then with regard to Lord Rosebery's award; it appears that sufficient attention has not been drawn, on the Indian side of the controversy, to the services performed by India for the Royal Naval Squadron, and the large expenditure willingly incurred by India to make the dockyards thoroughly efficient. I do not think it is saying too much to assert that without the Indian dockyards the East Indian Squadron could not exist in a state of efficiency. The so-called Naval dockyard at Trincomalee has no dock, and the workshops are only equal to minor repairs, not only from the small amount of plant and machinery, but because skilled labour is not procurable. At Bombay large works have been undertaken by the Government of India almost entirely to meet the requirements of the Navy, as the dockyard prior to these was sufficient for Indian purposes. When in 1888 the Admiralty pressed the Government of India to construct a huge dock at Bombay, which subsequent experience has shown would have been almost an impossibility, owing to the enormous difficulty of blasting a channel to it, the Government decided on deepening the Duncan dock to meet, as far as possible, necessary requirements, and this was completed in 1893 at a cost to India of Rs. 4,85,335, and a snip and torpedo basin and dock was also constructed, costing Rs. 15,21,609 rupees. A new dredger was also procured to maintain the channel necessary on the deepening of the docks, which cost 23,100*l.*

7049. Why do you state that in pounds and the other in rupees?—It was a home charge; you see we had to pay for the dredger in England.

7050. What would you put those other sums at roughly —Rx. 480,000 and Rx. 150,000?—I should divide them by 15; that would be a fair way of putting it—15 rupees to the £.

7051. And what would be the totals?—I come to the totals presently; some other things have to be added. Additional storehouses have recently been erected, costing Rs. 1,56,596, to take the large additional stock of stores entailed by the agreement between the Admiralty and the India Office to supply stores to the Royal Navy Squadron. The total would amount to about Rs. 21,88,000 rupees, say 22 lacs, divided by 15 would come to about 150,000*l.*

7052. It may be roughly stated at 150,000*l.*?—Yes, but to that must be added 23,000*l.*, the cost of the dredger. Then again, a reserve of boats for the squadron has to be kept up and paid for by India, and not repaid by the Admiralty until they are required.

7053. On that dockyard question: the charge of the dockyards, as I think we noticed before, is not a very heavy one in India?—No; but the cost of the buildings and the land and the machinery, &c., are all considerations, I think.

7054. The argument which you base upon that is, that this work, though not a very heavy expense, was incurred on account of Imperial purposes. That is your view of it, and it ought to be added, therefore, to the expenditure which is undertaken by India, in which the Empire is concerned?—My idea is to put forward certain things that we do for the Navy for which we get no return, and without which the Admiralty would have to go to very large expense indeed to maintain its squadron, as a consideration for reducing the Rosebery award.

7055. But is there no charge made against the Navy?—10 per cent. on the value of stores and material issued and the labour employed.

7056. (*Sir Ralph Knox.*) The Admiralty are charged for the material?—The Admiralty are charged for the material and the labour for the repairs of their ships, plus 10 per cent. I want to show what a small sum that is, compared with the immense amount of money we have spent, and the value of the building and lands; and also to compare it with Bermuda and Hong Kong dockyards, which certainly are not superior to Bombay. It may be argued that the Admiralty pay India 10 per cent. on the value of those stores; but when the enormous value of the land in Bombay is considered, and the cost of buildings and the staff required for care and supervision, as also the fact that India has to pay for these stores and is not repaid by the Admiralty for lengthened periods, it will be seen that this argument cannot be maintained. A victualling depôt for the Navy is also maintained at Bombay, for which the Admiralty pay 250*l.* a year according to the agreement between the Secretary of State and the Admiralty. The estimated value of the land on which the Bombay dockyard stands is Rs. 44,24,900, and of the buildings and docks Rs. 34,56,409. Besides this the dockyard at Kidderpore must also be taken into consideration, the total value of which is estimated at Rs. 12,06,500. A new dock, capable of docking any ship of the East Indian Naval Squadron, has recently been constructed there.

7057. (*Mr. Ryder.*) Did not England contribute to them?—Not a fraction.

7058. To the Bombay dock in consideration of its being enlarged?—Not one farthing of any sort or description.

Captain J. Hext, R.N., C.I.E.

16 April 1896.

7059. Really? I remember the question coming up; I thought there was a contribution from England?—No. The Admiralty agreed to contribute in case we built a dock to meet their requirements, which would have entailed a channel into the harbour of nearly half a mile, and the up-keep of this channel would have amounted to 20,000*l.* a year. The Government of India would not do it, but built these docks as a kind of compromise to help the English navy as far as possible, and built them entirely at their own cost.

7060. (*Chairman.*) Are these docks in no sense useful for the Indian marine?—Undoubtedly, but at the same time the docks, before they were deepened, were quite equal to our requirements.

7061. (*Sir Ralph Knox.*) But if this assistance were not given in this shape to the Admiralty for the purpose of refitting and repairing their ships, would not the Admiralty make a larger claim against India?—No, because they place their repairs, &c. at a very large figure. I mean to say that I could prove that the amount estimated for repairs to the Defence Squadron, which is paid by India to the Admiralty, much exceeds the actual cost.

7062. (*Chairman.*) There are other points to which you would wish to call our attention, are there not?—I would like to draw the attention of the Commission to one point; in the 10 years from the 1st April, 1885, the dry docks were used by Royal Navy vessels for 3,762 days at an actual cost (including 10 per cent.) of 36,200 rupees, an average of a little over 9½ rupees per day. The Port Trustees dock was used for 53 days at a cost of 213 rupees a day, and the P. and O. dock for 18 days at the same rate. There is a vast difference between 9½ rupees and 213 rupees a day. And as another instance I will quote the "Briton," in dock for 115 days consecutively; the total amount charged for actual labour on her, pumping, &c. was 650 rupees; while the "Conquest," docked in the P. and O. dock for 18 days cost 3,840 rupees. I think those examples show to a certain extent the amount of the work performed by the Bombay dockyard.

7063. You do not know whether that low charge in any way is in consequence of the Indian Government doing what is called in American railways "cutting the rates"?—We make no charge for docks at all. When I say no charge, the only charge made for docking is the actual labour incurred in dragging the ship into the dock, shoring her, and pumping the water out; and I say that the average for the "Briton" was 9½ rupees a day for 115 days consecutively.

7064. (*Sir Ralph Knox.*) My point is, that, if you charged that to the Admiralty, would not the Admiralty charge it to you as part of the cost of maintaining the squadron in the eastern seas?—I do not suppose the Admiralty could possibly for a moment insist upon charging India with an equivalent to the upkeep of Hong Kong dockyard or Bermuda dockyard. Besides you must recollect that the greater portion of the East India squadron is not subsidised by the Indian Government at all; it is only a portion of the squadron that is subsidised.

7065. Then ships come in that have nothing to do with the squadron in the eastern seas?—Yes; ships come in that are not part of the subsidised ships; you see there are eight ships on the station, four of which only are subsidised.

7066. But these other four are at liberty to come into the Bombay dockyard on the same terms as the subsidised vessels; and therefore that dockyard may be said to be kept up for Imperial purposes: but are not ordinary trading ships able to use this dock?—No, but all men-of-war whether on the Indian station or not, may come into the Bombay and Kidderpore dockyards free of charge.

7067. Do the four ships that are not subsidised come in free of charge?—Free of charge entirely. Every ship of Her Majesty's Navy coming from China or New Zealand or anywhere else in the world comes into the Indian dockyards free of charge.

7068. (*Mr. Caine.*) Do the ships of Her Majesty's Navy enjoy the same advantages at Trincomalee?—Trincomalee has no dock at all; it is a misnomer to call it a dock.

7069. Can they not go there for repairing?—No repairs can be done there worthy of being called repairs. Again I think I might point out that the comparative cost of work in India and at home is very different, whereby the Admiralty reap a decided advantage. The cost of docking the "Clive" at Portsmouth last year was 111*l.* under the same agreement which we have with the Navy for docking their ships; and for precisely the same work at Bombay the cost was 77*l.*

7070. (*Chairman.*) Is that taking the ship into dock?—Taking the ship into dock and painting her, giving her one coat of paint.

7071. (*Mr. Caine.*) The "Clive" painted for 77*l.*?—The "Clive" cost 111*l.* for docking and giving one coat of paint in England, and for precisely the same work in Bombay 77*l.*

7072. (*Sir Ralph Knox.*) How are these charges for the repairs of the non-subsidised ships settled?—The Admiralty pay on the Examiner of Marine Accounts presenting a bill.

7073. Was it agreed what the basis of that claim should be?—The basis of the agreement with India was that the Admiralty should in return dock our ships free of charge.

7074. Where?—In Portsmouth or Plymouth, as the case may be, when our ships happen to be at home; and we should dock their ships free of charge. It is a very one-sided agreement, inasmuch as we are docking their ships constantly, and for ten years they have had a ship in our docks every day.

7075. (*Mr. Caine.*) But your ships would never go into Portsmouth dock? if they came home on commission they would fall back into the British Navy?—We had the "Clive" at home the other day, and she was docked in Portsmouth dockyard.

7076. You are trooping with the P. and O. now?—The "Clive" is an Indian Marine ship.

7077. (*Sir Ralph Knox.*) How long ago was this?—I think it was in 1883 that the final agreement was come to. Before that time the ships of the Persian Gulf squadron, which were subsidised by India, were docked free of charge. Then the Admiralty asked us to dock all ships free of charge, not only the East India squadron, but all ships belonging to the Navy; we have taken ships on their way to China on one or two occasions.

7078. (*Chairman.*) There would be no very great difficulty, I suppose, in making up an account which would show what the actual cost of performing those services for the Navy would be?—I think I have got the actual cost of the stores and repairs for the 10 years ending 31 March 1895, amounting to Rs. 18,46,387, including the 10 per cent.

7079. You could without very much difficulty draw up an account, which would represent what the actual cost to India has been of executing these repairs?—The actual cost to India was for 10 years Rs. 16,78,534.

7080. Then you complain that you have spent a large sum of money upon docks for repairs and construction, and upon purchase of lands and so forth; and that you also maintain a considerable stock of stores which costs you money, the interest on which is not covered by this 10 per cent. charge?—Yes.

7081. Could you not show what the real cost was against that 10 per cent.?—I fear I have not got those figures.

7082. Do not the Indian Government keep accounts which show what the expense to them is of performing those services?—There is no such special statement. The 10 per cent. charge is supposed to cover the cost of supervision, warehousing, &c.

7083. You include this arbitrary sum of 10 per cent., instead of keeping a correct account of Indian expenditure?—That is the agreement with the Admiralty which we cannot vary.

7084. Have you an actual account which shows what the actual expense is and what you lose by charging only this 10 per cent.?—No, it would be exceedingly hard to calculate it. The actual average amount paid by the Admiralty towards dockyard expenses in India, apart from the actual cost of labour and material used, and also apart from the value of stores supplied, amounts, for the last 10 years, to about 1,100*l.* per year. Compare this with the cost of the actual upkeep of the Trincomalee Dockyard, as taken from the Navy Estimates for the present year, viz., 2,845*l.*; Bermuda, 12,410*l.*; and Hong Kong, 14,714*l.*, and this does not include anything for the value of the lands, buildings, docks, and machinery; I am quoting these figures to show that, if the Admiralty had to maintain their own dockyard in the East, the cost of the repairs would be increased in the most extraordinary way. In addition to these services which India performs for the Navy, I would point out that we have provided shears for lifting heavy guns, capable of lifting from 45 to 50 tons, costing 9,000*l.* A torpedo store and workshops have also been provided, with compressing and other machinery, which cost Rs. 24,900, and for this

the Admiralty pay Rs. 932 a year for the store room and 5 per cent. for the machinery—Rs. 1,200. India provides moorings free of charge at Bombay for the Navy, exclusive of the moorings for the defence squadron; these were occupied by men-of-war during the last year on 78 occasions. India provides—as, I believe, no other possession of England does—a completely equipped Marine Survey, working under the Hydrographer to the Admiralty at a total cost per annum of Rs. 2,12,780, with a specially constructed surveying ship, whose original cost was Rs. 4,28,000. To fulfil the conditions of the Indian Marine Act, and to render them efficient to take their place in the Royal Navy in case of necessity—see the last clause of the Marine Act—8 commanders, 32 lieutenants, and 32 sub-lieutenants are thoroughly trained in gunnery, torpedo, and other naval duties, which, according to the naval estimates, would cost 2,304*l.* for the lieutenants and 782*l.* for the sub-lieutenants. There are also belonging to the Indian Marine 55 engineer officers, an exceedingly valuable addition in case of war. The Admiralty pay a retaining fee for the smallest of the P. and O. steamers of 2,438*l* per annum; whereas the "Warren Hastings," a more suitable ship in many ways, twin screw, &c., with her magazines and shell-rooms specially fitted when the ship was built, has been provided with a powerful armament at the cost to the Government of India of quite 12,000*l.*, so that in case of war a valuable auxiliary cruiser would be at once placed at the disposal of the naval Commander-in-Chief. No return is made for this. To briefly summarise the position, India is treated on a very different footing from Australia—she is asked to pay 100,000*l.* per annum for a class of ships which the Government say they do not require, and for Imperial services which have never been advanced before; India has added ships to the Navy at a cost to herself of 541,497*l.*, with docks and stores to meet naval requirements at a cost of Rs. 21,88,440. India provides a thoroughly equipped Marine Survey, has drilled and educated officers to take their place in the Royal Navy in case of emergency, has provided a ship superior to some of the subsidised ships free of cost. I also submit that the upkeep of the ships in the Persian Gulf might partially be borne by the Home Government.

7085. (*Mr. Caine.*) Would you not say entirely?—I should like to say entirely.

7086. Well, I hope you will say it, if you would like to say it?—I do not think I would be right in saying it from the point of view of the Indian Government.

7087. (*Chairman.*) Does that comprise what you have got to remark?—That shortly comprises what I have got to say. Perhaps questions might bring out other points.

7088. (*Mr. Buchanan.*) Captain Hext, would you like to lay before the Commission any views of your own, or of the Indian Government, as to bettering the system upon which the Indian Marine is worked on lines which the Indian Government would be willing to undertake, apart from the justice or injustice of the Rosebery award as regards the present system?—I do not know how far I am justified in saying anything on behalf of the Government of India, but I have very strong opinions of my own on the subject.

7089-90. Would you like to give the Commission, not speaking as the representative of the Indian Government, your own opinions and views as to the best method?—I go so far as to say that, if the terms of the Indian Marine Act of 1884 were allowed to be carried out, and the ships fitted to carry out the duties therein enumerated, the Indian Marine ships, without the slightest increase of expenditure, could do the police of their own coasts without the aid of a single man-of-war; and would, therefore, release the naval squadron for their legitimate purposes on the high seas. At present we are obliged to keep a ship at Aden, at the Andamans, in the Persian Gulf, and on the coast of Burma. We have armaments provided for three of those ships.

7091. Do I understand you to mean that you would like to put the armaments on board those ships, or some of them, and make the ships of the Indian Marine sufficient for all defensive purposes connected with India?—I maintain that, if these armaments were placed on board, the Indian Marine ships could do the whole police of their own coasts.

7092. Including in their own coasts Burma and the Andamans?—Including Burma and the Andamans.

7093. And you think that putting the armaments on board these ships, and making them into coast defending vessels, would be within the terms of the Act of 1884?—The Act, as I said before, enumerates very clearly the suppression of piracy, local purposes, the transport of troops, the guarding of convict settlements; and I do not see how you can guard convict settlements and protect the garrison and Superintendent at Port Blair, unless the ship is armed; the ship is there to protect them in case of a rising and their having to evacuate the place, also for the suppression of piracy, the survey of coasts and harbours, the visiting of lighthouses, the relief of distressed or wrecked vessels, and other local objects, and is maintained out of the revenues of the Government of India; and how a vessel can do these duties unarmed I fail to see. Moreover, I may point out that according to page 379 of the Royal Navy List, Australia owns no less than eight ships heavily armed, which are under the local governments and not under the Navy.

7094. Your idea is that India would be prepared with its present marine force to undertake all the duties connected with police, suppression of piracy, and local defence?—Not local defence; I did not mention local defence; local purposes, I said, not local defence.

7095. Local purposes. And, in view of India doing that, are you also inclined to advocate that the Home Government should take over all the other duties, namely, those connected with the Persian Gulf, Aden, and the same duties of local defence that she discharges towards other parts of the Empire; is that your theory?—That is entirely my view, and always has been.

7096. (*Chairman.*) And to that extent you depart from or modify the arrangement which obtained while the Indian Navy was still in existence, under which the Indian Government undertook those duties?—I should advocate the Indian Marine doing the same work for the Government of India that her troops do within the limits of the Indian Empire.

7097. (*Mr. Buchanan.*) But to a certain extent your proposal would modify, and rather restrict, the duties which the old Indian Navy performed?—Oh, considerably restrict them from what the old Indian Navy undertook.

7098. In what respects?—The old Indian Navy, as I said before, ran the first mail line to Suez; the first overland mail was running in the old Indian Navy ships.

7099. That is superseded now?—Yes, but the first overland route was established by the Indian Navy.

7100. But, besides that, in what other respects would you restrict the duties of your marine ships, as compared with what the old Indian Navy did?—I cannot say what the duties of the old Indian Navy were.

7101. But I understood the purport of Lord Welby's question was, that the old Indian Navy did in the Persian Gulf what you think ought to be done by the Imperial Navy?—I think the duty in the Persian Gulf should be done by the Imperial Navy; Sir Charles Wood said not, though, "at any rate for the present."

7102. And at Aden?—I think the Imperial Government should have that duty.

7103. The East Coast of Africa and the Red Sea?—The East Coast of Africa and the Red Sea are far away from India. Zanzibar now belongs to the Cape station.

7104. The Red Sea?—The Red Sea is part of the Mediterranean station, not part of the East India station, as at present constituted.

7105. We only want to know your ideas so as to have them fully on record.

7106. (*Chairman.*) I read you Sir Charles Wood's definition of the duties of the old Indian Marine, to which I thought you gave a general assent. I remind you of this with reference to what you said just now, that you did not know what the duties of the old Indian Navy were. If you remember, I read you this paragraph: "The nature of the service required to be performed by "vessels of war in the Red Sea and upon the east coast of "Africa has recently been much changed in consequence "of the extension of the foreign slave trade, and the more "frequent presence of foreign ships of war. Her Majesty's "Government, therefore, consider that for the future "vessels of the Royal Navy should be employed in those "seas instead of vessels of the Indian Navy." Therefore, up to that time that service had been done by the Indian Navy?—As I said before, to a very limited extent.

7107. No doubt to a smaller extent. There remained, however, duties of considerable importance—"The police "of the Persian Gulf should, in my opinion, at any rate for "the present, continue to be performed by a local service. "India is bound, in like manner with the Colonies to pro-

Captain J. Hext, R.N., C.I.E.

16 April 1896.

"vide at her own cost sufficient means for the protection "of her ports against a small attacking force from the "sea . . .?"—"For the present," he says.

7108. That service up to that time had been performed by the Indian Navy?—Yes.

7109. I am only calling your attention to this in order that we may understand what the duties of the Indian Navy were. You have in that despatch, on the highest authority—not on that of the Imperial Government, but on that of the Indian Government itself—a statement of those duties. They have been considerably restricted, I think, and you would restrict them still further. So that the ships of the new Indian Navy, which you would create, would not have to undertake anything like the duties which the old Indian Navy undertook?—The only exceptions would be the Red Sea and Zanzibar, and the Persian Gulf, which would remain as at present.

7110. You excluded, I understood, just now, coast defence?—No, I agree with the latter portion of the passage you have quoted; and India has clearly carried out the duty of coast defence. I only say that those duties which used to be performed by India can be performed by India.

7111. Sir Donald, you asked Captain Hext a question about defence, and I thought he accepted it.

7112. (*Sir Donald Stewart.*) I understand now that Captain Hext would re-establish the Indian Navy?—I am merely answering Mr. Buchanan's question whether, in my opinion, we could do the police on the coasts of India. I think Sir Edwin Collen said the same thing the other day in his evidence, or something to that effect.

7113. (*Mr. Buchanan.*) How do you distinguish between the police of the coast and the defence of the coast; who is to do the defence of the coast?—The defence of the main harbours is provided for; but as far as I can see, it is a matter of impossibility to provide for the defence of the minor Indian ports in any way.

7114. (*Chairman.*) How is the defence of the bigger ports already provided for?—They are provided for by most expensive fortifications and modern guns; and also by the provision of the Defence Squadron at a cost of half a million sterling, for the manning of which India pays 61,000*l.* a year to the Admiralty.

7115. Supposing you re-established your Indian Navy?—I do not propose to touch the defence of the large ports at all. I do not propose to re-establish the Indian Navy, but simply to police the Indian coasts, with our existing force and under the existing Act, on which in reality the men-of-war never have done a single thing; they have not done anything for the last 12½ years to any place on the coasts.

7116. (*Sir Donald Stewart.*) But for that purpose you must have armed vessels, of course?—My argument is that you cannot carry out the terms of the Act unless you arm ships to put down piracy; you cannot do it unless you arm a ship; and you put officers under the Marine Act under a penalty of transportation for life in case of cowardice, and yet give them no means of carrying out the Act. This seems to me a very strong point.

7117. (*Mr. Caine.*) You propose that India should do everything that is required in time of peace, but not to defend herself against a foreign invader; that is what you put?—No, I go further than that. India is prepared to defend herself against a foreign invader at her main ports, but she is not prepared to take part on the high seas. And we know that the Admiralty policy is not to defend the coasts of India at all; it has been put in black and white by the Government of India. I have not got it here, but I have seen a letter, in which they say that their defence will really be in seeking for the enemy's squadron (which of course is the policy of the Navy and always has been); but, if the enemy's squadron evaded our squadron, the small towns on the coast would be in a very defenceless position, having nothing to defend them. Even Madras is practically defenceless.

7118. (*Sir James Peile*). England is very much in the same position?—Exactly so.

7119. (*Chairman.*) But in many of these places there are methods of defence, such as torpedoes, which may or may not be an efficient means of defence, but still they are of use; how would you propose to provide for those? would you leave them to the Navy or take them yourself?—The only ports, I take it, that would be actually defended in India would be the principal ports; I am not a military expert, but I should say that those are the only ports we should try to defend and they are, as far as my humble opinion goes, far more thoroughly defended than any ports in England. Take Kurrachee, Bombay, Rangoon, and Calcutta.

7120. (*Mr. Buchanan.*) Is that all done at the expense of the Indian Government?—Entirely at the expense of the Indian Government.

7121. And the Indian Government would be prepared to spend any further sums necessary for further defence of that character?—Undoubtedly. And there is another point which you must remember. India has rendered Bombay a safe port for the repair of ships of the Royal Navy.

7122. Could you put before the Commission what extra duties, supposing your views were carried out, you would impose upon the Indian Marine beyond those which it already has, and what would be the financial arrangement for the future with this country? How far, supposing your views were carried out, would you be prepared to allow that India should still pay any sum to the Admiralty for certain services, and for what services? We simply want to get your ideas as fully and as clearly as possible before the Commission?—I think the last proposal of the Government of India, namely, the "Sphinx" and two gunboats of the "Pigeon" class, for which they were prepared to pay, would amply meet the requirements of the Government of India.

7123. For all purposes of defence?—For all purposes that the Navy perform for India; in addition, of course, to the ships that we already pay 60,000*l.* a year for independently.

7124. You would be prepared to continue that payment of 60,000*l.*?—I think there is no question about that. The Government of India never raised that question. What they combat is the increase of 50,000*l.* in the charge, by what you may call the Rosebery award, which they think was not fully gone into.

7125. Then your view, substantially, is that they would continue to pay the 60,000*l.*; and for all other purposes they would be content to pay for three small vessels?—That they would pay the 60,000*l.* which they have agreed to pay for a term of ten years, plus the up-keep of the "Sphinx" and two gunboats of the "Pigeon" class.

7126. And they should have full power of disposing of them as they pleased?—Full power, as far as the Admiralty will let them.

7127. They should also have full power of putting armament in any of their own ships if they thought it necessary to do it?—Yes, and in case of offensive operations, they would place them at the disposal of the senior naval officer.

7128. And you do not think that that would increase the charges on the Indian exchequer for naval purposes?—I think it would not increase the charges on the Indian Exchequer in the slightest degree, except to the extent of the ammunition which might be fired away, because the guns and the armaments are already provided for the ships.

7129. And you are prepared to face any future expenditure that would be necessary for additional guns and additional ammunition?—Undoubtedly it would be cheaper to do that and have entire control over the ships than to be in the hands of the Admiralty, and pay a large subsidy.

7130. (*Mr. Naoroji.*) We have been considering that when the British exchequer disburses any expenses which are considered to be for the purposes of both the British and Indian Governments or British and Indian people, the British exchequer claims a portion from us; that is to say, from India. On the same principle would it not be right that whenever any disbursement is made by the Indian exchequer for purposes in which both are interested, that the British Exchequer should take a share of it also on the same principle?—That undoubtedly seems fair.

7131. Are there any Indians employed in the Navy, or in any of those ships about which we have been discussing all along?—In the Indian Marine, the service belonging to the Government of India, the crews are almost entirely composed of natives of India, and in the Defence Squadron there are a small number of Natives employed; in the Royal Naval Squadron proper no natives are employed.

7132. I am specially asking for that portion for which we are called upon to pay this apportionment, and that is especially the Royal Navy Squadron?—That is the Royal Navy Squadron.

7133. There are no natives at all?—With the exception of one or two cooks and servants, none.

7134. Virtually there are no Indians employed at all?—No.

7135. And though India is called upon to make this contribution or apportionment towards the expenses of the squadron, India itself cannot get any share out of the service for which India contributes?—Except, of course, the defence of their coasts, their trade, &c.

7136. Then that defence is also for the common purpose of defending the British rule in India. We are now going upon the supposition that both are common parties; it is for the interests of both, and wherever any disbursement is made, either by the British exchequer or the Indian exchequer, that the apportionment should be made on both sides?—On both sides, yes.

7137. I suppose, in Australia, in the Royal Squadron that is placed there, of course, Australians are quite free to be employed in every way on that squadron; they would be able to get in; they would not be prohibited or completely excluded as the Indians are from the Royal Squadron?—No; the whole of the Australian Squadron, as far as I know, is manned entirely from England, not from Australia.

7138. But would there be anything to prevent the squadron from being manned by Australians if the Australians offered themselves?—I cannot answer that question.

7139. But there would be no objection to employing any Australian, either as man or officer, if any Australian were here and offered himself as a sailor or joined; he would not be prevented as an Indian would be prevented? An Indian would be told, "No, you cannot come in"?—I think no sailor would be taken in the English navy for the Australian squadron unless he had gone through the training ships at home, (I am speaking from my memory of my service in the Navy) and had come home for that purpose; he would not be entered in Australia.

7140. But an Indian cannot do even that; he cannot be trained at home because he would never be admitted?—I cannot say whether the Admiralty would admit them or not; I think not.

7141. I know in the Army they are not admitted, and I suppose it is so in the Navy also.

7142. (*Mr. Caine.*) I should just like to be quite clear on this point regarding the Persian Gulf. Do you contend on the part of the Government of India, or only as an opinion of your own, that the whole of the Persian Gulf charges would fall on the British Exchequer?—I cannot say what the opinion of the Government of India is on the question; but going by Sir Charles Wood's despatch, he evidently only intended the arrangement he proposed to be for the time, as he says "for the present," and my own opinion is that the Persian Gulf, being outside Indian waters, and all operations in the Persian Gulf not being under the Government of India, but having to be referred to the Foreign Office at home, and the Ambassador at Constantinople, it becomes an Imperial question, and that therefore the Imperial Government should bear the cost. That is only my own opinion.

7143. You do not look upon it as any more Indian waters than Suez, for instance?—Indian waters do not go so far as the Persian Gulf. I had to obtain the permission of the Hydrographer of the Admiralty to survey Jask, as being outside Indian waters.

7144. You employ Indians in the Indian Marine, do you not?—Yes, the crews are almost entirely Bombay lascars.

7155. You have no training ship in India at all, have you?—No.

7146. Do you advocate the establishment of a training ship in India?—No; it would be too expensive.

7147. You do not think you would get valuable recruits from Eurasians in Calcutta, if you had a small training ship there?—In my opinion, Eurasians make bad sailors.

7148. Do you think, if you took them as lads and trained them, they would be?—I do not think they would make good sailors.

7149. They have not got the stuff in them?—I have had a certain amount of experience of them; they do not take to the sea at all.

7150. (*Sir Donald Stewart.*) There is one point I did not quite understand, why you would not undertake to provide ships for the Persian Gulf as well as for other duties and for the rest of the coast of India?—Because it is outside Indian waters.

7151. India has very large interests in the Persian Gulf. We have got all our consular advisers there, the Resident and political agents?—If it is ruled that the Persian Gulf is comprised in Indian waters, I see no reason why India should not assist in the Persian Gulf.

7152. But if it can assist, why not do the whole work?—I do not think India can do the whole work unless she provides more ships.

7153. That is not the point?—I think one man-of-war is required in the Gulf, but I think the "Lawrence" would be a most valuable auxiliary in every way.

7154. What is your reason for saying that a man-of-war should be there instead of an armed Indian ship?—She has to deal with foreign governments, and all her movements are controlled by orders from the authorities at home.

7155. No, I think not?—Well, so far as I know. The "Sphinx" was recently not allowed to act until she got the consent of the authorities at home. Before action could be taken, orders had to be awaited from the Foreign Office, after consulting the Ambassador at Constantinople. Then there are, more fighting duties to be performed at the Persian Gulf, more chance of actual combatant duties to be performed there, than there are on the coast of India, and you are meeting foreigners instead of your own subjects.

7156. But you are liable to meet them in Indian waters too?—Hardly I think, on the actual coasts.

7157. I fail to see why you differentiate between the two?—What I think is that the Bombay lascars are quite as good as the average Indian soldier, and therefore can be depended upon, as a fighting race, to do very good service against their own class; but that, if you get fanatical Arabs like you meet in the Persian Gulf and the pirate coasts, the backbone of the man-of-war would be a great thing, in the same way that the British troops in India are a support to the Native army. I only hold to our own coast, and it is only my own humble opinion, as I said before.

7158. (*Mr. Ryder.*) Do you think, Captain Hext, we may say that the main difference between the Admiralty and the India Office in regard to the Indian naval subsidy is this: that the Admiralty hold that one element in the subsidy ought to be a contribution, however small, to our general defence in Indian waters and off Indian coasts; and on the other hand that the India Office, or the Government of India, hold that the subsidy should not contain that element at all, but that the duty of defence of Indian trade on the high seas and in Indian waters should fall entirely upon the Royal Navy and ought not to be paid for in the smallest degree from Indian funds?—I think that the Admiralty recently, in bringing forward a claim for imperial purposes to be paid for by India, departed from the basis of their arguments on every previous occasion. On all previous occasions they based their claims on the number of men and the maintenance of the ships required by India; but on the occasion of the question finally submitted to Lord Rosebery, they put forward an entirely new claim for larger ships; and, after the claim for the larger ships had been put forward, they then, when India said they were too large for their purpose, for the first time advanced the claim for imperial purposes, and demanded a contribution for the protection of their trade. As far as I know it is the first time that argument has ever been advanced. It seems to me that if the home Government look upon the question as a purely imperial question, they have the power of dictating to India to pay any sum of money they think fit; but if they base their claim, as they always did previously to this one occasion, on Indian requirements and on the increased cost of ships, and then put those ships at a far larger size than is required by the Government of India, I maintain that the thing is wrong.

7159. The reason why the Admiralty maintain that one of the four ships should be a larger one than the Indian Government thought necessary was, if I am not mistaken, that they held that India ought to contribute in a small degree towards the defence of trade generally in Indian waters, and towards the general defence of the coast of India against the ships of the foreigner. I think there is no doubt about that point. I am anxious to bring upon record in the evidence one of the chief grounds on which I believe the Admiralty make this contention that India ought to contribute to a certain extent towards general defence in Indian waters. When the Indian Navy was abolished, and when the Admiralty undertook the whole of the defence of commerce in Indian waters a very important letter was written from the India Office to the Admiralty. It has not yet been quoted, I think, before the Commission. Lord Welby has quoted from a despatch from Sir Charles Wood to the Indian Government of 1862, in which the purposes for which the old Indian Navy was employed have been defined; but that definition does not go quite so far as the definition given by the India Office in a letter to the Admiralty, dated the 10th October 1862. I would ask permission to read one paragraph from that letter. I propose to do so because it

Captain J. Hext, R.N., C.I.E.

16 April 1896.

was the most important document that was before Lord Rosebery when he made his award, and I think one can see from the terms of his award that he evidently was very much influenced by it, and based his decision very much upon it. The paragraph I shall quote is this: "He (that is "Sir Charles Wood) is of opinion, therefore, that, as "regards India, the general defence, the protection to "trade generally, and the measures for putting down the "slave trade on the eastern coast of Africa, which have "hitherto been performed partly by Her Majesty's Navy "and partly by the Indian Navy, should be undertaken "by Her Majesty's Navy." That seems to me to be a very remarkable admission that up to that date the Indian Navy had in part undertaken the general defence and the protection of trade generally. Then we find in the award of Lord Rosebery that he refers to that correspondence of 1862, and decides that the old Indian Navy contributed towards general defence, and that therefore it would be fair that any subsidy now fixed should contain, as one of its elements, some sort of contribution towards general defence?—But with regard to that point, the fact of the Indian Navy having performed certain duties was simply because, before its abolition, India belonged to a company, and therefore an argument based upon it can hardly hold good at the present moment when India has become a dependency of the empire. If you make the Straits Settlements and Hong Kong pay towards the protection of the floating trade, it would be fair to make India do it. Surely it would not be so now, under present arrangements.

7160. I admit that is a fair argument—that we are dealing out a different measure to India and to the various colonies; but India, you may say, suffers from having entered into the community of the empire as an empire itself, with all the full-blown duties of empire upon it. Our colonies began in a very small way, and could only gradually be induced to undertake the duties appertaining to a completely equipped country. I quite admit the validity of your argument, and it is one we are bound to keep in view. All that I wish to say is that, historically, India undertook, and carried out to a certain extent, the duty of defending her own commerce in Indian waters; and that fact was one which mainly weighed with Lord Rosebery when he adjudicated upon the question, and decided that the subsidy ought to include something for general defence. If I am not departing from the subject I would point out that, in the correspondence which followed upon Lord Rosebery's award, the difference between the India Office and the Admiralty narrowed itself down to simply one vessel, and that vessel was the "Marathon"?—Yes.

7161. The Admiralty said that out of four vessels there ought to be one which was of nearly 3,000 tons burden, namely the "Marathon." The India Office, on the other hand, said: "We are ready to pay for four vessels, but "instead of the 'Marathon' you must employ only a vessel "of the 'Pigeon' class, 755 tons"?—Yes; and afterwards they modified that again by saying they wished to employ the "Sphinx," and two vessels of the "Pigeon" class.

7162. Was that after May 1895? you may be right, but I have not got that before me.

(*Sir James Peile.*) It was in 1891 that they made that representation?—Yes; and they repeated it in their Despatch No. 9, of 31st July 1894.

7163. (*Mr. Ryder.*) The India Office, in a letter signed by Lord Reay, dated 23rd May 1895, said that they were ready to pay for four vessels?—I was referring to despatches from the Government of India. The Government of India despatch—their last one—their final decision, was that they would pay for the "Sphinx" and two gunboats of the "Pigeon" class, at a cost not exceeding 50,000*l.* That was the very last word so far as the Government of India is concerned. I do not know what the Secretary of State has done.

7164. The Secretary of State has taken a more liberal view. He was quite prepared (letter to the Admiralty, 23rd May 1895) to pay for the "Brisk," 36,299*l.*; the "Pigeon," 16,513*l.*; gunboat, same class, 16,513*l.*; and the "Sphinx," 20,855*l.*; total, 90,180*l.*?—I do not know anything of that.

7165. When these papers are distributed, I have no doubt the Chairman will show them to you. The Admiralty defended the employment of the "Marathon." They used just the argument to which I have been alluding, that, by including such a ship as the "Marathon" in the squadron for which India was to pay, India would be made to contribute in a certain degree towards defence on the high seas, which had been one of the duties of the old Indian Navy?—But which was performed, as I said before, by the Company in their own interests to protect their own money; it was a perfectly private business. I maintain that, as far as the justice of the thing goes, when you have proclaimed India to be part of the English Empire and the Queen's proclamation has issued, India ought to be dealt with in exactly the same way as the rest of the Empire; if you make the rest of the Empire pay for protection of commerce, then, as far as I can see, there is nothing more to be said; but if others do not do it, I do not see that that argument can be brought forward to make India pay for it.

7166. Your argument is that all the members of the empire are really on the same footing; that if you charge anything to India you ought to charge it also to St. Helena, and to make no difference whatever between the two?—I have tried to show to-day the services of the Government of India to the Navy, which have never been considered, or at all events I fancy they have never been considered, but those services go further than that a great deal, if you take into account the enormous sums of money which India has paid at Aden, brought before you by Sir Edwin Collen, and also what she has spent in fortifying Bombay, Calcutta, Karachi, and Rangoon. All these things were done to protect the whole of the floating trade of the Empire.

7167. We contributed for Aden, you remember?—One half.

(*Chairman.*) And I think, generally speaking, in these arrangements the half came to a great deal more than one half.

7168. (*Mr. Ryder.*) It did in the case of the fortification of our Colonies of Hong Kong and the Straits Settlements to which we contributed. Whether it did in the case of Aden I am not quite sure?—If you contribute a portion of the expense at Hong Kong you ought to contribute at Bombay.

7169. India gains a great deal, for which England pays, by having Malta and Gibraltar on the route between England and India?—It is not right to say India gains; England gains. In the whole of that trade there is scarcely a ship which goes to India, which does not belong to English owners.

7170. There must be a profit to both?—The shipping belongs entirely to England. I suppose at the outside there are about six ships running out of Bombay which are not owned by English owners and English firms.

7171. (*Sir Ralph Knox.*) What about the cargoes?—cargoes are going home to England for England's wants.

7172. (*Mr. Ryder.*) But the profits go into the pockets of the Indian to a large extent. It seems to me that that is inevitable—I do not think you can separate the interests of the two countries?—I do not desire to contend that you can.

7173. Do you remember that in 1887, and again in 1890, the Indian Government pressed upon the Admiralty the substitution of modern and more powerful vessels for the older types then on service in the East Indian Squadron?—Yes, I perfectly recollect that, and I recollect writing a letter in which I tried to describe the squadron as it existed then, and said that not one ship in the whole squadron could go to Aden against the monsoon.

7174. Could a vessel of the "Pigeon" class steam against a monsoon?—Undoubtedly, better than any of the vessels of that time.

7175. It is generally held now, I think, that a vessel of that sort is not strong enough to steam against a monsoon; they cannot depend upon it?—Well, I doubt very much if you could depend even upon the "Cossack" class. I would prefer myself, if I had my own way, as a sailor, to proceed to Aden in the "Pigeon" to going in the "Cossack."

7176. The "Marathon," I suppose, is fitter?—I was outside Madras on the 10th December last; we were hardly moving, the "Bonaventure," the flagship, was also very steady, and even the "Brisk" was fairly so, while the "Marathon" was wallowing in it, and pitching her bows down to her jack-staff. I never saw such a thing in my life. I told her commander afterwards, that I would rather command the smallest gunboat in the British Navy, than have anything to do with the "Marathon."

7177. But still you would agree that they ought to have vessels strong enough to steam against the monsoon?—Not necessarily. That fact was brought up, not for the purpose of getting vessels that could steam against a monsoon, but to illustrate the disgraceful vessels that they had in the Persian Gulf for which the Government of India were paying a subsidy.

7178. The "Sphinx" was there, was she not?—Yes, the "Sphinx" was there and the "Ranger." All these ships mentioned in Despatch 14 of 1887, the "Briton," the "Algerine," and the "Mariner," were of a very obsolete type, and that was originally what the Government of India complained about. The state of the squadron was a constant re-commission of certain ships, of which the "Ranger" was one; the "Ranger" had been twice, if not three times, recommissioned on the station and was in a very bad state of repair in every way. And I think I am right in saying there was also a complaint about the "Woodlark"—previously to that employed in the Persian Gulf—as being utterly inefficient in every way.

7179. There were three small gunboats, I think, in the Persian Gulf before the "Sphinx"?—I know when I was in the Persian Gulf in 1881 that the two gunboats in the Persian Gulf, besides my own ship, could neither of them steam seven knots in a calm, and both had been recommissioned two or three times on the station, and the cockroaches in them were more like sparrows.

7180. (*Mr. Naoroji.*) We were told just now that India took all those duties upon itself. Was it not rather that the British rulers put upon India those duties, than that the Indians undertook all those duties of their own defence, and so on?—I have never been in the secrets of the Government; I could not give an opinion upon that.

7181. It is a mere matter of fact that all that is imposed upon the Indians is by the Government. The Indians themselves have no voice whatever in it. It is said also that the members of the Indian Empire are on the same footing as any other Colonial people; is it so? The Colonists are their own masters; they did not submit to the British Government here dictating to them, and at last the British Government was compelled to give them their own government. Is India in that condition?—I presume the British Government do it for their good; not only for the good of the British Government, but for the good of the Indian people. *Captain J. Hext, R.N., C.I.E.* 16 April 1896.

7182. But for the British supremacy and the British rule; they ought, therefore, to take their own fair share in everything that is done?—I am not a member of the Government and I cannot give any opinion. I do not know what the intentions were in the least.
